FREE BAPTIST CHURCH. The "Free Baptist Register and Yearbook " for 1896 gives statistics of this Church, of which the following is a summary: Number of quarterly meetings, 197; of churches, 1,540; of ordained ministers, 1,362; of licensed preachers, 212; of members, 85,504; value of church property, \$2,661,409. Amounts of contributions reported: For foreign missions, \$17,239; for home missions, \$12,594; for the Education Society, \$32,017; for the Woman's Missionary Society, \$22,232. The current accounts aionary Society, \$22,232. of the Foreign Mission Department for 1895 were balanced at \$31,464; the total amount of the 4 invested funds was \$52,621. The society returned from its mission in India 559 resident and 170 nonresident members, 38 additions by haptism during the year, 2,793 pupils in Sunday schools, and a native Christian community of 1.519 persons. The Home Mission Department had received (including the balance of \$1,191 from the previous year) \$14,446, and returned the amount of its two invested funds as \$13,118. The receipts of the Educational Department for 1895 were \$21,135, and its four invested funds amounted to \$8,607. Thirteen educational institutions - universities, colleges, classical schools, and high schools—are maintained.

The General Conference met at Winnebago City, Minn., in October. President George F. Mosher, of Hillsdale College, Mich., was chosen president. The General Conference Board reported that, its first year having been occupied argely with the transfer work and accounts from the several special boards, it had had but one year of active operation. A constitution

had been adopted, an executive committee appointed, an apportionment of \$50,000 made to he raised by the churches), the starting of new enterprises without the consent of the board or the Conference discouraged, and a resolution adopted that the invested funds should pever be used for current expenses or infringed upon in any way. The total receipts for home intesteris were given as having been \$13,846; for foreign missions, \$24,392; for education, \$21,135. In three years \$813 had been received on a "two-cent tax." The field secretary made a report of his work in behalf of the board, to stimulate the interest of the people of the Church in the enterprises and causes under its care. A "correspondence school" was reported upon as meeting the need for which it was organized-the diffusion of knowledge on biblical and theological subjects by correspondence—was received and adopted, and officers were chosen for it. A resolution proposed by the Committee on Church Polity urged the ministers faithfully to follow in practice and teach the principles of the de-nomination and its polity from the pulpit and in their pastoral relations. The report on "Our Country" included a resolution inviting practical effort on the part of the Government to devise some effectual means of restraining vicious foreign immigration, and an expression "in the interest of justice, temperance, reform, and the possible purification of political meth-ods," of "both municipal and national enfran-chisement of women," The action of the Conference respecting the young people embodied a direction that each Young People's Society appoint a committee whose duty it shall be to present from time to time all matters of denominational interest as learned from the denominational publications; a recommendation that the societies seek out young men looking to the ministry and encourage them to consecrate themselves to it and prepare for it; and urging members of the society to exercise themselves in securing a pure ballot and true manhood in the duties of citizenship. A report on doctrine adopted by the Conference declared

That the scriptural destrine of the Christian Church should be more carefully studied by our ministry and presented to our people to wit that the Church of Jesus Christ includes all persons who have been born of tiest through repentance toward test and faith in the Levil Jesus 4 brist, and no others, that members of the thurch general, and then enter into fellowship by agreement to ascert the rules and regulations and by vote of the local church respectively; and that the or liminess of the tesspel, haptism, and the Lord's Supper should be observed by all members of the universal thurch, and by no other

The Conference further emphatically declared "that baptism by immersion should be required of all candidates for membership in Free Baptist churches,"

The action of the Conference with reference to ministers directed the ministers' conferences of the several yearly meetings or State associations to require from all ministers within their bounds annual reports of their work and their fellowship with the ministers of the Conference, and to issue annual certificates of standing to them. A graded course of study was provided for, of not less than three years, to be required

FRIENDS. 310

of all candidates for ordination and for the renewal of licenses; all licenses to be of three grades, to be known as primary, junior, and senior licenses, to be obtained on giving satisfactory evidences of proficiency in the studies of the course corresponding to them. Resolutions were passed recognizing the value of evangelistic work by properly accredited workers; de-claring no political party worthy of support that fails to commit itself unequivocally for the prohabition of the liquor traffic; discountenancing the use of tobacco in any form; reaffirming allegiance to the system of public schools as founded and maintained by the State for the help and instruction of all the citizens" ; and pledging resistance to "every attempt, direct or indirect, to divert any of the common-school funds for the profit of sect or denomination."
FRIENDS. The following statistics

Friends in America for 1895 are given by Rufus M. Jones in the "Independent," of New York: New England Yearly Meeting, 4,389 members; Philadelphia, 4,513; New York, 3,808; Oregon, 1,777; Canada, 1,064; North Carolina, 4,998; Wilmington (Ohio), 5,099; Ohio, 5,084; Iowa, 10, 642; Western (Indiana), 15,195; Indiana, 18,182; Kansas, 10,583; Baltimore, 1,122; California, 1.202: Friends in Mexico, 500; total in America, 88,158; number reported in 1894, 87,466;

increase in 1895, 692.

A new yearly meeting was opened in California in the spring of 1895, making the fourteenth The opening independent body in America. was attended by delegates from nearly all the

other American yearly meetings.

The bicentennial anniversary of the New York Yearly Meeting of Friends was celebrated at Flushing, N. Y., May 29. Both divisions of the Friends, the orthodox and the "Hicksites united in the observance. It had been intended to hold the meeting in the old meeting house, erected about two hundred years ago, but the attendance was too large to be accommodated in it, and another room was secured. Besides a number of elderly persons, direct descendants of the Friends who settled at Flushing two centuries ago, Miss Caroline Hicks, a great granddaughter of Elias Hicks, founder of the "Hickdivision, was present. The historical address was delivered by James Wood, who traced the Quaker settlements from Gravesend, Long Island, to Flushing, thence to Westchester County, New York, and the adjacent islands of Connecticut, and then northward between the Dutch setthements along the Hudson and the English in New England, even into Vermont, while some thigrated as far north as Canada. Aaron W. Pewell read a paper on "What Friends have done for the World," and Marianna W. Chaptean de vered an address on "The Position of Women in the Society of Friends." The exerwith the reading of a poem by Mary S. Kinder a The Old Friends Meeting House.

The Manage of the London Yearly Meeting were held in the third and fourth weeks in May. Connected with them were home and foreign mission meetings and neetings in support of temperance, against viviscetion and the opium trade, in the interests of education or of special schools, and the annual meeting of the Friends Provident Solety. The statistical reports

showed that the society in England and Scotland included 16,400 members, showing an increase of about 40-less than recent averages-and in Ireland 2,600. The names of 337 "recorded ministers" were returned as entered on the rolls. The Yearly Meeting in Dublin is independent, but sends representatives to the London meeting. The meeting was visited by representa-tives of American Friends' traveling ministers who had been laboring in different parts of the world, and by a deputation returned from Russia, where the members had had private interviews with the Czar and Czarina on the subject of religious liberty. The reading of the report of marriage statistics was followed by expressions of regret that the marriage ceremony of the society was not universally made use of by the members, and was but little sought by others, to whom it is freely open. A question arose concerning the appointment of the committee of selection, or of a committee to whom is intrusted the duty of naming the persons to be assigned to important services. The present method of naming the committee in open meeting was held liable to lead to one-sided committees by enabling those who are readiest in suggestion and speech to forestall their more deliberate brethren. It was proposed to have the representatives from the various districts appoint the committee. In the discussion concerning the society's schools, the subject of the higher education of women was most prominent. The opinion was generally expressed that the best way of meeting the want of a special woman's college would be to establish a hall of residence and tuition attached to some college, as Dalton Hall, for young men, is attached to Owen's College, Manchester. In the discussion of the state of the society desires were expressed that Friends should not purchase effectiveness in mission work at the cost of lowering the standard of the ministry, lest in the desire for readiness and for quality, and to meet a demand for words, it should lose spontaneity and inspiration. The relations of the London Yearly Meeting to American Friends have in recent years become somewhat delicate, in consequence of the assumed departures from the old usages which have been tolerated in some of the larger yearly meetings with which this body has been accustomed to correspond. The question which of the American separated bodies should be recognized in the annual letter was the subject of debate, and the meeting decided "to write to the smaller conservative bodies, sometimes named after the Rev. John Wilbur, as well as to the more numerous evangelical bodies, some-times called after Joseph John Gurney." This action, according to Rufus M. Jones, editor of the "American Friend," is regarded as a step toward the obliteration of differences in the fuller light of the unity of truth and the oneness of the head of the Church. Among other subjects discussed were the report of the Opium Commission; slavery, with especial reference to Zanzibar; the education of new members-such as the workingmen who are joining the society from the adult schools—in Quaker principles and methods of thought and feeling; and birthright membership.

A conference of British Friends was held in

London, in November, to consider the attitude and relations of members of the body toward modern conditions. One day's session was given to the discussion of the bearing of social questions. The training given by Friends in their business meetings was held up as the best for qualifying men for the conduct of public affairs, inasmuch as it inculcates and exemplifies prudence, courtesy in difference, deference to the opinions and feelings of others, and reliance on rational conviction rather than on forcing conclusions. Quaker methods were mentioned as a good antidote for the prevailing disposition to haste; and "another thing that entitled Friends to deal with social questions was the stress they were accustomed to lay upon the spirituality of true religion." A discussion of the topic " Modern Thought and its Results upon Quakerism called out a variety of expressions of opinion.

The discussion chiefly related to the authority of the Scriptures and the tendency and results of the "higher" biblical criticism; while the modern developments of aestheticism, historical criticism, and the evolution of thought, meluding religious thought, were touched upon. In the consideration of the topic of "The More Effective Presentation of Spiritual Truth," the unprofessional character of the Friends' ministry was pointed out as involving a weak coint in the Quaker system, inasmuch as it does not demand education, and the ministers may fail to meet the demands of thoughtful minds among the younger men and women; and the desirability was suggested of finding means for giving better-grounded training to those who intend to serve as preachers, without incurring the danger of raising up a separate, semiprofessional ministerial class,

G

GEORGIA, a Southern State, one of the original thirteen, ratified the Federal Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890. Capital, Atlanta.

Government,-The following were the State ers during the year; Governor, William Y. Atkinson, Democrat; Secretary of State, Allen D. Candler; Treasurer, Robert U. Hardeman; Comptroller General, William A. Wright; Attorney-General, Joseph M. Terrell; Adjutant General, J. McIntosh Kell; Commissioner of Agriculture, Robert T. Nesbitt; School Com-missioner, S. D. Bradwell—all Democrats; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin and

Spencer R. Atkinson.

Valuations.—The assessed valuations of taxable property in the State in 1894 were: Real estate and railroad property, \$285,613,778; personal property, \$143,399,145; total, \$429,012,923. This does not include the property of railroads that is exempt by their charters from ad valorem taxation, estimated at about \$20,000,000. The tax rate was \$4.37 per \$1,000. In 1892 taxable property reached its highest valuation in the history of the State—\$463,753,534, when the tax

rate was \$4.85 per \$1,000.

Finances.—The balance in the treasury Oct.

1, 1893, was \$1,139,837.45. The receipts during the following year were \$2,789,595.05, and the total payments by the treasurer \$3,100,798.94. leaving a balance in the treasury Oct. 1, 1894, of \$328,633.56. The recognized bonded debt was \$8,154,500, comprising \$8,149,500 in interest-bearing bonds and \$5,000 in past-due noninterest-bearing bonds, the sinking fund held \$200,000, making the net debt \$7,954,500. The State owns the Western and Atlantic Railroad, extending from Atlanta to Chattanooga, Tenn., and has leased it to the Nashville, Chattanooga and St. Louis Railroad at an annual rental of \$420,012.

Outstanding bonds fall due as follows: July 1, 1896, \$542,000 (funding, 1876); Jan. 1, 1922, \$207,000 (redemption, 1892); July I, 1915, \$3,-392,000 (refunding, 1884); Jan. 1, 1896–1916, \$1,900,000 (refunding, 1887, \$100,000 payable annually); Jan. 1, 1917–35, \$1,813,000 (refunding, 1889); and various times in 1933-'42, \$275,-000 (State University bonds).

Banking .- According to the last published report of the United States Comptroller of the Currency, Georgia had on Oct. 31, 1894, 29 national banks in operation. The combined capital was \$3,816,000; amount of United States bonds held to secure circulation, \$1,107,000; excess beyond requirement, \$328,000; amount of coin and coin certificates held, \$519.314.90; notes issued for circulation, \$9,935,630; redeemed, \$8,735,-926; outstanding, \$1,199,704; and loans and discounts, \$8,168,018. The State banks numbered 77, and had total capital of \$8,340,468; resources, \$24,435,397; deposits, \$11,764,466; and surplus and undivided profits, \$2,434,196, There were 12 savings banks with capital of \$717.327 : resources, \$2,322,779 : savings deposits, \$836,823; deposits subject to check, \$468,100; and surplus and profits, \$211,110. There were also 3 private banks with capital of \$185,000; resources, \$632,412; deposits, \$213,-712; and surplus and profits, \$154,741.

Rallroads,-On Dec. 31, 1893, Georgia had a single-track railroad mileage of 5,083-02; during 1894 three lines constructed 30 miles of new track; making the total mileage on Dec. 31, 1894, 5,113:02. The roads were operated on a capital of over \$68,500,000; had a funded debt exceeding \$87,000,000, and a total investment of over \$172,500,000; and had expended for road-bed and equipment nearly \$157,500,000.

The Northeastern Railroad of Georgia was put up at auction April 16, and bid off by the State for \$100,000. The Georgia Central Railroad was sold, Oct. 7, for \$2,000,000 to representatives of the Southern Railway Company, which in June had secured control of the Georgia Southern and Florida, running from Macon to Palatka, Fla., 285 miles. The Marietta and North Georgia mas sold, Nov. 25, for \$956,000 to the Phila-

delibbia Car Trust Company,

Manufactures,-In the fiscal year ending June 30, 1894, the collection of internal revenue aggregated \$413,287.44 from the following surges: Distilled spirits, \$315,661.39; tobacco, \$15,196,59; fermented liquors, \$75,639,23; oleomargarine, \$4,770; and penalties, \$2,020,23. The same sources yielded a total of \$393,417.72 in the fiscal year ending June 30, 1895.

The number of tobacco factories in 1894 was 66, which had a total output of 5,073,252 eigars; and of grain, molasses, and fruit distilleries, 268, of which 251 were in operation, producing 287,517 gallons of distilled spirits and 78,407

barrels of fermented liquors.

A census of the cotton and woolen manufacturing interests of the Southern States, in April, 1895, showed that Georgia had 73 mills, operating 668,578 spindles, 15,237 looms, and 1,809 cards. The largest plant in the State, and till recently the largest one in the South, was at Columbus, and had a capital of \$1,250,000 There were 2 mills, both and 46,600 spindles. in Augusta, capitalized at \$1,000,000 each. Another mill had a capital of \$600,000; 2 had \$500,000 each; 1 had \$400,000; 1 each had \$300,000, \$262,000, \$250,000, and \$225,000; 2 had \$200,000 each; and 16 had from \$157,500 to \$100,000 each. The smallest capital reported was \$15,000.

Manufacturers' Association .- An association of the manufacturers of the State was formed May 7, the purposes of which are set forth in the resolutions adopted, namely:

Collection, compilation, and distribution of reliable statistics and special information regarding the progress and possibilities of manufacturing in Georgia.

Education of the producer to an intelligent knowledge of the fact that the manufacturer is not, as the politician teaches, his enemy, but a friend who develops a home market for his product.

Equitable adjustment of freight and insurance

Enactment of just and liberal laws for the protection of both private and corporate capital, and for the promotion of manufacturing in the State.

Promotion of a patriotic spirit among our people that shall encourage them to patronize home indus-

Live Stock,-In January, 1895, the United States Department of Agriculture estimated the number and value of farm animals in the State as follows: Horses, 107,044, value \$5,458,470; males, 161,204, value \$10,470,828; milch cows, i, value \$4.811.417; oxen and other cattle, 557.645, value \$4,505,380; sheep, 402,946, value \$547 530; and swine, 1,934,892, value \$6,885,119; to's value, \$32,669,744,

Gold Mining. - A few years agoseveral wealthy men from the North made extensive investments in the fall major of Dahlonega, and by taking advantage of he war seeses they have reaped a good profit from the low-grade ores which are practically in charstole in this part of Georgia. then the mes are at work within six miles from Dahlanga These who have the capital for an imprevel emprent can mine the ore and deliver it into the in its at a cost of 25 cents alon

Education .- The total enrollment in 1893 in the public schools, including those coming under local systems, was 436,682, an increase over the preceding year of 21,035. The total average attendance was 262,140, an increase of 16,762. The number of teachers was 9,033, an increase The school fund in 1893 was \$1.058. 532.52.

The State Normal School, near Athens, enrolled 175 students during the session of 1894, among whom 51 counties were represented. The average daily attendance was 125. The session lasted only eight weeks, beginning July 5. In April, 1895, it was formally opened as a permanent normal school, the Legislature having appropriated \$20,000 for two years for running expenses. (See "Annual Cyclopædia" for 1893, page 339.) Rock College, as the building now used by the Normal School is called, is on an eminence 750 feet above the sea level between the Oconce river and the Blue Ridge. It was built in 1859 as a place for instruction of the undergraduates in the sophomore and freshman classes of the University of Georgia. But it was long since discontinued in that use and turned over to the Agricultural College. The degree of Licentiate of Instruction is to be conferred upon graduates.

The total attendance at the State University. at Athens, in 1894-'95 was 246; and the total number, including those at other institutions established by the State and made branches of the university, was 1,542. These institutions are: The North Georgia Agricultural College, the South Georgia and the Middle Georgia Military and Agricultural Colleges, the West Georgia Agricultural and Mechanical College, the Georgia School of Technology, the Georgia Normal and Industrial College, the State In-dustrial College for Colored Youth, and the

State Normal School.

The failure of the Legislature to provide suitably for the Technological School led to the

resignation of its president.

Mercer University, at Macon, had enrolled in 1894 students to the number of 252, including the preparatory, theological, and law departments. By a decision rendered in December the university receives \$13,000 from the Cheney estate in addition to the \$30,000 not disputed by the relatives. Emory College, at Oxford, had 256 enrolled, including a subfreshman class of 46. The income from endowments during the year 1892-'93 was \$9,637, and that from tuition fees \$8,871. There would have been a deficit of \$6,516 if salaries had been paid in full, but the professors made up the shortage by accepting reduced salaries.

State Institutions,-In the State Lunatic Asylum, at Milledgeville, the average number of patients during the year ending Sept. 1, 1894, was 1,709. Of those present during that time 127 were discharged restored and 7 were discharged improved, while 162 died. The expenditures for eleven months amounted to \$185,598.85. The total cost per capita per diem was 32.42 cents.

The School for the Deaf at Cave Spring had in 1893-'94 130 pupils, with 7 teachers. cost of support was \$18,854.71. In addition to the usual school instruction the girls are taught to sew, and the boys learn shoemaking. shoe shop had a balance in its favor for the year of \$285.38. The State maintains and instructs the pupil for seven years without charge, and in case of need supplies clothing. All are furnished with shoes from the shop free of cost.

Silver Convention .- A convention held at Griffin, July 18, for the purpose of taking action favorable to the restoration of silver, was attended by nearly 5,000 people, and included delegates from every senatorial district in the State. Great enthusiasm was shown, and the resolutions passed at the Bimetallie Convention at Memphis in June were adopted, together with others having in view the organization of

clubs in every county and district of the State.

A Negro Exodus.—The Danish steamer was chartered by the International - Homa Immigration Society to take to Liberia a com-pany of about 200 negroes who gathered at Sa-vannah in March, to form an African colony. In making the selections only men of good physical condition were permitted to join. narried men were accompanied by their wives and families, and the society made arrangements to give the unmarried colonists 10 acres of land and the married ones 25 acres upon their arrival in Liberia. The Liberian Government will shelter the colonists for three months, until they

have built their own houses,

Lawlessness. - A race war, so called, broke out in Brooks County in December, 1894. The trouble began with the killing of Constable Maulden while he was on business connected with his office, by two brothers, negroes. Promineut among those who assisted in arresting the murderers was Joseph Isham; and a plot was formed among their friends, who formed themelves into a band to take revenge upon Mr. Isham. He was shot by a gang of 5 negroes in the highway near his house in the vicinity of Quitman. Three of the 5 were captured; but the one who fired the first shot, which was fatal, escaped. The search for him excited the negroes of the neighborhood, who banded together threatening not only to prevent his capture, but also to release the 3 prisoners from jail. A company of white men gathered to oppose them and to hunt for the murderer. The murdered man's father-in-law urged them to turn the negro over to the officers if he should be caught, and allow the law to take its course; and they sent a message to the blacks promising to do so if they would give him up. The proposition was rejected, and the whites began a search for the man, in the course of which they killed his stepfather, his brother, and another negro, and beat most cruelly a woman who was suspected of knowing where the murderer was hidden. The excitement grew until whites and blacks were gathered into two armed mobs of several hundred men each. The situation was so serious that the Governor was appealed to and ordered the Paldosta Videttes to the scene, and in a short time the trouble was over.

This account, gathered from reports of newspaper correspondents who were on the field, is contradicted by a statement given out Dec. 27, by the Board of Commissioners of Brooks County, in which they say: "There has never been any race riot in our county; the negroes have never been under arms; and the whole trouble has been caused by about 25 white men, not over 4 of

whom lived in Brooks County."

About the same time great excitement was caused in Augusta by a mob, said to be 1000 strong, which gathered about the jail where a negro was confined who had murdered another negro, and in resisting arrest had shot a detertive and a policeman, both, it was supposed, fatally. During the riot that followed over the shots were fired. One other man, a speciator, was shot and killed. The crowd were finally induced to give up their purpose to lynch the mur-

It was necessary to call out militia to quell a riot that arose in Savannah, in February, in consequence of a lecture announced to be given at Masonic Hall by an ex-priest. In the course of the riot, stones and bricks were thrown into the hall, and attempts were made the next day to burn the building. Four buildings in the city were blown up during the night, but there seemed to be no evidence to sustain the charge

that this was done by the rioters,

Legislative Session .- The Legislature adourned, Dec. 11, after a session of fifty days, In accordance with an act passed in 1893, a commission has been at work for nearly two years codifying the laws of the State. The recent Legislature passed an act providing that, as the work of the commission would have finished its work before the next session of the General Assembly, and as under the original act its work must be accepted by the Legislature, a committee be appointed to examine the work and report to the next General Assembly,

The Governor sent a special message to the Legislature in reference to the crime of lypching, from which the following are extracts:

Information reached me that there were in Service County two parties charged with murder who had not been arrested, although the sheriff had in his hands a warrant charging them with the afteresand offense. These men were reported to be armed and ready to resist any effort that might be made to bring them to trial for the offense charges! I offered a reward of \$500 for their arrest, and wrote the sheriff of the county, calling his attention to the fact that it was his duty to arrest them, and requested that he summon a posse comitative and execute the warrant in On Nov. 14 the shend write to me. his hands. his hands. On Nov. 14 the sherriff whole to me. "I summoned a posse of 38 men to meet me this merning. Out of 28, 3 respended to the summons. I went with the 3 men and searched the premises, but they could not be found. Where they are I am not able to say, as I could learn nothing from the family I am informed that on this day the deferdants were seen bird hunting in the counts of Server. There is no penalty attached for failure to respend to the a should to act as a posse constitue. This statement of facts, without argument, justifies me in recommending :

1. That a law by enacted that will provide a penal-In for failure to obey the summons of a shoriff to set

as a posse countains.
2. That it be made the duty of the Solicitor-General, in every case where he has reason to believe that an arresting officer has failed to make an arrest when it was to his power to do so, to draw a rule son against him, so that if the facts on trial warrant it be may

be punished.

During the present session of the General Assembly there have been reported 5 lynchings one in Clinch County, one in Montgomery, and one in Dooly you may fully appreciate the enormity of the wood done by so-called lynch law to the reputation of the State, to civilization, and to the rights of man, I in the you to inquire into each case of the recent cases which

has moved me to pen this communication. The could be the mob in each case is unjustifiable, disera stal, and shocking, but in one of them the wrong done a as especially horritying. While I was en-gaced in writing this message, there came into my order, asking that he be accorded a trial in our courts, a man who had fled from an angry mob which endear and to capture and lynch him.

If the measures herein and heretofore suggested by me do not meet with your approval, I most carnestly ask that you devise others, and enact them into law.

Political.-County elections were held in January, resulting in gains for the Democrats, who elected their candidates in some counties considered heretofore as Populist strongholds, The Populists gained in Washington County. The Republicans elected their candidates in Pickens and Fannin Counties. There will be no more county elections in January, the Legislature having passed an act uniting them with the October elections.

The new election in the Tenth Congressional District (see "Annual Cyclopædia" for 1894. page 313) resulted in the election of the Democratic candidate, Mr. Black, by a majority of Only 19,022 votes were cast, against 34,-

440 in Nov., 1894.

The People's party held a convention at the capital, Dec. 18, and chose delegates to the National Convention of the party. It was decided to recommend to that convention the platform

that includes these principles:

Direct issue of all money by the Government; abolition of banks of issue; no more bonds to be issued except in refunding those of the Government now outstanding; silver and gold to be coined upon equal terms at a ratio of 16 to 1; the volume of currency to be increased to not less than \$50 per capita; Government revenues to be raised by a graduated tax upon incomes and by a tariff tax upon luxuries of life, the necessaries of life to be placed upon the free list, and the internal-revenue system to be abolished: Government ownership of railroads, canals, the telegraph, and the telephone; alien ownership of land to be prohibited; and United States Senators to be elected by direct vote of the people.

GERMAN EVANGELICAL SYNOD. This body returns for 1895-839 ministers, 1,075 congregations, 185,203 persons having received the communion, and \$1,091 pupils in Sunday schools. The year's profits of the publishing house are reported as having been \$25,000. More than 80 congregations received aid from the Home Mission fund. A foreign mission is sustained in India, which is represented as making steady Orphan asylums, two of which are contacted with a home for old people, are sustained at Detroit, Mich., Bensenville, Ill., and Hoveston, Ill. The triennial General Confercan of the Church met in August. Its principal age related to the appointment of a Professor of the English Language at Eden College; the erestion of a banding at St. Louis, Mo., for the Eden Publishing House; the erection of an addepenal tentifies for Elimburst College, Illinois; and the publication of the weekly journal "Friedenshot," the organ of the synod.

GERMANY, an empire in central Europe under a federal Covernment. The King of Prussia as German Emperor has supreme charge

of political and military affairs, with power to enter into international treaties and to make war if the empire is attacked, but he must have the consent of the federal legislative authorities if the war is not purely defensive. The legislative bodies are the Bundesrath and the Reichstag. The acts upon which they agree become law on receiving the assent of the Emperor and being countersigned by the Chancellor of the Empire. The Bundesrath consists of 58 members, appointed by the governments of the federal states, the Kingdom of Prussia having 17 seats, Bavaria 6, Saxony 4, and Würtemberg 4: the Grand Duchy of Baden 3, Hesse 3, Mecklenburg-Schwerin 2, and Saxe-Weimar, Mecklenburg-Strelitz, and Oldenburg 1 each; the Duchy of Brunswick 2, and Saxe-Meiningen, Saxe-Altenburg, Saxe-Coburg-Gotha, and Anhalt 1 each: and the principalities of Schwarzburg-Sonders-Schwarzburg - Rudolstadt, hausen, Reuss-Greiz, Reuss-Schleiz, Schaumburg-Lippe, and Lippe, and the free cities of Hamburg, Bremen, and Lübeck each 1. The Reichsland of Alsace-Lorraine is not represented in the Bundesrath, but sends 15 members to the Reichstag, which has 397 members altogether, of whom 236 represent Prussia, 48 Bavaria, 23 Saxony, 17 Würtemberg, 14 Baden, 9 Hesse, 6 Mecklenburg-Schwerin, 3 Saxe-Weimar, Oldenburg, Bruns-wick, and Hamburg, 2 Saxe-Meiningen, Anhalt, and Saxe-Coburg-Gotha, and a single member each of the other states. The Reichstag members are elected by universal male suffrage and by secret ballot for five years, the proportion being about 1 to 124,500 of population. The Reichkanzler or Chancellor of the Empire presides over the Bundesrath.

The German Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III, whom

he succeeded on June 15, 1888.

The Reichskanzler in 1895 was Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The imperial ministers were: Foreign Affairs, Freiherr A. Marschall von Bieberstein; Interior, Dr. Karl Heinrich von Bötticher; Marine, Vice-Admiral Hollmann; Justice, A. Nieberding; Treasury, Graf A. von Posadovsky-Wehner; Railroads, Dr. Schulz; Post Office, Dr. von Stephan; Court of Accounts, Privy-Councilor von Wolff; Invalid Fund, Dr. Rösing; Railroad Administration, Herr Thielen; Imperial Bank, Dr. Koch; Debt Commission, Privv-Councilor Meinecke. Prince Hohenlohe was President of the Prussian Council of Ministers, Dr. von Bötticher was Vice-President and Minister of State, and Herr Thielen was Minister of Public Works. The other Prussian ministers were: Interior, Herr von Köller; War, Gen. Bronsart von Schellendorf; Agriculture and Domains, Freiherr von Hammerstein-Loxten; Justice, Dr. Schönstedt; Ecclesiastical Affairs, Education, and Public Health, Dr. Julius Robert Bosse; Finance, Dr. Johannes Miquel; Commerce, Freiherr von

Area and Population.—The area of the empire is now computed to be 208,670 square miles. The population at the taking of the last census on Dec. 2, 1895, was 51,758,364, showing an annual gain of 91 per cent. since 1890, when the population was 49,428,470, consisting of 24,-230,832 males and 25,197,638 females.

annual rate of increase for the preceding five years was 107 per cent., as compared with 13 per cent, for the whole period since 1816. number of foreigners was 518,510, of whom 207,- 135 were Austrians, 56,437 Netherlanders, 53,
 227 Russians, 41,613 Swiss, 32,130 French, 23, 439 Danes, 15,748 English, 14,615 Scandinavi-ans, 12,080 Italians, 12,704 Luxemburgers, 10,-213 Belgians, 3,242 others Europeans, 17,646 citizens of the United States, 6,068 other Americans, 5,371 Asiatics, Africans, etc., and 5,842 of unknown origin. The number of marriages in 1822 was 398,775; of births, 1,856,999; of deaths, 1,272,430; excess of births, 584,569. There were 954,743 boys born and 900,253 girls. The number of emigrants in 1893 was 87,677, compared with 116.339 in 1892; the destination of 78,245 was the United States, while 1,173 went to Brazil, 7,266 to other countries in America, 586 to Africa, 146 to Asia, and 261 to Australasia. total emigration since 1820 had been 5,700,000, of whom 2,292,496 crossed the sea since 1870. Of the total number about 4,000,000 went to the United States. The number of Austrians, Russtans, and other emigrants who took ship at Hamburg and Bremen in 1893 was 98,288. Berim on Dec. 2, 1895, had 1,674,112 inhabitants, an increase of 95,318 since 1890. The suburbs increased more rapidly than the city. The population within the corporate limits of the other principal cities was in 1890 as follows: Munich, 350,594; Leipzig, 357,122; Breslau, 349,-024; Hamburg, 323,923; Dresden, 289,544; Cologne, 281,681; Magdeburg, 202,234; Frankfort, 179,985; Hanover, 174,455; Königsberg, 161,666.

Finances.-The ordinary revenue for 1895 was estimated in the budget at 1,154,899,000 marks, and the extraordinary revenue at 130,-275,000 marks; total, 1,285,174 marks (1 mark = 23 82 cents). The receipts from customs and excise were estimated at 621,936,000 marks; stamp duties at 34,045,000 marks; postal and telegraph revenue, 28,404,000 marks; printingoffice profits, 1,437,000 marks; net revenue from railroads, 23,081,000 marks; from the Imperial Bank, 7,245,000 marks; from the departments, 12,339,000 marks; interest of invalid fund, 27,-258,000 marks; interest of Imperial funds, 46,-000 marks; various receipts, 1,400,000 marks; contributions of the federal states, 397,508,000 marks. The ordinary recurring expenditure for the year ending March 31, 1895, was estimated at 1,079,948,000 marks, and the nonrecurring and extraordinary expenditure for military and other purposes at 206,598,000 marks; 1,286,546,000 marks. The gross receipts from posts and telegraphs were 270,768,400, and expenses 242,364,383 marks; the gross receipts of the printing office were 6,242,000, and expenses 4,805,200 marks; the gross receipts of the railroads 62,460,000, and expenses 39,378,900 marks. Of the recurring expenditure, 360,528,000 marks were for the imperial treasury, 480,022,000 marks for the army, 71,740,000 marks for interest and sinking fund of the debt of the empire. 50,696,000 marks for the navy, 48,245,000 marks for the Pension fund, 27,258,000 marks for the Invalid fund, 27,223,000 marks for the Interior Department, 10,304,000 marks for foreign affairs. 612,000 marks for the court of accounts, 2,066,-000 marks for justice, 423,000 marks for the

Reichstag, 322,000 marks for reform of the applications and 153,000 marks for the Imperial Chamellers. The total ordinary expenditure for military and naval purposes in 1895 was 588-047,000 marks and 696,000 marks in 1893,531,986,000 marks in 1894,548, 696,000 marks in 1893,531,986,000 marks in 1892, and 487,845,000 marks in 1891; the extra relinary expenditure for defense was 96,960,000 marks compared with 161,820,000 marks in 1894, 118–395,000 marks in 1893, 119,925,000 marks in 1892, and 303,397,000 marks in 1891. The delif charge has increased from 48,274,000 marks in 1891 to 55,807,000 marks in 1892, 58,711,600 marks in 1893, 66,986,000 marks in 1894, and 71,740,000 marks in 1895.

The funded debt of the empire on March 31, 1893, amounted to 1,740,842,500 marks. The first loans, amounting to the neminal sum of 450,000,000 marks, were contracted at 4 per cent, after which 760,842,500 marks were raised at 3½ per cent, and old debts were funded and new obligations issued under acts passed in 1890, 1891, and 1892 to the amount of 530,000,000

marks bearing interest at 3 per cent.

The amount of the several reserve funds in April, 1893, was as follows: Invalid fund, 457, 775,275 marks, besides 3,297,625 floring and 6,818,160 marks in cash; Reichstag building fund, 9,956,800 marks; war treasure, 120,000,000 marks.

The following table gives, in marks, the budgets of the different German states for 1855, er in the case of some of them for 1854, and the state of their debts:

Mana of the states have property effecting, and in some cases exceeding the debt. Anhalt has property of the value of 6.746,528 marks. The debt of Baden was incurred solely for railroad construction, and the railroads pay more than the interest. Of the Bavarian debt 983, 460,400 marks were put into railroads. The debt of Bremen is represented by railroads and harbor improvements yielding revenue enough

to extinguish the obligations at a rapid rate. Of the debt of Brunswick 80 per cent, was contracted in order to build railroads. The debt of Hamburg was incurred mainly for public works, from which, next to direct taxes, the largest revenue is obtained. Of the debt of Hesse 35,-345,020 marks are railway debt, and against the rest are held 4,166,503 marks of active funds. In Lippe, where the revenue comes from the land. which is the property of the prince, the debt is less than the active funds. The debt of Mecklenburg Schwerm is more than covered by productive funds. The budget given includes only that part of the grand-ducal revenue that is applied to public purposes, not the separate revenue of the grand duke, amounting to 17,390,000 marks a year. In Mecklenburg-Strelitz the administrative expenses are paid out of the privy purse of the grand duke, and no public accounting is made. Most of the debt of Saxe-Meiningen is covered by productive capital; two thirds of the revenue of Saxe-Altenburg and one third of that of Saxe-Meiningen is the usufruct of ducal estates now applied to public purposes. Saxe-Weimar gets a large part of the revenue from the state forests. The budget of Saxony includes 21,690,700 marks of extraordinary revenue used for extending the public works; the kingdom obtains more than half its revenue from state forests, domains, and railroads, the latter yielding a net income of 30,636,535 marks in 1894. Of the debt of Würtemberg 405,242,-000 marks were contracted for railroads, from which the state derived a net profit of 11,377,-442 marks in 1892. The Prussian revenue is derived from the following sources: Domains and forests, 86,191,474 marks; direct taxes, 194,422,-000 marks; indirect taxes, 71,221,000 marks; lottery, 79,266,500 marks; marine bank, 1,876,-000 marks; mint, 353,650 marks; mines, iron furnaces, and salt works, 128,188,972 marks; state railroads, 963,751,676 marks; finance adminis(ration, 335,553,367 marks; Ministry of Justice, 60,913,300 marks; Ministry of the In-terior, 11,075,890 marks; Ministry of Agricul-ture, 3,855,512 marks; Ministry of Public Instruction, 3,080,890 marks; other departments, 9,899,160 marks. The expenditure is distributed as follows: Working expenses of the domains and forests, 41,198,090 marks; of the finance administration, 119,319,590 marks; of the administration of mines, etc., 111,916,732 marks; of the alumnstration of railroads, 595,996,943 marks; supplement to the King's revenue from the royal trust funds, 8,000,000 marks; public ber 252 300,810 marks, being 241,876,534 marks for others, 37,934,067 marks for amortization, 1.442 756 for annumities, and 1.057,453 for adannual of the marripular contribution to impet a vy- with its , 247,986,090 marks; appanages, itmes fores, and in lemnities, 105,316,343 marks; Herr phalis 179 680 marks; Chamber of Depu-1 ... 1.201 540 marks; Ministry of State, 6,204,-6 2 marks. Monstry of Foreign Affairs, 538,000 marks, Ministry of Ulmance, 72,762,679 marks, of which 43 007 904 are for evil pensions and rewards, 7 (66,100) marks for the widows' fund, 19,520,000 marks for presidences and governments, 8,810,000 marks for the general funds, and 1.948,775 for administration and other expenditure; Ministry of Public Works, 22,376,-

640 marks; Ministry of Commerce and Industry, 6,618,077 marks; Ministry of Justice, 91,913,200 marks; Ministry of the Interior, 53,055,094 marks, of which 22,516,456 marks are for police, 10,716,970 marks for gendarmerie, 9,122,-016 marks for houses of correction, and 10,699,-652 marks for administrative and other expenses; Ministry of Agriculture, Domains, and Forests, 17,229,607 marks, of which 4,722,100 marks are for the stud; Ministry of Worship and Public Instruction, 105,843,809 marks, of which 80,439,883 marks are for public instruction, 10,819,451 marks for expenses common to worship and instruction, 2,987,425 marks for evangelical worship, 2,604,789 marks for Catholic worship, 4,061,591 marks for science and the fine arts, 1,983,398 marks for medical affairs, 1,675,024 marks for technical instruction, and 1,322,248 for other expenses; administration of the arsenal, 128,122 marks. The total ordinary expenditure is 1,891,612,410 marks, and the extraordinary expenditure is 58,036,981 marks, of which the chief items are 20,865,000 marks for railroads, 16,235,490 marks for other public works, 4,707,200 marks for justice, 4,373,575 marks for worship, 4,270,359 marks for agricul-ture, and 4,474,047 marks for finance. The Prussian debt consists of 3,592,667,850 marks of consols paying 4 per cent, interest, 1,916,883,950 marks paying 3½ per cent., 635,000,000 marks paying 3 per cent., 170,075,535 marks of shares and loans of railroads bought by the state, 35,-089,800 marks of treasury bills, and some old

The Army .- Every able-bodied German, unless exempted by lot, is called into the active army at the age of twenty. The military law of 1893, adopted for the period ending March 31, 1899, reduced the time of active service to two years in the infantry, leaving it still three years in the cavalry and field artillery. This added about 60,000 men to the annual contingent. Young men who have reached the highest grade in a gymnasium or a realschule, if they equip and board themselves, can fulfill their military duty by serving a single year. From these one-year volunteers, of whom there are about 8,000 every year, are taken many offi-cers of the Landwehr. These volunteers are not counted in the peace effectives. Roman Catholic priests are inscribed in the depot reserve. and are not obliged to train. Natives of Heligoland are exempt from military duty by treaty; but those born after the cession of the island to Germany, Aug. 11, 1890, will have to serve. Schoolmasters are required to serve in the active army only ten weeks. After the two or three years of service with the colors the re-crnits return to civil life, except those who adopt the military profession and are re-engaged as noncommissioned officers. When these men become too old for the service, they frequently obtain civil employment on the railroads, or as forest rangers, or the like. time-expired soldiers are enrolled for three years in the regular army reserve, and then pass into the Landwehr, where the term of service is five years in the first and seven years in the second bans for the men who have served two years as infantrymen, engineers, foot artillerymen, etc.; but those who have served three years in the permanent army remain only three years in the first ban. The military law of 1893 fixed the mean annual peace effective at 479,229 men. This limitation, however, has not been observed. The actual strength in 1895 was 22,534 officers and 562,014 men, with 96,844 horses. The army is organized in 20 corps, consisting of 173 regiments of infantry, 19 battalions of Jägers, 93 regiments of cavalry, 43 regiments, with 494 batteries, of field artillery, 17 regiments of foot artillery, and 23 battalions of pioneers, besides 3 regiments and 2 battalions of railroad troops. There are 288 district commands of Landwehr. The strength of the different arms, including the armies of Bavaria and Würtemberg—which, though separately organized, form a part of the German army under the supreme command of the Emperor-King as war lord—is shown in the following table:

TROOPS.	Officers.	Men.
leastry	11,774	863,750
Jagers	410	12,006
District commands	7490	5,95/2
Sergeons, Instructors, etc	2.671	2,716
Prest artillery	2,872	66,008
Foot artillery	-69	23,073
Passers	728	19,189
Train	805	7,396
Special formations	461	2,579
staff and special details	2,264	287
Total	22,534	562,014

The war strength of Germany, with her present organization, is estimated to be 3,000,000

instructed soldiers.

The Navy. - In accordance with the programme of construction adopted in 1889, 4 first-class battle ships, of 9,840 tons ("Kurffirst Friedrich Wilhelm," "Weissenburg," "Brandenberg," and "Worth"), were launched in 1891 and 1892. They have steel hulls with double bottoms and 130 water-tight compartments, are protected by a complete belt of 154-inch compound armor, 9,500 indicated horse power, a speed of 16 knots with natural draught, and are armed with 6 11-inch guns mounted in a strong barbette, besides 16 4-inch quick-firing guns, 8 of ‡-inch caliber, and 7 torpedo ejectors. A fifth vessel of this class ("Ersatz Preussen") is under construction. Of the projected 10 armor clads, of 3,500 tons, for coast defense, 6 were completed before 1895 ("Siegfried," "Beowulf," "Frith-jiof," "Hildebrand," "Heimdal," and "Hagen"), and 2 are under construction. Each of these essels has a normal speed of 16 knots and carries 3 94-inch breech-loading guns and 6 ‡-inch quick-firers. Of the 8 corvette cruisers that were in the programme, only the "Kaiserin Augusta" has been built as originally planned. She is a triple-screw steamer of 12,000 indicated horse power, capable of steaming 22 knots, hav-ing a displacement of 6,052 tons, and armed with 12 6-inch Krupp guns, 8 quick-firing guns, and 4 torpedo tubes. The "Irene" and "Princess Wilhelm" are smaller and slower. There are 10 battle ships of the old fleet that are still effective, all built between 1874 and 1884, except the "König Wilhelm," of 9,600 tons, a broadside ship, with 12 inches of armor and 18 9'4-inch, 5 8'2-inch, and 6 5'9-inch guns. Two of them ("Kaiser" and "Deutschland") have a displace-

ment of 7,550 tons, 10 inches of side armor and 8 102-inch guns in a central batters, besides 1 8'2-inch gun and 7.59-inch guns; 4 (" Sachsen," "Baden," "Bayern," and "Würtemberg") have a displacement of 7,280 tons, 16-inch armor, and 6 102-inch guns mounted in barbettes, 4 41inch quick-firing guns; 2 ("Preussen "Friedrich der Grosse") have a displacement of 6,660 tons, 10] inches of side armor, and 4 10-2. inch, 2 66-inch, and 4 44-inch quick-firing guns; and I ("Oldenburg"), of 5,120 tons, has 12 inches of armor, and carries 8 9:4-inch guns. Every one of these vessels is fitted with 4 or 5 torpedo ejectors. Their speed varies from 13+ to 15 ejectors. Their speed varies from 137 to 15 knots. There are 11 gunbeats ("Basilisk," "Biene," "Camäleon," "Crocedil," "Hummel," "Mücke," "Natter," "Salamander," "Skorpion," "Viper," and "Wespe"), of 1,090 tons, having 8-inch armor, and carrying a single 35-ton or 11:8-inch gun. The Government has engaged 7 of the fleetest vessels of the Hamburg-American and North-German Lloyd packet lines to serve as auxiliary cruisers in case of war, and has provided for each of them 8 59-inch, 4 49-inch, vided for each of them 8 53-inch, 4 49-inch, and 4 quick-firing Krupp guns. There are 7 third-class cruisers ("Geflon," "Arcona," "Alexandrine," "Olga," "Marie," "Sophie," and "Freya"), of about 2,500 tons, and 7 fourth-class cruisers ("Seeadler," "Condor," "Cormoran," "Falke," "Bussard," "Schwalbe," and "Sperber"), of about 1,500 tons, the latter hasing powerful rams and 4 guns disposed fore and aft and on each broadside. A first-class crusser of 8,500 tons has been authorized, and 3 secondclass cruisers are to be laid down also. The chief naval stations are at Kiel and Wilhelmshaven, which are connected by the new North Sea Canal. The torpedo stations are Friedrichsort, Wilhelmshaven, Kiel, Cuxhaven, and Geestemunde. There are 114 first-class torpedo. boats and torpedo division boats, and 21 secondclass torpedo boats.

Commerce and Industry.—The total value of the special imports in 1893 was 4.134,070,000 marks, and the value of the experts of German products 3,244,562,000 marks. The following table gives the values, in marks, of the special imports and exports in 1893 of the vanous classes

of merchandise:

MERCHANDIEE.	Imperts.	Esperia.
Live animals	221,30A,000	75.844,000
Animal products	117, 1466, 1410	279,4692,69140
Articles of consumption.	1,004,723,000	\$640, F1.6, (600)
See de and plants	64,05,10,0600	800,004,0000
Fuel,	74,941,1410	3-80, 439,000
Fats and oils	244, 443, 4440	TEL 5-63, 0010

T 43/	4,134,070,000	8,244,562,000

The total area of Germany is 54,025,085 hectares, of which 26,311,968 are cultivated, 13,908,208 are forest, 10,914,570 are mendow, pasture, and waste, and 2,800,149 are roads, towns, etc. There are 5,276,334 farms, employing 8,120,518 and supporting 18,840,818 persons. The areas covered with various crops in 1893 were: Rye, 5,678,734 hectares; cats, 3,987,719; wheat, 1,975,652; barley, 1,690,096; potatoes, 2,929,808; hay, 5,862,717; vines, 118,252; hops, 43,434. The number of horses in 1892 was 3,817,939; cattle, 17,496,696; sheep, 18,775,063; hogs, 12,056,804; goats, 3,077,722. The quantity of sugar beets consumed in 1893 was 9,811,940 metric tons, producing 1,175,137 tons of sugar. The quantity producing 1,175,137 tons of sugar.

tity of beer brewed was 54,651,000 hectolitres, the product of 8,460 breweries. The coal output in 1893 was 73,909,000 tons. The product of pig iron in 1892 was 4,937,461 tons, valued at 229,296,000 marks; of manufactured iron, 5,130,891 metric tons were turned out, valued at 671,677,000 marks. The silver product was valued at 57,229,000 marks; zinc, 55,062,000 marks; copper, 24,758,000 marks; lead, 20,547,000 marks.

Navigation.—The merchant shipping of various nationalities that visited German ports during 1892 is shown in the following table, each vessel, though calling at different ports, being

counted only once:

	WITH	CARGOES.	IN BA	LLAST.
ENTERED,	Vessels.	Tonnage.	Vessels.	Tonnago.
German	40,954	6,812,825	7.726	639,580
British	4,868	8,945,963	251	262,166
Danish	4.675	772,815	1,286	96,885
Swedish	2,809	596,081	183	84,749
Dutch	1,105	194,148	192	19,455
Norwegian	1.047	483,080	61	26,957
Russian	567	167,785	10	2,781
Other foreign	238	189,968	5	8,840
Total	56,263	18,101,560	9,664	1,085,907

The number of vessels cleared and their tonnage are given according to their flags in the table below:

	WITH	CARGOES.	IN BA	LLAST.
CLEARED.	Versels,	Tonnage.	Vessels.	Tonnage.
German	37,617	5.865,757	10,802	1.545.979
British	2,900	2.044.805	2.192	2.146.125
Danish	8,881	689,769	2,149	224,856
Swedish	1,379	861,780	1,560	270,659

Russian	237	74,067	827	87,789
Other foreign	274	118,670	80	81,202
Total	47,756	9,549,567	17,825	4,559,898

The total number entered was 65,927, of 14,187,407 tons; cleared, 65,581, of 14,108,950 tons. The number entered at Hamburg was 8,829, of 5,683,353 tons; at Bremen, 3,095, of 1,358,191 tons; at Stettin, 3,762, of 1,233,541 tons; at Kiel, 3,611, of 591,680 tons; at Dantsic, 1,582, of 584,478 tons; at Lübeck, 2,425, of 516,963 tons; at

Königsberg, 1,330, of 397,556 tons.

The merchant navy in 1894 consisted of 2,713 sailing vessels, of 698,356 tons, and 1,016 steamers, of 823,702 tons; total, 3,729 vessels, of 1,522,058 tons. Of the sailing vessels 2,017, of 558,139 tons, belonged to North Sea ports, and 696, of 140,217 tons, to Baltic ports; of the steamers, 628, of 665,702 tons, belonged to ports of the North Sea, and 388, of 158,000 tons, to Baltic ports. Not included in these figures are the vessels engaged in the coasting trade and inland navigation, numbering 22,848 in 1893, of about 2,817,000 tons.

Railroads.—There were 27,439 miles of railroads in operation in 1894, all of which belonged to the Government, state or imperial, save 3,206 miles, and of these 296 miles were worked by the Government. The gross receipts for 1893 were 1,353,083,000 marks, and expenses 862,267,000 marks, leaving the net receipts 490,816,000 marks.

equal to 44 per cent, on the capital, which was 10.917,237,000 marks. The freight traffic for the fiscal year was 230,864,000 metric tons, paving 888,577,000 marks, while 854,793,000 marks were

taken in from 488,171,000 passengers.

Posts and Telegraphs.—The imperial post office in 1893 carried 1,094,333,514 letters, 385,-934,976 postal cards, 471,295,176 circulars, etc., 30,677,658 samples, and 808,257,036 newspapers. The total number of pieces was 2,878,996,588. The separate Bavarian post office handled 302, 872,489 pieces, and the Würtemberg post office 129,653,212 pieces. The amount of money forwarded was 18,016,532,164 marks in the imperial pestal district or 20,638,578,319 marks, including Bavaria and Würtemberg. The receipts of the imperial post office for 1894, both from mails and the telegraph service, were 256,466,749 marks, and expenses 239,776,366 marks, leaving a surplus of 16,690,383 marks, Including Bavaria and Würtemberg, receipts were 290,615,418 marks, and expenses 270,887,743 marks.

The telegraph lines of the imperial postal district had in 1894 a total length of 66,045 miles, with 245,017 miles of wires, The Bavarian telegraphs were 7,559 miles in length, with 23,404 miles of wire, and those of Würtemberg 2,955 miles, with 7,551 miles of wire, making the total length of lines for the empire 76,559 miles, and the length of wires 275,972 miles. The number of domestic telegrams dispatched by the imperial service was 19,592,554; in Bavaria, 1,719,-669; in Würtemberg, 610,518; total, 21,922,741. The number of foreign telegrams was 8,775,932 for the imperial postal district, 498,471 for Bavaria, and 167,072 for Würtemberg; total.

9,441,475.

The North Sea and Baltic Canal.—The only means of communication by water between the North Sea and the Baltic has hitherto been by the navigation of the Skager Rack and the Cattegat, round the peninsula of Jutland, with the exception of the old Eider Canal, which gave passage to small vessels only. The route round Jutland is dangerous, for the reason that the passage is not very wide and that the water is crowded with shipping, which in the heavy fogs and the frequent violent storms cause much shipwreck. The annual number of wrecks avershipwreck. The annual number of wrecks averages 200. The new canal was ceremoniously opened by Kaiser Wilhelm, June 20, 1895. For an account of the canal, see Engineering.

Prince Bismarck's Birthday.-On April 1, 1895, Prince Bismarck, ex-Chancellor and founder of the German Empire, celebrated his eightieth birthday, and with him celebrated the German nation, from the Emperor down to the low-

est citizen.

In the German Reichstag a resolution was proposed to authorize the president of that body, Herr von Levetzow, to convey to Prince Rismarck the congratulations of the Chamber. The majority of the Reichstag members, however, could not forget the bitter quarrels they had had with the former Chancellor, in which they usually were worsted, and by a vote of 163 to 146 the proposed resolution was rejected. Herr von Levetzow and the second vice-president of the Reichstag immediately resigned, amid great confusion. Emperor William, upon hearing the decision of the Reichstag, sent the following telegram to Prince Bouncesk "Allow me to express to your Screne Highness my deepest indignation at the decision last taken by the Imperial Diet, which is diametric ally opposed to the sentiments of all German

princes and their peoples."

The celebrations in Friedrichsruh began on March 25, with the reception by the Prince of the members of the Prussian Duct and many members of the Reichstag. On March 26 Emperor William went to Friedricheruh to congratulate Prince Bismarck personally, accompanied by the Crown Prince, the Minister of War, the heads of the civil, military, and naval cabinets, and the members of his staff.

On April 1 large delegations from all parts of the empire arrived in Friedricheruh and presented the congratulations of the German people. In the cities the houses and public buildings were decorated, and in the evening illuminations and fireworks took place. William gave a grand banquet in honor of the Prince's birthday, and celebrations and festivities were had everywhere-in the United States, in Italy, Japan, China, Africa, Australia, in

every place where Germans congregate.

Session of the Reichstag .- At the opening of the Reichstag, Dec. 5, 1894, Emperor William, in his speech from the throne, announced the introduction of bills dealing with the extension of the criminal laws; a bill for the regulation of bourse transactions; a measure for the reform of abuses caused by dishonest trade competition; and a bill providing for the further tan-ation of tobacco. The first of these 4 bils, the Umsturzrorlage (see "Annual Cyclopedia" for 1894), created an enormous amount of opposition throughout the whole of Germany. Petitions throughout the whole of Germany. against its adoption were presented to the Reichstag by thousands, signed by the best learnest men of the empire-professors in the universities, poets, writers; all liberal-minded people joined in expressing their disapproval of this proposed measure. The bill, although mainly directed measure. against socialism, was clastic enough to be applied with equal force against any one of the parties that might happen to offend the Government, and it had arraved against it in the Reichstag all the liberal parties in addition to the Social Democrats. The Government relied chiefly on the support of the Conservatives and the Ultramontane party. After its first reading in the Reichstag it was referred to a committee, and here it underwent considerable changes and modifications. Attempts were made to win the Clericals for the Government, but that party was mindful of the fact that it owed its existence to the Culturkompf and the represeive laws originating therefrom. It was therefore not disposed to grant to the Government powers which could be turned against it at any moment unless by giving this weapon to the Government it could derive material benefits. While the full was in the hands of the committee the Clericals succeeded in gaining many modifications to suit their purposes, and when the full emerged from the committee room there appeared to be a prospect that with the ail of the Clericals the bill would be adopted. 11 11:55 it came before the Reichstag for a so and realing it was found that the Government massist

on the bill in its original form. The Clerical party, which had agreed to support the Govern-ment under the impression that the latter had tacitly consented to the modifications, refused to vote for the original bill. When section 112 was reached only the Clericals voted for the section as modified, and when the section in its original form was read, only the Conservatives voted for it. Eugene Richter then proposed to dispose of the entire bill at once, and not to waste any more precious time upon it. Accordingly, the differ-ent paragraphs of the bill were taken up successively, and were rejected by the Reichstag by large majorities, so that not even the formality of a division was required. Thus ended with the inglorious defeat of the Government a campaign undertaken, as the Government expressed it, for the defense of religion, morality, and social order.

The Government had to sustain another defeat in the rejection by the Reichstag of the to-This bill provided for a reducbacco-tax bill. tion of the import duty on foreign-grown tobacco by 45 marks per 100 kilogrammes, the abolition of the system of specific duties on home-grown tobacco, and substitution for the latter of an ad valorem duty of 25 per cent. for cigars and cigarettes and 40 per cent. for snuff and smoking and chewing tobaccos. At the time of its introduction into the Reichstag, the Government declared that these new duties were necessary to prevent a threatened deficit in the budget, and it was expected that the Clericals would rally to its support. When it came before the committee it appeared that there would be no deficit in the budget, and even the committee rejected it. When it came before the House on a second reading, it was rejected by a large majority, only the Conservatives and National Liberals voting for it.

The other two bills mentioned in the speech from the throne were never even laid before the Reichstag. A bill dealing with the regulation of the imperial finances was defeated. The whole accomplished by the Reichstag in its five months' sittings, amounted to the adoption of the budget, 2 bills dealing with the taxation of sugar and spirits, a customs-laws amendment bill, a measure providing for the punishment of slave trading, 2 bills granting pensions to veterans or their widows and orphans, and a few minor propesals. Such lack of positive results has never seen equaled by any Reichstag. The sessions

closed on May 24.

Socialism.-The unsuccessful attempt of the German Government to combat socialism within the German Empire by means of represand laws in the shape of the Umsturzvorlage only served to unite the socialists for stronger a tivity and helped to increase their numbers. Hitherto the strongholds of the socialists have teen large cities and the industrial centers, but the districting condition of the agrarian population contributed to swell the socialists' ranks in districts where formerly socialism was unknown. In order to meet the demands of this wing of the party for recognition in the party platform, an agrarian committee was appointed to draft amendments to the party principles, which were to be submitted to the Socialist Congress at its meeting at Breslau. The committee prepared a

programme of which the principal points were: The abolition of all administrative functions and of all privileges connected with real property, as well as of any remains of the feudal sys-tem; the preservation and increase of public landed property, the transfer of property in mortmain, of the forests, and of water power to the community, under the control of the representatives of the people; the introduction of a right of pre-emption for the communes in case of the sale of property by public auction, and the management of their property by the state and the communes on their own account, or by associ tions of rural laborers or small proprietors, or, if that was not attainable, by self-dependent tenants, under the supervision of the state or the commune; state credit for associations or for communes for the purpose of improving property; the payment by the empire or state of the expenses involved in the construction and repair of the public means of communication and of dams and dikes; the nationalization of mortgages and a reduction of the rate of interest there on; state help for distress caused by the ele ments of Nature; and an extension of forest and shooting rights. This programme, although rejected by the congress, was declared by a resolution accompanying the rejection to form basis upon which a new committee was to pre-pare amendments to be laid before the congress in 1896.

Great celebrations were prepared and held throughout the German Empire to commemorate the twenty-fifth anniversary of the victory of the German army over that of France. The socialistic press urged its adherents to refrain from taking part in these celebrations, and especially from celebrating the fall of Sedan, on the ground that it would be an unbrotherly ac toward the French socialists. In a good many places the socialists announced their intention of holding meetings to denounce these celebra-tions, of which Emperor William was the prime mover. Their press assailed the memory of Wilhelm I in recalling his repressive laws. Sept. 2, 1895, the anniversary of the battle of Sedan, Emperor William II, in proposing a tost to the Guards at a banquet in the White Hall of the royal castle, concluded his speech as follows: "Yet in the sublime and noble joy of these celebrations a note has been struck which truly has no place there. A rabble unworthy to bear the name of Germans have dared to revile the German people, have dared to drag in th dust the sacred person of their late honored Emperor. May the whole people find strength to repel these monstrous attacks! If not, I now call upon you to resist this treasonable band, to wage a war which will free us from such elements." The Social-Democratic papers took up this speech and attacked the Government and the Emperor in violent articles. This and th aspersions upon Wilhelm I led to the arrest of several of the most prominent socialistic editors, and the institution of charges against them for lèse-majesté. A number of socialistic newspa-pers were confiscated and, with the aid of some old Prussian laws, repressive measures against the socialists were adopted throughout the Kingdom of Prussia. The plant of the "Vorwärts," the leading paper of the socialists in Berlin, was seized. Prominent socialists were arrested, their houses scarched, and all papers and documents confiscated, with the result that the headquarters of the Social-Democratic party was removed to Hamburg, where the Prussian

lass are not applicable, The Agrarian Movement,-When, in 1893, the Agrarian League was formed, there was little indication that within two years the Agrarians would succeed in arousing the whole country on the question of agrarian reforms. Nevertheless, the question of relieving the dis-tressing condition of agriculture has assumed tremendous proportions. In 1894 Count Kamitz proposed a measure of relief which, although coming from a stanch Conservative, was so-cialistic in its scope. He proposed that the Government should go into the grain business, that it should have an absolute monopoly of the importation and sale of foreign cereals, and should fix a price for domestic cereals which would be large enough to yield a comfortable profit to the producer. This proposal was placed before the Prussian Herrenhaus and adopted there by a large majority. It was discussed in the press, in the Reichstag, by citizens and ministers of state, but the Government did not declare itself either way. It recognized that something had to be done to save agriculture in the empire from ruin, but it did not care to commit itself to a scheme like the Kanitz proposal. On the other hand, it had no definite measure of relief which it might substitute, and thus satisfy the clamor of the Agrarians for relief, which had been promised by the Government again and again. In order to escape from this embarrassing position and show the good intentions of the Government, Emperor Wilhelm called a meeting of a select committee of the State Council at Berlin on March 12, 1895, to inquire into the unfavorable condition of agriculture, its causes, and its remedies. Two proposals were laid before the State Council, viz., Count Kanitz's motion and the currency problem. The deliberations of that body lasted ten days, with the result that the Kanitz motion was declared impracticable, while on the currency question the decision was neither for nor against a gold currency; it simply declares that an investigation of the currency question might be serviceable. The reasons for rejecting the Kanitz motion are: That such an extensive enterprise is not compatible with a proper conception of the position of the state in the industrial and economic life of the country; that the organization of the state is not suited to such a task; that such an undertaking would arouse discontent and suspicion, and would damage commerce in general and the export trade in particular; and finally, that it was not reconcilable with the commercial treaties, as it would restrict the guaranteed freedom of trade. For the relief of agriculture the Council recommends the reduction of the costs of production and transport, protection of the sugar and spirit industries, and a reform of the loan system.

This decision gave very little satisfaction to the Agrarians, who renewed their attacks against the Government and increased their demands. Count Kanitz's motion, though thought to be

dead, was reproduced and submitted to the Reichstag, and, contrary to all expectations it was referred to a committee. One of the principal and most violent leaders of the Agratians was the editor of the Berlin "Kreuz-Zestung Baron von Hammerstein, who for years had been the leader of the Conservative party August, 1895, rumors were heard that he was about to resign his position as managing editor and at the same time appeared charges against him in several newspapers for mismanaging the funds of the "Kreuz Zeitung" These charges were denied by Baron von Hammerstein, and actions for libel were instituted against the responsible editors of the respective papers. Shortly before the trial of these actions Baron von Hammerstein absconded, leaving his personal effects in charge of a governess, whose wages he forgot to pay in his hurry to get away. The poor woman was left destitute, and, in order to obtain what was due her, she sold Hammerstein's correspondence to the editors of the Social-Democratic paper "Vorwarts." This correspondence contains compromising letters of members of the Conservative and Agrarian parties, addressed to von Hammerstein, and the "Vorwarts" published one letter after another. Von Hammerstein was apprehended in Athens on Dec. 30, 1895, and brought back to Ger-HILBERT

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and lequests for public purposes, of \$5,000 cach and upward in amount or value, that were made, tecame operative, or were completed in the United States during 1895. It excludes the ordinary denominational contributions for educational and benevolent purposes; State and morningal appropriations to public and sectamen institutions; and the Faverweather bequests to relleges (see "Annual Cyclopasha" for 1864, com cerning which the New York Supreme Court, in December, 1895, set aside the deed of trust, allowing the original bequest to stand. The known value of the gifts and bequests enumerated ex-

ceeds \$32,800,000.

for the Church of the Transfiguration, \$60,000; first

ocupied Feb. 3.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by a union of the British Kingdom, into which the Kingdoms of England and Scotland and the Principality of Wales are merged, and the Kingdom of Ireland. holding supreme dominion over the Empire of India and dependencies of various kinds, from self-governing colonies to barbarian protecto-rates, the whole constituting the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, daughter of Ed-ward, Duke of Kent, fourth son of George III, of the house of Guelph, descended from a Margrave of Este of the eleventh century, who married the daughter of Guelph, Count of Altdorf, near Re-

gensburg. The Guelphs became to marriage and inheritance Dukes of Bavaria, and afterward Dukes of Saxony and Lerds of Brudswick and Luneburg, and have been Dukes of Brunswick since 1235. Ernst August, who was made beetor of Hanover in 1602, married a princes of the house of Stuart, and his son was pres larmed size. cessor to the throne of Great Britain and Ireland in 1701, and was crowned under the name of George I in 1714. Victoria is the fifth motion arch of the Brunswick-Luneburg line. The heir apparent is Albert Edward, Prince of Wales born Nov. 9, 1841, and married to Alexandra, Princess of Denmark, George, Duke of York, the only living son of this muon, bern June 3, 1865, married Victoria, daughter of the Duke of Teck, who on June 23, 1894, born him a son, christened Albert Edward.

The power to legislate for the United Kingdom and, except so far as is delegated to the local legislative authorities, for the whole British Empire is vested in the Parliament, which consists of the House of Lords and the House of Commons. Lords are the princes of full age of the blood royal, of whom there are 5; the 2 Anglican archbishops, the bishops of London, Durham, and Winchester, and 21 other English bishops of ancient sees; the heads by right of primogeniture of the noble houses of England, of Great Britain, and of the United Kingdom, and peers created by the sovereign, of whom there are altogether 494 over twenty-one years of age; 16 Scotch peers elected for each Parlia-ment from among 36; and 28 representatives whom the 94 Irish peers elect for life. The House of Commons has 670 members, elected by the registered electors of countres, boroughs, and universities. In counties, as well as in boroughs, every householder or lodger is now a qualified voter. There are 253 English, 39 Scotch, and 85 Irish county members; 237 English, 31 Seetch, and 16 Irish borough members; and 5 English, 2 Scotch, and 2 Irish university members. There were 6,229,120 registered electors in 1883, of whom 4,862,758 were in England and Wales, represented by 495 members; 619,091 were Scotch, represented by 72 members; and 747,-271 were Irish, represented by 103 members. The duration of Parliament, unless it is previously dissolved, is seven years. The executive power is exercised in the name of the sovereign by a committee of ministers, whose tenure of office depends upon their retaining the support and confidence of a majority of the House of Commons, and thus being able to initiate and control legislation. The legislative programme for each annual session is set forth in brief and general terms in the royal address. When through the defection of former supporters and the successes of the opposite party in by-elections a ministry finds itself in a minority on a political question and its policy condemned by a vote of the House, Parliament is prorogued, and the Government appeals to the country by issuing a proclamation of dissolution and write for new elections, or the Prime Minister advises the sovereign to send for the leading statesman of the opposite party, who is requested to form a new Cabinet to take over the scals of office and the executive business of the kingdom and empire. If he accepts, unless he is sure of the support of Parliament in the policy that he is prepared to mangurate, he also dissolves Parliament and orders new elections to be held throughout

the I mited Kingdom.

The Cabinet that assumed office on Aug. 18, 1897, as the result of the general elections, represented a coalition of Gladstonian Liberals and trish Home Rulers, and was pledged to introduce trish self-government. This ministry, as reconstructed after the retirement of Mr. Gladstone in the beginning of March, 1894, was composed as follows: Prime Minister, First Lord of the Treasury, and President of the Council, the Earl of Rosebery; Lord High Chancellor, Lord Herschell; Chancellor of the Exchequer, Sir William Vernon Harcourt; Secretary of State for Foreign Affairs, the Earl of Kimberley; Lord Privy Seal and Chancellor of the Duchy of Lancaster, Lord Tweedmouth; Secretary of State for India, Harry H. Fowler; Secretary of State for the Home Department, Herbert H. Asquith; Secretary of State for the Colonies, the Marquis of Ripon; Secretary of State for War, H. Campbell-Bannerman; First Lord of the Admiralty, Earl Spencer; Chief Secretary to the Lord Lieutenant of Ireland, John Morley; President of the Board of Trade, James Bryce; President of the Local Government Board, G. J. Shaw-Lefevre; Secretary for Scotland, Sir George Otto Trevelyan; Postmaster-General, Arnold Morley; Vice-President of the Council on Education, A. H. Dyke Acland.

Area and Population.—England has an area of 50,867, Wales 7,442, Scotland 29,785, Ireland 32,583, the Isle of Man 227, and the Channel Islands 75 square miles; total United Kingnom, 120,979 square miles; England, on April 5, 1891, had 27,483,490 inhabitants, 13,291,402 males and 14,192,088 females; Wales had 1,519,645 inhabitants, 761,499 males and 757,536 females; Scotland had 4,025,647 inhabitants, 1,942,717 males and 2,082,930 females; Ireland had 4,704,750 inhabitants, 2,318,953 males and 2,385,797 females; and there were 55,608 inhabitants in the Isle of Man, 92,234 in the Channel Islands, and 224,211 soldiers and sailors abroad; total population of the United Kingdom, 38, 104,975. The estimated population of England and Wales in 1894 was 30,060,763; of Scotland,

4,124,691; of Ireland, 4,593,577.

The population of the three kingdoms, counting for England persons above the age of ten years only, was divided in 1891, in respect to recupation and means of living, as follows:

The extension regulation of the large towns of England will Wales in 1894 was as follows: London registration district, 4.349,166; Manchester, 520,211; Laveri -1, 507,230; Birmingcham, 492,301; Leeds, 388,761; Sheffield, 338,316; West Hain, 238,184; Brysol, 226,578; Bradford, 223,985; Nottingham, 223,584; Kingston-upon-

Hull, 212,679; Salford, 205,828; Newcastle-on-Tyne, 201,947; Leicester, 189,136. Scotland has 3 cities with over 150,000 inhabitants: Glasgow, 686,820; Edinburgh, 270,588; Dundec, 158,719. Ireland has 2: Belfast, 255,950; Dublin, 245,-001.

The number of marriages in England in 1893 was 218,251; of births, 914,189; of deaths, 569,923; excess of births, 344,266. In Scotland the number of marriages was 27,090; of births, 127,040; of deaths, 79,641; excess of births, 47,390. In Ireland the number of marriages was 21,710; of births, 106,031; of deaths, 82,822; excess of

births, 23,209.

The total number of emigrants in 1894 from the United Kingdom was 227,179, including foreigners. Of the total emigration, 159,605 persons went to the United States, 23,731 to British America, 11,185 to Australasia, and 32,658 to other destinations. The British and Irish emigrants in 1894 numbered 156,806, which was 52,008 fewer than in 1893. Of these, 100,663 were English, 14,213 were Scotch, and

41,930 were Irish.

The Army,-The peace establishment of the regular army, according to the estimates, was, for the year ending March 31, 1895, as follows: Officers of the general staff, 332, with 130 assistants; accountants, 209; chaplains, 87; surgeons, 620; veterinarians, 76; cavalry, 553 officers, 1.371 noncommissioned officers, and 11,392 rank and file; royal artillery, 850 officers, 2,017 noncommissioned officers, and 20,546 rank and file; royal engineers, 588 officers, 1,222 noncommissioned officers, and 5,413 rank and file; infantry, 2,817 officers, 6,659 noncommissioned officers, and 79,295 rank and file; colonial corps, 161 officers, 372 noncommissioned officers, 4.695 rank and file; departmental corps, 139 officers, 1,299 noncommissioned officers, and 2,924 rank and file; army service corps, 237 officers 920 noncommissioned officers, and 2,729 rank and file; staff of yeomanry, militia, and volunteers, 600 officers, 6,199 noncommissioned officers, and 10 rank and file; instruction in gunnery and musketry, 35 officers, 100 noncommissioned officers, and 98 rank and file; Royal Military Academy, at Woolwich, 30 officers, 22 noncommissioned officers, and 18 rank and file; other colleges and schools, 39 officers, 109 noncommissioned officers, and 1 rank and file; regimental schools, 14 officers and 183 noncommissioned officers; other establishments, 99 officers 63 noncommissioned officers, and 30 rank and file; total army, 7,496 officers, 20,689 noncommissioned officers, and 127,162 rank and file. The infantry consists of 3 regiments of guards, divided into 7 battalions, each regiment having its depot; 69 battalions of the line, with 65 depots; and 20 battalions stationed in South Africa, Canada, Bermuda, the West Indies, Malta, Gibraltar, Hong-Kong, Singapore, Ceylon, and Egypt. The weapon is the Lee-Metford rifle of 7.698 millimetres caliber, with a detachable magazine holding 8 cartridges. The cavalry forces are 3 guard regiments of cuirassiers, each of 8 troops; 17 regiments of the line, with 11 depots; and 1 battalion in Egypt, 1 in Natal, and 9 in the Indies. The weapon is the Martini-Metford carbine. The yeomanry numbers 10,-697 men, organized since April, 1893, in 194

squadrons. The artillery comprises 20 batteries of horse artillery, with 2 depot batteries; 80 mounted batteries of field artillery, with 4 depot batteries; 10 mounted batteries; and 3 sections of garrison artillery, containing 97 companies, with 3 depots. The armament consists of breechloading rifled cannon of 762 centimetres caliber for the horse artillery and 89 centimetres for the mounted batteries and muzzle-loading mountain guns. Each battery consists of 6 pieces, The engineers comprise 8 companies of field and 10 of fortress pioneers, 2 railroad companies, and 4 companies of surveyors, with 17 depot companies; 11 companies of submarine mines, with depot company; and I battalion of telegraphists, I battalion of pontonniers, and I balloon action, with a depot. The number of horses provided in the estimates was 14,556. In the beginning of 1894 there were 105,550 officers and men in the home stations, of whom 75,435 were in England and Wales, 3,689 in Scotland, and 26,426 in Ireland. The troops stationed in Egypt numbered 5,015, and in the colonies there were 31,577. The regular forces, home and colonial, in returns for 1895 had 143,788 effectives; the army reserve, 80,559; militia, 126,273; yeomanry, 10,424; volunteers, 227,741; total, 588,-783. The regular British troops drafted into the Indian army numbered 76,721, making the total effective regular British troops 665,506. There are 2 schools for the training of officers, the Royal Military Academy, at Woolwich, and the Royal Military and Staff College, at Sandhurst. Other military educational institutions are the military asylum and normal school, at Chelsea, the Hibernian Military School, at Dublin, the department for the instruction of artillery officers, the military medical school, and schools and libraries for the garrisons. The yearly requirements of recruits for the British army are from 32,000 to 36,000. About 17,000 men are transferred annually to the army

The Duke of Cambridge, field marshal commanding the British army, was retired in August in spite of his plaintive protests, and his inveterate antagonist, Field-Marshal Viscount Wolseley, the foremost champion of military reform, was appointed his successor. During all the years that he was commander in chief the Queen's cousin was the object of incessant radical attacks as an exponent of the royal prerogative, having been appointed in 1856 at the dictation of the Queen in spite of his failure as a general in the Crimean War, and being the recipient, though rich, of an annuity of £12,000 and the emoluments of various sinecures. Seientific military men and the chiefs of the War Office have long desired the removal of the pipeclay martinet who has fought every reform and was the chief obstacle to administrative reorganization on the modern Prussian model, to effect which Lord Wolseley was chosen in preference to the Duke of Connaught, the Queen's third son. Lord Wolseley assumed the chief command on Nov. 1.

The Navy.—The British navy since the completion in 1894 of the programme of the navaldefense act of 1889 has 10 first-class battle ships launched since 1890, 13 more built between 1880 and 1890 that can steam 15½ knots an hour or

over, 18 others above 6,000 tons of elder type that are still classed as effective for joint defense or convoying purposes, if not for the line of battle, and 9 above 3,500 tons with from 9 to 12 inches of side armor, and armed with 18, 22 or 25-ton guns. Of the 10 new ships 7 (" 10 val Sovereign," "Empress of India," "Rep. "Royal Oak," "Romillies," "Resolution, " Hepulse "Revenge") have a displacement of 14,150 terrs, 18 inches of armor, engines of 13,000 borse power, giving a speed of 175 knots, and carry 4 67-ton guns in barbette batteries, with an auxiliary armament of 10 6-mch, 16 6-1s under, and 12 8-pounder quick-firing guns, with 7 torpedo ejectors. There is another vessel (" Hood " in this class that carries her heavy guns in closed turrets. The 2 other new armor clads ("Centurion" and "Barfleur") are lighter and more mobile, having only 12 inches of armor and a displacement of 10,500 tons, and with the same engine power develop a speed of 182 knots. Of 3 turret ships completed in 1891 and 1892, 2 ("Nile" and "Trafalgar"), of 11,940 tons, haring 20 inches of armor over the vital parts, carry 4 67-ton guns and a secondary battery of 6 4.7-inch, 8 6-pounder, and 9 3 pounder quick-firing guns, and the third (" Sans Parett"). of 10,470 tons and 18-inch plates, with engines indicating 12,000 horse power, carries 2 111-ten guns, 1 29-ten gun, 12 5-ten guns, and 12 6pounder and 9 3-pounder quick-fivers, and has engines of 14,000 horse power. These have a nominal speed of 16% knots, and the 4 barbette ships launched in 1885 ("Bentow," "Campardown," "Howe," and "Anson"), of 10,600 tons and 18-inch armor, develop the same speed with engines of 11,500 horse power, while they carry an armament of 4 67-ton and 6 5-ton guns, with 19 quick firers, and are fitted with tubes for discharging 5 torpedoes, I less than the vesse's last mentioned. This standard of speed was fixed by a vessel of similar type ("Redney"), whose main armament consists of 1 @ston and 3 67-ton guns. Two turnet ships of Edinburgh " and "Colossus"), of 9,420 tons, having 18 inches of armor and an armament consisting of 4 43ton and 5 5-ton guns and 14 quick firers, developed a speed of 15.5 knots, the rate set by a lighter armed and protected vessel ("Con-queror") launched in 1881. Into a barbette ship that was next built ("Collingwood"), of 9,500 tons, having the same side armor as they and the same armament, were put engines of 9,500 horse power, with which the speed of 165 knots was first reached. These 4 ships come rather within the second class of squadron fighting ships than within the first, to which belongs a more recent turnet slap (" Hero"), of 6,200 tons, which carnes 2 45-ton guns and a powerful auxiliary armament, and makes 15-5 knots an hour. There are 4 older vessels counted in the second class, I of which ("Temeraire") was the first British barbette ship, launched in 1876, and armed with 4 25-ton and 4 18-ton guns; I is a turret ship (" Dreadnaught") carrying 4.28-ton guns; and 2 ("Superb" and " Alexandra") carry 18- and 22-ton guns in a central battery monster vessel built at the same peri al " laffex. able "1 of 11,880 tons, with plates 24 mehes think and 4 80-ton guns, is now accounted ton show and unwieldy for fleet purposes, and is not even

placed in the third class, which comprises 7 vessels, 2 of which ("Hercules" and "Sultan") carry 8 18-ton guns in a central battery and 5 are turret ships ("Monarch," "Devastation," "Thunderer," "Rapert," and "Neptune") armed with 38-, 29-, 22-, or 18-ton guns. There are 17 other armor clads classed as efficient for coast defense, of which 8 ("Penelope," "Audacious," Invincible," "Iron Duke," "Swiftsure," "Triumph, "Belleisle," and "Orion") have their guns disposed in a central battery, and 9 ("Hotspur," "Cyclops," "Glatton," "Gorgon," "Hecate," "Hydra," "Inflexible," "Agamemnon," and "Ajax") carry their heavy guns, mostly 25-,

29-, or 18-ton, in closed turrets.

A new programme of construction was begun upon as soon as the old was completed. The first vessel laid down ("Renown"), launched in May, 1895, is an improved "Centurion," with the same armament more effectively arranged and better protected; she has a displacement of 12,350 tons, engines of 10,000 horse power, is calculated to steam 17 knots, and is fitted with 5 torpedo ejectors of new design. The first ("Magnificent") of a class of colossal battle ships, of 14,900 tons displacement, was launched in 1894; a sister ship ("Jupiter") was launched on Nov. 18, 1895, and 7 others ("Majestic," "Prince George," "Cæsar," "Hannibal," "Victorious," "Illustrious," and "Mars") are building. They will have engines of 12,000 horse power, capable of making 18 knots, and will be armed with 4 12-inch guns in barbettes and 12 6-inch and 28 smaller quickfiring guns, and have 5 torpedo ejectors.

Under the naval-defense act 9 first-class deckprotected cruisers were built, 5 (" Edgar," " Endymion," " Hawke," " Grafton," and " Theseus "), oymion. "Hawke," Grafton," and "Theseus"), of 7,359, and 4 ("Royal Arthur," "Crescent," "St. George," and "Gibraltar"), of 7,700 tons, all equipped with engines of 12,000 horse power, capable of steaming 191 or 20 because capable of steaming 191 or 20 knots an hour, with coal space for long cruises and an armament of 2 22-ton guns and 12 6-inch, 12 6-pounder, and 5 3-pounder quick-firing guns, except the "Royal Arthur," which carries only 1 heavy gun. Two older cruisers (" Blake" and " Blenheim"), of 9,000 tons, have engines of 20,000 horse power and a nominal speed of 22 knots. Seven belted cruisers launched in 1896 and 1897, of 5,600 tons and a nominal speed of 18½ knots ("Undaunted,"
"Aurora," "Australia," "Galatea," "Immortalité," "Narcissus," and "Orlando"), have also 2 22-ton guns, and nearly as large a secondary armament. Lighter deck-protected cruisers, of 5,600 tons and engines of 9,600 horse power, giving a trial speed of 19½ knots, of which 3 ("Empeo," "Minerva," and "Talbot") have been begun, to be followed by 6 others ("Diana,"
"Dido," "Doris," "Isis," "Juno," and "Venus"),
carryendy quick-firing guns, 5 of 6 inches caliber, 6 of 47 mehos, and several smaller ones. The "Talbat" was launched in April, 1895. Two chormons pretected cruisers have been begun under the latest programme ("Powerful" and "Terrible"), of 11,000 tons, with engines of 25,000 horse power, designed to give a trial speed of 22 knots; the armament will be 2 92inch, 12 6-inch quick-firing, and 18 12-pounder and 12 3-pounder quick-firing guns. The "Terrible" was launched in the Clyde on May 27. 1893. Every one of these cruisers is equipped

with 4 torpedo ejectors. There are 12 armored cruisers built between 1860 and 1885, which are classed as first class for convoying purposes ("Warrior," "Black Prince," "Minotaur," "Achilles," "Bellerophon," "Agincourt," "Northumberland," "Shannon," "Nelson," "Im-périeuse," and "Warspite." There are 29 second-class cruisers built under the naval-defense act, which are of 2 types and sizes, 3,400 tons ("Apollo") and 4,360 tons ("Astræa"), with 9,000 horse power and a speed of 191 or 20 knots. Three improved "Astreas" and 6 fast cruisers of another type are projected. The older second-class eruisers number 20, and the thirdclass cruisers and gunboats 172. Of torpedo craft there are 85 of the first class, including topedo-bont catchers or torpedo gunbonts of the "Rattlesnake" class, the more recent ones of the "Sharpshooter" class and the "Speedy" class, the still larger torpedo gunboats of the "Halcyon" class, and 42 of the new torpedo-boat de-stroyers, of which the "Havock," "Hornet," "Ardent," and "Daring" were the first to be completed; 33 of the second class; and 18 of the third class. The destroyers have a displacement of 220 tons, and are fitted with 5 torpedo tubes, and are armed with a 12-pounder quick-firing gun and, usually, 5 6-pounders. The torpedo-boat destroyers were decided on in 1893 on the theory that England, being the strongest naval power, has no need of torpedo boats, but rather of special craft large enough and fast enough to put torpedo boats out of action. the French torpedo boats have a speed of 25 knots, the destroyers were tested for 27 knots. Abandoning the heavier types, of which the "Rattlesnakes," of 550 tons, marked the first departures followed by the "Sharpshooters," of 800 tons, and still larger "Speedy" class and "Halcyons," the Admiralty reverted to the first idea of the torpedo-boat catchers of 1885, boats of 200 tons, armed with quick-firing guns, and capable of overtaking the fleetest torpedo boats in all weathers. There were 23 completed before the end of 1895. The speed has been improved, the "Boxer," built by Thorneycroft, making 29:17 knots. Since the "Sokol," built by Yarrow, showed 29:76 knots, and the French have turned out a torpedo boat ("Forban") speeding 21 knots the 19 destroyers called for in speeding 31 knots, the 19 destroyers called for in 1896 will be required to show over 30 knots. New first-class cruisers to be begun in 1896 will be improved "Blenheims." Second-class cruisers, of about 5,750 tons, will have the armament of the "Talbot" class and similar, but increased protection. Third-class cruisers are to have a displacement of 2,100 tons, locomotive boilers developing 7,000 horse power, and giving a speed of 20 knots, an armament of 84-inch quick-firing guns, 8 3-pounders, and smaller guns, and in torpedo armament and general type and arrange ments will resemble the "Barham" class, but will have greater free board and much larger coal capacity. There are under construction 10 first-class battle ships, 6 first-class cruisers, 13 second-class cruisers, 2 third-class cruisers, and nearly 50 torpedo-boat destroyers. Harveyized steel has been definitely adopted for armor plates. Besides locomotive boilers, Du Temple watertube boilers, Thorneycroft boilers capable of be ing forced under air pressure, and the Belleville

boiler have been tried, and the water-tube type has been adopted for most of the new ships. The number of officers, seamen, boys, coast guards, and marines provided for in the estimates for 1896 is 83,400. An attempt to recruit men from the mercantile marine having failed, the experiment was tried of engaging boys, not such as are taken on the ordinary training ships, but older boys that can be trained for the service in a few months. The complement of officers and men to be provided in 1897 is 88,850.

commerce and Production.—The total value of the imports in 1894 was £408,505,718. The value of the exports of British products was £16,194,239; of re-exports of foreign and colonial products, £57,966,484. The values are not determined for the year, as in most countries; but the declared values are taken, subject to revision and a fine for false declaration. The exports of British produce shrank from \$31.80 percepita in 1891 to \$27.60 in 1893, and the imports from \$56 to \$51. Of the total imports in 1893, amounting to £404,688,178, British colonies and dependencies furnished 224 per cent. and foreign countries 774 per cent., and of the exports of British produce and manufactures 33 percent, went to British possessions and 67 percent to other countries. The imports from and domestic exports to the different colonies and dependencies in 1893 were valued as follow:

DRITISH COLONIES.	Imports.	Domestic exports
hdb	£26,233,949	£28,776,001
America	29,574,862	15,083,490
British America	18,848,596	7,200,852
South Africa	5,550,158	8,544,388

Make	- 76,771	721,618
Mauritius	250,497	805.197
All others	881,599	1,256,706
Total	£91,769,454	£72,015,101

The imports of wheat in 1894 were 130,482,520 ashels. Including flour, the imports of wheat and other cereals were 178,477,173 hundred-reight. The imports of flour were 19,134,605 andredweight, of which 15,925,486 hundredweight came from the United States. Of wheat, 4,638,245 hundredweight were imported from the United States, 16,775,881 hundredweight from Russia, 13,272,152 hundredweight from the Argentine Republic, 5,349,056 hundredweight from India. 3,877,418 hundredweight from India. n India, 3,877,418 hundredweight from Australia, 2,828,515 hundredweight from Canada, 1,764,413 hundredweight from Chili, and 715,043 hundredweight from Germany. The imports of bacon and hams were 4,846,387 hundredweight; of fish, 2,556,929 hundredweight; of butter, 2.576,063 hundredweight; of margarine, 1,109,-313 hundredweight: of cheese, 2,263,287 hundredweight; of beef, 2,346,405 hundredweight; of preserved meat, 554,346 hundredweight; of fresh mutton, 2,295,065 hundredweight; of refined sugar, 13,916,642 hundredweight; of raw sugar, 14,306,739 hundredweight; of tea, 244,-474.625 pounds; of spirits, 11,989,863 proof gallons; of wine, 14,362,171 gallons. The imports of live stock consisted of 484,764 sheep and lambs and 476,021 cattle.

The imports from foreign countries and the trade with them in British produce are shown in the following table:

FOREIGN COUNTRIES.	Imports.	Dissound a separta

Total British produce	£215,094,565	£216,194,239

The area under grain crops in Great Britain in 1894 was 7,854,974 acres, having decreased in twenty years 1,576,516 acres; the production of hops showed a like decrease, the growing of flax has almost ceased, and green crops fell off 10 per cent., about the same amount of land being added to the meadows, while the rest of the land that went out of tillage was turned into permanent pasture, the area of which increased from 13,178,412 acres in 1874 to 16,465,069 in 1894. The crop of wheat in 1894 was 59,173,000 bushels in Great Britain and 1,666,000 in Ireland: barley, 72,295,000 bushels in Great Britain and 6,211,000 in Ireland; oats, 135,463,000 bushels in Great Britain and 55,701,000 bushels in Ireland. The number of horses in the United Kingdarburn 1893 was 2,079,587; of cattle, 11,207,554;

of sheep, 31,774,824; of pigs, 3,278,030.

The I nated Kingdom's output of coal for 1893 was 161,325,795 long tens, value £55,899,808; of man, 5, 11,293,476 tens, value £2,827,947; of man, 5,686 tens, value £9,333,797; the value £1,361,563,604 tens, value £9,333,797; the value £1,361,564,610, tetal value of mineral products, £70,767,651, who haves £11,583,109 less than in 1892. There were £18,747 persons employed in the mines, 570,978 of them underground. The expects of soal in 1803 were 29,031,955 tens, valued at £14,375,476. The imports of from ore were 4,055,000 tens, the tetal production of pig iron, 6,977,000 tens. The number of furnaces in blast in 1892 was 362, against 414 in 1890. The im-

ports of cotton in 1893 were 1,416,780,064 pounds; the year's consumption of raw cotton was 1,482,000,000 pounds. The imports of raw wool were 677,947,464 pounds; including the home product, wool clipped from imported sheepskins, and imports of goat hair and woolen rags, the year's supply was 951,000,000 pounds, of which 362,000,000 pounds were exported. The actual consumption of wool was 580,000,000 pounds; the consumption of flax and tow, 200,000,000 pounds. The quantity of cotton piece goods exported was 4,652,000,000 yards; of woolen goods, 194,000,000 yards; of linen, 158,000,000 yards; of cotton yarn, 206,000,000 pounds; of woolen yarn, 50,000,000 pounds; of linen yarn, 16,000,000 pounds; the total value of cotton exports, £63,700,000; of woolen exports, £20,900,000; of linen exports, £5,800,000.

Navigation.—The number of vessels in the foreign trade entered at the ports of the United Kingdom during 1893 was 59,916, of 37,142,000 tons, of which 36,587, of 26,919,000 tons, were British, and 23,329, of 10,223,000 tons, were foreign; the number cleared was 59,918, of 37,491,-000 tons, of which 36,511, of 27,229,000 tons, were British and 23,407, of 10,262,000 tons, were for-Of 20,484,183 tons, the foreign tonnage cleared and entered, 5,013,533 tons belonged to Norway, 3,789,702 to Germany, 2,155,707 to the Netherlands, 1,848,856 to Sweden, 1,787,583 to France, 1,772,837 to Denmark, 1,165,551 to Spain, 1,022,546 to Belgium, 617,583 to Russia, 464,468 to the United States, 358,108 to Italy, and 191,136 to Austria. Of the total tonnage, 13,418,056 tons were entered at the port of London, 9,839,-801 at Liverpool, 9,408,044 at Cardiff, 4,487,523 at Newcastle, 3,540,869 at Shields, 3,415,330 at Hull, 2,748,599 at Glasgow, 2,130,753 at Southampton, and over 1,000,000 each at Sunderland, Newport, Middlesbro, Leith, Grimsby, Swansea, and Grangemouth. The vessels with cargoes entered from foreign countries had an aggregate tonnage of 28,796,000 tons, of which 20,-962,000 were British and 7,834,000 foreign; the tonnage cleared with cargoes for foreign countries was 32,953,000 tons, of which 24,496,000 were British and 8,457,000 foreign.

The number of vessels registered as belonging to the United Kingdom in 1893 was 21,327, of 8,778,503 tons, of which 13,239, of 3,038,260 tons, were sailing vessels and 8,088, of 5,740,243 tons, were steamers. The merchant shipping numbered 16,828 vessels, of 8,541,388 tons, employing 240,974 men, of whom 29,549 were foreigners. There were 8,211 sailing vessels, of 518,264 tons, and 2,446 steam vessels, of 372,527 tons, engaged in the home trade; 263 sailing vessels, of 32,345 tons, and 345 steamers, of 224,562 tons, engaged both in the home and the foreign trade; and 1,994 sailing vessels, of 2,348,584 tons, and 3,569 steamers, of 5,045,106 tons, engaged exclusively in the foreign trade.

Communications.—The railroads open to traffic at the beginning of 1894 had a length of 20,646 miles. The average rate of extension since 1890 has been 191 miles a year, compared with 214 miles in the preceding ten years. There are 14,440 miles in England and Wales, 3,215 miles in Scotland, and 2,991 miles in Ireland. The capital invested was £971,323,000. The receipts for 1893 were £80,631,892, of which

£40,994,637 were from freight and £35,849,449

from 873,177,052 passengers.

The telegraphs in 1894 had a length of 35,miles of line, with 214,804 miles of wire. The number of messages forwarded during the year ending March 31, 1894, was 70,899,498, The revenue was £2,534,264 and expenditure £2,641,518.

During the year ending March 31, 1894, the post office carried 1,812,000,000 letters, 245,500,000 post cards, 574,300,000 book packets, 164,900,000 newspapers, and 54,000,000 parcels. The number of money orders issued was 10,524,-774, for £28,720,000; the numbers of postal orders was 57,232,939, for £21,768,793. The revenue was £10,472,875 and expenses were

£7,738,602.

Parliamentary Session.—The fourth and last session of the Parliament elected in July, 1892, was opened on Feb. 5. The original Ministerial majority of 41 had dwindled to 33, including the refractory Parnellites and Keir Hardie, an independent Socialist. There were 270 Gladstonian Liberals, 72 Anti-Parnellites, and 9 Parnellites on the Ministerial side, and 271 Conservatives and 47 Liberal Unionists in Opposition. In the Queen's speech the first place was given to proposals for remedying de-lects in the working of the Irish land law and for dealing with the cases of certain evicted ants whose situation constitutes a peril to tenants whose situation constitutes a permuserial order. The offenses against the law in Ireland had sunk to the lowest level recorded. A bill dealing with the Church establishment in Wales was promised. Other bills would have for cir object popular control of the liquor traffic, the abolition of the system of plural voting, and a provision for the payment of the charges of returning officers at elections. A bill would be presented founded upon the report of a commis-sion appointed in 1893 to study the best means of unifying the government of the metropolis, Agriculture continued in a seriously depressed condition and a commission appointed in the autumn of 1893 still had the subject under consideration; in the meantime a proposal would be submitted for facilitating the construction of light railways, as these were expected to prove beneficial to the rural districts. would also be presented for the promotion of conciliation in labor disputes and for the amendment of the factory acts. The Scotch measures promised were measures for completing the system of county government and further legisla-tion in respect of the crofter population in that country. In the House of Lords the Marquis of Salisbury asked about the reform of that House which the Premier had announced, and was told that a resolution would be introduced in the House of Commons. John Redmond moved an amendment to the address calling for disso-lution on the ground that the Government had failed to carry home rule. James Keir Hardie offered one expressing regret that there was no allusion in the Queen's speech to the distress prevailing among the people and asking for legislation in the direction of alleviating the sufferings of the poor. The Duke of Devon-shire thought that no bill was likely to pass in any form except the Irish land bill. The practice of introducing and reintroducing measures

that had no chance of going through was like head to "plowing the sames of the seashere," their constant defeat by Conservative factics was called "filling the cup." Justin McCarthy was re-elected their chairman by the Irish Nationalists. Clement Higgins, a county member from Norfolk, dissatisfied with the Liberal party, announced his withdrawal from the discussions of Parliament. The Unionists had won in many by-elections. The Parnellites threatened to revolt because of the postpone-ment of Irish measures. The Anti-Parnellites were divided by a bitter faction fight between the friends and the opponents of Mr. McCarthy, in the course of which it came out that the party had received contributions from Lib-eral politicians, which were expended in sup-porting evicted tenants. Mr. O Brien was sued by the lawyer who conducted his libel suit against the London "Times," and was compelled to go into bankruptcy and retire from Parliament. On Mr. Redmond's amendment the Government had only a majority of 20, and on Mr. Jeffreys's amendment to the address, censuring official indifference to agricultural distress, commercial stagnation, and the increase of the unemployed, the majority sank to 12.

On Feb. 12 the Nationalist Lord Mayor of Dublin, Mr. Dillon, presented a petition of the burgesses and corporation for the release of Fenian convicts who had been many years in prison. Similar petitions were forwarded from Limerick and other Irish boroughs. Callaghan and Henry McCann had been released after serving eleven years. Dr. Gallagher and the others the Government refused to amnesty,

Sir Henry James's motion consuring the Government for levying an import duty in India on cotton goods to the detriment of the Lancashire trade was lost on Feb. 21 by 304 to 109 votes. On Feb. 26 the ministry accepted, and the House of Commons approved a motion of Robert L. Everett, a Liberal member, seconded by Henry Chaplin, Conservative, that the House regards with increasing apprehension the constant fluctuation and growing divergence of the values of gold and silver, and beartily concurs in the recent expressions of opinion of the governments of France and Germany in regard to the serious evils resulting therefrom. The resolution urged upon the Government the desirability of co-operating with other powers in an international conference for the purpose of considering measures for removing or mitigating those evils. Sir William Harcourt declared later in a public utterance that the Government in any discussion in which they might take part would not admit a doubt as to their intention to adhere to the single gold standard. Sir Joseph Pease, anti-opium champion, mustered a minerity of 59 for a vote of censure on the Royal Commission that inquired into the opium trade in India and reported in favor of its continuance. Arthur Wellesley Peel, who had been for eleven years speaker of the House of Commons, resigned on account of his health on April S, and William Court Gully was elected to succeed him on April 10 by a majority of 11 over Sir Matthew White Ridley, the candidate put forward by the Conservatives,

Three members of the House of Commons.

heirs to peerages, determined to test the question whether a member could not elect to remain a commoner instead of qualifying as a peer. One of them, Viscount Wolmer, fell heir to the Earldom of Selborne in May. On his appearing in his accustomed seat Sir William Harcourt moved to have a committee appointed to inquire whether he had succeeded to a peerage. George N. Curzon and St. John Brodrick, the two eldest sons of peers who were allied with Viscount Wolmer in the contest, supported his contention in and out of Parliament. It has been the custom to treat the succession to a peerage as creating a vacancy, but the question had never been decided. The controversy ended in its being established as the law of Parliament that the succession to a peerage of a member of the Lower House vacates his seat whether he applies for or receives a writ of summons to the

Upper House or not.
The budget was presented by Sir William Harcourt on May 3. The revenue for 1894-95 had realized £509,000 more than the estimates and the expenditure, including £704,000 of supplementary estimates for Uganda, the navy, education, Cyprus, and Irish relief, varied only £34,000 from the estimates. The balance showed a surplus of £776,000. The total receipts were £3,551,000 more than the receipts of the preceding year; customs yielded £408,000 more, excise £850,000 more, stamps £1,580,000 more, income tax £400,000 more, the post office £290,000 more, and telegraphs £40,000 more. The import duty on spirits, in spite of the extra 6d. a gallon, yielded only £67,000 more than in 1893-'94, and the excise receipts from domestic spirits were £330,000 less than the estimates, whereas the extra tax of 6d, a barrel on beer did all that was expected of it. The new death duties, expected to produce £1,000,000, fell short of that figure only £32,000. The large increase in the stamps receipts was due to activity in the mining market and a general recovery in business. The public debt was reduced by £8,529,000 during 1894-'95. The interest on the Suez Canal shares owned by the British Government was set free in 1895. These shares are valued at £23,900,000. The savings banks gained in at £23,300,000. The savings cames gamed in deposits £7,169,000 during the year. The funds of the friendly, industrial, provident, and building societies amounted to £240,296,-733, a net increase of £60,000,000 in ten years. The expenditure of the Government for 1895— '96 was estimated at £95,981,000. The increase of £2,000,000 is due to the navy, which requires £1,400,000 more than in 1895, and to additional expenditure for the civil service, especially for the enlargement of education. The total expenditure for 1895-'96, including the imperial contribution of £7,262,000 to local revenues, is £103,243,000, which is raised by heal tavation. The Government revenue proper was estimated at \$95,662,000, leaving a deficit of \$319,000 on the assumption that the additional beer and spirit duties would expire on July 1. To avoid this deficit the Chancellor of the Exche pier proposed to resenact the duty of 6d. a barrel (36 gallous) on beer, which would increase the revenue to \$96,162,000 and turn the deficit into an estimated surplus of £151,000. The reimposition of the extra beer duty in preference

to the spirit duty, which was unpopular in Ire land, drew forth sarcastic comments from the Conservatives. The income tax was continued at the rate of the preceding year, 8d, in the pound, or 3½ per cent.

The Irish land law bill, prepared by Mr. Morley, altered the statutory term for the revision of rents from fifteen to ten years. It applied to terms already fixed as well as to new cases where a judicial rent was praved for. The bill abolished the landlord's right of pre-emption and provided that the tenant should pay no rent on his improvements and that allowance should be made in respect of his occupancy. Two valuers would estimate what was a fair rent, and the Land Commission would fix the judicial rent at that figure unless the landlord or the tenant objected. The bill also abolished in certain cases the remedy of ejectment for nonpayment of rent. All improvements made since 1850 are presumed to have been made by the tenant. This clause is intended to undo the results of the decision in the law case of Adams against Dunseath, which affirmed that the land act of 1870 provided compensation for improvements. Mr. Morley's bill prescribes that in fixing a fair rent the court shall include in the tenant's interest any increase in the letting value of the holding that has resulted from improvements that he has made, and also the right to the continued occupation of his holding secured to the tenant by the various land acts. contract by a tenant not to claim compensation for improvements warrants the allowance of rent in respect of any improvement, unless the landlord proves that it was made by him. Either tenant or landlord can apply to the Land Commission to have a fair rent fixed. The landlord can not determine a tenancy by subletting the land. No action to recover rent or evict a tenant can be brought if the rent has been two years overdue. When a statutory term has expired the tenant continues in occupation under the former conditions until his tenancy is determined or until a new judicial rent is fixed.

The Welsh Disestablishment bill to terminate the legal establishment of the Church of England in Wales and Monmouthshire was intro duced by Mr. Asquith. The Welsh Church, originally a spontaneous national growth, having been for centuries used as a dependency of the English Church, dissent sprang up in the eighteenth century and spread until now there are 4,000 nonconformist congregations in the principality, comprising three quarters or four fifths of the population. Mr. Gladstone, dissatisfied with some of the provisions of the bill, withdrew his pair toward the close of the ses The Government accepted amendments placing schools and public chapels under a rep resentative body, instead of disendowing them

entirely.

A bill dealing with Church patronage was drawn up by the bishops. It aimed at checking the worst abuses of the patronage system. and renders almost impossible sales of the right of patronage. Sales by auction are absolutely prohibited. Persons presented to livings who are vicious or incapable can be rejected by the bishops.

The bill for the local control of traffic in inesting liquors was the local veto bill that lost in 1893 with some modifications and plifications. It provided that on a requisi-asigned by one tenth of the parochial elec-sin any ward of a town or other determined lares, a vote shall be taken as to whether liquor licenses shall be revoked without comtion and no new ones issued within the If two thirds of the electors vote in the sative, then the liquor traffic will cease in locality at the date of the next annual expired from the commencement of the rafter the lapse of one year when the act seen two years in operation. If the reintro-ion of the liquor traffic in a locality where een prohibited is called for by one tenth electors, another vote is taken, and a bare crity decides whether prohibition shall be stained or whether the local area shall have sublic houses again. If a petition is signed same proportion of electors, not for the ression, but for the restriction of the liquor e, then a poll shall be taken, and if a mavote for a reduction of the number of houses, all existing licenses shall be canat the end of a year, and the licensing trates shall have authority to grant new not to exceed three fourths of the number Ireland was exempted from the apation of the bill.

lr. Shaw-Lefevre introduced a bill to prot plural voting and to provide for taking the at Parliamentary elections on one and the day throughout the kingdom. The num-of plural voters was computed to be 160,000 66, but probably the real number is much ter. It has increased enormously since the act of 1832. In local elections the plural has already been abolished. In Parliamen-lections some electors hold property in 20 different constituencies and are therefore dified to vote in all of them. The Conserva-denounced the bill as a gerrymander, ind to reduce their party vote in the metrokan boroughs and other constituencies. The as accompanied by a measure to relieve lidates of the expenses of returning officers. was a sop for the Radicals, who demanded payment of members. When William Allan ored on March 22 that the members receive for their services Sir William Harcourt ded that the Government would advance the posal in every way possible; it was the logic-vatcome of the extension of the suffrage and ld not lead to corruption and the election of t members, for democracy would guard inst that; the House was too much of one ... The resolution, which had been passed ce, in 1893, with the Government's approval, urried by 176 votes to 158.

A bill was introduced to empower municipalities and local authorities to acquire and work tramways. The general tramways act of 1870 sere power to local authorities to build and own street railroads, but required that these should be leased to companies in every case. Glasgow, under a special act, obtained in 1871 power to work its street-car lines, but nevertheless leased than to a company for a term of years. Recent-

ly the municipal authorities have taken the management of the Glasgow tramways into their own hands and have operated them with eminent success, improving the service, raising wages, and cheapening fares for work propde and school children. Huddersfield obtained similar powers in 1882, finding no company willing to take the lease. The success of this town led other municipalities to petition Parliament for the right to work their tramways, but these requests were always refused, either by the House of Commons or the House of Lords, until in 1802 a standing order was passed that provided for the working of tramways by local authorities when companies can not be found to undertake it on fair terms. Besides Glasgow and Huddersfield only Blackpool, Plymouth, and Greenock availed themselves of the privilege and are actually working their street railroads, although 8 other municipalities have permission. The new act was intended to give a general right to municipalities to manage their street railroads under such circumstances as arose in Huddersfield and the other boroughs mentioned

The bill for the conciliation of trade disputes empowered the Board of Trade to inquire into the circumstances of a dispute between employers and employed and to report; also to act as arbitrators or to appoint a conciliator or a chairman and board of conciliation, to which the parties may submit the question at issue. A conciliator or board of conciliation appointed by the Board of Trade would act on the application of one or both of the parties. The county council could also appoint a conciliator or board of conciliation, which in certain cases would have the right to intervene and exercise compulsory powers.

Mr. Bryce's light-railways bill was all that the Government offered for the relief of agricultural depression. Its purpose was to enable local narrow-gauge railroads to be built without the special authorization of Parliament. A scheme would have to be presented first to the county council and examined by a committee of that body, which would consult all the local authorities and submit the plans to the Board of Trade for it to determine whether it is a light railway within the meaning of the act; it must also see that the requirements of the public safety are satisfied, and hear the objections of landowners through whose land the route passes. In the case of other railroads running through the rural districts the bill empowers the Board of Trade to relax some of the precautions hitherto required and sanction less expensive methods of construction and working.

Mr. Asquith's factories and workshops bill was passed by both Houses. It provided for more sanitary arrangements and stricter regulations for the safety of workers in factories and the proper feneing of machinery. To allow wearing apparel to be made up in places where there is infectious disease is made a penal offense. Children are not permitted to be employed in cleaning machinery while it is in motion. Every factory or workshop must have a fire escape. Persons receiving bodily injury and the families of persons killed through neglect of the factory acts or the regulations made under them can

recover compensation. Overtime for young persome is prohibited, for women it is restricted, and no woman, young person, or child after working the full time allowed can take work home. A register of accidents must be kept. The factory acts are extended to laundries, and the provisions requiring the fencing of machinery and notice of accidents to docks, wharves, and quays. The law relating to bakeries is ex-tended to all kinds of bakeries. The powers of the Home Secretary to regulate dangerous em-ployments are enlarged. Medical practitioners are required to send notice to the chief inspector of factories of any case in which disease has arisen from the conditions of employment. workers in textile industries who are employed on piecework have a right to have supplied to them such particulars as will enable them to ascertain the rate of wages. Workshops must be registered and lists of outside workers must be furnished to the inspector of factories.

A bill for adding one or two colonial judges to the Judicial Committee of the Privy Council was unsatisfactory to the colonies because there was no provision for a salary, and therefore no active judge of the first rank in the colonies would be likely to accept the office. The House of Lords negatived, as often before, the proposal to abolish primogeniture in cases of intestage and divide real estate in the same way as personalty among the family of an intestate.

A criminal appeal bill proposed to create a Court of Criminal Appeal and to grant the right of appeal in all capital cases when there is a conviction. The court would be able to amend or set aside the sentence, not only on grounds of informality or irregularity, but if the jury was misdirected or the verdict is found to have been against the weight of evidence, and to order a new trial if there has been any miscarriage of justice. Prisoners under less sentences than that of death would only have the right of appeal by leave of the court of trial or the Court of Appeal or in certain cases of the Attorney-General. They may also apply for a revision of their sentences, subject to the peril of having them increased.

A bill was passed, in accordance with an agreement with the Russian Government, which extended the protection of the Paris arbitration award to the Russian seal fisheries in Bering Sea. The bill went further than the agreement with the United States in that it contained no limitation of time and covered the whole Pacific Ocean north of the forty-second degree of latitude. Russia agreed in return for the extension of Hussian jurisdiction over English sealers between the three-mile limit to restrict the annual that hear the Pribyloff Islands to 30,000 seals.

Mr Shaw-Lefevre brought in a bill to exempt the release carriages from the regulations governing the use of locomotives on highways, which prohibit them from going at a greater speed than 4 miles an hour and require that they shall be preseded by a man bearing a red flag. A bill requiring the registration of midwives was passed, also a naturalization bill dealing with naturalized citizens residing abroad.

The Irish members proposed to extend to Ireland the institution of county councils as they existed in England and Scotland. It was supported by the Government, but the Unionists,

although the proposition was their own idea, ridiculed the bill and the motives of its authors. On a motion to creet a statue to Oliver Cromwell all the Nationalists as well as the Conservatives voted against the proposition, and the Government was saved from defeat only by the votes of Liberal Unionists. The ministers thereupon renounced the project.

Scotch bills, except those of a contentious character, were referred early in May to a grand committee including all the Scotch members. When the Government refused to refer the crofters' bill to this committee, Dr. MacGregor resigned his seat for Inverness-shire, which was won by the Opposition. The Welsh disendowment bill was the only one of political importance that was advanced in committee. Parnellites, disappointed because the Irish bill was deferred, went into opposition. The Government majority fell to 10, and on David Thomas's proposal to omit the provision for vesting in the county councils the property of the Welsh Church the majority was only 7. the night following, June 21, Mr. Brodrick moved the reduction of the salary of the Secretary for War, alleging that there was an insufficient supply of ammunition for the infantry. Some of the Radicals refrained from voting, and when a division was taken the amendment was carried against the ministers by 132 votes to 125. Mr. Campbell-Bannerman, whom his colleagues had kept out of the Speaker's chair because they could not spare his services, immediately resigned. The Cabinet on the following day chose to resign and leave to their opponents the duty of dissolving Parliament. This task the Opposition was prepared to accept. Lord Salisbury was requested by the Queen to form a new ministry. This he was able to do without difficulty, with the co-operation of Mr. Chamberlain and the Duke of Devonshire.

The new Government obtained the necessary votes in supply, passed the Bering Sea bill, and rescued the factories and workshops bill and others of a noncontentious character, including a bill relating to inquiry into fatal accidents in Scotland, a bill for naval works, a bill to amend the corrupt practices act, the Scotch bill for the regulation of sea fisheries, the extradition bill, the naturalization bill, and the Judicial Committee bill. Parliament was prorogued on July 6 and dissolved on July 8.

The Salisbury Cabinet.—The Unionist Cabinet was constituted on June 25, as follows: Prime Minister and Secretary of State for Forcign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; First Lord of the Treasury, Arthur James Balfour: Secretary of State for the Colonies. Joseph Chamberlain; Chancellor of the Exchequer, Sir Michael Hicks-Beach; First Lord of the Admiralty, George Joachim Goschen; Lord Chancellor, Lord Halsbury; Lord Privy Seal. Viscount Cross: Chancellor of the Duchy of Lancaster, Sir Henry James: Secretary of State for the Home Department, Sir Matthew White Ridley: Secretary of State for War, the Marquis of Lansdowne: Secretary of State for India. Lord George Hamilton: President of the Board of Trade, Charles T. Ritchie; President of the Local Government Board, Henry Chaplin; Lord Lieutenant of Ireland, Lord Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; Secretary for Scotland, Lord Balfour of Burleigh; Pirst Commissioner of Works, A. Akers-Doug-las; President of the Board of Agriculture,

Walter Long.

The Duke of Devonshire, who was chairman of the commission that laid down the lines of army reform, the inauguration of which was announced by Mr. Campbell-Bannerman just before the vote of censure, accepted the headship of the Naval and Military Council of Defense appointed to work out the details of the reforms, The most important office outside of the Cabinet was that of Under Secretary for Foreign Affairs, to which George N, Curzon was called. Gerald Balfour was appointed Chief Secretary for Ireland; the Duke of Norfolk, Postmaster-General; and Sir John E. Gorst, Vice-President of the Council for Education. Lord Salisbury offended the retiring Secretary for War by sending at once for his scals of office,

The General Election.—At the dissolution

the Conservatives in the House of Commons numbered 272 and the Liberal Unionists 49, making a gain for the Unionist party of 7 votes since the Parliament first came together in 1892, while the National Liberals, composed of 267 Liberals, 72 Anti-Parnellites, and 9 Parnellites, had lost 7 seats, reducing their normal majority from 41 to 27. The elections took place in the

latter part of July.

In the electoral campaign the Conservatives and Liberal Unionists, following the lead of Arthur J. Balfour and Joseph Chamberlain, offered to the democratic masses a programme of social reforms to match that of the Radicals, The National Liberal Federation announced an electoral programme embracing home rule, disestablishment of the Welsh Church, the employers' liability bill, the Irish land bill, one man one vote, the liquor veto, sweeping reforms for dwellers in towns and for the rural population, and the submission of the House of Lords to the will of the representative Chamber. Mr. Chamberlain promised that wild projects of constitutional change and destructive legislation would be succeeded by constructive social reform.

The Radical association, called the National Reform Union, advocated one man one vote, payment of members, local legislation by local bodies alone, simplification of parliamentary procedure, and the abolition of the legislative power of the House of Lords, together with home rule, land-law reform, local option, suppression of grants and pensions, international arbitration, recognition of the rights of weaker races, closer union of English-speaking races, taxation of all land values, graduation of taxation according to ability to pay, recognition of the claims of the sick, aged, and distressed, and admission of the claims of labor to limitation of hours, right of combination, compensation for injuries, and direct representation in l'arliament.

The Irish Nationalists renewed their professions of allegiance to the Liberal party on the basis of the public pledges of its leaders to place home rule in the forefront of its programme.

The platform of the Social Democrat Federation, besides the eight-hour law, free maintenance of children, a minimum wage of the a week, and wholesome dwellings, iteclared for the ownership of railways, factories, miles and and by the whole people, a single chamber of last delegates, elected by universal suffrage and the

popular initiative and referendum.

The members of the Independent Laber party, of which James Keir Hardie was chief, were pledged to sever all connection with the great politteal parties and vote for their own independent socialist candidates. The Welsh Nationalists, the Local Optionists, the Publicans' Association, the McCarthyites, Healyites, and Redmondites, and various other factions issued electoral manifestoes. The Agricultural Union demanded protection for farmers. The Liberty and Property Defense League denounced all state interference,

Each Liberal leader magnified on the platform the project of which he was the special advicate in Parliament, Lord Rosebery proclaimed as the need of the hour the annihilation of the legislative power of the House of Lords, Mr. Morley put home rule at the head of the programme, and Sir William Harcourt laid stress on the local veto. The Conservative programme was chiefly a negative one. The Unionista were the champions of the integrity of the United Empire and the continuity of its Constitution, and upholders of the greatness of the British Empire. Politicians of both parties had schemes to lay before the working classes. Mr. Morley advocated oldage pensions. Mr. Chamberlain came out with a larger scheme, which had the indersement of Mr. Balfour-that of making every artisan the owner of his own dwelling and securing to every agricultural laborer a small holding and a cottage by the intervention of the credit of the Government and its right of exprepriation. Mr. Balfour enumerated as tasks of the next Parliament the better housing of the working classes, the encouragement of freehold occupancy, the amelioration of the lot of the aged poor, the protection of agricultural tenants in their improvements, the preservation of voluntary schools, provision of compensation for injured workmen, the easing of the burdens of British agriculture, and the opening of markets for British industry.

The Unionists were successful in the electrons beyond their anticipations. The Conservatives gained a majority over all other parties com-bined. The new Parliament was composed of 411 Conservatives, 71 Liberal Unionists, 177 Liberals, 70 Anti-Parnellites, and 12 Parnellites, or 411 Unionists against 259 Home Rulers, giving a Ministerial majority of 152. The English constituencies elected 323 Conservatives, 115 Laborals, 53 Liberal Unionists, and I Anti-Parnellite; Welsh constituencies elected 22 Radicals, 7 Conservatives, and 1 Liberal Unionist; there were returned from Scotland 39 Liberals, 20 Conservatives, and 13 Liberal Unionists; and the Irish representation was divided between 69 Anti-Parnellites, 17 Conservatives, 12 Parnellites, 4 Lib-

eral Unionists, and I Radical.

The New Parliament, - Parliament was convoked on Aug. 12. Speaker Gully was unani-mously re-elected. The Queen's speech mantioned the representations made to the thingse Government to secure the punishment of the authors of outrages upon English missi man-

VOL XXXV.-22 A

and the joint intercession of the British, French, and Russian ambassadors with the Sultan of Turkey and their suggestion of reforms for Armenia: also the incorporation of British Bechuanaland with Cape Colony. No legislative proposals were made, the business of the session being confined to voting the estimates for the service of the year which were not voted by the

last Parliament.

James William Lowther was elected chairman of committees. John Daly, who was chosen a member for Limerick city, was declared incapable of being elected because he was undergoing a sentence for treason-felony, Gerald W. four promised the Irish members to consider a noncontentious bill for the relief of evicted tenants, but said that he would not introduce a landlaw bill then on account of its controversial character. In fulfillment of his pledge the new Irish Secretary secured the re-enactment of a clause of the land act of 1891 for the reinstatement of evicted tenants with the consent of their landlords. Further than this he refused to go. Charles K. D. Tanner, Anti-Parnellite, was suspended for a week because he created a disorderly scene. The Liberals supported the de-mands that were made on the Government for the immediate treatment of the questions of the condition of agriculture and the unemployed. The session came to an end on Sept. 5.

London County Council. - The County Council that has managed the affairs of the metropolis for six years has been in control of the Progressive party. The Progressives desire the unification of the metropolis and seek to extend the powers of the County Council, whereas the Moderates, their opponents, propose that the metropolitan area shall be divided into 10 self-governing municipalities. The Progressives have, indeed, acceded to the creation of separate municipalities, each with its own mayor, but not to the principle that each of these shall assess and spend its own rates. The effect of that would be that rich districts, having banished all the poverty and labor into the poorer districts, would not be responsible for any of the cost of improving and keeping up these districts; that the parishes of the West End, which have their Hyde and St. James's Parks maintained out of the taxes, would be relieved of the expense of partly paying for the parks and open spaces of the East End; that poor districts, having a valuation one tenth that of the city or the luxurious divisions and in which all the insanitary areas are found, would have to clear these unhealthy areas away at the expense of the poor themselves. The Progressives have endeavored to introduce the principle of assessing the rates upon the owners rather than upon the occupiers of the sand, and the Council has incurred large expenses in trying to obtain the sanction of Parliament to this method of local taxation. In education, samitation, and other matters the metropolis has made great progress. The rates have been increased over 20 per cent., from 111d. to 14d, in the pound, during the six years the County Council has been in existence. Six schemes of street improvements were proposed in Parliament in 1893, the Council making the condition that Parliament should pass a public bill for taxing ground values, otherwise the im-

provements would not be made. This resulted in a deadlock, for the Government declined to introduce such a bill. Later the Council was willing to proceed with some of the schemes. provided Parliament should sanction the principle of betterment, which is that owners whose land is enhanced in value by improvements should be made to pay for them in proportion to the benefit received. In furtherance of the project of unification the Progressives have proposed to take from the corporation of the city of London its ceremonial functions. In compliance with their wishes the city companies have already given up some of their surplus revenues for technical education. Many of their proposals are called socialistic, such as the municipalization of docks and markets and the establishment of municipal pawnshops. The municipalization of gas and waterworks and street railroads is not opposed absolutely by the Moderates, but the majority of the Council have not been able to agree with the opposite party or with the companies owning the existing waterworks and trainways in regard to the price and the conditions of the transfer. The County Council adopted the policy of executing all pub lic works and conducting all the public business without the intervention of contractors. The Committee on Works regarded the results as satisfactory, although the rule was adopted to pay the trade-union rates or the highest market ra of wages to all workmen employed. The Moderates have ceased their opposition to the purchase of the street railroads since the Court of Appeals decided that the price shall not be based on the market value of the shares, and must not be more than the actual value of plant and material. The Moderates want the tramways, however, to be leased and operated by companies, while the Progressives propose that the County Council shall run them. Bills have been brought before Parliament for the expropriation of all the water companies.

Elections for a new County Council were held in March, 1895. The general reaction in favor of the Conservative and Unionist party operated in favor of the Moderates, who have been affliated with the Conservatives. The result was a tie, 57 Moderates against 57 Progressives. The Moderates gained 23 seats. Nevertheless, the Progressives obtained a majority in the new Council with the votes of the 9 aldermen who have seats and votes in the Council. They elected their candidate for chairman, Robert Arthur Arnold, over the Duke of Norfolk by 66

votes to 57.

The Progressives, grown modest through their electoral reverses and the prospective victory of the Conservatives in the national election, of fered in Parliament a compromise bill, combining betterment with worsement in assessing special taxes for local improvements. The compromise, having been arranged by Mr. Stuart with Lord Cadogan, had the support of the Moderates. The principle of worsement, securing in demnity to owners whose property is injured by improvements, has heretofore been rejected by the majority of the Council. The bill provide that in certain conditions owners may call upon the County Council to purchase the lands and houses on which a special tax has been assessed

Trade Union Congress.-The Trade Union Congress, which was held at Cardiff in the beginning of September, restored the Old Union-ists to the position from which they were ousted in the Norwich congress in 1894; and yet the collectivist doctrines of the New Unionism were not repudiated. The resolution for nationalizing the whole of the means of production, distribution, and exchange remained unrepealed. nationalization of land, mines, and railroads was approved without discussion. The municipalisation of docks, with the financial and administrative aid of the state, was unanimously accepted. The present system of education was condemned as based upon commercialism and unfitted to supply the educational needs of the nation. The congress called for the reintroduction into Parliament of the employers' liability bill without the clause for contracting out, and commended an eight-hours' bill that should apply to all trades and districts. The abolition of the House of Lords was demanded because it had shown hostilty to labor legislation. The amendments to the truck act passed by Parliament were declared to be ineffective as a protection against deductions from wages, because a worker may have to sign a contract to submit to deductions as a condition of obtaining employment. An additional resolution called for the payment of all wages at the first regular pay day, and one suggested by the women's trade unions condemned deductions for house rent or for workroom conveniences, such as motive power, light, or tools. Another resolution asked the Government to put into operation the principle of a fair wage and to pay the union rates always, with a minimum rate for laborers of 24s. a week; also to deal only with fair houses, in which fair conditions of labor exist, and where trade-union rates are paid for all labor and trade-union customs as to hours, holidays, and the number of hands and apprentices are observed. The congress assented to the proposition that in labor legislation perfect equality of treatment as to hours of work and remuneration should be secured to both sexes. When a mill or company stops work without providing for the payment of all wages earned, it was proposed to give to the work people the right to distrain at once which a landlord has for collecting arrears of rent. The parliamentary committee was instructed to have the trade union-acts so amended that a person of the age of fourteen years may become a member of a registered union. congress declared itself of opinion that employers should be responsible to workmen when tools are destroyed or damaged by fire on their premises.

Institute of International Law.—The four-teenth session of the Institute of International Law was opened at Cambridge on Aug. 8. An article was adopted recommending that claims against a diplomatic representative, over which, on the principle of exterritoriality, the courts of the country to which he is accredited have no jurisdiction, should be sued in the court of the capital of his own country, or in the court of his domicile if he is able to contest the jurisdiction of the court of his capital on the ground of being domiciled elsewhere. Immunity from taxation was held not to extend beyond the official per-

sonnel of a diplomatic mission. Persons er a ing diplomatic immunities can not be cited as witnesses before local courts, but they should be obliged to give testimony within the precinc's of the mission before a magistrate specially delegated by the local authority. The question of establishing an international tribunal to decide cases arising out of the international copyright treaty was postponed. The subject of guardianship over adults came up, and the metitute beld that the national law should apply, rather than the law of the domicile. Another decision was that the judgment of the competent national tribunal should be enforced in other countries without being ratified by the courts of those countries. Proceedings against a foreigner should, however, be provisional only, and should not be concluded without notifying the diplomatic or consular representative of the state to which the foreigner belongs, and hearing any observation made by such representative, Bern copyright convention was discussed and amendments were suggested. The institute decided in favor of extending the author's exclusive right of translation from ten to twenty years, or to the full copyright term; also in favor of, and against altering the clause only giving the foreign author copyright for the least term allowed in either of the two countries, and allowing the term of the country of reproduction; the rules regarding adaptations should be made unequivocal, and newspaper articles should be protected, with the exception of news and political articles, and reproductions of these should contain an indication of the source. The question of contraband of war was extensively discussed, but the decision was postponed. On the subject of nationality the institute decided that no one should be without a nationality, and no one should have two nationalities; that every one should be allowed to change his nationality. but that to do it a simple declaration should not suffice; and that the nationality of origin should not be transmissible from generation to generation on foreign soil.

Colonies and Dependencies.—Besides British India (see India) and the colonies possessing responsible and representative government (see Australasia, Cape Colony, Domision of Carada, and West Indies), Great Britain has Crown colonies and protectorates in every continent and ocean. The total area of the British Empire is estimated at 11,334,701 square miles and the aggregate population at 380,038,000. The expenditure of the mother country on the colonies is about 42,000,000 a year, mainly for military and naval purposes. There are about 32,000 British troops maintained in the British colonies and naval stations, not counting the garrisons in

India and Egypt.

In Europe England has Gibraltar and Malta, which serve chiefly as naval and military bases for operations in the Mediterranean Sea. Gibraltar, governed as a Crown colony, is garrisoned by 9,000 troops. The Governor is Gen. Sir Robert Buddulph. The native population of Spaniards and descendants of the original Genesse settlers is about 20,000. The revenue in 1893 was £60,919, and expenditure £58,405. Malta, an island south of Sicily, has an area of 95 square miles and a population of 168,105, of whom 1,773 are

English. The Governor is Lieut,-Gen. Sir Arthur J. L. Fremantle. The revenue in 1893 was

£291,158; expenditure, £304,993,

At the eastern end of the Mediterranean is the island of Cyprus, administered by Great Britain for the Sulian of Turkey, in accordance with a convention concluded at Constantinople on June 4, 1878. It was the compensation obtained for England in the readjustment of the Eastern question by the Treaty of Berlin. Lord Beaconsfield, who brought back "peace with honor," pected that the island would become an important military post; but the climate proved unhealthy for troops, and the island ceased to possess strategic value for Great Britain after the occupation of Egypt. The British administration has been inefficient, and its expense crushing to the inhabitants and a burden to the British taxpayer, for Parliament has granted subsidies aggregating about £500,000 for the relief of the Cypriots, and still contributes £30,-000 to cover the deficit. The annual tribute due the Turkish Government and guaranteed by Great Britain is £92,800. The annual revenue previous to the British occupation was £132,000. Some of the Turkish taxes it was necessary to abandon, they were so oppressive. The revenue in 1894 was returned as £177,054, and local expenditure as £117,654. After the good harvest of 1892 no grant in aid was required for two The revenue is derived from customs, a salt monopoly, tithes, a land tax, excise, stamps, court dues, a tax on trade profits, military exemption fees, and taxes on sheep, goats, and pigs. The tithes are paid in kind. The Governor is The tithes are paid in kind. Sir Walter Joseph Sendall, appointed in 1892. The area of Cyprus is 3,580 square miles. The population in 1891 was 209,286, exclusive of the garrison. The exports are grain, carobs, cotton, linseed, olives, cocoons, raisins, fruit, wine, cheese, live animals, wool, skins, vegetables, sponges, and gypsum. The imports in 1893 amounted to £316,872, and exports to £316,543.

Negotiations have been carried on with Turkey for the reduction of the tribute by its commutation into a lump sum. To this Turkey would not consent, because it would practically extinguish her rights over the island and lead to its annexation by Great Britain. The Greek inhabitants protest against the payment of tribute and demand relief from the heavy taxation that is tending to their destruction. They ask for the

cossion of the island to Greece.

In Asia, on the trade and military route to the East, Great Britain possesses the fortress and coaling station of Aden, with territory on the opposite coast of Africa, which serves as a basis of supplies and a gateway for trade. Aden has a psychapter of 41,910. The island of Socotra has 10,000. The Somali coast protectorate has an area of 75,900 miles. On both sides of the African confucent Great Britain has more recently acquired epichamical by treaty arrangements or partial on spatial continues the first Africa and West Africa).

At the southern extremity of India is the fertile island of Ceylon, now largely given up to the cultivation of tea on a commercial scale. It has a partly representative government. The Governor is Sir Arthur Elibank Havelock. The area is 25,365 square miles, and the population

in 1891 was 3,008,466. The natives are Buddhists, Hindus, Mohammedans, Christians, and pagans. The revenue in 1893 was 18,051,950 rupees, and the expenditure 18,276,108 rupees. The imports were valued at 72,340,662 rupees, and exports at 74,195,368 rupees. Besides tea the products of commercial importance are cocoanuts, coffee, rice, cinchona, areca nuts, cinamon, tobacco, and cacao. Plumbago and pearls are valuable exports. The abolition of the obnoxious paddy tax has caused a temporary decline in the revenue. The export of tea increased from 72,000,000 pounds in 1892 to 82,000,000 pounds in 1893; that of coffee from 43,000 to 55,000 hundredweight.

British North Borneo, with Labuan and the sultanates of Brunei and Sarawak, constitutes a recently acquired British possession on the island of Borneo. The Governor is Charles Vandeleur Creagh. The total area is about 85,000 square miles, and the population 475,000. North Borneo produces tobacco, pepper, coffee, woods, sago, gutta-percha, gums, gambier, rattan, pearls, and bèche-de-mer. Coal and gold have been found. The revenue in 1893 was \$289,220. The imports were valued at \$1,780,

593, and exports at \$1,116,714.

Beyond India, guarding the sea route to China and the protected states of the Malay peninsula, are the Straits Settlements, a Crown colony comprising Singapore, Malacca, and Penang, with the dependencies of the Cocos Islands and Christmas island. The Governor is Sir C. B. H. Mitchell. The total white population in 1891 was 3,483, and the colored population 419,901. Of the latter half were Malays and half Chinese The revenue in 1893 was \$3,706,308, and expenditure \$3,915,482. The forts defending the new harbor at Singapore cost £100,000 to build This expense the colony had to bear, together with an increased and growing burden for the support of the increased garrison and armaments. The imports in 1893 were valued at \$160,148,960, and exports at \$144,757,394. The exports are tin, sugar, pepper, gutta-percha gambier, gums, copra, coffee, tobacco, tapica

rattan, dye stuffs, and spices.

The colonists have complained seriously o. the burdens they have been made to take upor themselves for imperial defense, which were doubly heavy on account of the fall in the value of the rupee. The British Government decrees that they should raise for that purpose £100,00 a year from 1894 till 1898, but afterward agre that the contribution should be reduced to £80, 000 for the first year and £90,000 for the second on condition that if the colonial finances should be more prosperous in subsequent years the should make up the sums remitted. They aske to have the amount reduced to £70,000 a year and instead of that were called upon to p £110,000 in 1897 and £120,000 in 1898. Unabl to obtain any better terms, the best known c the nonofficial members of the Legislativ Council, together with the justices of the peac and the members of the Chinese Advisory Cour cil, resigned their places by way of protest i January, 1895. The entire body of colonist signed a petition setting forth that the contribu tion for the year amounted to 27 per cent. the total revenue, and asking to have a reason

able percentage of the revenue assigned for the purpose instead of an arbitrary sum. In June ord Ripon agreed to fix the military charges

at 171 per cent, of the gross revenue.

The native states under the protection of the Straits Settlements are Perak, Selangor, Sungei Ujong, Negri Sembilan, and Pahang. Their aggregate revenue exceeds \$7,000,000. Johns is a semi-independent state. A scheme has been drawn up for confederating the protected states under a British Resident General. A rebellion roke out in Pahang in 1895, a renewal of the disturbances that ceased in 1892. The most valuable product of these territories is tin. Gold has been found in Negri Sembilan.

Hong-Kong, a military station and free commercial port in the China Sea, is a small island at the mouth of the Si-Kiang river. The population in 1894 was 246,009. There were 8,545 whites in 1892. The revenue for 1893 was \$1,-940.200, not including \$137,874 of premiums from the water account. The expenditure was \$1,903,695, exclusive of \$355,144 of extraordinary expenditure for defensive works and the water account. The revenue is derived from land taxes, license fees, and the opium monopoly. There is a public debt of £341,800, raised for fortifications and waterworks. In the six years preceding 1891 there were \$647,300 spent for fortifications, and since then the expenditure has been higher. The Governor is Sir William Robinson. The trade with China increased from 129,181,000 Haikwan taels in 1893 to 133,218,000

The inhabitants of Hong-Kong have praved for an amendment of the Constitution converting the colony from a Crown colony into one having a larger degree of representative govern-ment. The civil population consists of 211,000 Chinese, 2,000 Portuguese, 1,400 British, and a few hundred other Europeans and Americans. The colonists have protested as strenuously as those of the Straits Settlements against the execsive charges imposed upon them by the Colonial Office in London for fortifications, armaments, and garrison expenses, and also for public buildings and other improvements that they

were not ready to undertake.

Mauritius is an island in the Indian Ocean, near Madagascar. It was originally owned and settled by the French. The area is 705 square miles, and the population is 371,655, of whom two thirds are natives of India, who came originally as coolies from Bombay to work on the sugar estates of the creoles. The revenue in 1863 was 8,103,922 rupees, and the expenditure 7,572,096 rupees. The imports were 18,899,939 rupces in value, and the exports 22,176,486 rupces. Besides raw sugar and rum, drugs, hemp, and soutchouc are the principal exports. The Seychelles, Rodriguez, Diego Garcia, and other small islands are governed from Mauritius. The Governor is Sir Hubert Edward H. Jerningham. Mauritius, as well as Hong-Kong and Singapore. objects to the heavy demands of the Imperial Government for military purposes.

In America, besides the Canadian Dominion. Newfoundland, and the British Antilles, the British possessions are British Honduras and British Guiana. The former has grown out of a settlement established on the coast of Central

America for the cutting of mahegany and logwood, to which the Spanish Government granted the privilege of municipal self-government. The area is 7,562 square miles, and the population in 1893 was 31,371. The revenue in 1893 was \$301,922, and the expenditure \$365,519. The imports were valued at \$1,460,941, and experts at \$2,135,117. The Governor is Sir C. Alfred Moloney,

British Guiana has grown up from the former Spanish settlements of Demerara, Essequits, and Berbice. The area is given as 109,000 square miles. The population in 1892 was 278,295. limits of the colony are a subject of dispute (see VENEZUELA). The revenue in 1894 was £602,762. and expenditure £366,833. The imports were £1,920,710, and exports £2,358,918 in value. The Governor is Sir Charles Cameron Lees,

The New Laurente,-The office of poet laureate, which had been vacant since the death of Tennyson, in the autumn of 1892, was filled, late. in the year, by the appointment of Alfred Austin, Mr. Austin was born in Headingly, near Leeds, May 30, 1835. His Jather was a merchant; his mother was a sister of Joseph Locke,

ALPRED AUSTIN, POST LAUREATE

the civil engineer. Both were Roman Catholics. Alfred was educated at Stonyhurst College and at St. Mary's College, Oscott. He took his degree at the University of London in 1853, and four years later was called to the bar. But his heart was in literature rather than in the law, At the age of eighteen he published anonymous-ly a poem critifed "Randolph," and two years afterward a novel. He definitely abandoned the law in 1861, and traveled on the Continent. He was a special correspondent in the field during the Franco-German War in 1870, has written much for journals and magazines, and founded and for ten years edited the "National Review." His predecessors in the office of laureate were; Edmund Spenser, 1591-99; Samuel Daniel, 1599-1619; Ben Jonson, 1619-37; William Davenant, 1660-'68; John Dryden. 1670-89; Thomas Shadwell, 1689-39; Nahum Tate, 1692-1715; Nicholas Rowe, 1715-78; Lawrence Eusden, 1718-30; Colley Cibber, 1730-'57; William Whitehead, 1757-'85; Themas

Warton, 1785-'90; Henry James Pye, 1790-1813; Robert Southey, 1813-'43; William Wordsworth,

1843-'50; Alfred Tennyson, 1850-'92.

Mr. Austin's prese works include 3 novels—
"Five Years of it" (1858), "An Artist's Proof"
(1864), and "Won by a Head" (1866)—and "A
Vindication of Lord Byron" (1869); "The Poetry of the Period" (1870); "Russia before Europe" (1876); "England's Policy and Peril"
(1877); and "The Garden that I love" (1894).
In poetry he has published "The Season," a satire (1861); "The Human Tragedy" (1862);
"The Golden Age," a satire (1871); "Interludes" (1872); "Rome or Death" (1873); "Madenna's Child" (1873); "The Tower of Babel,"
a drama (1874); "Leszko the Bastard" (1877);
"Savonarola," a tragedy (1881); "Soliloquies in
Song" (1883); "At the Gate of the Convent"
(1885); "Love's Widowhood" (1887); "Prince
Lucifer" (1888); "English Lyrics" (1890);
"Fortunatus the Pessimist" (1893); and "England's Darling" (1896).

GREECE, a constitutional monarchy in southern Europe. The legislative body is a single Chamber called the Boule, composed of 207 members, elected by universal suffrage for the term of four years, or until the Legislature is dissolved by the King on the advice of his responsible ministers. The reigning King is Georgios I, born Dec. 24, 1845, the second son of Prince Christian of Sleswick-Holstein-Sonderburg-Glücksburg, now King of Denmark. He was elected by the Boule in virtue of a protocol signed at London on June 5, 1863, by the three protecting powers—England, France, and Russia—and began to reign on June 27, 1863. The heir apparent is Konstantinos, Duke of Sparta, eldest son of the King, born Aug. 2, 1868, and married to Sophia,

Princess of Prussia.

The ministry at the beginning of 1895 was composed as follows: President of the Council and Minister of Finance, C. Trikoupis; Minister of Foreign Affairs, M. Stephanou; Minister of the Interior, M. Bouphidis; Minister of Ecclesiastic Affairs and Education, M. Kalliphronas; Minister of War, Col. Tsamados; Minister of Marine, Capt. Bouboulis; Minister of Justice,

M. Stephanou.

Area and Population.—The area of the kingdom is 25,041 square miles. The population is 2,187,208, of whom 1,133,625 are males and 1,053,583 females. Of the male population, 444,096 are engaged in agriculture and stock raising, 64,211 in mechanical arts, and 117,979 in commerce, 31,321 are in service, 15,735 are professional men, 12,109 are officials, 10,059 are clergywied, and 34,624 compose the army and navy. The people belong to the Greek Orthodox Church, with the exception of insignificant communities of Rayana Catholies and Jews and a few thousand Mahammedans.

Defense.—The strength of the army in 1894 was 24.877 efficers and men, with 3,739 horses and 120.0cbl guis. There were 16,039 infantry, 1,146 cavalry, 2,287 artifley, 1,213 engineers, and 3,229 gendarmes. The legal term of active service is two years, but furloughs are commonly

granted after slight instruction.

The naval force consists of 3 steel-clad vessels c"Hydra," "Spotso," and "Psara") of 4,885 tons displacement, having 11% mehes of armor at the

water line, and carrying 3 Canet guns of 30 centimetres caliber, 4 of 15 centimetres, and 24 small guns; two older armor clads ("Basilissa Olga" and "Basileus Georgios") armed one with 4 54-ton and 2 34-ton and the other with 2 10-ton Krupp guns; 4 unprotected cruisers, 12 gunboats, and 30 torpedo boats, not including 2 submarine Nordenfeldt boats.

Commerce and Production.—The principal commercial product is Zante currants, grown between Corinth and Patras, on the shore of the Gulf of Corinth, on the islands of Zante and Cephalonia, and in other parts of Greece, in such quantities that the price has fallen. The Greek Government has endeavored to extend the market by inducing other governments to abolish or lower their duties, and has met considerable success on the Continent, but not in England, which is the largest consumer of the Greek staple. Merchants have succeeded in opening up

some new markets, notably in Russia. The next most important exportable product is metallic ore—lead, silver, and zinc. The values, in drachmai or francs, of the principal exports in 1893 were: Currants, 46,274,650; ores, 15,002,625; wine, 4,194,250; fruit, 2,686,125; olive oil, 2,675,000; tobacco, 2,453,150; sponges, 2,290,625; silk and cocoons, 1,396,175; valonia, 1,131,500; hides, 539,325; soap, 537,500; emery, 468,925; all others, 8,384,000; total exports, 88,033,850 drachmai. The principal imports were valued, in drachmai, as follows: Cereals, 23,301,500; coal, 7,482,125; cotton goods, 5,363,175; caviar and fish, 4,049,200; woolen goods, 4,036,025. Other imports are hides, timber, sugar, coffee, animals, hardware, and metals. The total value of the imports in 1893 was 91,484,925 drachmai.

Navigation.—There were 6,582 vessels, of 2,788,815 tons, entered at Greek ports during 1892,

and 5,482, of 2,340,720 tons, cleared.

The inerchant navy consisted of 125 steamers, of 134,687 tons, and 762 sailing vessels, of 343,442 tons.

Railroads and Telegraphs.—The length of railroads in operation in 1893 was 568 miles, of which the Government owned 92 miles. There were 306 miles under construction,

The telegraphs have a total length of 4,751 miles, with 5,630 miles of wire. There were 817,-034 internal and 347,829 foreign messages sent

and received in 1892.

Finances.—The financial statements of the Greek Government have been unreliable, owing to a loose and variable system of accounts and the mutable theories of different financiers. The total revenue was estimated for 1894 at 88,729,669 drachmai, of which 18,236,900 were derived from direct taxes, 18,000,000 from customs, 12,477,067 from stamps, 11,027,000 from monopolies, 6,218,400 from excise, 4,309,672 from dues and fines, 3,535,796 from public property, 2,937,000 from posts and telegraphs, 1,961,200 from educational fees, 1,650,000 from police, 1,320,119 from sales, and arrears. The direct taxes are always in arrear, the Government refraining from collecting them, from consideration for agricultural distress, mixed with political motives.

The expenditures for 1894 were estimated at

The expenditures for 1894 were estimated at the total of 81,693,158 drachmai, divided as folows: Public debt, 21,999,083 drachmai; army, 14,761,946; Interior Department, 10,209,689; ad-

GREECE.

ministration, 8,902,661; Worship and Education, 7,359,521; Justice, 5,393,564; navy, 5,303,611; pensions and allowances, 5,270,494; Finance Department, 2,456,556; Foreign Relations, 2,001,-22; civil list, 1,325,000; Boule, 496,561.

Municipal taxation is limited by law to 2½ per cent. of the direct taxation of the Government, besides an octroi duty of 2 per cent. The revenues of the municipalities amount to 17,000,000

drachmai.

The total debts of the Government amounted in 1804 to 657,653,247 drachmai payable in gold and 169,420,210 drachmai redeemable in currency. The gold debt consists of 71,521,012 drachmai, advanced by the three protecting powers in 1838, sinking-fund loans of 104,370,000 drachmai raised in 1880, 91,350,000 drachmai raised in 1884, and 133,045,000 drachmai raised in 1887, perpetual consuls amounting to 155,000,000 drachmai issued in 1889, a railroad debt of 52,007,500 drachmai contracted in 1890, 16,800,000 drachmai of gold treasury notes, and 14,159,000 drachmai of gold treasury notes, and 14,159,000

785 drachmai of temporary loans.

Change of Government,-In the beginning January, 1895, distraining for taxes and the foreclosure of mortgages by the National Bank sed disturbances in Elis and other districts. The opposition blocked legislation in the Cham-ber. The Government proposed to abolish oc-reis and to impose a higher house tax and a tax on all trades and professions. The people sade demonstrations against these new taxes, d the police and soldiery roughly dispersed the protesting crowds that gathered in the streets of Athens on Jan. 20. The Crown Prince, who is commander of the Athens Army Corps, recented not being consulted as to the move-ments of his troops. He rode to the Field of Mars, where the great mass meeting was to be weld, and ordered the prefect of police to cease interfering with the people's constitutional right of assemblage. The prefect refused to obey any orders but those of the Minister of the When the people surrounded the nce's horse he advised them to present their evances to the King by deputations, and almed their angry spirits, preventing the restened collision between the crowd and the troops. Trikoupis got together with difficulty a quorum, to prove that he could still command majority, and immediately adjourned the Chamber. Thus fortified, the Prime Minister complained to the King about the prince's interference, and the King sustained the prince. The Cabinet thereupon resigned on Jan. 22. The King promptly accepted the resignation of Trikoupis, and, after Admiral Kanaris had given up an attempt to form a provisional Cabinet, sent for Nikolaos Delyannis, nephew of Theodo-Delyannis, the veteran political leader. A www Cabinet was constituted on Jan. 24, as fol-President of the Council and Minister of Foreign Affairs, Nikolaos Delyannis: Minister of War, Col. Papadiamantopoulos; Minister of Marine, Capt. Kriezis: Minister of Education and Public Worship, Angelos Vlachos; Minister of Finance, Ketseas: Minister of Abr. Finance, Ketseas; Minister of the Interior, Col. Metaxas; Minister of Justice, Aravantinos. This was a nonpolitical ministry, composed mainly of personal friends of the King, appointed for the purpose of dissolving the Cham-

ber and superintending new electrons, ministers gave pledges that they would not be candidates for the Boule. The sessions of the Chamber were immediately suspended by royal decree for forty days. During the five months that the ministry lasted the diplomatist who presided over it did much useful work in improving the commercial relations of Greece. He concluded the negotiations for a new commercial treaty with Egypt that Trikoups had begun, made other new commercial treaties with Russia and Belgium, and succeeded in getting the Swedish duty on currants lowered, In the Belgian treaty the duty on currents was reduced one fifth, and abolished altogether if the cur-rants are used for distilling. In the Russian treaty Greece agreed to reduce by one half the duties on caviare, lard, and oak timber, and Russia promised to make the same reduction in her duties on olive oil, olives, and figs, and to admit currents free. Greece furthermore agreed to use only Russian petroleum, and to take it at the price current in Bremen for American oil. The Egyptian treaty opens a market for Greek tobacco. He also established better political rela-tions with Turkey. The internal administration was improved as well. Public order was well preserved, even during an excited political campaign, and brigandage received a blow in the extermination of two out of the three bands that infested the northern part of the kingdom.

The Delyannis Ministry.—The elections were held on April 29. The party of Delyannis was successful in obtaining a surprising majority over the followers of Trikoupis and the outside parties. The election hinged on the readjustment of the debt. Trikoupis having attempted to scale down the principal and interest by arbitrary decree, and having failed, Delyannis promised to rehabilitate the finances of the country, restore specie payments, and raise the price of all staple commodities by means of an arrangement with the creditors, although the organs of his party had previously criticised Trikoupis for making too great concessions to the bondholders. The Trikoupist party secured only 16 seats, while the party of his old rival won 155. Trikoupis lost his own seat in Missolonghi, and his most trusted heutenants were defeated. There were 24 Independents elected, and 20 supporters of Kalli, 4 Progessists, and 4 followers of Deligeorgi. Trikoupts announced his withdrawal from public life for a time, leaving his adherents in the new Chamber free to adopt such course as they deemed best. Government, so far from exercising the pressure and influence in the elections customary with partisan administrations, had forbidden state officials to take any part, and confined to their barracks all officers and soldiers on election day. In Missolonghi several officials were removed because they electioneered in behalf of Trikou-The sudden overthrow of the late Premier was due not wholly to his failure to extricate the country from its financial difficulties, notwithstanding the crushing taxation, but partly to some unpopular measures that he instituted, such as the establishment of a military police and the exaction of fees for tuition at the university-160 drachmai a year. When the Chamber met on June 10 and elected a Delyannist

President, the Cabinet resigned. The King sent for Theodoros Delyannis, who formed a Cabinet composed as follows: President of the Council and Minister of Finance, Theodoros Delyannis; Minister of Foreign Affairs, Skonzes; Minister of the Interior, Mavromichalis; Minister of War, Smolentz; Minister of Marine, Levidis; Minister of Justice, Varvoglis; Minister of Pub-

he Instruction, Petridis.

In intrusting the Government to Delyannis, with whom he had been on bad terms since he dismissed that statesman from office in 1892, the King exacted a promise that the ministry would not interfere with the command of the army, nor introduce any bill in the Boule to diminish the authority of the sovereign as commander-inchief, or restrain him from making promotions and assignments to duty, on grounds of seniority and fitness only, without regard to political or

social considerations.

The plan of Delvannis for the service of the debt was to allocate certain revenues, after setting aside a sufficient sum for the proper working of the administrative machine to meet the claims of the public creditors. For the administration of the sequestered surplus revenues a debt commission would be appointed, composed of some of the most important and independent men of the kingdom, but containing no representatives of the foreign bondholders. commission was to consist of the Minister of Finance, the President of the Board of Audit, the President of the Boule, the President of the Court of the Areopagus, and the managers of three of the principal banks. He proposed to complete the Chalcis section of the Piraus and Larissa Railroad, which had cost the state 85,000,-000 drachmai and was falling into decay; to save from ruin also the Myli and Kalamata Railroad: and to finish the incomplete and neglected roads throughout the country. The military police were to be altered into a state civil police in the cities and a municipal police in small towns. Educational fees were to be reduced, and the contributions of municipalities for primary education abolished. After passing these measures and two bills for the relief of the producers of currants-one slightly reducing the export tax, and one anthorizing the Government to take 20 per cent of the superabundant crop and hold it back for a year—the Boule closed its session on Aug. 1. The provisional reduction of 70 per ment, in the interest on the foreign debt was continued by Delyannis pending the arrangement of a compromise with the English, French, Corpan, and Russian creditors. Since many of the bandholders objected to the proposals that had been made by the committees that pretended to speak for them, the Greek Governon at demanded that the holders of Greek bonds should register their names and the amount of ther heatings as a preliminary to the negotiations and delegate persons to act for them who would be truly representative. With the premism on gold mounting up to 89 per cent, the traverment could only, at a great sacrifice, obtain the money to pay even 30 per cent, of the face of the coupens. There were 118,800,000 paper drachman in circulation, of which 16,800 .-000 called for gold. The provisional gold loans amounted to 14,160,000 drachmai. The debt

amounts to \$54 per capita, and the annual charge for interest and amortization is nearly \$4. Even at the reduced interest the bond-holders received a fair return for their money, as most of the loans were issued for less than 65

per cent, of their face value.

The Olympian Games.—An international congress held in Paris in the summer of 1894, under the presidency of the Baron de Courcel, decided on reviving the Olympian games of ancient Greece in the form of an international athletic tournament, to be held in different European cities at intervals of four years. The first celebration takes place in Athens in the spring of 1896, and the second will be in Paris in 1900. The games include gymnastics, running, quoits, bicycling, tennis, rowing, and sailing. The festivities will be diversified by spectacles and ancient Greek music.

GUATEMALA, a republic in Central America, declared independent when the Central American Confederation dissolved in 1847. The legislative power is vested in the National Assembly, a single chamber elected for four years by universal suffrage. The President is J. M. Reyna Barrios, elected for the constitutional

term of six years that ends in 1898.

Finances.—Customs duties provide nearly half the revenue, and excise duties on alcohol and tobacco more than a quarter. The principal expenditures are for the debt, the army, and education. About a tenth of the revenue goes to maintain the regular army of 3,718 officers and men and pay the necessary expenses of the militia force of 67,300 men. The Government has expended money lately to procure modern military arms. It has also erected many new public buildings and entered into heavy engagements to subsidize railroads. A national bank has been established.

Guatemala defaulted on her bonds in February, 1894. The bonds are held mostly in England, though Americans and Germans hold a part. The English bondholders formed a committee, with Sir John Lubbock as chairman, and sent an agent to Guatemala. They went so far as to suggest the forcible intervention of the British Government. The Guatemalan Government declared that it had no intention of repudiating either principal or interest of the debt, that the temporary suspension was due to the depreciation of silver, and that the customs duties hypothecated for the service of the debt were regularly deposited in the treasury, Guatemalan commissioners were sent to England, and an arrangement was finally made in May, The Government offered to give a new 1895. bond for £75 bearing 4 per cent. interest in exchange for every £100 bond of the external debt, and for the internal bonds to issue new ones for 934 per cent, of their face value, bearing likewise 4 per cent. interest. The London bondholders agreed to accept this compromise.

Education.—Education is free and compulsory by law, and the Government maintains 1,304 primary schools, but only 43,789 children out of 143,453 of school age were in attendance in 1893. The Government expended \$1,120,000 on education in 1894, over a tenth of its income.

Railroads.—A railroad from San José to the capital, 72 miles, and one from Champerico to

HAWAH.

Ritalhulen, 27 miles, were completed in 1883. The latter was afterward extended to San Felipe, 30 miles from Ritalhuleu. A railroad from the capital to the Pacific coast, built by an Amerlean company, was opened on March 15, 1895. The division completing the line to the Atlantic coast is to be finished by 1897. The Govern-

ment grants a subsidy of \$8,000 a mile.

The Mexican Boundary .- A dispute with Mexico over a part of the boundary between the two republies became so acute before the beginning of 1895 that troops were sent to the frontier by both governments, and military preparations were made on a large scale. Each Government stood firmly by its claim to the district, and Mexico demanded compensation for the damage inflicted upon concessionnaires by the expulsion of their servants, the destruction of buildings, and the burning of forests. The disputed district is a gore jutting into

Guatemalan territory that looks as though it ought to belong to Guatemala. Costa lina and the other Central American states showed strong sympathy with Guatemala, and indicated a will ingness to come to her aid with their inditary forces. The United States Government, on Jan. 25, 1895, intervened with the suggestion that the dispute was a proper subject for arbitration, and proffered its services to bring about an amicable settlement. The Mexican Government was ready to concede the disputed district to Guatemala, but demanded an apology and reparation. A treaty was signed by Ministers De Leon and Mariscal, in the city of Mexico, that gave complete satisfaction to Guatemala, and the Mexican Senate, in April, ratified it by a unanimous vote. The question of indemnities was left to be settled by arbitration. The United States minister to Mexico was, on Sept. 16, selected as arbitrator.

H

HAWAII, a republic in the Hawaiian Islands of the Pacific Ocean, proclaimed July 4, 1894, succeeding a Provisional Government that was formed on Jan. 13, 1894, when Queen Liliuokalani conditionally abdicated the throne. legislative power is vested in a Senate and a House of Representatives, the former consisting of 15 members elected for six years by indirect limited suffrage, and the latter also of 15 mcmbers, elected by the suffrage of native or naturalized Hawaiians and whites. The President is elected for six years by the two houses in joint resion. There is a State Council of 15 members, appointed by the Senate, the House of Representatives, and the President, each naming one third.

The President is Sanford B. Dole, elected for the term that expires in 1900. His Cabinet in the beginning of 1895 was composed as follows: Minister of Foreign Affairs, Francis March Hatch; Minister of the Interior, James A. King; Minister of Finance, S. M. Damon; Attorney-General, William Owen Smith.

Commerce and Production.—Sugar is the principal product. The imports in 1893 were valued at \$5,347,000, and the exports of domestic preduce at \$10,742,000. The export of sugar was \$10,200,958; of rice, \$317,473; of bana-nas, \$105,096; of wool, \$30,259. The principal imports are provisions, cotton goods, cereals, timber, apparel, machinery, and hardware. Nearly all the exports go to the United States, and the bulk of the imports come from there, though lately Japanese, Chinese, and British merchants have diverted a part of the trade to other countries. All the sugar was formerly shipped to San Francisco, but in 1895 cargoes were sent to New York by way of Cape Horn. There were all vessels, of 323,685 tons, entered at the port of Honolulu in 1893,

Prosecution of Royalists,-A royalist uprising that occurred in the environs of Honolulu on Jan, 6, 1895, was quickly suppressed. Of the insurgents 12 were killed and 500 taken prisoners. On the Government side C. L. Carter, late

Commissioner to the United States, was killed, In one of the improvised forts were found 36 rifles with ammunition and 2 dynamite bombs, These munitions were landed from the schooner "H. A. Wahlberg," of San Francisco, whose entire crew was arrested. A second fight occurred in the Manoa valley on Jan. 9, in which several insurgents were slain. Among 70 persons who were arrested for complicity in the attempted rebellion were 10 American citizens and 10 British subjects. The leaders in the uprising were Samuel Nowlein, formerly colonel of the Queen's body guard, and Robert Wilcox, who directed the revolutionary uprising of 1887. There were 40 rifles and cartridge belts found in the residence of the deposed Queen. All persons not in the police or on military service were compelled to deliver up their arms. Under martial law, which was proclaimed on Jan. 7, Major Seward, formerly of the United States army, and Charles T. Gulick, who was Minister of the Interior in 1885-'86 under King Kalakaua, and who claimed to be an American citizen, were condemned to death; also an Englishman, William H. Rickard. T. R. Walker was condemned to imprisonment for life and fined \$5,000. United States Minister Willis, under special instructions from Secretary Gresham, demanded delay of execution for American citizens who were condemned to death by a military tribunal for mere complicity without participation in the revolution, or condemned for actual participation without a fair and open trial and opportunity for defense. He was instructed to report in either case the evidence relied on to support the death sentence. Identical representations were made by the British Government,

Ex-Queen Liliuokalani was arrested on Jan. 16 and imprisoned on the charge of complicity in the insurrection. On Jan. 24 she sent a letter to President Dole in which, in the hope of obtaining elemency for the misguided Hawaiians and others who had engaged in a rebellion for her restoration, but asking for no indulgence for herself, she solemnly renounced all her claims

346 . HAWAII.

to the throne and absolved her former subjects from all allegiance to herself and her heirs and successors, declaring her intention to live henceforth in absolute privacy and retirement from public affairs, and offering to take an oath to support the republic and never encourage or assist directly or indirectly in the restoration of a monarchical form of government. Attorney-General Smith accepted the renunciation of sovereign rights and oath of allegiance, on the understanding that the ex-Queen was in no degree exempt from liability to punishment for complicity in the rebellion, and with the reservation that her sovereign rights ceased to exist on Jan. 24 1893, when she refused to be longer bound by the fundamental law, and promised to give full consideration to her unselfish appeal for elemency for those who took part in the insurrection.

The trial of the supposed instigators of the attempted rising began on Jan. 17. Wilcox and Nowlein pleaded guilty and gave information regarding the conspiracy. The prisoners were Gulick, Rickard, T. B. Walker, Seward, Bowler, Bertlemann, Wilcox, Nowlein, James Lane and his brother, Grey, Weidemann, and Marshall. John Cummings, Kalakaua's last Premier, was implicated. T. B. Walker pleaded guilty, and for that reason was not sentenced to death. Gulick denied guilt emphatically. A new royalist Constitution had been drawn up and a Cabinet selected, with R. W. Wilcox at its head. C. W. Ashford, a Canadian, who was named Attorney-General, was sentenced on trial to a year's imprisonment and \$1,000 fine. John S. Bowler. an lrish-American, was sentenced to five years' imprisonment and \$5,000 fine. Of 70 natives and half whites who were tried for treason or misprision 23 were convicted and sentenced to imprisonment, the terms ranging from five to ten years. While the trial proceeded fresh arrests were made daily, 700 in the course of a month. American newspaper correspondents and local journalists were arrested to prevent undesirable news from being published. J. B. Johnston, J. Cranstoun, and Alfred Muller were taken from prison and against their protest placed on board a steamer bound for British Columbia; 17 other men, mostly Englishmen, accepted the privilege of leaving the country in preference to standing trial. Charles Creighton, Attorney-General under the Queen, and other old officials, were released from prison and allowed to sail for the United States. In all, 234 were banished. The persons condemned to death by court-martial were retried by the military commission. Gulick, Sward, Rickard, Bertlemann, Nowlein, and Wilcan were sentenced to thirty-five years' imprisonmore and fined \$10,000 each; Walker, W. H. C. Grey, Lonis Marshall, and Judge Weidemann to thirty years interisonment. Nowlein and Berthe mann were released in consideration of their discussives to the Government, their sentences being suspended. The trial of Mrs. Liliuokalani Dominis, the ex-Queen, for misprision of treason, resulted in her conviction. Sie was condemned to imprisonment for five years, it having been proved that she had ministers selected for the event of her restoration, but not that she knew of the intended rebellion or the secreted arms. The military commission adjourned on March 18, and

martial law was suspended. The United States and British Governments both refused to interfere in behalf of those of the convicted persons who claimed to be their citizens but had also exercised the rights of citizenship in Hawaii. The sentences of the convicted leaders were commuted on July 4 to twenty years of imprisonment. The British Government, after inquiry represented that Rickard and Walker were British subjects, since they had never abjured their allegiance to Great Britain. The Government was not willing to recognize in their case the principle of dual citizenship, and offered to submit the rights of the matter to arbitration.

Political Affairs .- Financial and race problems complicated the political situation and added to the perplexities of the Government. After the Queen's formal abdication there was little disposition on the part of the natives to start a new rebellion. When they saw that neither the United States nor Great Britain intervened to rescue the imprisoned royalists, they generally followed the ex-Queen's advice to make the best of their lot under the white men's republic, although individual plotters still endeavored to recruit filibustering expeditions and procure arms in the United States and Canada for a fresh uprising. The Government rendered its military position secure by thoroughly training and equipping a standing army of 1,200 men, many of them from the United States. Lorin A. Thurston, minister to the United States, was recalled, having become persona non grata through discussing state papers prematurely in newspaper interviews, and publishing reflections upon the diplomatic attitude of the Government to which he was accredited. Secretary Gresham requested his recall on Feb. 21. Mr. Hatch was sent to Washington in his place. The Government made new repressive laws to check open expressions of discontent. Any one who criticised the rulers could be tried under an act against persons suspected of unlawful intentions. act provides that any person suspected of law-less intentions, hostile to public order or to the Government, may be summoned before a court and summarily examined, and, if the intention be shown to have existed, this person shall be sentenced to expulsion from the Hawaiian Islands. If the judge be not fully convinced, he may put the person under bonds. No Legislature having yet been convoked, legislation still remained in the hands of the combined Executive and Advisory Conneils, the 19 men who formed the original Provisional Government The President introduced an act giving to the Government power to suppress for a period not exceeding four years any offending newspaper or any journal started in the place of one that has been suppressed. The wealthy supporter of the Government were very anxious about the Japanese, who already made one third of the male population, and were coming in increasing numbers, who were clamoring for the suffrage and who were aggressively independent, and se united that the authorities refrained from ar resting them for the same offenses that other foreigners had to suffer for, or released such a were arrested at the truculent demand of thei fellow-countrymen. The Government is dis posed to discourage the further immigration o

Japanese, but can only stop their importation as contract laborers, their free entrance being seoured by a treaty in which most-favored-nation treatment is guaranteed. As a counterpoise to the Japanese, the Portuguese have been invited to come in larger numbers, but a Hawaiian agent who was sent to the Azores in 1894 was unable to engage many either as colonists or as laborers. An act was passed securing indemnity to officers of the Government and others for acts done under martial law for the suppression of the rebellion, and protecting them from legal claims for damages. Another act forbade the return of any person deported under martial law, or hanished by sentence of any court without the permission of the Minister of Foreign Affairs. The first Legislature was convened for a special sosion on June 12. President Dole in his address deprecated Asiatic immigration, and propased to settle American and other white immigrants on the crown estates and public lands.

Some of the natives and white royalists, men who had always opposed annexation, held meetings in conjunction with the Hawaiian Annexation League and members of the American League to promote the policy of annexation to the United States. These natives changed front on this question in the hope that annexation would put an end to the objectionable Government, and bring the country under the liberal

laws of the United States.

The British Government, having recognized the Hawaiian Republic, recalled Major James Hay Wodehouse, for twenty-five years British minister to Hawaii, and appointed Mr. Hawes British commissioner and consul general. Major Wedehouse, on his departure, neglected to pay an official farewell to the Dole Government, and proposed to take leave of the ex-Queen, who was imprisoned in a room of the palace, but could not get permission to visit her. Col. C. S. Spalding, a sugar-planter of Hawaii, obtained a concession to lay a cable between the islands and the Pacific coast of the United States, with a subsidy of \$50,000 a year for twenty years, in return for which he promised to send all mesages of the Government free. He formed a company in conjunction with American capitalists, and applied to the United States Congress for a subsidy.

HAYTI, a republic on the island of Hayti, in the West Indies. The National Assembly consists of a Senate, of 39 members, and a House of Representatives. The President and electoral colleges present separate lists of nominees, from which the House of Representatives every two years elects one third of the Senators to take the place of those whose term of six years has expired. The Representatives are elected directly for two years by the votes of all male citizens who have a regular occupation. The President is elected for the term of seven years by the direct vote of the people or by the joint vote of both houses of the Legislature. The President is Gen. L. M. F. Hippolyte, elected in May, 1890.

Finance.—Almost the sole source of the revenue is the customs tariff. Duties on exports are paid in United States gold and import duties in currency. The revenue for the year ending Sept. 30, 1893, was \$7,405,250 in gold, the export duties amounting to \$3,164,960 and import

duties to \$4,526,620 in currency. The expenditure for 1893 was estimated in the budget at \$8,498,524 in currency.

The public debt on Jan. 1, 1893, consisted of a 5-per-cent, external loan of \$4,471,312, internal loans of \$4,406,083, also paying 5 per cent. a floating debt of \$186,960 in gold and \$892,714 in currency, and \$3,085,482 of temporary loans, besides the paper currency, of which \$4,040,785 were outstanding, making a total of \$16,993,347

Attempted Rebellion.—President Hippolyte in March, 1895, made a tour of the country with his army. In the north and on the south coast the antagonists of the President were quiet, but near the border of Santo Domingo Gen. Hippolyte was suddenly attacked while sleeping by a small band of revolutionists. He mounted his horse and directed the troops, who, after a short and sharp fight, put the rebels to flight, as they were armed with revolvers and machetes only. All who were taken were instantly shot. The rebels were partisans of Gen. B. Canal, successor to Gen. Anselm Prophete, deceased, as a candidate for the presidency. They knew that some of Gen. Hippolyte's troops were dissatisfied, and expected them to join the revolt.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The Congress is a single chamber, containing 37 members, elected by direct suffrage for four years. The President is elected by popular vote for the term of four years, though Policarpo Bonilla, President for the term ending in 1897, became chief of the state as leader of a revolution, and was elected on Dec. 24, 1893, by a constituent assembly. There is an active army of 500 men, and about 20,000 militia. The republic is computed to be 46,250 square miles, with a population of 396,048. Tegucigalpa, the capital, has 12,000 inhabitants.

Communications.—A railroad from Puerto Cortez to San Pedro Sula, 37 miles, has been built twenty-five years. Originally it extended to Pimienta, but the whole line, being poorly constructed, fell into disuse, and under subsequent managements it never reached beyond Pimienta, until, on Feb. 22, 1895, an extension to Chamelecon, 6 miles, was opened to traffic, The line will be continued to Pimienta and Comayagua. Concessions have been granted for a railroad from Tegucigalpa to the Pacific coast and to one terminating in the Mosquito territory in Nicaragua. There are 1,800 miles of telegraph.

Central American Union,-The hostile acts of Great Britain in Nicaragua gave a fresh impulse to the movement for confederation of the five Central American republics. First a treaty establishing an offensive and defensive alliance between Honduras and Nicaragua was concluded and promulgated on May 4, 1895. The treaty did away with the commercial boundaries between the two countries, and pledged the two contracting governments to labor incessantly for the adoption of similar treaties by all the Central American republics until The presidents they become one united nation. of the other republics expressed themselves as in favor of union, and in June a conference was called by President Guttierez, of Salvador. President Bonilla and Zelaya, the Nicaraguan

President, met him at Amapola and discussed the question of union and the terms of agreements tending toward federation. An agreement was prepared which prohibits exiles from fomenting revolutions. President Barrios de-chined to take part in a federation conference unless the old claim of Guatemala to supremnev on the ground of its superior size and population should be recognized beforehand, President Iglesias, of Costa Rica, on account of a boundary dispute with Nicaragua, also declined to come. A compact to establish per-manent peace in Central America was drawn up and signed by the heads of the three republies. The compact unites them into a single nation in regard to their external political and commercial relations. The united republics will be known as the Greater Republic of Central America until Guatemala and Costa Rica also accept the agreement, when the title will be the Republic of Central America. The internal affairs of each republic will continue to be carried on under its own constitution by its proper legislature. All external affairs will be transacted under the directions of a Diet consisting of one deputy from each legislature and one other member representing each republic. The members serve three years. A majority vote decides. In negotiations with other governments the Diet chooses one of its members to act as plenipotentiary. It appoints all diplomatic and consular representatives. The Diet meets annually at the capital of each republic in turn. All questions now in abeyance or that may arise in future between any of the republics and a foreign government shall be discussed by the Diet according to data and instructions furnished by the interested government. If it be impossible to arrange in a friendly manner a question presented for consideration or to have the question submitted to arbitration, it shall notify all three governments, and a majority of them shall decide whether to accept the result of the negotiations or to declare war. When arbitration is agreed upon the Diet shall nominate an arbitrator, and must select from among the residents of the American republies,

HUNT, RICHARD MORRIS, architect, born in Brattleboro, Vt., Oct. 31, 1828; died in Newport, R. I., July 31, 1895. He was a son of Jonathan Hunt, a Representative in Congress for many years, and a younger brother of William Morris Hunt, the painter. In 1843 he was graduated at the Boston High School, and, having chosen the profession of architecture, went to Europe to study in the same year. He spent 1844 with Samuel Darier in Geneva, Switzerland, and in 1845 entered the atelier of Hector Lefuel in l'aris, and also became a student at the École des Beaux Arts. During the nine years he was with Lefuel he made several professional jour-neys in Europe, Egypt, and Asia Minor. In 1854, Lefuel succeeded Visconti as architect of the new buildings connecting the Tuileries and the Louvre, and sourcd for his pupil the appointment of inspector of the work. Mr. Hunt was placed in special charge of the Pavilion de In Bibliotheque, opposite the Palais Royal, and under his chief made all the studies and drawings for that work. He returned to the United States in 1855, and established himself in New

York city. His first engagement here was with Thomas U. Walter, whom he assisted in preparing plans for the completion of the Capitol in Washington. On settling permanently in New York, he opened an atelier for students similar to those in Paris, at first in the University Building, and afterward in the Tenth Street Studio Building, which he had recently designed and erected, and was influential in founding the American Institute of Architects. His first publie work comprised designs for the four southern entrances to Central Park, which were adopted by the Park Department in 1860, but up to the present time have not been carried out. In 1861-2 Mr. Hunt was principally engaged in study and travel in Europe, being part of the time a pupil of Barye the sculptor, and in 1867 he was member of the jury of the Paris Exposition. In 1870 he entered on the really productive part of his career, which first exhibited the results of his study and the direction of his mind in the line of domestic architecture at Newport, R. I. His work there transformed that city from a popular summer resort to a costly and artistic residential place, replete with charm and comfort all the year round. His genius soon began to find expression in great business structures, so that within a few years he distinguished him-self as the creator of a unique style of both domestic and business architecture. In 1876 he was appointed a member of the jury of the Centennial Exposition at Philadelphia: His last noted publie work was in connection with the World's Columbian Exposition at Chicago in 1893. He was president of the board of architects selected to confer with the Chief of Construction regarding the grouping of buildings and their architecture, and besides this advisory work he designed the noble Administration Building (see "Annual Cyclopædia" for 1891, page 838). He was awarded the Queen's gold medal by the Royal Insti-tute of British Architects in 1893, and at the personal presentation of it President MacVickar Anderson paid Mr. Hunt and his work this com-pliment: "We are about to do honor to a citizen of the great Western republic, one whose name we are proud to enroll as one of our gold medalists not only on account of high personal and professional merit, but also because he is the first American whose name will appear in that roll call of illustrious artists. That the selection should this year have fallen on one who has designed the principal building in the great Co-lumbian Exposition which attracts the world's sightseers to Chicago at the present moment. and which will hereafter associate the name of America with the most wondrous development that international exhibitions have ever reached, or perhaps are ever likely to attain, is, to say the least, a singularly fortunate coincidence. In honoring Mr. Hunt, in recognition of his eminence and of his works as an artist, we rejoice that we are thus able to pay a graceful tribute to the United States in the person of one of her most distinguished sons." On Dec. 23, 1894, Mr. Hunt received the honor of election to a vacant as sociate membership of the Academie des Beaux Arts, a distinction rarely conferred on a foreigner, and a graceful supplement to the honorary membership of the Institute, which he had held for some years. He was also an honorary member of the Central Society of French Architects, the Royal Institute of British Architects, the Engineers' and Architects' Society of Vienna, and the Academy of St. Luke, in Rome, Italy, and a member of the Legion of Honor of France, the American Institute of Architects, and the Architectural League. In 1802 he received the honorary degree of LL, D, from Harvard Col-

lege, being the first artist ever so honored by that institution. Among the bestknown structures designed by him, besides those already mentioned, are the monument erected by the United States Government at Yorktown, Va., in 1881; the pedestal of the statue of Lib-New. erty in York harbor: the Astor memorial doors of bronze in Trinity Church, New York city; the United States Naval Observatory at Washthe ington: new academic and gymnasium buildings of the United States Military Acade-West my nt

Point; the Marquand Chapel and Theological Library at Princeton College; the Divinity School and the Scroll-and-Key Society building at Yale College; the Lenox Library, Presbyterian Hospital, "New York Tribune "building, Coal and Iron Exchange, Guernsey office building, and the residences of William K. Vanderbilt, Ogden Mills, Elbridge T. Gerry, John Jacob Astor, and Henry G. Marquand—all in New York city; residences of Cornelius Vanderbilt ("The Breakers"), Ogden Goelet ("Ochre Court"), J. R. Busk, Prof. Shields, and Oliver H. P. Belmont ("Belcourt")—all in Newport, R. I.; residence of William K. Vanderbilt at Oakdale, L. I.; residence of George Vanderbilt at Biltmore, N. C.; the Fogg Museum, Cambridge, Mass.; the Vanderbilt mausoleum on Staten Island; and the Mills tomb at Tarrytown, N. Y.

HUXLEY, THOMAS HENRY, an English scientist, born in Ealing, Middlesex, England, May 4, 1825; died in Eastbourne, June 29, 1895. His father was a teacher in Ealing. Of his mother he wrote; "Physically and mentally, I am the son of my mother so completely—even down to the peculiar movements of the hands, which made their appearance in me as I reached the age she had when I noticed them—that I can hardly find any trace of my father in my-

self, except an inhern faculty for drawing which, unfortunately, in my case has rever had cultivated; a hot temper and that am might tenacity of purpose which undriendly classical call obstinacy. My mother was a secule our nette of an emotional and chergetic tempera ment, and possessed of the most piercing towk eyes I eyer saw in a woman's head. With his more education than other women of the middle classes in her day, she had an excellent mental capacity. Her most distinguishing character istic, however, was rapidity of thought. If one ventured to suggest that she had not taken much time to arrive at any conclusion, she would say: 'I can not help it; things flash across me!' That peculiarity has been passed on to me in full strength; it has sometimes played me sad tricks, and it has always been a danger." His earliest education was received at the school where his father taught. Percety made a university career impossible, and be turned to reading. The works of Thomas Car-lyle, John Stuart Mill, and the philosophical writers of Germany were studied with eagerness. No book came amiss. He took up one pursuit after another, but failed to continue in any very long. His great desire was to become a mechanical engineer, and he read much with this in mind. Although he failed to realize this ambition, he retained to the last a taste for the mechanical side of investigation. Finally, he began the study of medicine in the office of his brother-in-law, a physician. Thence he passed to the Charing Cross Medical School, where he was graduated in 1846 with high honers in physiology. Of this period he wrote: "The only part of my professional course which really and deeply interested me was physiology, which is the mechanical engineering of living machines; and notwithstanding that natural science has been my proper business, I am afraid there is very little of the genuine naturalist in me. I never collected anything, and species work was always a burden to me; what I cared for was the architectural and engineering part of the business, the working out of the wonderful unity of plan in the thousands and thousands of diverse living constructions, and thousands of the modification of similar apparatus to serve diverse ends." While he was in the medical school he published a paper in which he described the layer of cells of the inner rootsheath of the hair, and this is now called Huxley's layer.

As he was too young to qualify at the College of Surgeons, he applied to Sir William Burnett for a medical appointment in the navy. He was instructed to call, which he did, and he thus describes the result:

I think I see him now as he entered with my card in his hand. The first thing he did was to return it with the frugal reminder that I should probably find it useful en some other occasion. The second was to ask whether I was an Irishman. I suppose the air of modesty about my appeal must have struck him. I satisfied the director general that I was English to the backleine, and he made some inquiries as to my student career, finally desiring me to hold myself ready for examination. Having passed this, I was in her Majesty's services and entered on the backs of Nelson's old ship "Victory" for duty at Haslar Hespital about a couple of months after I made my ap-

plication. My official chief at Haslar was a very remarkable person—the late Sir John Richardson, an excellent naturalist, and far famed as an indomitable Arctic traveler.

Months passed, during which his existence was apparently ignored, when suddenly "Old (as the chief was styled), meeting him, described the service in which the "Rattle-snake" was about to be ordered: "He said that Captain Owen Stanley, who was to command the ship, had asked him to recommend an assistant surgeon who knew something of science. Would I like that? Of course I jumped at the offer. 'Very well, I give you leave; go to London at once and see Captain Stanley. I went, saw my future commander, who was very civil to me, and promised to ask that I should be appointed to his ship, as in due time I was." Then followed four years of absence from home. during which the "Rattlesnake" surveyed some of the passages round the coast of Australia and explored the sea between that continent and New Guinea. In the course of his voyage Mr. Huxley made extensive observations of the natural history of the sea, especially with reference to the anatomy of the mollusks and Medusee. He collected a great number of specimens, and wrote several papers which he sent home. Of these he says:

During the four years of our absence I sent home communication after communication to the Linnean Society, with the same result as that obtained by Noah when he sent the raven out of his ark. Tired at last of hearing nothing about them, I determined to do or die, and in 1849 I drew up a more elaborate paper and forwarded it to the Royal Society. This was my dove, if I had only known it. But, owing to the movements of the ship, I heard nothing of that either until my return to England in the latter end of the year 1850, when I found it was printed and published, and that a huge packet of separate copies awaited me.

For three years after his return he continued in the navy, and persistently tried to persuade his superiors to contribute to the expense of publishing the scientific results of the expedition. At last, weary of his efforts, the Admiralty ordered him to join a ship, "which thing," he says, "I declined to do," and he resigned.

I desired to obtain a professorship of either physicalogy or comparative anatomy, and as vacancies occurred I applied, but in vain. My friend Prof. Tyndail and I were candidates at the same time—he for the chair of Physics, and I for that of Natural History in the University of Toronto, which fortunately, as it turned out, would not look at either of us. I say festimately, not from any lack of respect for Toronto, but he alse I seen made up my mind that London was the place for me, and hence I have steadily denoted the inducements to leave it which have at values been offered.

In 1854 his friend Edward Forbes resigned from the place of palaeontologist to the Geological Survey and from the lectureship on natural history in the Royal School of Mines. "I refused the former point-blank," says Huxley, "and accepted the latter only provisionally, saying that I did not care for fossils and that I should give up natural history as soon as I could get a physiological post. But I held the office for thirty-one years, and a large part of my work has been palaeontological."

Meanwhile he had begun to attain a standing among scientists. He was made a fellow of the Royal Society in June, 1851, and in 1852 one of its medals was conferred upon him. In 1859 the Royal Society published the scientific results of his expedition, under the title of "Oceanic Hydrazoa: A Description of the Calycoporidæ and Physophoridæ." Then came the memorable discussion on Darwin at the Oxford meeting of the British Association in 1860. Michael Foster, his friend for forty years, describes the event in these words:

The bishop [Wilberforce] had spoken; cheered loudly from time to time during his speech, he sat down amid rapturous applause, ladies waving their handkerchiefs with great enthusiasm, and in almost dead silence, broken merely by greetings which, coming only from the few who knew, seemed as nothing. Huxley, then well-nigh unknown outside the narrow circle of scientific workers, began his reply. A cheer, chiefly from a knot of young men in the audience—hearty, but seeming scant through the fewness of those who gave it, and almost angrily resented by some—welcomed the first point made. Then as, slowly and measured at first, more quickly and with more vigor later, stroke followed stroke, the circle of cheers grew wider and yet wider, until the speaker's last words were crowned with an applause falling not far short of, indeed equaling, that which had gone before—an applause hearty and genuine in its recognition that a strong man had arisen among the biologists of England.

To the scientific reputation that he had already achieved he thus added one of a more popular character, and thereafter he took rank among the great men of England. Other appointments followed his acceptance of the chair in the Royal School of Mines. In 1854 he was made Fullerian Professor of Physiology to the Royal Institution, and during the same year he became examiner in physiology and compara-tive anatomy for the University of London, which place he held for seven years. From 1863 to 1869 he was Hunterian Professor in the Royal College of Surgeons, and during the absence of C. Wyville Thompson in 1875-76 he filled his place as Professor of Natural History in the University of Edinburgh. In 1870 he was elected a member of the London School Board. and in its deliberations he became specially prominent as the opponent of denominational education, particularly that of the Catholic Church. He retired from the board in 1872, owing to illness. In the same year he was elected Lord Rector of the University of Aberdeen, and in 1874 was installed. On the death of Frank Buckland, in 1881, he was called to the vacant post of Inspector General of Salmon Fisheries. Failing health compelled his resignation from various appointments in 1885, but at the request of the lord president he retained his connection with the Normal School of Science and the Royal School of Mines as dean and Honorary Professor of Biology. He served on many Government and royal commissions, among which were those relating to fisheries contagious diseases, vivisection, and Scottish universities.

The degree of Ph. D. was conferred on him by Breslau, that of M. D. by Würzburg, that of LL. D. by Edinburgh and Cambridge in 1879, and that of D. C. L. by Oxford in 1886.

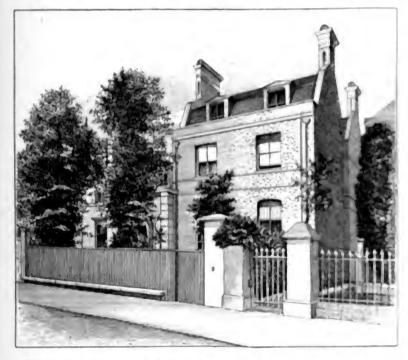

New York I Applet a & Co.

Affluxery

The King of Sweden made him a Knight of the Pole Star, and he became a privy councilor to his own sovereign in 1892. The Royal Society gave him its Wollaston medal in 1876, its Copley medal in 1888, and its Darwin medal in 1894. The Academy of Natural Sciences of Philadelphia awarded him in 1893 the Hayden memorial medal. He became its secretary in 1873, and its president in 1883, serving for two years only. The Geological Society made him its president in 1809, and the Ethnological Society similarly honored him in 1870, while during the same year he presided over the British Association. In 1884 he was made a fellow of the Royal Col-

also lectured on the "Elements of Comparative Anatomy" and on the "Classification of Ammals and the Vertebrate Skull". In 1876 be wisited the United States, and after delivering an address at the opening of Johns Hopkilis University, lectured in New York city "On the Direct Evidences of Evolution." He delivered the Rede lecture in Cambridge in 1883 on "The Origin of the Existing Forms of Animal Life—Creation or Evolution," and in 1893 he delivered the second Romanes lecture, "Evolution and Ethics," in Oxford. With Darwin, Tyndall, and Herbert Spencer, he brought about the general acceptance of the dectrine of

lege of Surgeons. In 1879 he was chosen a corresponding member of the French Academy of Sciences, and in 1883 he was elected a foreign member of the National Academy of Sciences. He was also a foreign or corresponding member of academies in Berlin, Brussels, Göttingen, Haarlem, Lisbon, Munich, Philadelphia, Rome, St. Petersburg, and Stockholm.

Huxley more than any other scientist of the century influenced public opinion by his writings and public utterances. In 1860 he delivered a course of lectures to workingmen on "The Relation of Man to the Lower Animals." At once his views became the subject of controversy, and a summary of the discussion is given in his "Evidences as to Man's Place in Nature" (1863). In 1862 he gave another course to workingmen, and his lectures were published with the title "On our Knowledge of the Causes of the Phenomena of Organic Nature" (1863). He

evolution. Huxley's special work was that of proving it by biological evidence. Of his success Haeckel has written the following words:

Not only has the eviction theory received from Prof. His less and plete does not rate of the mose important e in the filter argety solvanced by his valuable comparative resources, but its operation resources, but its operation of the profit is not been argety that to have the profit is not been argety that to have the profit is not been argety that the second of the profit is not been as an individual of the interest of private areas to the highest private is ranke the highest private is not be have a late title is insecting as of development in these several ways he has remisered as one a service with a must ever rank as one of the highest of his unity and great as entitle merrie.

Huxley's scientific papers for the most part appeared in the journals and proceedings of the Royal, Linnson, Geological, and Zollogical Societies, and in the memoirs of the Geological

IDAHO. 352

Survey of Great Britain. In book form his scientific works include: "On Tape and Cystic Worms, with an Introduction on the Origin of Intestinal Worms by Carl Theodor von Siebeld" (1857); "Lectures on the Elements of Comparative Anatomy" (1864); "An Elementary Atlas of Comparative Osteology (1864);
"Lessons in Elementary Physiology (1866);
"Palæontologia Indica: Vertebrate Fossils" (1866); "An Introduction to the Classification of Animals" (1869); "A Manual of the Anatomy of Vertebrated Animals" (1871); "A Manual of the Anatomy of Invertebrated Animals" (1877); "The Crayfish: An Introduction to the Study of Zoölogy" (1879); and an "Introduc-tory" to the series of "Science Primers" (1880). Concerning his more popular works it has been well said that "for mere rhetoric, for polish of expression, for structural harmony, for keen wit and sareasm masked under the most graceful urbanity, for unsparing logic, and for luminous simplicity even when dealing with the most abstruse and difficult subjects, the books which Huxley addressed to the unscientific world are almost unparalleled in English literature." They include: "On the Educational Value of the Natural History Sciences" (1854); "Protoplasm; The Physical Basis of Life" (1869); "Lay Sermons, Addresses, and Reviews" (1870); "Essays: Selected from Lay Sermons" (1871): Critiques and Addresses" (1873); "Hume" in the series of "English Men of Letters" (1877); "American Addresses, with a Lecture on Biology" (1877); "Physiography: An Introduction to the Study of Nature" (1877); "Science and Culture, and other Essays" (1881); and "Inaug-ural Meeting of the Fisheries Congress: An Address" (1883). A complete edition of collected essays, grouped in accordance with the general subject, was issued in 9 volumes, each with a new introduction (New York, 1894-'95). He was associated with Robert Etheridge in the prepa-

ration of "A Catalogue of the Collection of Fossils in the Museum of Practical Geology" (1858), and with Newell H. Martin in the "Course of Practical Instruction in Elementary Biology"

(1875).

It was Huxley who coined the word "agnostic," and of its origin he wrote: "When I reached intellectual maturity and began to ask myself whether I was an atheist, a theist, or a pantheist, a materialist or an idealist, a Christian or a freethinker, I found that the more I learned and reflected the less ready was the answer, until at last I came to the conclusion that I had neither art nor part with any of these denominations except the last. The one thing in which most of these good people agreed was the one thing on which I differed from them. They were quite sure they had attained a certain 'gnosis,' had more or less solved the problem of existence, while I was quite sure I had not, and had a pretty strong conviction that the problem was insoluble. So I took thought, and invented what I conceived to be the appropriate title of agnostic. It came into my head as suggestively antithetic to the gnostic of Church history, who professed to know so much about the very things of which I was ignorant.'

Still, as he saw the end approaching, he made request that the following words, written by his

wife, should stand on his tomb:

And if there be no meeting past the grave, If all is darkness, silence, yet 'tis rest.'
Be not afraid, ye waiting hearts that weep,
For God "still giveth his beloved sleep," And if an endless sleep he will-so best.

Concerning this, Michael Foster says: "Future visitors to the burial place on the northern heights of London, seeing on his tombstone the above lines, will recognize that the agnostic man of science had much in common with the man of faith.'

T

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of

1890, 84,385. Capital, Boisé City. Government.—The following were the State officers during the year: Governor, William J. McConnell, Republican; Lieutenant Governor, Frank B. Mills (until Aug. 10); Secretary of State, Isaac Garrett; Auditor, Frank C. Ramsey, Treasurer, C. Bunting; Attorney-General, George M. Parsons: Adjutant General, A. Case; Superintendent of Public Instruction, Charles A. Foreschan: State Engineer, Frank B. Mills; Chief Justice of the Supreme Court, John T. Morgan: Asses ate Justices, J. W. Huston, I. N. Sullivan

Legislative Session.—The Legislature met Jan. 7, and continued in session until March 9. In the House, 165 bills were introduced, and in the Senate 97. Of the 83 bills that were passed by both Houses, the Governor signed 77 and vetoed 6, two of which were passed over the veto.

Among the measures chacted was the repeal

of the law passed unanimously by the last Legis lature, providing that all obligations shall be paid in gold or silver, all contracts to the contrary notwithstanding, the ground for repeal being that the measure had been detrimental to the business interests of the State. An act making a new legislative apportionment provides for a senator for every county, while representation in the House is on the basis of one representative for every 536 votes, or fraction over one half of 536, cast at the last election. The new game-and-fish law abolishes the office of county game warden, specifies what are the closed seasons, and prohibits transporting or dealing in hides of wild animals, as also hunting with dogs. Three irrigation bills were passed—the joint irrigation bill providing means of accepting the gift of 1,000,000 acres of land. under the Carey act, from the Federal Government, and two measures providing for the organization of irrigation districts, a system of water measurements, and the fixing of water rates in certain emergencies by the district courts. Under the system it is proposed to purchase existing ditches or construct new ones by issuing bonds based on the property of the district and taxing all the land in the district for the pay-

ment of the bonds.

A radical change in the system of locating mines was made by a new mining law, whose most important feature is a provision requiring a locator to sink a shaft at least 10 feet within two months after location. Any open cut, cross cut, or tunnel which shall cut the lode at a depth of 10 feet below the surface, or an adit tunnel of at least 10 feet in and along the lode from the pe at where the lode may be in any manner discovered, shall, it is provided, be equivalent to the sinking of the required 10-foot shaft. In the case of the relocation of an abandoned claim. the relocator may sink the old shaft 10 feet farther in order to perfect his location.

The age of consent was raised from fourteen

years to eighteen.

The office of State engineer was created in March, to which the Governor appointed the Lieutenant Governor, Frank B. Mills, who in August handed in his resignation as Lieutenant Governor, when Vincent Bierbower, President pro lem. of the Senate, became acting Lieutenant Governor. Among other laws enacted were

Extending the time for redemption of property sold under execution from six months to one year.

Providing for the distribution of moneys collected from liquor and gambling licenses as follows: Fifty per cent, to the school fund, 40 per cent, to the read fund, and 10 per cent, to the State treasury ; in incorporated cities and towns, 50 per cent, to the school fund, 40 per cent to the municipal treasury, and 10 per cent, to the State.

To abolish the counties of Logan and Alturas, and

ervate therefrom the county of Blaine.

Testablish the county of Lincoln from the southern portion of the new county of Blaine.

Providing for exemption from execution of certain property other than that specified as homesteads.

Repealing the merchant license law.

Providing for the issuance of seven-year improvement bonds by incorporated cities for the purpose of paring streets and constructing sidewalks, the cost to be a lien on the property benefited, and payable in Repealing the test outh.

Requiring marriage licenses.

To remit penalties on delinquent taxes in certain

cases for the years 1894 and 1995.

John memorials to Congress were passed petition lag for free and unlimited colinge of silver and probability against the passage of the Carlisle bill; for an appropriation of \$125,000 to be used in making our vers in Idaho preliminary to carrying into effect the provisions of the Carey law; for the removal of observations from the Clark's Fork of Columbia river. favoring the election of United States Senature by a direct vote of the people; and asking for a bankrupt cy law.

The constitutional amendments to be submitted to popular vote, including one granting the transline to and one providing for the election of a prime

early att mey in each county.

On March 7, George L. Shoup was re-elected to the United States Senate, on the 524 balled The final vote was: George L. Shoup, Republic can, 27; Willis Sweet, Republican, 12; A. J. Crook, Populist, 14.

Finances.-The State owes for outstanding warrants \$156,644.81, estimated interest on the

same \$5,000, total \$161 644.81; cavil defi-les a for 1893-'94, \$43,357,59, militia deficience \$7,965.08. Grand total of indebtedness \$212.567 48. Rescurren to meet this indebted as are Cash in general fund, \$15,531 01 (ascedur from counties, \$201,851, probable pull taxes \$12 (00) total. \$229,382.01 Deducting \$16 ton for delinquent taxes leaves a balance of resemble of \$213,382 01, or \$414 53 in excess of indebtedness. The estimate of expenses for 1865-36 is \$463-480. The bunded indebtedness is as follows Capitol building, \$80,000; means asslim \$5,000. refunding, \$10,000; wagon read, 180 \$50.000;

wagon road, 1863 \$105,000, rotal \$175,000. The appropriations made by the Legislature amounted to \$484 (00), half of which were for the expenses of 1865. Additional sums to the amount of \$48,980 also became due this year, making a total of \$250,580. The State Board of Equalization in August fixed the valuation of the property of the State at \$29 IN 210 35 an increase over 1894 of \$344,979.04 Of this increase \$69,000 was in the valuation of 1 rees and \$142,000 in the valuation of sheep, another source of increase was in patented land, hereta-fore not taxable because the patents were not complete.

The valuation of the 900 old miles of railroad in the State and of the telegraph as I to eph see lines and instruments was \$6,456,250 the

same as last vear.

Under the restrictions of the Constitution the total tax levy can not exceed 10 mills in the dollar, of which 11 mill is pledged for pass ment of debts owed prior to the admission of the State, and for redemption of university war rants. A tax levy of M mills on the valuation for 1895 produces \$256,656 54 The less for 1894 was 84 mills.

Metal Output, - During 1894 the production of gold was 111,687 fine ources, valued at \$2. 308,775; of silver, 3,774,349 fine one ve valued at \$7,188,680. The production of lead was valued at \$2,605,450. The total metal production tion was valued at \$9 Billion an increase in valuation over the production of 1-00 of \$1 1000 2001. The flour gold, to be fromt in great quantities on Snake river has aften tol unweal attention, and has contributed large's to the increased productions

Wool. - The word clip this year amounted to nearly Scotters points, an increase over 1804 of more than 1 (1910) points. In that year there were in the State 577178 sleep valued at \$1 cach ; in low the number had in regard to 717,239, with the valuation the same. The valuation in 1821 was a little over \$2 each. The decrease to valuation is said to be because of the

change in the tar f.

Rabbit Bounties - An inquiry from the I mited States Department of Agriculture has developed the fact that since 1879 Ada County has paid for rabbit scalps, at 8 cents each, \$31,trul 44 who has said to be a larger amount than the aggregate of bounties paid by all other Ma'ce in the West that have offered bount in on jack rabbuts. As the amount part for the last quarter was over \$2,500, and the maximum tax fers for bounties was 3 mills on the dollar, the county commissioners in October storged parment of bounties on rabbits and gophers.

State Lands.-The State Land Department has secured the approval of 283,000 acres of selected land during the past two years, as also the rescinding of an order withdrawing from settlement 137,000 acres of land, chiefly in Kootenai County, heretofore withdrawn as a forest reservation. The State may now select lands there, and a very valuable tract of agricultural land is made available for settlement under the homestead laws.

The State has secured the reversal of a uniform line of decisions of the Interior Department, holding that double minimum lands-that is, lands within the limits of a railroad grantcould not be selected by States in satisfaction of

grants made to them.

Surveys .- In the allotment of the appropriation carried in the sundry civil-service bill for public surveys in 1895, Idaho received \$23,000. The general appropriation act provides that the survey of the agricultural lands thereunder must be on the application of settlers.

Education.—The State University began its fourth year in September with an attendance of 108, an increase of nearly 50 per cent. over 1894. To it the Legislature made an appropriation of \$16,230 to reimburse the Morrill fund,

and \$2,000 for regents' expenses.

The Legislature of 1893 established State normal schools at Lewiston and Albion, but made no financial provision for them. At Albion a building has been erected by the citizens and a flourishing school opened, and in August arrangements for a new building were made. This was made possible by the legislative act authorizing the issue of bonds to the amount of \$75,-000 for the support of the two schools. The enrollment at Albion for the half year ending July 1 was 83, the expenses during that period were \$5,278.22. At Lewiston the people have laid the foundations for a building. The amount of the semiannual apportionment of the State school fund, made in August, was \$9,664.46.
By act of the Legislature the location of the

Agricultural College was fixed at Idaho Falls.

Insane Asylum.-In this institution, for whose support the Legislature made an appropriation of \$65,000, there were in December 152 patients, of whom 56 were women.

The issuing of bonds to the amount of \$25,-000 for asylum improvements was authorized by

the Legislature.

Penitentiary .- On July 1 there were 115 prisoners confined in the penitentiary, of whom were held on account of the United States. To this institution an appropriation of \$65,000

was made.

Soldiers' Home. - An appropriation of \$28,-(FEI was made for the support of the home, and a bill was passed enacting that the board of trustees for the home shall consist of the Govermer. Se retary of State, and Attorney-General, and that they shall serve without compensation. The number of inmates at the end of Septemher was 27, and the number of officers and empluvers 11.

Decisions .- Adecision of the Supreme Court affirmed the constitutionality of the law providing that water companies shall furnish water free for fire purposes and other great public ne-

cessities.

The same court also decided that women were eligible to practice law in Idaho, the Idaho statutes to the contrary notwithstanding. The ground for the decision was that the State Con-stitution provides that "the Legislature has no power to deprive the judicial department of any power or jurisdiction which rightfully pertains to it as a co-ordinate department of the government," and that the admission and control of the attorneys were within the purview of this section of the Constitution.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and

3,826,351 in 1890. Capital, Springfield.

Government.—The following were the chief officers for the year: Governor, John P. Altgeld, Democrat; Lieutenant Governor, Joseph B. Gill; Secretary of State, William H. Hinrichsen; Auditor, David Gore; Treasurer, Henry Wulff, who qualified Jan. 15, 1895, succeeding Elijah P. Ramsey; Attorney-General, Maurice T. Mahoney; Adjutant General, Alfred Ovendorff; Superintendent of Public Instruction. Samuel M. Inglis; Secretary of Labor Bureau, George A. Schilling; Fish Commissioners, R. Roe, G. W. Langford, and H. Schmidt; Railway and Warehouse Commissioners, Isaac N. Phillips, J. R. Wheeler, and Jonathan C. Willis; Secretary Canal Commission, W. A. S. Graham; Secretary Live-stock Commission, A. M. Brownlee; Superintendent of Insurance, Bradford K. Durfee; Secretary of State Board of Charities, George F. Miner; Secretary of Board of Health, Dr. J. W. Scott; Secretary of Board of Dental Examiners, L. L. Davis; Secretary of Board of Pharmacy, Frank Fleury; Factory Inspector, Florence Kelley: Chief Justice of the Supreme Court, Joseph W. Wilkin; Associate Justices, David J. Baker, Alfred M. Craig, Benjamin D. Magruder, Jesse J. Phillips, Joseph N. Carter, and Joseph Meade Bailey, who died in Octo-

Finances. - The available surplus of the treasury was practically exhausted a month before Oct. 1, 1895, the close of the fiscal year, but an advanced payment of \$250,000 from the Illinois Central Railroad Company temporarily relieved

the embarrassment.

The tax rate for 1895 was 52 cents on the \$100 valuation, as equalized by the State Board. Thirteen cents belongs to the school tax; the remainder is the general revenue tax. The aggregate was estimated at \$4,332,530. But this would be reduced by about \$250,000 from delinquencies, removals, etc. Last year assessments were made on the capital stock of 263 corporations, and this year on 274.

The total assessment of railroad property is \$79,319,385, covering 9,730 miles of track.

Legislative Session .- The thirty-ninth General Assembly was convoked Jan. 9, with 26 newly elected members, and adjourned June 17, after passing 58 appropriation and 88 other bills. The bills included one appropriating \$900,000 for the ordinary and contingent expenses of the State and one making the tax levy for school purposes \$1,000,000 per annum. The

other bills that became laws included the following:

Making appropriations for monuments to mark the out Mountain, and Missionary Ridge.

Providing for the settlement of the estates of klicits.

lunatics, drunkards, and spendthrifts.

Appropriating \$50 to each county farmers' institute in the State. Authorizing towns to issue bonds for the comple-

a and improvement of parks and boulevards. Providing that no freight or passenger train shall shatruct the public highway for longer than ten min-

To include in judgments for wages the services of

the laborer's horse or team.

To prevent and punish wrongs to children.

To require highway commissioners to destroy Russian thistles.

To prevent the spread of contagious and infectious

Providing that where a corporation passes into the ands of a receiver or an individual makes an assignand of a receiver of an interest of wages shall be pre-cent, the claims of laborers for wages shall be pre-pred claims.

Providing that suits against insurance companies be brought in the county in which the plaintiff

Providing that teachers of special branches shall to required to pass an examination in other anches than that which it is proposed to teach.

Providing that whoever hinders, obstructs, or de-

another traveling upon the public highway hall be liable to a fine of \$25 and damages.

To punish the stealing of water and electricity.
To protect laborers and miners for labor performed

a developing and working in coal mines.

To increase the number of companies in the Illi-is National Guard from 84 to 88, so as to provide

To prohibit the use of machines or devices for ambling purposes.

Appropriating \$1,249,000 for each of the years and 1896 for the ordinary expenses of the State haritable institutions.

To provide for State scholarships in the University

To create the Illinois Farmers' Institute.

To exempt certain personal property from attach-ent and sale on execution and from distress for

Fixing the compensation of members of the General Assembly at \$1,000 for each regular session and \$5 a day for each special session and 10 cents for each mile necessarily traveled in going to and returnation from the State acceptal. om the State capital.

Prohibiting barber shops from keeping open on

A special session was called on June 25 for consideration of the following topics:

Raising revenue equal to the appropriations.

The creation of such a revenue law as will compel all persons and corporations to pay their fair share of

The abolition of the State Board of Equalization. Legislation to put an end to the abuses and scandalous conditions prevailing in and about many of the police and justice courts.

To establish such a system of practice and prove-dure in courts of record as will prevent unnecessary mulation of business

To prevent the employment of children in such a

anner as to stunt their development.
To create the proper machinery, agencies, or bear le of conciliation, inquiry, and arbitration between em-

plover and employees.

To fix a reasonable maximum limit to charges for sleeping-car service.

Such legislation as will insure fair and unbuscol grand juries

To improve the convict system.

Revision of the law relating to slander and littel

On June 29 the Assembly, being unable to come to unanimous voice regarding the revenue law, adjourned till July 9, during which time John Myer, Speaker of the House, died, and upon their reassembling some time was lost in electing W. G. Cochran as his successor. An arbitration bill and a tax-levy bill were finally passed, and both houses adjourned on Aug. 2. Among the important measures of the session

A libel bill providing that in any action brought for the publication of a litel, the plaintiff shall re-cover only actual damages if it shall appear that such publication was made in good faith, and that in the next two regular issues of said newspaper a correction was published in as conspicuous a manner as was the

Creating a fund for disabled fire-insurance patrol-men and widows of deceased patrolmen.

The providing for raising the following same by tax: For general State purposes, \$2,200,000 upon the assessed value of property for 1995, and \$2,500,000 upon that of 1896; for school purposes, \$1,000,000 upon the same rate.

Amending the law in relation to the sale of prop-

erty for taxes.

Amending the law in relation to the establishment

of a State home for juvenile female offenders.

Gov. Altgeld also filed with the Secretary of State June 27, a veto of a bill to promote the construction of water ways, but its friends claim that the veto was med filed within the time required by the Constitution and that the bill has become a law without his signature. The Governor objects to the bill because it expressly declares it to be the policy of the State to undertake an enterprise that he thinks would cost hundreds of millions of dollars. As the Constitution expressly forbids any appropriations in aid of railroads or canala, he holds the appropriation made by the bill to be unconstitutional.

Revising the pharmacy law Revising the mechanics' lien law.

State Institutions,-All the State institutions are overcrowded, although 13 new buildings have been erected, all receiving careful legislation and liberal appropriations for the next biennial period.

The Institute for Feeble-Minded Children, at Lincoln, cared for its inmates at a cost per caputa yearly of \$135.25, the lowest in the history of the institution. Its appropriation is \$165,000, to cover cost of new building and repairs.

A permanent site for the Home for Juvenile Offenders, now at Chicago, has been selected at

Geneva, Kane County

The Soldiers' and Sailors' Home, at Quincy, has received from the United States Govern-ment \$100 per annum for each veteran present

for the past two years.

The Eye and Ear Infirmary of Chicago admitted nearly 16,000 patients and treated more than 13,000 indigent persons, the total expendi-ture being within \$50,000.

The Blind Asylum, at Jacksonville, will benefit by the new law for the prevention of blind-The total number of pupils enrolled during the biennial term was 318,

The Southern Hospital for the Insane, at Anna, received an appropriation of \$190,000 for replacing that portion of its buildings destroyed by fire in January. Its average number of patients annually was 562; average cost per capita, \$169.69; average time in hospital, two years.

The Eastern Insane Asylum, at Kankakee, was never in better condition. In connection with this asylum a laboratory has been established and a pathologist employed, who gives all his time to scientific investigations and general discussion with the physicians of the insti-The total number of patients treated was 2,467; discharged, 371, of which number 99 were recovered. Of the number treated, 78 were The net cost per capita yearly readmitted. was \$140,54.

The Northern Hospital for the Insane, at Elgin, had 1,001 patients, 87 being readmitted. During the biennial period 514 patients were discharged, of which number 171 had recovered. The number of deaths was 176; the gross cost

per capita \$150.

The site for the Western Hospital for the Insane, a new institution, has been chosen at Wa-

tertown, near Rock Island.

The Joliet Penitentiary, having a deficit of \$129,144.48, asked for an appropriation, and received one of \$100,000 a year for two years. The penitentiary is greatly overcrowded.

The penitentiary at Chester is in good condition. The average number of prisoners was 658; ordinary cost per capita, 38 cents a day;

earnings per capita, 23 cents.

The Reformatory Institution at Pontiac admitted 1.011 persons during the previous year, of whom 111 were offspring of dissipated parents, 8 from epileptics, and 20 from families afflicted with insanity. The daily average of inmates was 769. The per capita yearly cost was \$188.67.

Education.—The total value of the property belonging to the public schools and the State educational institutions, not including perma-

The State Normal University, at Normal, shows an enrollment of 620 students. The model department enrolled 550 others. The Model School was discontinued for want of funds, and the State Institute also.

The enrollment for the year at the Southern Illinois Normal School at Carbondale, numbered 716, with graduation above the average. An appropriation of \$40,000 was received from the

State for a library building.

The existing normal schools being insufficient to meet the need for teachers, the thirty-ninth Assembly passed a bill authorizing the building and of ablishment of two new ones, to be termed 1). Lastern and Northern. The site chosen for

the Harren school is at Charleston.

The University of Illinois, at Urbana, received from the Sate of \$325,000. Dr. Andrew S. 11-1 -- - newly elected president. The new Engine de Hall was occupied in October. It is a hand and and me, with a central hall and two wings are was designed by a graduate of the mass of land of the School of Architecture, in competition with 15 other graduates. The chief point of interest in the report of the extra work of the university for the year was the cetablishment at Champagn of a biological station for continuous investigation of the aquatic life of Illinois river and its dependent waters

near Havana, and an elaborate experimental work, with measures for the destruction of the chinch bug, and especially for the dissemination of the contagious diseases of that insect, undertaken by the laboratory staff. Part of the university appropriation was to establish a department of economic geology at the laboratory for study of the soils of the State, with special reference to their value for purposes of manufacture. The appropriations were framed to cover the cost of purchasing the College of Physicians and Surgeons, and its consolidation with the university. Military science is taught at the university by an officer of the United States army.

The university enrollment for the year numbers 718 students, of whom 609 were men and

109 were women.

At the Newberry Library, in Chicago, John Vance Cheney is the successor of Dr. William F. Poole, who died in March, 1894, as librarian, His report for 1895 gives these statistics: There are in the library 123,516 volumes and 90,556 pamphlets, exclusive of pamphlets in the medical department, not yet accessible. These pamphlets number probably 17,000. The cash balance was \$2,931,261.66. Of the readers during the year, 45,850 were men and 12,768 were women.

The Lincoln Homestead and Monument.-The furniture, relies, etc., in the Lincoln homestead, Springfield, were claimed by Mr. Oldroyd as his personal property, and he was allowed to remove them. Extensive repairs have been made, and the property is now in a fairly presentable condition. A number of authentic relies associated with Mr. Lincoln's life have been obtained by donation, and have been placed in the homestead as the property of the State. Under the new law, which went into effect July 1, the Lincoln Monument became the property of the State, and it was transferred, with impressive ceremonies, to the custody of the newly appointed board of commissioners, at Springfield, July 3.

Factory Inspection,—The State Inspector's report shows that in 1894 3,440 factories and workshops, employing 130,065 persons, were inspected; an increase of 1,078 factories and workshops, employing 45,121 men, 7,047 women, and 1,674 children, over the number in 1893.

Agriculture.-The Permanent State Fair, at Springfield, is the latest of the State institutions. There are beautiful buildings devoted to its uses, recently erected, the most important of which is the Dome Building, for agricultural expositions. The dome is from the Horticultural Hall of the World's Fair at Chicago, and cost \$68,000. entire cost was \$100,000. The fair was opened Sept. 1, and was very successful, showing marked improvement of agricultural matters in the State since the first State fair, which was held in 1853. when a few cattle were corraled within a rail fence, and the highest premium for agricultural The presexhibits was a silver mug costing \$10. ent fair grounds contain 156 acres. Sangamon County gave the additional donation of \$139,800 to the Board of Agriculture toward the expenses of the project. The Board of Agriculture's receipts for the year were \$182,500, and the disbursements \$176,700.

The Farmers' Institute was held at Springfield in January, and the Illinois Breeders' Asso-

ciation during the same month.

The average yield of buckwheat was 201 bushels, against 161 the year before; the average yield of potatoes, 1007 bushels; tobacco, 743 pounds; and hay, 106 tons.

State Banks,-Tabulated statements to March 20 showed the business at the beginning of the ar as follows: Deposits had decreased \$2,800,-000 since Dec. 14, 1894. Loans had decreased 2,000,000. Cash and sight exchange amounted 23,371,309, and deposits to \$73,006,629, or a h reserve of a fraction less than 32 per cent, \$6,000,000 in loans and of \$8,000,000 in deposits, The call dated June 11 showed an increase of e average cash reserve being 32 per cent., and in Chicago 34 per cent. On Dec. 11, 1895, the items were as follow: Loans and discounts aggregated \$39,447,449,83; cash on hand, \$12,725. 0.68; savings deposits subject to notice, \$294,-512.734.37; individual deposits subject to check, \$51,369,749.89; demand and time certificates of deposit, \$13,844,149.35; total resources, \$132,-338,981.23.

Railroads.-The summary of the railway business for the year shows these items: Total capital stock, \$2,112,570,715, or \$50,891 per mile of road operated; gross carnings, \$282,762,993; operating expenses, \$191,140,759; total income from operations, \$91,633,234; income from property owned, but not operated, \$12,056,936; making total gross income of \$103,689,170 above operating expenses. Forty-two roads showed a net income of \$28,169,958; 36 showed a net deficit of \$6,687,875. The number of passengers carried was 83,281,655; tons of freight, 56,736,687; employees, 61,200; total annual pay, \$46,848,-608.81; passengers killed, 65; injured, 258; em-ployees killed, 134; injured, 1,057.

Insurance.—The number of companies transcting business in Illinois Dec. 31, 1894, was: Illinois joint-stock fire and marine companies, 7: Illinois mutual fire companies, 9; joint-stock are and marine insurance companies of other States, 103; mutual fire insurance companies of other States, 15; foreign fire and marine insursee companies, 35; total, 169. Illinois district mutual fire companies, 12; Illinois County mutual fire companies, 40; Illinois township mutual fire companies, 142; Illinois district mutual windstorm companies, 2: Illinois County mutual windstorm companies, 4; total, 200. This report contains the statements of 8 more compa-nies than the previous report. The amount of losses incurred in the State was \$7,543,306, a decrease of \$308,049. The decrease in premium receipts in the State was \$28,074.

Mining.—The Governor appointed in October 7 new mining inspectors under the new law for stricter inspection and safeguards at the 850 shipping mines throughout the State. The statistics of the coal mines of the State for the year ending July 1, 1894, include these items: The total output was 17,118,576 tons, against 19,949,564 tons the year before; number of mines and openings of all kinds, 836; number of employees, 38,477; number underground, 32. 046; aggregate home value of total product. \$15,282,111; average price per ton for hand mining, 67 cents. There are 296 mining machines in use. There were 72 fatalities, and 521 men were injured. The number of new mines opened and old ones reopened was 156. St. Clair County stands first in prestuction with 1,623,684 tons; Macoupin, 1,575,045; Salega mon, 1,142,299. The number of boys employed in mines is decreasing.

Fisheries. - The plants of 1894 suffered badla from the drought. From Havana to a testit 70 miles below less than 6 lakes held water enough to keep fish alive. Chisel lake, with a watersheet of 5,000 acres, had crevices 12 inches deep in the

dry bed.

With the steamer "Lotus," belonging to the commission, fish were saved from drying streams and carried long distances to renew the supply, thus saving millions of pounds. The fish used for distribution, selected from those saved from drying pools along the Illinois and Mississippi rivers, consisted chiefly of black base, crapple wall-eved pike, warmouth base, white base, and spotted catfish.

From one point on the Illinois 250,000 pounds of carp were sent to Chicago and New York.

Swamp Lands,-There were on the backs of the General Land Office two years ago swampland selections in Illinois aggregating 1,920,583 acres, and since then 952,863 acres have been rejected. So far as the claim of Illinois for cash indemnity is concerned, the work demanded by the General Government has been complete in case of nearly all the counties from two to three years. Only the countries of Henderson, La Salle, and Livingston remain to be examined. There can be no cash indemnity until these are settled. With tiled drainage the ewamp lands have become the most productive; the health of their vicinage is improved, public reads are kept in good repair, and their value has increased from \$1 to \$30 an acre.

INDEPENDENT ROMAN CATHOLIC CHURCH, a religious organization formed in Cleveland, Ohio, Sept. 14, 1895, as the result of a convention of Polish Catholic churches convention consisted of about 90 delegates from 22 independent churches, their chief contention being independence of the Roman authorities in matters affecting the owning of church property. The four points that caused the most discussion were: Church property to be owned by the pecple; financial affairs of the churches to be in the hands of a committee selected by the people, the people to have a voice in the choosing and the dismissing of pasters; a better education to be provided for children. After a full discussion of these points, a resolution was passed requiring all parish schools competted with independent churches to use the same text-books as the public schools in the city where they are located, and all teachers in the parish schools to understand the English language. The priests were also expressly probitated from preventing any who dearmi from sending their children to the public which. The name of Independent Catholic Church was changed to that of Independent Roman t'atholic, and every member was required to obligate himself to perform all the duties of a Roman Catholic in the Church. The members of the Central Committee signed a protest to the l'ope "against the arbitrary manner in which the bishops of the Roman Catholic Church in the United States have treated and are new treating the Polish Catholics of this country. The said bishops are treating the Polish people

in a tyrannical and arbitrary manner, looking upon them as mere cattle, refusing them their just rights, and in every manner trampling upon them. The people so used by the bishops are educated persons and not wild beasts; and we desire to enter our selemn protest before the American people against the unjust, illegal, tyrannical, and arbitrary manner in which they are treated by the said bishops." The greatest strength of the movement is in Chicago, Cleveland, and Buffalo. It should not be confounded with the Polish National Alliance, which see.

INDIA, an empire in southern Asia subject to Great Britain, governed under general acts of the British Parliament by a Governor General under instructions from an English Secretary of State for India, who is a member of the Cabinet, responsible to Parliament. The Viceroy and Governor General is the Earl of Elgin and Kincardine, appointed in October, 1893. The ordinary members of the Council of the Governor General in the beginning of 1895 were Sir A. E. Miller, Sir Charles B. Pritchard, Lieut.-Gen. Brackenbury, James Westland, and Sir A. P. MacDonnell. The commander in chief of the Bengal troops, Gen. Sir G. S. White, is an extraordinary inember, as also is the governor or lieutenant governor of the province where the The governors of Madras and Council sits. Bombay, Lord Wenlock and Lord Harris in 1895, have each a separate executive and legislative Council and civil service. The Viceroy's Council, assisted by a dozen adjunct members, half of whom are natives of India, acts as a legislative council for the framing of laws and regulations, to be passed upon later by the Governor General or submitted with his approval to the British Parliament. Henry Fowler was succeeded as Secretary of State for India at the end of June, 1895, by Lord George Hamilton. (For area and population, see "Annual Cyclopædia" for 1894.)

Defense.-The European army provided for in the estimates for the year ending March 31, 1895, consists of 3,477 officers and 70,563 men, comprising 85 general officers in the infantry and cavalry, 29 general officers unemployed, 80 officers in the staff corps, 27 officers and men in the invalid establishment, 1,508 officers and 52,232 men in the infantry, 261 officers and 5,418 men in the cavalry, 280 officers and 74 men of the royal engineers, and 497 officers and 12,822 men of the royal artillery. The native army numbers 145,738 officers and men, making the total active army, European and native, 219,778 of all arms. The native army is composed of 33 European and 26 native officers and 4,472 men in the artillery, 362 European and 627 na-tive officers and 22,439 men in the cavalry, 1,127 European and 2,045 native officers and 110,642 men in the infantry, and a corps of sappers and miners consisting of 58 European and 63 native officers and 3,845 noncommissioned officers and privates. Of the European soldiers 46,372 are stationed in Bengal, 13,465 in Bombay, and 14,176 in Madras. There is a volun-teer corps, composed of European employees and other residents, the effective strength of which is 24,950 men. The contingents furnished by native princes and inspected by European officers form an elite force of 19,294 men.

The naval force for coast defense consists of 2 turret ironclads, of about 3,000 tons, each armed with 4 8-inch guns, a dispatch vessel, 2 first-class torpedo gunboats, and 7 torpedo boats.

Finances.-In 1894 the net revenue was Rx 50,328,000 and the net expenditure Rx 51,874,-000. The estimates for 1895 were framed to meet a further decline in the value of the rupee, which for the preceding year was taken as 14.6d. Having exhausted the resources of taxation, the Government abandoned military works, suspended the famine insurance fund, and drew on the provincial revenues. revenue was estimated at Rx 50,943,500, and the net expenditure at Rx 51,245,400. But the exchange fell in the earlier months of the year from 14d. to 12.5d. The Indian Government then proposed and the Secretary for India, Henry Fowler, assented to putting on a duty of 5 per cent. on cotton goods, promising the Laneashire manufacturers that if it should prove protective in its operation it would be readjusted. The railroad receipts showed an improvement, there was a reduction in the army expenses, and the opium revenue was largely increased by levying a higher tax on Malwa opium. The tax on petroleum was increased, and a duty was levied on silver imports. budget estimates for 1895 made the total revenue Rx 92,024,900 and the total expenditure Rx 92,326,800. The items of revenue were: Land, Rx 25,703,600; opium, Rx 6,393,600; salt, Rx 8,629,-200; stamps, Rx 4,561,800; excise, Rx 5,317,600; provincial rates, Rx 3,525,300; customs, Rx 2,872,900; assessed taxes, Rx 1,740,900; forests, Rx 1,646,000; registration, Rx 440,000; tribute, Rx 775,200; interest, Rx 856,800; post office, telegraphs, and mint, Rx 2,656,500; civil departments, Rx 1,611,700; railways, Rx 20,408,-400; irrigation, Rx 2,463,800; buildings and roads, Rx 629,200; military departments, Rx 809,700; miscellaneous, Rx 982,700. Expenditure under the various heads was estimated as follows: Interest, Rx 4,611,400; refunds, etc., Rx 1,808,200; charges of collection, Rx 8,854,-400; post office, telegraphs, and mint, Rx 2,595,-800; civil salaries, Rx 14,959,200; miscellaneous civil charges, Rx 5,754,000; famine relief insurance, Rx 55,000; railway construction, Rx 24,-400; railway revenue account, Rx 22,538,300; irrigation, Rx 2,909,400; buildings and roads, Rx 5,489,100; army, Rx 23,759,700; defense works, Rx 152,300; total, Rx 93,511,200, from which is deducted Rx 1,184,400 of expenditure from provincial balances. The capital expenditure on railroads and irrigation works not charged against the revenue was estimated at Rx 5,000,000. The additional taxes and extraordinary resources that were resorted to converted the budget into an estimated surplus of Rx 1,230,000 in spite of the embarrassing loss by exchange, which amounted to 27 per cent. of the net revenue.

In the budget for 1896 the expenses of the Chitral expedition (see Afghanistan) had to be provided for, and extraordinary resources could no longer be drawn npon. The Chitral expedition cost Rx 2,360,000 and the expense of the occupation of Chitral is Rx 200,000 a year. Military expenditure was further increased by rais-

ing the pay of the sepoys from 7 to 9 rupees a month, and there was a further loss by exchange of itx 2,503,700. The total increased expenditure was Rx 6,850,000. This was not balanced within Rx 1.212,000 by the saving of Rx 422,-000 in interest by the conversion of the debt, an increase of Rx 427,900 in the general customs duties, Rx 1,455,000 expected from the cotton duties, and an estimated improvement in the

general revenue.

The rupee debt of India amounts to Rx 122,coolooo, The assets in the form of railroads, loans to municipalities, irrigation works, etc., are valued at Rx 149,542,000. In 1894 the perma-ment debt was converted and the rate of interest reduced from 4 to 3‡ per cent. The sterling liabilities in England amount to £116,006,con against which the Government has pur-chased railroads, cash balances, and loans to railroad companies amounting to £67,091,000, The sterling debt has been increased by about 19,000,000, which the Government has allowed to stand against its credit in London in prefer-

ence to selling bills at lower rates.

Commerce.-The imports of merchandise for the year ending March 31, 1894, were valued at Rx 73,956,957. The imports of silver were Rx 15,278,726, and of gold Rx 3,146,530, making the total imports Rx 92,382,213. The exports of Indian merchandise were Rx 102,015,615; of foreign merchandise, Rx 4,431,975; of silver, Rx 1,519,453; of gold, Rx 2,506,284. Total exports, Rx 110,472,327. The commercial movement was strongly affected by the closure of the mints to silver on July 26, 1893. The exchange value of the rupee rose at once from 144d, to 16d., and the Government made this the official rate, but could not hold it, and was afterward compelled to sell bills at a lower rate. Importers took advantage of the artificial rate of exchange to put goods on the Indian market, and continued their importations after the rupec becan to fall, being apprehensive that the fall would continue until the rupee reached its bullion value. The result was that importations exceeded those of the preceding year by 18 per cent. The closure of the mints had the unexsected result of stimulating the importation of silver. Quantities of the metal were rushed in at first in the hope of their arriving before the mints closed, and afterward the bankers imported silver bars and exchanged them for rupees in preference to buying Council bills at a fixed rate, for the natives were eager to take advantage of the cheapness of silver, thinking it to be only temporary, and bought bullion freely in order to have it made into ornaments. More over the rulers of native states imported silver to coin into rupees. The outflow of gold that began in 1893 continued, though in lessening volume. In the imports of merchandise the largest increase, amounting to more than half of the whole, was in cotton goods and yarns. The imports of metals also greatly increased. More than half the total imports consisted of cottons and metals. The trade in cotton goods was stimulated by the expected import duty, and exorts of cottons were retarded by the same cause, The total exports showed no appreciable in-crease over those of the year preceding. In cotton yarn and goods there was a decline of Rx

1,858,100, being nearly 23 per cent., in square the decline was Rx 1,285,585, tering 13 deget cent.; in grain and pulse there was a dev ine ! Rx 4,237,830, or 200 per cent. One result of the closure of the Indian mints to eilver was to check the large export of cotton yarns to Japan. and enable the Japanese manufacturers to take away the foreign market of the Bombay will owners in the same way as these had cut into the trade of the Manchester capitalists until the latter almost ceased to produce heavy webs for the Oriental market.

The values of the leading imports and classes

of imports were for 1893-'94 as follow .

Cotton manufactures	Ka 27, 277 440

The value of the trade across the land frontiers is not included in the foregoing figures. It was valued in 1893–194 at Rx 4,037,400 for imports and Rx 3,431,700 for exports. While the trade with Candahar and Cabul has declined, and that with Nepaul and Cashmere shows some falling off, there has been an increase of imports from Tibet, and the trade with the Shan States and with Siam and western China is growing at a

rapid rate.

Navigation.—There were entered during the year 1893–94 at the ports of India 5,030 vessels, of 3,797,911 tons, of which 1,976, of 3,076,277 tons, were British 1925, of 134,821 tons, were British Indian; 1,506, of 82,739 tons, were native; and 623, of 504,074 tons, were foreign. The total number cleared was 4,965, of 3,867,975 tons, of the vessels entered, 712, of 1,575,836 tons, and of these cleared, 928, of 1,987,474 tons, passed through the Sucz Canal. The number of vessels entered coastwise with cargoes was 105,764, of 11,324,193 tons; the number cleared was 96,145, of 11,159,078 tons. There were 98 vessels, of 3,280 tons, built during the year in India.

Railroads,-The Government, owing to its financial embarrassments, has abandoned for the present the policy of subsidizing railroads and invited private enterprise, but still it will not encourage the building of lines to compete with the guaranteed roads. The existing lines have been planned with reference to British commerce rather than to the commercial needs and populousness of the districts served. Bombay, the chief source of Indian cotton and wheat for England has 1 mile of railway to 8,000 inhabitants, and the wheat-growing Punjab, with small commercial interests, has 1 mile to 11,000 of population, while Bengal, with enormous tea production, with steam textile manufactories, with vast undeveloped coal-fields and prospective metal industries, has only 1 mile to 29,000 of its popu-The Indian network had a total length of 18.856 miles on March 31, 1895. During the previous year 356 miles were built. There were 2.217 miles under construction or sanctioned. There were in 1894 8,606 miles belonging to the Government but operated by companies, 5,199 miles operated by the Government, 2,587 miles operated by guaranteed companies, 403 miles belonging to assisted companies, 809 miles owned by native states and operated by companies, 838 miles owned and operated by native states, and 58 miles of foreign lines. The gross earnings of all the railroads in 1893 were Rx 24,048,229 and the operating expenses Rx 11,347,728, being 47:12 servent of the receipts. The net earnings were htv 12,325,777, giving an average return of 5:46 per cent on the capital. During 1893 there were tratists ried 135,520,447 passengers and 28,851,531 long tomosf freight. In 1894 gross earnings were Rx 25,508 856; working expenses, Rx 11,983,920, or 16:0s per cent, of the receipts; and net earnings, Rx 13,524,936. The net profit on the capital invested was 5.69 per cent., but the Government sustained a net liss of Rx 1,970,000. The Government pays an average rate of 44 per cent. on the capital raised by the guaranteed companies. which is increased to over 7 per cent, by the fall of exchange. In the Ganges delta a beginning has been made of railroad construction by private native enterprise with rupee capital and native Indian managers and engineers and an enterprise native staff. The first line thus built has a length of 31 miles. To facilitate the undertaking of feeders to the trunk lines by attracting English capital, the Government carried a bill in 1895 empowering companies to pay dividends out of capital during the construction of railroads.

The Hurnai Railroad, opened in 1885, which cost the Indian Government millions of pounds, has been abandoned because landslides make the route unsafe, and in its place a new double line has been built through the Bolan pass to connect Sibi and Quetta. Another strategic line is being built to connect the fortress of Quetta, which is already in direct communication with Karachi on the one side and Lahore on the other, with Peshawur also.

Posts and Telegraphs.—The number of letters and other mail matter carried in 1893 was 360,209,076. The revenue was Rx 1,488,863 and

expenditure Rx 1,518,555.

The Government telegraph lines on March 31, 1893, had an aggregate length of 41,030 miles, with 120,251 miles of wire. The number of paid messages was 3,981,411 during the year; receipts were Rx 937,743, and expenses Rx 875,073. A junction between the Chinese and the Indian systems was effected on the frontier of Upper Burtons and the second s

mah on March 16, 1895.

Oplum Commission.-A royal commission, appointed by the British Parliament on Sept. 2, 1893, to inquire into the Indian opium traffic, made its report in the spring of 1895. The English Society for the Suppression of the Opium Trade, of which Sir Joseph W. Pease was president, had called for an inquiry into the best method of adjusting the finances of India to the abolition of the opium traffic, and Mr. Gladstone, then Prime Minister, accepted instead the proposition to investigate the conditions of the trade. The first president of the society, the Earl of Shaftesbury, when he was Lord Ashley, offered a resolution in the House of Commons condemning the opium trade as producing ill feeling between England and China, but withdrew it. Sir Wilfrid Lawson's resolution was lost in 1870 by 150 votes to 46. After the society was started in 1874 frequent motions were made in Parliament calling for the gradual extinction of the traffic or for prohibition of the sale except for medical The antiopium league condemned purposes. primarily the action of the English Government in coercing China by war and menaces to admit Indian opium and the position of the Indian Government in drawing a revenue from the vice thus fastened upon the Chinese by treaty. Latterly the society gave its attention also to the evils arising from the spread of the opium habit in India. In that country opium is eaten in the crude form, or sometimes drunk in an infusion whereas in China a strong preparation is smoked in a pipe. In 1891 a vote was carried in a thin house which condemned the opium traffic, except for medical purposes, as morally indefensible As a sequel to this vote Mr. Gladstone's Govern ment proposed the opium commission in June 1893. The commission was ordered to report whether the growth of the poppy and sale of opium should be prohibited, except for medica

361

process, in British India, whether such prohishould be extended to the native states, what terms existing transit arrangements those states could be terminated; also as to effect prohibition of the sale and export um would have on the finances of India. into consideration the amount of compento be paid, the cost of necessary preventcasures, and the loss of revenue; whether change short of total prohibition should be in the system at present followed for reguand restricting the opium traffic and for or a revenue therefrom; what the consump-or opium is in the different districts and by rent races of India, and what its effect the moral and physical condition of the and what was the disposition of the peo-landia toward the prohibition of the use of for non-medical purposes, and whether would be willing to bear the whole or a part cost of prohibitive measures. The comwas composed of Lord Brassey, Sir James all, Sir Lakshmiswar Singh, of Darbhangar, filliam Roberts, R. G. C. Mowbray, H. U. news, Arthur Pease, Haridas Viharidas, and Wilson.

Indian Government controls and limits ultivation of the poppy, and has a monop-f the manufacture and sale of opium. No can grow the poppy without a license, Government subagent, after measuring the d that he is permitted to sow, gives him rance of 20 per cent, on the value of the ctive crop and pays the rest of the price the crop is delivered. The extract for consumption and for export is made in ament factories. The main part is in-l for export. The chests are sent to Caland there sold to merchants by public The area devoted to the poppy is 100,000 square miles, lying in the district har in Bengal and in the Northwest Provand Oudh. Outside of British India the is cultivated in certain native states of nd India and Rajputana and in the terri-of Gurwah. Their product is known as a opium. The total annual value of the oplum crop is estimated at £13,000,000, ad between the Government and the grow-nd landlords. The share of the Governis nearly two thirds of the selling price, on Malwa opium the Government ima tax in the form of transit dues that is than two thirds of the value. Of the total revenue, which has greatly fallen off in years, over 90 per cent, is paid by the see on the opium exported to China, Hong-g, and the Straits Settlements.

The royal commission examined 723 witnesses, whom 408 were natives of India or China and 367. Europeans. Of the medical witnesses may all the missionaries, half the private practitioners, and a fraction of the officials were in a trace of the suppression of the traffic. The commission drew up a report which was signed by 8 out of the 9 members. Mr. H. J. Wilson a brief minority report contested all the contested of his colleagues. The majority report mained the Indian Government in all its contestions. According to the weight of evidence maintage, prohibition was not necessary nor

demanded by the Indian people. If the paramount power extended prohibition to the protected states it would act without prevedent or justification and provoke the resentment of the native chiefs and their people. It would inflies a loss of public revenue on the Indian Govern-ment that it was unable to bear. In regard to the export of the drug to China, there was no occasion to revise the existing treatics in the interest of the Chinese when the Chinese Goternment had formally admitted that the treaties contained all that it desired. The testimous of medical experts convinced the commission that the use of the drug, unless taken in excess, is by no means harmful. The physical and moral effects of excessive indulgence are evil, but not productive of lesions or insanity, as is alcohol. Besides being used as a stimulant opium is the common household medicine in all parts of India, taken in cases of specific disorders, such as rheumatism, diabetes, chills, and diarrhora. It is regularly administered to unweaned chil-dren. The people have faith in its efficacy and dren. medical men approve its use in these disorders. The people believe in it as a prophylactic and a remedy for malarial fevers. The common use of opium in India is a moderate use, leading to no evil effects. Excess is exceptional and is condemned by public opinion. The mass of native opinion is opposed to prohibition as an unnecessary restriction on individual liberty and an interference with native habits and customs. The only classes of native Indians who are in favor of prohibition are certain small Mohammedan and Hindu sects that would abolish the use of stimulants of all kinds. The Indian Comgress, though urged by friends in England, declined to include the opium question in its programme. Mercantile bodies, the community of planters, and the Europeans in India are strenu-ously opposed to prohibition. A presentive system would be enormously expensive and would prove impracticable. The prohibition of planting and manufacture could not be extended to the native states, which would get hold of the trade abandoned by the Indian Government, The existing Bengal monopoly seemed to be the best system for regulating the preduction of opium. The regulations for the restriction of consumption might be amended, especially by making it more difficult for smokers to obtain the drug. A distinction is drawn between the common way of taking opium in pills or decoctions and the comparatively rare and accel practice of smoking preparations of opsum known as chandward standard. This use of the drug is considered disreputable, and public opinion might not view with disfavor legislation against salcons and clubs where smoking is carried on. In Burmah, where there is a considerable t hinese population and where smoking is much resorted to in certain parts of the country, restrictions are necessary, but the commission did not recommend any modification of the regulations recently introduced. The extensive use of opium in India for non-medical or quasimedical purposes is rarely attended with injuriour consequences; in some cases it is beneficial. The non-medical uses are so interwoven with the medical uses that it would be impracticable to draw a distinction between them in the distri-

betten and sale of the drug. The habitual use of epium as a stimulant by young people is generally condemned. The testimony was unanimous that the people of India would be unwilling to bear the cost of prohibitive measures. The commission decided that existing transit arrangements could not be terminated without the voluntary agreement of the native states, which would involve large pecuniary compensation both to the state and to individuals.

II, J. Wilson in his minute of dissent pointed out that the commission had selected witnesses representing the official classes, both native and European, or who echoed their views or considered their own interests at stake, including military medical officers, titled persons, landowners, and others. While violent crimes were not attributed to opium, he believed that there was much evidence to show that habitual consumers, when poor, resort to petty stealing to obtain money for the purpose of getting opium. He contended that the imperious craving for the periodical dose, the powerful sway that the opium habit was admitted by every witness to have over the habitual consumer, was necessarily degrading to the moral nature of man. Mr. Wifson recommended the cessation of the growth of the poppy and the manufacture and sale of opium in British India, and that, as soon as the Chinese opium trade shall have been brought to an end and licenses to cultivate are no longer granted, licenses for the transit of opium from native states be withheld. The plan of compensating cultivators and landlords he declared to be without precedent. He condemned the present system of sale through private contractors and vendors, advising rather that official vendors be appointed, with instructions to restrict the sale. He further recommended the total prohibition of smoking.

After the report was published Sir Joseph Pease assailed the commission and offered another resolution in the House of Commons declaring the opium traffic morally indefensible,

which was lost by 176 votes to 59.

Another commission, appointed by the Indian Government, came to the conclusion, after examining 700 witnesses, that the smoking of ganja and the drinking of bhang are as innocuous as the royal commission found opium eating to be. The hemp drugs, although their excessive use is sometimes productive of poverty or violent crime, have an inappreciable · flect on the general statistics of crime, pauper-18m. msanity, disease, and longevity, since only 1 in 200 of the inhabitants consumes ganja at all, and not more than 1 in 4,000 consumes the homp stunulants to such an extent as to render himself objectionable to his neighbors or distinguishable from the total abstainers. Ganja, the form, it which the narcotic is taken by the common people, is declared to afford 1,000,000 peothe a harmless pleasure, and in some cases a beneficial stimulation. The pleasant summer beverage made from bhang and drunk by the well-towler is said to be harmless.

Official as well as native opinion dreads the growing use of alcohol in the social entertainments of the wealthy and, with especially injurious results, among the new operative class in mines and factories, who begin to find the more

active stimulant necessary to enable them to withstand the severe and continuous strain of their work. The opinion is general that alcohol is not only demoralizing but fatal to the native races, and that the prohibition of opium and the hemp drugs would only substitute that fierce and deadly stimulant for the mild narcotics to which the people have been accustomed from time immemorial. The Government intends to place upon the hemp drugs the utmost restrictions compatible with fairness by increasing the tax where it is not already as high as the article can stand without encouraging illicit production. The public storehouses established in Bengal will be extended to Madras and Bombay, and the growth and distribution of the products will be gradually taken in hand by the Government.

Legislation.—An act providing that the people of a district in which riots occur shall bear the cost of extra police drafted into it and pay compensation for damage done aroused much excitement in native circles. The Government considered that the frequent religious riots justifled such a measure, but accepted an amend-ment authorizing the local government to grant exemption from liability to individuals or classes, An amendment to the Cantonments bill removed, in pursuance of a resolution of the House of Commons, the restrictions which have hitherto kept down virulent diseases that weaken the health and efficiency of the European army in India. A bill for the sanitation and inspection of pilgrim ships, embodying the rules approved by the Paris convention of the Sanitary Conference, was generally welcomed by the Mohammedan community. The whole of India resounded with the outcry that was made when the Legislative Council at the dictation of the English Government, which had promised as much to the Lancashire cotton manufacturers, voted to impose an excise duty on cotton yarns finer than 20 hanks to the pound, to counterbalance the import duty on cotton manufac-The main Indian product was 20's or tures. under, while England produces nothing as coarse. The excise duty caused the Indian manufacturers to cease spinning the higher grades altogether, but their expulsion from the field did not benefit their English competitors so much as it did the Japanese and Chinese spinners, who had already begun to produce the finer yarns from cotton imported from America.

Religious Tumults.—While priests from Ceylon were engaged in installing on Feb. 25, 1895, an ancient and artistic statuette of Buddha, the gift of the Buddhist high priest of Japan, in the great temple of Budh-Gaya, Bengal, which is the most sacred shrine of Buddha in the world, a mob of Hindu worshipers rushed in and seized the image and threw it on the ground outside, while the dedicators remained devoutly in their attitude of religious contemplation. The Hindus were offended because the image had not been consecrated according to their rites, for they also worship Buddha as an incarnation of Vishnu in the same temple. The Government custodian of the temple intervened, and the rioters were fined for disturbance of religious worship.

At Dhulia, Bombay, Mohammedans on Aug. 24 attacked and routed a Hindu bullock procession and a week later obstructed the Hindu ganpati procession and beat the British collector, who rode at its head to preserve order, whereupon the armed police fired into the mob, killing 10 persons and wounding 40.

INDIANA, a Western State, admitted to the

Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission was 147,178 in 1820; 343,001 in 1830; 685,866 in 1840; 988,416 in 1850; 1.350.428 in 1860; 1,680,637 in 1870; 1,978,301 in 180; 2,192,404 in 1890. Capital, Indianapolis.

Government.-The following were the State officers for the year: Governor, Claude Matthews; Lieutenant Governor, Mortimer Nye; Secretary of State, W. D. Owen; Auditor, Americus C. Daily; Treasurer, F. T. Scholz; Superintendent of Public Instruction, David M. Greeting: State Statistician, S. J. Thompson; State Geologist, W. S. Blatchley; Adjutant General, Irvin Robbins: Attorney-General, W. A. Ketcham; all Republicans except the Governor, Lieutenant Governor, and Adjutant General. Chief Justice of the Court of Appeals, George E. Ross; Associate Justices, Theodore P. Pavis, Orlando J. Lotz, George L. Reinhard, Frank E. Gavin; Chief Justice of the Supreme Court, J. H. Jordan; Associate Justices, Leonard J. Hackney, Timothy E. Howard; Joseph S.

Dailey, James McCabe, L. J. Monks, Pinances.—The total receipts for the year were \$8,525,219.33; the expenditures, \$8,342,-004.20, which, with the balance on hand a year ago, leaves a balance on hand of \$573,726.42. The State paid for maintenance of its benevolent institutions \$959,525.39, for reformatories \$110,000, and for penal institutions, \$190,484.12. In direct payments to the colleges that come un-der the title of State institutions the State contributed \$223,922. During the year \$1,331,-380.98 was paid on the State debt. The State now has a debt of \$7,030,000, exclusive of the bonds held by the State educational institutions, which were issued merely as a means of securing to these institutions a certain amount of money annually. The annual interest on this for forlet amounts to \$484,000; interest, \$24,200.

A recent decision of the Supreme Court in re-

lation to the loaning of public funds is to the effect that a county treasurer loaning public funds for his own use and benefit, and taking a note therefor, is not permitted to appeal to the law for collection of the money. The ruling applies also to township trustees. It has long the law in reference to

the Treasurer of State.

Valuations.-The valuation of land in the State in 1894 was \$454,131,203; of improvements on these lands, \$86,544,952; of lots in the State, \$149,263,802; of improvements on lots, \$153,441,643; value of personal property. \$291,045; Value of personal property, \$291,085; \$3513,085; of railread property, \$157,125,085. The aggresate of all property subject to taxation is \$1,593,106,515.

State Institutions .- The report of the Northern Hospital for the Insane shows that the appropriation of \$95,000 for the year was just sufficient to meet the expenses. The catte ings from sales of material and old clathing were \$138.63, paid into the State treasury.

The Eastern Hospital received an equal appropriation, \$95,000, and reported a balance of \$26.04. The new construction fund of \$25 (0.0) was all used. At the beginning of the fie al year there were 450 patients in the institution During the year 76 were admitted, 46 were discharged, and 24 died, leaving 456 in the hospital at the close of the year. The cost per capila for the year was \$175.27.

The Southern Hospital showed a balance of \$15,20 out of the appropriation of \$85,000. This

institution earned \$69.59.
The Institution for the Blind received an appropriation of \$30,739.98, and reported a balance of \$1.63. A little more than half the en-tire cost, \$15,855.71, was used in paying salaries. The report of the Reform School for Boys,

which was printed in the institution, shows that during the year 163 boys were admitted and 222 released. The average number present dur-ing the year was 558. Each county must pay half the expense of maintaining its representatives. The annual cost of supporting each in-mate is \$120. In the last six months a large building has been erected by the boys. Although the school farm has been enlarged by the purchase of 195 acres the Reform School is no longer known as a "farm school." The management has found that boys from the cities will not take to farming, and they are taught trades.

The two penitentiaries have about 1,500 convicts within their walls. Both prisons are short of funds, the Northern to the extent of \$12,000 and the Southern to the extent of \$17,300. At the middle of the year but 350 of the 800 men at the Southern prison were under contract, and but 2 contractors were employing labor there, while the appropriation for the year was nearly exhausted; but by the close of the year 725 person

oners were under contract.

The population of the charitable and penal institutions of Indiana has increased 920 in five years, which is 15-9 per cent., while the total increase of the cost of maintenance is 4-3 per cent. Each year the cost of maintenance has declined from \$190,68 in 1891 to \$171.64 in 1895.

Plans for the State Soldiers' Home at Lafavette were accepted in April, and the Woman's Relief Corps of the Logan Post last the corner

stone of the first cottage in October.

Vital Statistics.-Figures given out by the State Statistician show, from reports received from the clerks of all the counties except Casa, that the number of divorces granted in the State during the year ending June 30, 1805, was 2,730. For the same period in 1894 the number was 2,279. A comparison of these figures shows an increase of nearly 400 cases in the State. Of the number of divorces procured in the last year, 1,567 were granted to wives and 863 to husbands. The records of marriage licenses do not show a material increase. During the year ending June 30, 1895, there were 22,507 marriages. The number of people confined in the county jails of the State during the year was 31,161. Of this number 1,475 were women. The report shows that 1,735 foreigners were naturalised during the year.

Loan Associations.—According to a summary of the annual reports of the building and lean associations of the State, they have loaned on mortgage security \$11,552,616,89; on stock and pass-book security, \$741,436,84; and on other security, \$297,836,76. They hold real estate to the value of \$275,320,81. The amount of installment stock and credited dividends due to members is \$9,513,487,97, and on paid-up stock and credited dividends \$3,245,125,09. The undivided profits amount to \$537,627,61. The associations have issued 321,831 shares of installment stock and 45,907 shares of paid-up stock. There are 50,205 shareholders that have not borrowed from the associations, and 19,176 that have. The authorized capital is \$94,620,000, of which \$38,821,220 has been subscribed.

Railroads.—During the past six years more than half the track mileage of main lines has been laid with heavy steel rails, and 75 per cent. of the wooden bridges have been replaced with iron structures resting on stone abutments, and the lighter rails taken up have been used for side tracks, thus greatly increasing the business facilities. Grades have been reduced and curves

straightened on many of the roads.

Education.—The amount of State money for schools was reported as \$1,436,852,04, all of which, except a balance of \$15,222,90, was distributed, \$15,000 going to the State Normal School. The number of children of school age

was 808,261.

Since the founding of the Northern Indiana Normal School twenty-three years ago more than 100,000 names have been entered on its rolls. The average attendance for the year ending in August was over 2,500, while more than 6,000 students have been in attendance during the year, and 300 more were graduated than in any previous year, the total number being 1,307.

The State Normal School at Terre Haute sent out this year a class of 101, the largest in the history of the school. The total attendance at

the spring term was 1,224.

A course in journalism has been added to the curriculum of the State University. It includes studies in English, general history, political theory, constitutional history, and economics. There were 87 graduates in the various departments in June. Wabash College, at Crawfords-ville, graduated 28, and Franklin College 16.

The North Manchester College, which has been conducted by the United Brethren Church, has been bought by the citizens, to be given, together with \$5,000, to the Dunkard Church, which will establish an institution there.

Dis Medical College at Indianapolis graduated 50 at its twenty-fifth commencement.

Burker University sent out 19 graduates in Jama, and Purdue, which has entered its twenty-

we mit war groduated 76.

Earlian Codege, at Richmond, which is conducted by the Society of Friends, has been embarranced for want of funds, but received at the time of the Yearly Meeting an additional endowment of about \$30,000. The whole number of students curidical during the year was 236; professors, 12; too hers in other departments, 4.

A large disparity on the wrong side between the income and expenses of De Pauw University has led to a change in its management. The president retired, and his place has been temporarily filled. The number of graduates was 65.

The college presidents of the State, in convention at Indianapolis, in March, declined to amend resolutions passed in the previous December virtually abolishing football. They were petitioned to reconsider, but were of opinion that the game should be prohibited until the rules shall have been materially changed and professionalism entirely taken out. This year they went a step further and passed a resolution making the rule forbidding the playing of football with professional teams applicable to all college athletics.

Military Matters.—The positions of Indiana regiments on the field of Chickamauga were all determined early in the year. It was decided that the monuments should be built of Indiana stone, and they were dedicated Sept. 18. While the State did not have so many regiments in the battle as some States, Indiana lost more men in killed and wounded than any other. The Legislature appropriated \$40,000 for the purpose,

More controversy has arisen in reference to the Soldiers' Monument at Indianapolis (see "Annual Cyclopædia" for 1893, p. 405). In consequence of criticisms on the quality of the art and other matters connected with the management, one of the three members of the commission resigned in February, and three regents were appointed in May under a new law—Gen. Lew Wallace, Gen. Fred. Knefler, and Major G. V. Menzies, all of whom accepted: but Gen. Wallace soon resigned in consequence of the rejection by the other regents of certain resolutions which he offered, the significant portions of which were these:

That the monument be devoted to the State of la-

diana exclusively

That the female figure at present covering the shaft of the monument be taken down, and a fitting statue in bronze of Gov. Oliver P. Morton be erected in its place. That the four pedestals now in place about the monument be reserved exclusively for soldiers of the Territory and State of Indiana actually slain in battle or by hand hostile to the republic.

The State encampment of the Grand Army of the Republic was held at Muncie in April. One of the questions discussed was the inadequacy and unfairness of the treatment of the civil war in the United States histories in use in the public schools of the State. A protest against them, signed by the Indianapolis posts, was referred to a committee, and a memorial stating the objections to the books was prepared for presentation to the State Board of Education.

Products.—During the fiscal year 63,651,923 cigars were manufactured in Indiana. Seventeen distilleries were operated, 14 being grain distilleries, consuming 1,500,000 bushels of grain: 969,478 gallons of spirits were rectified, 8,700 cattle and 7,125 hogs were fed, and 10,528,592 taxable gallons of distilled spirits were gauged. The production of fermented liquors amounted to 592,224 barrels.

The corn crop, as reported in November, was 131,105,991 bushels, from an acreage of 3.706, 146. The acreage in wheat has been gradually decreasing in recent years, having fallen from 3,063,348 in 1882 to 2,540,424 in 1894. The yield this year was estimated at 20,000,000 bushels.

The apple crop was unusually large, but low

rater in the streams interfered seriously with he shipments, and in many places the fruit had a be left on the ground or sold at extremely ow prices. A large quantity of apple brandy as made.

The tomato crop was reported about 60 per

ent, short of that of 1894.

The State geologist has been investigating the eds of clay and stone. In the western part of he State, where the coal deposits crop out, is a ed stone composed of sand and iron, which will e a valuable building material. It can not be awed, but must be taken out with chisels and sammers. Oblitic stone to the extent of 25,-00,000 cubic feet was quarried in the State in 594. Investigation of the clays showed valuble varieties one shale found in unlimited uantities suitable for drain tile, and one for fire rick, and deposits of clay such as is used in erra-cotta factories. Alleged discoveries of gold re occasionally reported, and on this point the cologist says: "There is gold in very small unnities in the sands of Brown County which leated there with the glaciers, but nobody could nake wages in hunting for it." As to the gas nd oil, he says: "Indiana has a larger gas terriory than Ohio and Pennsylvania combined, but here is every reason to urge economical use of New oil wells are developed almost every day, and there seems to be no limit to the supply. new oil field is developing at Parker City.

Supreme Court Decisions.—In an opinion anded down in a Carroll County liquor case it a held that a liquor dealer is responsible for ctionable injuries caused by the sale of liquors made by his agents or servants. The fact that he sale was made without the knowledge of the

lealer constitutes no defense.

The court affirmed the decision of the Allen County Superior Court in a suit in which the Lumane Society of Fort Wayne was involved. Two members of the society caused two horses to be killed, and the owner was awarded damages.

n the Allen County Court.

A case of general interest was decided in Deember. It was held, in the case of the Indiana Natural Gas Company against Henry Jones and thers, that in the assessment of damages in conlemnation proceedings no allowance shall be nade for future prospective damages that could

cerue only through an accident.

An important decision was given in the case of the president of a bank at Martinsville against he County Board of Review. The suit was on he question of the right of the bank to refuse to allow the board to examine the books containing he names of the bank's depositors for the purcose of discovering whether persons in general and unlisted cash in the bank in the form of creenbacks. The president of the bank refused o answer the questions or permit an examinaion of the books. He was fined \$1, and an ap-cal was taken. The decision declares that "it beal was taken. s not easy to see how the statute could have nore fully conferred upon the Board of Review he power to do what it was attempting to do in his case. The board had authority to make the examination. It had authority by any member of it to administer the oath to the witness, and it had authority to require him to be sworn and answer as to the matters required of him.'

Political.—The enumeration of voters by counties, which is made once in six years as a basis of legislative apportionment, was finished in October. There are 627,072 voters in the State. A comparison of the number of voters reported by the township trustees and the number of men assessed shows that more than 200, 000 escaped poll tax. The difference in the enumeration of 1989 and 1895 is as follows. Increase of white votes, 73,745; increase of colored

Votes, 2.297.

Legislative Session.-The Legislature adjourned March 11, after a session of state days, Among the bills passed was one called the State-house-custodian bill, which was to have the result of removing the present custodian and a number of subordinates and putting Republicans in their places. The Governor wrote a veto to the bill, which was sent to him about two days before the adjournment; but the veto message was held back until just before 12 o'clock on the night when the session expired, with the design (so the Republicans asserted) of having it handed in to the Legislature at the very moment of adjournment, so that the bill could not be passed over the veto. It was also asserted that the clock was kept at ten minutes before twelve in order to deceive the members as to the time remaining in which to act; that the veto was to start from the Governor's office downstairs within three minutes to twelve, and when it reached the House (so the plan was said to be arranged) the hands on the electric clock were to give one bound and leap past that minute point which marked the expiration of the Fifty-month Assembly's life. Democratic members of the House were to be the witnesses that the hour of twelve had struck before the measure was passed over the Governor's objections. But the Republican members had information that the veto was coming; and when the elevator arrived at the assembly-hall landing, at one minute before twelve, bringing the Governor's private secretary with the message, the custodian whose office was in danger and others C2 Republican members) pushed in. The Republicate closed the door and, seizing the lever, sent the elevator upward. A rough and tumble fight ensued in the elevator between the two members on one side and the secretary and the costedian on the other. After the clevator had gone up and down several times the door was opened and the fight continued in the corridors and became general. The doors of the Assemble chamber were locked and the effort to break them in on the part of the veto bearers was resisted by the Republicans. One door was finally forced, and the secretary fought his way slowly to the desk amid a surging crowd of contestants on both sides, and reached it just after the Speaker had declared the House adjourned, though, according to law, the session had expired at 12 o'clock, some minutes before.

When the Governor made proclamation of the acts of the session as laws he excepted the State-house-custodian bill, claiming that it had been vetoed. The proclamation was not presented to the Secretary of State for his signature to attest that of the Governor, as required by law in official documents. It was also claimed that the Governor exceeded his authority in affixing the

seal to his proclamation; for, though he is the custodian of the seal, a statute says that the Secretary of State shall affix it to official documents. These precautions of the Governor seem, however, to have been unnecessary, as the Secretary is reported to have said that he would attest any proclamation the Governor might make. He holds that the proclamation carries with it nothing more than a mere formal notice. According to the law, the new acts were in force at the time the copies were received by the last county, which was June 28, and no act or omission of the Governor could prevent their being effective at that time.

One of the most important measures of the session was that on temperance, called the Nich-olson bill. Mr. Nicholson is president of the The law pro-Indiana Good Citizens' League. vides for local option, but the option is to be exereised by petition instead of by ballot. The applicant for license is to be required to describe specifically the "room in which he desires to sell such liquors, and the exact location of the same, and if there is more than one room in the building in which such liquors are intended to be sold said applicant shall specifically describe and locate the room in which he desires to sell such liquors in such building." Those holding license to sell intoxicating liquors in less quantities than a quart at a time are to provide for the sale in a "room separate from any other business of any kind, and no devices for amusement or music of any character, or partitions of any kind shall be permitted in such room." The rooms are to be on the ground floor or basement and fronting the street or highway, and so "arranged, either with window or glass door, as that the whole of said room may be in view of the street or highway." The penalty for violations of these provisions is \$10 to \$100 fine, to which may be added imprisonment not exceeding ninety days; and on conviction of a second offense the license is forfeited. Drug stores are allowed to dispose of liquors in quantities less than a quart at a time only on the written prescriptions of reputable physicians. The vote on the bill in the Senate was 28 for and 20 against; in the House, 75 for, 20 against. The vote was not divided on party lines.

An act was passed designed to prevent township trustees from retaining surplus school moneys, and at the same time do away with the enormous fees to the Attorney-General for cov-

ering such moneys into the treasury.

The apportionment act of 1893 was repealed on the ground that the courts have practically declared it unconstitutional, and the State was redistricted. Of the 13 congressional districts by the new division, the largest contains 8,410 inhabitants above the average, and the smallest 7.757 below, while 7 are within 2,000 of the Average.

These acts were vetoed by the Governor, but were passed over the veto, as was also one provaling for the appointment of boards of control for the State prisons, to be chosen by the Governor, Secretary of State, Auditor, Treasurer, and Attorney-General.

A fee-and-salary law takes the place of that of 1891, declared unconstitutional by the courts. The so-called Reby bill prohibits racing on any track from Nov. 15 to April 15, for purse or prize, in the presence of 50 persons, and the calling of any race meeting on any one track oftener than three times a year. The validity of the bill was upheld by the Supreme Court.

An act affecting the militia appropriated \$45. 000, and made more liberal provision for armories, etc., but the more important changes are those that relate to authority in time of riot and disturbance, and to trials of militiamen for results attending the firing upon a mob. The practical effect of the bill is to place the officer commanding the militia in authority over the civil officers, and to place under martial law any community or section where the military may be called to preserve order. In the trial of soldiers who are charged with the injury or death of the members of a mob the military is made superior to the civil courts, the provision being that soldiers so charged shall be tried by court-martial, and that the finding of the military tribunal shall be final.

By the terms of the benevolent-institutions bill, the Board of Trustees is made bipartisan.

The State tax levy was placed at 28 cents on \$100, a reduction of 1½ cent from the previous years; for the general fund, 9 cents; benevolent institutions, 5 cents; school tuition, 11 cents; sinking fund, 3 cents. Aside from this is the direct tax for the support of the State educational institutions, amounting to one sixth of a mill on the dollar. The State University gets one fifteenth of a mill, and the other two one twentieth each.

The number of employees at the State House

was materially reduced.

An appropriation of \$75,000 was made to establish a State Soldiers' Home at Lafayette.

The law on the publication of libels in news papers was materially changed. If it appears upon trial that the article was published in good faith, that its falsity was due to mistake, and that a full and fair retraction was published in a conspicuous place and type the plaintiff shall receive only actual damages.

A fraudulent-marriage act makes it a felony for a man to desert or treat cruelly, within two years, a wife whom he has married to escape

prosecution for seduction.

Several acts were passed, designed to provide for new and improved roads in townships where a majority are in favor.

Among other acts passed were the follow-

Providing for a commission to consider the matter

of a centennial (1900) industrial exposition.

Authorizing city councils to sell bonds and raise money for water works in which cities may be part owners.

Giving the Auditor further control over insurance companies, and abolishing the 80-per-cent. clause in insurance policies; also requiring companies to add cash to their capital up to \$100,000.

Prohibiting the landing and beaching of family shanties or flatboats on shore for a longer period than

ten hours without consent of the owner. Defining when property shall be taxed, providing for county boards of review, and extending the session of the State Board of Review—an amendment to an act of 1891.

Amending all laws authorizing city councils to di-

vide cities into wards.

Authorizing cities of 10,000 population or more to provide for a police matron.

Specifying the terms on which the Governor, Audiand Treasurer of State may issue and sell bonds.

Authorizing cities and towns to sell bonds for fund ing or refunding, and requiring boards of trustees to levy taxes for the payment of interest on bonds and

for a sinking fund.

Making the stockholders of State banks responsible for double the par value of their stock, and requiring that any impairment of capital shall be made good.

Making it unlawful to take fish in any lake in In-

diana between April 1 and June 15.

subjecting any railroad company or other corpora-

tion, or their agents, to exemplary damages if any discharged employee shall be blacklisted.

A joint resolution, looking to an increase in the number of judges of the Supreme Court, by the terms of which the number may be from 7 to 16, but must be either 7, 10, 13, or 16, proposing an amendment to the Constitution to that effect. Another proposed amendment to the Constitution, adopting voting by machine, was embodied in a resolution that passed both Houses.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,913 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. By the State cenus of 1895 it was 2,058,069, Capital, Des

Government.-The following were the State officers during the year: Governor, Frank D. Jackson; Lieutenant Governor, Warren S. Dun-Auditor, C. Y. McCarthy: Treasurer, John Herriott: Attorney-General, Milton Remley; Superintendent of Instruction, Henry Sabin; Rail-road Commissioners, John W. Luke, George W. Perkins, C. L. Davidson. Mr. Luke died Dec. 20. Chief Justice of the Supreme Court, Josiah Given; Associate Justices, J. H. Rothrock, L. G. Kinne, C. T. Granger, C. S. Robinson, H. E. Deemer. Justice Kinne is a Democrat; the other justices and the State officers are Republicans.

Pluances.-The total assessed valuation is 551,000,000, a decrease of about \$9,000,000 in the past biennial period. The tax levy was the past biennial period.

placed at 24 mills.

The State Treasurer's report for the two years ending June 30 shows a total general revenue from all sources from July 1, 1893, to June 30, 1805, inclusive, of \$3,524,251,35; balance from last report, \$412,981,45; total, \$3,937,232.80. The total Auditor's warrants redeemed was \$3,624,-378.39; cash balance on hand at close of business June 30, 1895, \$312,854.41.

The aggregate cost of criminal proceedings in the State in one year was \$504,040,45, not including the salaries of county attorneys, which

amounted to \$82,355,26.

Banks.-There was an increase of 14 banks during the year 10 of which were savings and 4 State banks, and during the two years an increase of 39. There was an increase of deposits, though in the year from 1893 to 1894 there was a decrease. No bank was compelled to close its doors during the time, but in September the Auditor reported the Buena Vista State Bank at Storm Lake as being in poor condition, and asked for the appointment of a receiver.

The last Legislature enacted several laws af-

feeting banks. Directors were empowered to make good by assessment impairment of the catital stock of a State or a savings bank, the liability to the State bank on the part of an officer was limited; loans to directors must be passed upon by the board; an examining committee, to make quarterly examinations and report to the full board, was provided for, bank officers were prohibited from using the funds of the bank or its deposits except for regular business transactions; and it was made a penal offense for any bank officer, agent, or clerk to make false entries or statements in regard to the condition of the bank to any person authorized to examine it.

Loan Associations.-The Union Building and Savings Association went into the hands of a receiver in January. His report, rendered in February, showed that the liabilities amounted to \$199,334.29, and the assets considered good to \$69,419.36. Many of the loans had been made to the manager on security of doubtful value, and the running expenses had been increased under his management by a large amount. Three indictments were found against him for embezzlement and one for conspiracy. He was acquitted on one of the charges in June. After the affairs of the association were made public the other companies in Des Moines, with the exception of the lows Deposit and Loan Company, asked for an investigation of their business by a committee to be appointed by the State Executive Council. Later, new directors were added to that company, and they asked for an investigation. The committee found that the affairs of the lowa Deposit and Loan Company as to loans were in good condition, but that the management had been extravagant, and the funds had been used for purposes not contemplated by the stockbolders. After the investigation the company was reorganized with a new manager.

The other Des Moines associations were found

to be in good condition.

Insurance.—The report for 1894, published May, gives the following figures: The Iown in May, gives the following figures .. fire insurance companies show a total of risks written, \$94,687,546; premiums received, \$2,002,-382; losses paid, \$894,728.93; percentage of losses paid to premiums received, 44%. totals of other than lows fire companies were: Amount of risks written, \$155.514.959; premiums received, \$2,251,976.48; losses paid, \$1,-513,282,58; percentage of losses paid to pre-miums received, 672. Companies other than fire and life; Risks written, \$8,889,256; pre-miums received, \$84,108.95; losses paid, \$51,-459.92; percentage of losses to premiums, 612. The Council Bluffs Insurance Company was

put into the hands of a receiver, whose report, made in August, showed the assets to be \$19,889.

and the liabilities \$79,944.

In a case before the Supreme Court in which the Northwestern Legion of Honor was the defendant, the decision was to the effect that the order was an insurance company. Acting under this decision, the Auditor notified the fraternal secretics doing insurance business in the State that they must comply with the insurance laws. Representatives of 26 of these societies met in Des Moines, Dec. 13, and prepared a bill for the 368 IOWA.

protection of their interests, to be presented to

the next Legislature.

Railways.—The assessment of railway property for 1895 places it at \$44,364,542, a decrease of \$509,144 from the valuation of 1894. The sleeping-car assessment is reduced also. In 1894 it was \$186,028, and this year it is \$151,091. The sleeping cars are assessed \$4,000 each, and the tax is distributed according to the number of miles the cars run in Iowa.

The council is also required to classify the railways for the purpose of fixing their charges for passenger fares, and according to this classification two roads were changed from Class A to Class B and allowed to charge 3½ instead of 3 cents a mile, and two others were allowed to

charge 4 cents instead of 31.

At a meeting in January the Railroad Commissioners refused to allow an increase in rates for freight, as petitioned for by the companies.

Education.—The annual statistics of the

Education.—The annual statistics of the schools include the following: Number of ungraded schools, 12,456; rooms in graded, 4,520; number of male teachers employed, 5,281; female, 22,782; average monthly compensation, males, \$38,19; females, \$31,408; average tuition per month per pupil, \$1,89; trees set out on grounds and in thrifty condition, 196,095.

The department of college professors adopted resolutions, with one dissenting vote, declaring "that we hereby agree to suspend all intercollegiate games of football in our respective institutions until the accepted rules and safeguards of the game shall have been so modified as to make it proper to be played by gentlemen."

The Danish Government made an appropriation for the Danish University, lately founded at Des Moines, endowing a chair with 2,000 crowns

annually.

The income and the cost of the professional departments of the State University for the past three years are as follow: Medical department—disbursements, \$41,985.85; income, \$24,060.99. The number of students during that time was 513. Homosopathic department—disbursements, \$12.514.55; income, \$8,697.64. The number of students in this department was 203. Law department—income, \$31,196.36; disbursements, \$29,538.67; attendance, 620. Dental department—income, \$32,577.09; disbursements, \$28,-316.11; attendance, 448. Pharmacy department—nucome, \$12,002.58; disbursements, \$8,254.54; attendance, 171.

The Soldiers' Home.—There has been a constant increase in the number of inmates in the points of Marshalltown, from 140 the first year 1888 to 516, the average enrollment for 1895.

It a 1,26 have been admitted.

Monument at Spirit Lake.—The monument cribited by the twenty-fifth General Assembly in his one at spirit Lake. It is to the memory of the visual spirit Lake. It is to the memory of the visual spirit Lake. It is to the memory of the visual spirit Lake. It is to the memory of the visual spirit spirit spirit when it spirit spirit were carried into captivity. Two of these were received later in the year, and 2 were unurdered by the Indians. Two members of the rule of expedit; a were frozen to death on the return mach. Thenty-three persons who had fled from the attack on Springfield, Minn, were rescued by this expedition. The monu-

ment is a shaft of Minnesota granite, 55 feet high, of alternate rough and polished stones, bearing on bronze tablets the names of the victims and those of the rescued and members of the relief expedition. The cost was \$4,500.

Indian Lands.—In reference to a lease of their lands in Tama County by the Sac and Fox Indians, running from Sept. 16, 1892 to March 1, 1898, the Attorney General has given the opinion that it is illegal. He says: "These lands were purchased by the Indians with their own funds, and are not a reservation. They were permitted to locate in Iowa by an act of the Legislature giving them special authority so to do. The title to the lands was taken in the name of the Governor of the State as trustee for the Indians." The lease was executed by a United States agent, acting for the Indians. The Attorney General is of opinion that the United States would have no authority over the lands, and he finds that the rental is grossly inadequate.

Miners' Association.—Representatives of the principal mining camps in the State reorganized their union, Nov. 21, under the name Iowa Mine Workers' Protective Association, withdrawing from the District Association of the Mine Workers of America, which included

mining territory in Missouri.

The new organization will have a benevolent fund attachment, and will take upon itself some of the forms and plans of a lodge providing a sick benefit, a death benefit, and a benevolent fund for the families of miners in distress. It will affiliate with the Mine Workers of America and the American Federation of Labor, but will have power for independent action.

Coal Operators.—The coal operators of the State met at Des Moines, May 23, and formed an association, the object of which is to secure a general improvement in the coal business in the State by equalizing wages and doing away with

certain unfavorable conditions.

The Mulct Law.—The Supreme Court decided, April 2, that this law is constitutional, Justice Kinne alone dissenting. It is held that there is in the act no delegation of the legislative power, and that it does not confer on communities a so-called pardoning power for violation of the prohibitory law. Cases arising from it have been in the courts during the year. Fourteen druggists were indicted for selling liquor illegally by the grand jury of Polk County. A convention of those opposed to the law was called to meet at Davenport, Feb. 2, and the Liberal League of Iowa was formed by the 31 authorized delegates in attendance.

Political.—A decision adverse to the right of women to vote at school and municipal elections was rendered, April 10, in the district court at Cedar Rapids. An election had been held to choose directors and to vote upon the division of the district. The election was carried by the party opposed to division, by means of the votes of about 30 women. The court held that their votes were illegal, and ordered the district divided. The opinion declares that the Iowa statute granting women the right to vote at school and municipal elections on propositions involving the expenditure of money or levying of taxes is unconstitutional, because the

citution of the State provides that only citizens may vote. More than 100 women advantage of the new statute to vote at the al election in Des Moines, March 11.

State Federation of Labor, in session at www, May 21, refused to commit itself to advocacy of free silver. A committee was inted to visit the miners of southern lowa

ettle the trouble among them.

sonpartisan convention in the interest of liver met at Des Moines, June 5. Resoluwere adopted declaring that "the gold metallists of the world are seeking to the single gold standard upon this counits permanent financial policy, with the ate design, boldly avowed, to retire all backs and Treasury notes by converting me into interest-bearing bonds, thus to the hands of banking corporations."

nvention of Free-silver Democrats met in foines, June 6, and passed resolutions dethat "the free and unlimited coinage of elver and gold, at the ratio of 16 to 1, withraiting for the action of other nations, is a mal principle of Democratic faith, and that coinage shall be a legal tender for all public and private"; and favoring "the of any and all laws which permit the of contracts which discriminate against ats in any kind of money which is by law

al tender.

legal tender."

a Convention of the People's party met in Moines, June 11. Their nominees were: Governor, Sylvester Crane; Licutenant mor, A. R. Starrett; Justice of the Succeeding of the Suce on the income tax, the recent acts of Govt by injunction in the interests of corwealth, and the issue of interest-bearing ": declared in favor of the restoration of the adoption of the initiative and refer-and that until such time as a Governsystem of finances can be established all institutions-national, State, and pribe required to give security to depositors moneys received for deposits; demanded, r, that the Legislature provide for the tion of all workshops and factories more than 10 persons are employed, that hysical and sanitary conditions may be red and the lives, limbs, health, and conof the employees be better guarded"; that the salaries of public officers be re-l in proportion to the reductions in the of the products of labor: favored a gradulate tax upon incomes and an inheritance the those of New York and Illinois; and I for "a State tax of 10 per cent, upon all contracts made payable in gold, the same paid by the holder."

Prohibitionists met in convention at Des June 19. On one of the flags on the m was a poster that read as follows:

russ B. R. direct from earth to hell. Operated the protection of the United States Governibe which we pay \$1,000,000 a year revenue tax a music on board. Ladies in attendance. Spe-

cial high-liceruse coaches. A few local-optica care Special attention given to young men. Last stop at Chicago. Last year we carried 100,000 through pas-sengers, 1,000,000 more on the way. Stop over at Murphytown. Special Tillman coaches. No arcti-May over at dents. Only down trains. Easy chairs for preach ers; sleeping cars for Christians. Annual receipts. \$1,200,000,000. Hoys always in demand. Have one to spare! Through tickets in every salesce Boys always in demand. Have you

The announcement that the Supreme Court had refused to interfere with the decision of the district court declaring the saloon petition invalid, was greeted with loud applause, and the convention joined in singing "Praise God, from whom all blessings flow." The platform, which was very long, after declaring in favor of absolute prohibition "with the Prohibition party behind it," a tariff for revenue, but with "special reference to the protection of our do-mestic labor, for "the gold and silver coinage of the Constitution and a national currency issued by the General Government only, Government ownership or control of railroads, telegraphs, etc., for restricted immigration, for exclusion of the teaching of foreign languages in the public schools, for Sunday legislation, for liberal pensions, for settlement of differences by arbitration, for an income tax, and for the initiative and referendum system, made the following declarations in regard to State politics:

We denounce in unmeasured terms the so called mulct law of this State, and we arrange the Republic-an party which enacted it for perfidy and treachery to the vote of the sovereign people cast for prohibi-

tion June 27, 1882.

We demand that the revenue laws of lows shall be radically reconstructed, to the end that the wealth of the wealthy shall bear its just proportion of taxation. We demand a reduction of the legal rate of interest

in this State to 6 per cent.

The ticket nominated was: For Governor, Frank Bacon; Lieutenant Governor, M. P. Atwood; Judge of the Supreme Court, J. W. Rogers; Superintendent of Public Instruction, Mrs. L. D. Carhart; Railroad Commissioner, H. F. Johns.

The Republican Convention, held in Des

Moines, July 10, nominated the following candidates: For Governor, Francis M. Drake; Lieutenant Governor, Matt Parrett; Judge of the Supreme Court, Josiah Given; Superintendent of Instruction, Henry Sabin; Railroad Commissioner, George W. Perkins. The platform included the following declarations:

The Democratic party is convicted of obtaining power in 1892 under false pretenses. In its platform it declared the principle of pretection to be unconstitutional, and in its campaign it denounced the policy tutional, and in its campaign it denounced the policy as robbery. But, with complete power in its hands, its lawnakers have utterly failed to carry out the policy to which they were pledgest. It is a farcical pretense for the Democratic party to claim credit now for a measure from which nine months ago its President withheld his approval and demounced as a humiliating abandonment of their cardinal principle.

We deplore the fact that the Democratic party, while protosoing especial interest in enlargement of

while professing especial interest in enlargement of our export trude, has destroyed the reciprocity arrangements established by a Republican administra-tion. Its solicitude for foreign trade has been ex-hibited only in the admission of foreign goods to our markets without obtaining any reciprocal favors from

foreign nations.

We are unalterably opposed to reducing the Amer-

ican workmen to open competition in our own market with the poorly paid labor of the Old World.

We believe in maintaining not only the highest ware rate for the laborer, but the integrity of money

in which he is paid.

We urge that the United States exert its influence to establish with the important commercial nations of the world such an international agreement as will enable this country to reopen its mints to the free and unlimited comage of both metals without loss of one or the other from the volume of our money.

Restricted immigrations and liberal pensions

were favored.

The Democratic Convention, which met in Marshalltown, Aug. 7, was divided on the subject of comage, but the monometallists were in the majority and elected their chairman. The minority report of the Committee on Resolutions presented a resolution calling for free coinage of gold and silver at the ratio of 16 to 1; but it was defeated by a vote of 420 in favor, to 651 opposed. The majority report, which was adopted, contained the following:

We declare the rescue of the finances of the country from the baleful effects of the Sherman law, the repeal of the un-American Federal election law, and the uprooting of Mckinleyism to be works worthy of the history and prestige of the great Democratic party and of a courageous Democratic administration.

We condemn the cowardice and trickery of the Republican party of lowa in failing to meet in its last State platform any of the issues important and vital to the interests of our State.

We believe that the mulet law fails to meet the re-

quirements of a good excise statute.

We repeat our demand of the past five years for a local-option high-license law, and on behalf of the commercial interests of our State we favor a law permitting the manufacture of liquors, thus affording a market for the products of the farm and labor of the State, and saving to our people the enormous sums now expended in other States.

The resolutions also favored election of United States Senators by direct vote of the people, "just and liberal pensions to all deserving veterans," nonpartisan control of State institutions, and the speedy completion of the Hennepin Canal and the deepening of water ways from the Great Lakes to the ocean. The nominations were: For Governor, W. I. Babb; Lieutenant Governor, G. L. Bestow; Judge of the Supreme Court, T. G. Harper; Superin-tendent of Instruction, Lyman B. Parshall; Railroad Commissioner, George Jenkins.

The Republican ticket was successful at the election, the return of the vote for Governor by ng as follows: Drake, Republican, 208,689; Babb. Democrat, 149,433; Crane, People's party, 32.115; Bacon, Prohibition, 11,052. The other untilities were elected by the following vote: - tenant Governor, 210,888; Judge, 212,186; Separationdent, 212,852; Railroad Commission-2 2 6 1). The next State Senate will have 43 Republicans and 7 Democrats; the House, 80 Republicans and 20 Democrats.

TRISH NATIONAL ALLIANCE, an organization former in a nvention in Chicago, Sept. 26, 1865, having for it object "the securing of the independence of Ireland by any means within its power consistent with the laws and usages of civilized nations. The qualifications for membership are good moral character, birth on Irish soil or descent from Irish parentage, and

the taking of a pledge to aid by every means, in conformity with the constitution and by-laws of the Irish National Alliance, in securing the independence of Ireland. The organization has a president, a vice-president, a treasurer, and an executive council of nine members, who hold office for two years. The State organizations are modeled on the national plan, and all authority to organize must come from the national executive council.

Each local subdivision of the Alliance is known as a council, to be designated by the number of the charter furnished by the national executive council. The convention passed resolutions of sympathy with the Cubans, and commended the work now being done by the Gaelie League and the National Literary Society in Ireland, and by the Gaelic societies of the United The most important of the resolutions States.

adopted were these:

We earnestly protest against the continued in-carceration in English prisons of Irish patriots; we consider it inhuman and against the policy of civilized nations to keep in prison men who have acted only in the interest of their country and human liberty, and that the release of these men is imperatively demanded not only by the Irish people, but by evili-zation; we recommend the formation of military companies wherever practicable, in order to foster and preserve the military spirit of the Irish race and to prepare for action in the hour of England's diff-

Early in December, 1895, it was reported that a large number of councils had been formed, in New York, Brooklyn, Montreal, Quebec, St. Louis, Chicago, San Francisco, Cleveland, Boston, and Detroit. The movement commands attention on account of the military arm of the Alliance, to be a member of which the applicant must also belong to a lodge of the Clan-na-Gael. In this manner, a full regiment has been raised in the city of New York, and others of the large cities are following the example. When President Cleveland sent his message to Congress relative to the boundary of Venezuela, in December, 1895, the Alliance issued a manifesto against England, and declared it would furnish 100,000 men in case of a war with that nation.

ITALY, a constitutional monarchy in southern Europe. The Constitution is that of the ancient kingdom of Sardinia, adopted in 1848 and extended to the united countries of Italy in 1861. The throne is hereditary in the male line of the house of Savoy. The reigning King is Umberto I, born March 14, 1844. The Senate is composed of the royal princes and 390 members nominated for life from among persons who have attained certain official positions or have rendered eminent services to the country or pay 3,000 lire of taxes. The Chamber of Deputies contains 508 members, elected directly in separate districts by all citizens who can read and write and who pay 20 lire of direct taxes. The Coun-cil of Ministers, constituted on Dec. 15, 1893, is composed of the following members: President and Minister of the Interior, Francesco Crispi; Minister of Foreign Affairs, Baron Blane; Minister of Finance, Paolo Boselli; Minister of the Treasury, Giorgio Sonnino; Minister of Justice and Worship, Andrea Calenda di Tavani; Minister of War, Gen. Stanislao Mocenni; Minister of Marine, Admiral Constantino Morin; MinITALY.

ister of Education, Augusto Bacelli: Minister of Public Works, Giuseppe Saracco; Minister of Agriculture, Industry, and Commerce, A. Barrazuoli: Minister of Posts and Telegraphs, Dr.

M. Ferraris.

Area and Population.—The area of Italy is 110,623 square miles. The population on Dec. 31, 1894, was computed to be 30,913,663. The number of marriages in 1894 was 231,581; of births, 1,149,191; of deaths, 822,623; excess of births, 326,563. The number of emigrants in 1804 was 225,346, of whom 110,771 went to Eurepean countries, 41,256 to Brazil, 34,731 to the Argentine Republic, Uruguay, and Paraguay, 31,316 to the United States, 4,137 to other parts America, and 8,185 to Africa, Asia, and Oceanica. The population of the largest cities at the end of 1893 was: Naples, 522,700; Rome, mo, 275,000; Genoa, 215,300; Florence, 200,300; Venice, 150,900; Messina, 146,400; Bologna, 142,400. 451.000; Milan, 432,400; Turin, 335,900; Paler-

Pinances.—The receipts of the treasury for the year ending June 30, 1894, were 1,853,294,-087 lire, and the expenditures 1,912,149,991 lire, caving a deficit of 58,855,904 lire. For the car 1805-96 the ordinary receipts were estimated in the budget at 1,655,207,382 lire, and extraordinary receipts at 43,881,243 lire; total, 1,600,088,625 lire. The ordinary expenditures were estimated at 1,578,300,068 lire and extraordinary expenditures at 111,042,696 lire; total, 1,669,342,764 lire. The revenue from railroads and other property is 87,128,904 lire; from the income tax, 288,183,300 lire; from land and ouse taxes, 193,400,000 lire; from registration, stamps, succession dues, the tax on railroad rets, etc., 215,607,000 lire; from customs, 235,-1000 lire; from consumption duties, 52,050,-000 lire; from the tobacco monopoly, 192,000,-Olire; from the salt monopoly, 71,500,000 lire; from taxes on the manufacture of spirits, beer, powder, and sugar, 39,500,000 lire; from the ottery, 65,000,000 lire; from posts, telegraphs, school fees, prisons, etc., 81,897,900 lire; repayments, 37,102,209 lire; various receipts, 8,410,-740 lire; from domains, interest, contributions of Rome and Naples, etc., 88,427,329 lire; from of domains and ecclesiastical lands, etc., 15,186,203 lire; from nickel money, etc., 17,129,-350 lire. The chief expenditures are: Interest on the consolidated debt, 463,351,363 lire; interest on extinguishable loans, 70,023,751 lire; annual payment on the purchase of railroads, 27,-276,010 lire; railroad guarantees and interest on the floating debt. 124,032,024 lire; pensions, 78,-300,000 lire; civil list and appanages, 15,050,000 lire; Senate and Chamber, 2,120,000 lire; service of the amortizable debt, 34,387,518 lire; inerest, 8,595,512 lire; extraordinary expenses for amortization, etc., 33,499,332 lire; administra-tion of finances and cost of collection, 189,153,-304 lire; foreign affairs, 9,431,880 lire for ordinary and 38,400 lire for extraordinary purposes; justice, 33,751,952 lire for ordinary and 82,889 lire for extraordinary purposes; public instruction, 40,784,820 lire for ordinary and 669,113 lire for extraordinary purposes; interior, 56,993,159 lire for ordinary and 2,299,543 lire for extraordinary purposes; public works, 26,686,634 lire for ordinary and 62,400,483 lire for extraordinary pur-

poses; posts and telegraphs, 55,837,629 lire f ; ordinary and 56,516 lire for extraordinary pur poses; war, 223,434,843 lire for ordinary and 2,548,000 lire for extraordinary purposes, marine, 94,721,270 lire for ordinary and 4,421,000 lire for extraordinary purposes; agriculture, commerce, and industry, 8,285,150 lire for ordinary and 1,183,863 lire for extraordinary pur-poses. The total expenditure on account of the debt in 1894-'95 was 598,113,950 lire for interest and 1,557,528 lire for amortization.

The Army .- The peace effective of the army in 1895 was: Staff and military establishments, 3.558 officers and 4,461 under officers and men; 346 battalions and 98 district companies of infantry, 7,148 officers and 146,494 men; 144 squadrons and 24 depots of cavairy, 865 officers and 24,406 men; 207 batteries and 76 companies of artillery and 40 companies of train, 1,207 officers and 30,452 men; 64 companies of engineers and 10 of train, 285 officers and 7,666 men; 12 sanitary companies, 191 officers and 2,271 men; 12 commissary companies, 126 officers and 1.746 men; 12 legions of carabinieri, 562 officers and 24,087 men; veterinary corps, 196 officers; African troops, 225 officers and 3,622 men; total, 14,463 officers and 245,265 men, with 50,390 horses and mules, effective is 1,508,954 trained and 520,424 partly trained troops and 1,368,411 untrained men of the territorial militia.

The Navy,-The fleet in 1895 consisted of 10 first-class battle ships of from 11,000 to 15,500 tons, with 14 to 22 inches of armor over the vital parts, each armed with 4 105-, 100-, or 67-ton guns, carried in barbettes by 8 of them ("Italia,"
"Lepanto," "Ruggiero di Lauria," "Andrea
Doria," "Francesco Morosini," "Re Umberto," Doria, "Francesco Morosini, "Re Umberto,"
"Sardegna," and "Sicilia") and by 2 in turrets
("Duilio" and "Dandolo"); 6 second-class battle ships ("Affondatore," "Ancona," "Castelfadardo," "Marco Polo," "Maria Pia," and "San
Martino"), armed, the first with 18-ton, the others with 4-ton guns; 5 fourth-class ships of the line ("Etna," "Fieramosca," "Giovanni Bausan," "Stromboli," and "Vesuvia"); 8 of the fifth, 13 of the sixth, and 2 of the seventh class; 5 first-class, 94 second-class, 38 thirdclass, and 21 fourth-class torpedo brate; 29 auxiliary vessels of various classes; and S aux-

iliary cruisers.

Commerce.-The special imports of merchandise in 1894 amounted to 1,094,600,000 line: imports of precious metals, 108,100,000 lire. The special exports of merchandise amounted to 1,026,500,000 lire; transit trade, 37,800,000 lire; exports of precious metals, 31,500,000 lire. principal imports were: Cotton, 119,800,600 ire; coal, 110,400,000 lire; silk, 86,100,000 lire; cereals, 79,200,000 lire; hides and skins, 47,900,-000 lire; iron, 43,900,000 lire; woolens, 34,800,000 lire; machinery, 34,600,000 lire; fish, 32,800,-000 lire; coffee, 29,200,000 lire; timber, 28,300,-000 lire; colors, 25,500,000 lire; chemicals, 25,200,000 lire; wool, 24,700,000 lire; sugar, 23,0:0,000 lire; cottons, 22,400,000 lire; silks, 19,200,000 lire; gums, 17,800,000 lire; seeds, 17,-300,000 lire; animals, 17,100,000 lire; jewelry, 16,900,000 lire; tobacco, 16,900,000 lire; petro-leum, 11,900,000 lire. The chief exports were Silk, 296,100,000 lire; olive oil, 63,500,000 lire;

ITALY. 372

wine, 49,000,000 lire; eggs, 40,000,000 lire; hemp and flax, 34,200,000 lire; vegetables, 30,000,000 hre; wood manufactures, 27,800,000 lire; animals, 27,000,000 lire; silk goods, 23,500,000 lire; sulphur, 21,500,000 lire; fruits, 19,900,000 lire; skins, 19,300,000 lire; cotton goods, 16,800,000 lire; almonds, 16,500,000 lire; colors, 13,900,000 lire; tartar, 13,400,000 lire; marble and alabaster, 12,900,000 lire; poultry, 12,800,000 lire; but-ter, 11,800,000 lire; rice, 11,700,000 lire; cheese, 11,600,000 lire; zinc ore, 10,500,000 lire. The values, in lire, of the special trade with the principal foreign countres, in 1894 are given in the following table:

COUNTRIES.	Imports.	Exports.	
England	249,400,000	121,800,000	
France	181,000,000	144,000,000	
Germany	189,900,000	142,700,000	
Austria	115,400,000	126,100,000	
Switzerland	43,800,000	202,600,000	
United States	109,900,000	91,200,000	
British India	74,600,000	18,500,000	
Russia	71,900,000	18,900,000	
Argentine Republic	20,500,000	29,600,000	
Beigium	24,500,000	21,700,000	
Egypt	21,200,000	10,600,000	
Turkey	12,100,000	16,800,000	
Spain	10,500,000	12,700,000	
Netherlands	3,500,000	14,500,000	
Greene	7,200,000	7,000,000	
Sweden and Norway	9,600,000	2,500,000	

Navigation. - There were entered during 1894 in Italian ports 115,197 vessels, of 29,038,-182 tons, of which 15,953, of 7,962,369 tons, were engaged in foreign trade, 9,579 of these, of 2,009,568 tons, being Italian, and 99,244, of 21,-075,813 tons, were coasting vessels. The number of vessels entered from long voyages with cargoes was 12,682, of 6,384,198 tons. The number of steam vessels engaged in foreign trade was 6,716, of 7,262,709 tons. The total number of vessels cleared was 113,983, of 28,215,422 tons, of which 16,138, of 8,195,558 tons, were engaged in foreign trade, and of these latter 9.820. of 4,369,023 tons, carried cargoes.

The merchant marine on Jan. 1, 1895, consisted of 6,231 sailing vessels, of 571,605 tons,

and 328 steamers, of 207,530 tons.

Railroads, Posts, and Telegraphs,-There were 14,944 kilometres, or 9,280 miles, of railroad in operation on Jan. 1, 1895.

The post office in 1893 forwarded 140,133,907 letters, 57,036,433 postal cards, and 215,640,616

newspapers and circulars.

The length of the telegraphs in 1893 was 38,-258 kilometres, with 148,348 kilometres of wires. The number of paid internal messages sent was 7.596.131; of international messages, 814,694.

Prosecution of Giolitti.-Ex-Premier Giohill, who on Dec. 15, 1894, submitted to the Chamber of Deputies a plico or sealed envelope contacting charges against Crispi fortified by described apparently implicating the Premier in the Bare a Remana scandals, and afterward fled to as at arrest when the session of the Parhament was suddenly suspended, returned to Rome on Yel 27, 1895, to meet accusations brought against him of abstraction of papers from the archives and illegal possession of letters of Signera Crispa. The original complaint was for forgery and slander. Giolitti demanded a trial before the Senate. The Court of Cassation on April 24 sustained his appeal, and the case against him was abandoned, since further proceedings could be taken only by vote of the

Chamber of Deputies.

General Elections.—Prime-Minister Crispi prorogued Parliament in December, 1894, because he found it impossible to command a majority for his measures and feared a vote of censure in the excitement caused by the accusations brought against him in the Chamber of Deputies by ex-Prime-Minister Giolitti. For six months he governed without a Parliament, putting off dissolution and the summoning of a new Chamber until it should become necessary for the voting of the budget. The Chamber was formally dissolved by royal decree on May 8, and elections were appointed to take place on May 26. The electoral lists meanwhile were revised under a new registration law enacted on June 11, 1894. The Pope renewed his injunction non expedit, forbidding Catholics to take part in the elections either as candidates or as voters (ne eletti ne elettori). The inhibi-tion was universally respected. The politicians of all parties predicted that the elections would give Crispi a majority of 100 in the new Chamber. Results can be thus foretold because the prefects have power to control largely nominations and elections, but ministerial candidates often change their attitude after they are elected, and vote against the ministry on questions that arise in the Chamber. The people did not generally believe the imputations against the personal honesty of Signor Crispi, although they were revived by the Radical leader Cavalotti. Nothing had been actually proved against him in connection with the Banca Romana or the voting of a decoration for the Panama swindler Herz that was not capable of being explained in a way that was consistent with his lifelong record of probity. His assumption of a military dictatorship for the suppression of economic disorders in Sicily and his extension of the law of domicilio coatto to anarchical propaganda lost for him many adherents of liberal ten-dencies, but more votes were gained in the conservative section of the community. The improvement in the national finances was an achievement of Crispi's ministry that made him seem indispensable even to his multitudinous personal and political enemies. Baron Sonnino was able to boast that the rate of exchange had fallen 10 points, while 80,000,000 lire of fractional currency had been withdrawn from circulation; that the paper money was decreased 150,000,000 lire, while 44,000,000 lire of gold and 85,000,000 lire of silver had been added to the metallic reserve; that the Bank of Italy was successfully reconstructed and progress made in the reorganization of the Bank of Naples, and the official rate of discount had been lowered from 6 to 5 per cent.; that the debts abroad had decreased, consolidated stock had been withdrawn to the amount of 50,000,000 lire, 40, 000,000 lire of treasury bonds had been redeemed, and 90,000,000 lire of Italian silver had returned from abroad; that Italian stock had risen to the highest quotations in spite of an in crease in the tax; that imports had diminished by 69,000,000 lire, while exports increased 303, 000,000 lire; that there was a reduction of 80,

ITALY.

000,000 lire in expenditures, and an increase of 100,000,000 lire in revenue. In view of such results the country could forgive the dictatorial methods of Crispi, including the levying of taxes that were not yet authorized by Parliament.

The elections passed off quietly in most places. Crispi was elected in 9 constituencies. Two imprisoned socialists, Barbato and Felice-Giuffrida, were each elected in 2 or 3. Garibaldi Bosco, another condemned Sicilian socialist, was also elected. After the elections an attempt was made at Rimini upon the life of Count Luigi Ferrari, a socialist who denounced violence and illegality and was elected over Barbato, the candidate of the anarchists. Count Ferrari died from his wounds.

In the new Chamber the Ministerialists numbered 336 and the various groups of the Opposition 172. The Constitutional Opposition numbered 98, of whom 40 or more were Conservatives, following the Marquis di Rudini, and the rest Progressists, acknowledging Brin, Giolitti, and Zanardelli as leaders. The extreme left was 60 strong, about a third being advanced Socialists.

ession of Parliament.-The nineteenth Italian Parliament was opened on June 10, the day appointed by the royal decree. When the members took the oath of allegiance the So-cialist Deputies were absent. The King in the speech from the throne spoke of further measures to insure the stability of the budget that were required before the problems of communal taxation and administrative reform could be considered. Modifications of the laws were to be proposed by the Government for the better protection of private rights and public tran-quillity. All citizens, even those filling high coltions, ought to be subject to the common av. Legislation giving a higher and more effective significance to the principle of human fraternity was relied on to guarantee social peace and lead the misguided to better things. The education in the common schools would be directed to the same end. The glory of his reign he sought in ameliorating the lot of the lowly. The intended visit of the Italian fleet at Portsmouth, which took place on July 9, was mentioned as being a return to the British fleet of greetings of most intimate friendship. In Africa the Government, far from pursuing a policy of adventure, wished only to consolidate the Italian possessions and pave the way for the colony's financial independence.

The new financial measures included changes in the customs tariff, a tax on insurance policies, and a revision of the probate duties, by which means 9,000,000 lire of new taxes would be obtained; 18,000,000 lire had already been realized by the decrees of the Government. Retrenehments would amount to 20,000,000 lire. The budget fixed expenditures at 1,615,130,000 lire, giving an estimated surplus of 2,578,000 lire. Bank notes were to be reduced 100,000,000 lire. The Socialists attacked the Italian policy of the Government. They demanded amnesty for political offenders, and when Signor Crispi declared that no mercy would be shown to leaders of revolt a physical encounter ensued on June 19. Sonnino's tax hills were carried substantially unchanged. On Sept. 17, the anniversary of the entry into

Rome, all political prisoners were set free with the exception of 4 leaders of the Swilian racts. Giuseppe de Felices-Giuffrida had been exceted again to the Chamber at a by-election in Rome. Laws against socialists and abarchies were introduced after Parliament reassembled on Nov-21. Signor Crispi, having failed in his policy of concliation toward the Pope, recalled his offered "truce of God" and returned to his old

aggressive policy.

Dependencies, - Italy possesses a colony called Erythrea on the Red Sea coast of Africa, containing about 955,000 square miles, and claims a protectorate over the Empire of Abrasinia or Ethiopia (see Anyanista). In December. 1894, in consequence of the rebellion of Ras Mangascia, a son of the late Emperor Johannes, the Italian authorities decided to incorporate the Kingdom of Tigre, over which he was governor, in their colony. They attempted the occupation of the country, being provoked by numerous raids of the Abysemians into their territory. Protests made to King Menelek had no effect, for he had no effective authority in Tigre, which was in a state of rebellion against him, and, moreover, was inclined to encourage the people of Ras Mangascia in their hestilities against the Italians and to join them when his plans were ripe in a blow for the independence of Abyssinia. He did not acknowledge the right of suzerainty claimed by Italy, which was based upon a construction of the treaty of Ucriali that he would not accept. Menelek still lived in his own Kingdom of Shoa, south of Abyssinia proper. For three years he has been collecting arms and storing up food for the contest with Italy. When Gen. Baratieri, after his plans had received the approval of the Italian Government, began the conquest of Tigre in January, 1885, Menelek did not stir. Ras Mangascia collected an army of 10,000 men to resist the invasion of the Italian forces, but they defeated him at Belesa and Coatit, and afterward captured his camp at Schapeh and drove him out of his country, occupying the capital and all the northern and central districts. Suddenly, early in December, hostile forces began to pour into the country. A force of 1,300 native troops, com-manded by Major Toselli, was surprised at Ambalagi and surrounded by an army of 25,000 Abyssinians. Major Toselli had under him 20 Italian officers and 40 noncommissioned officers. When the ammunition for the small arms and mountain batters was exhausted the enemy fell upon them, 20 to 1, and cut them to pieces. They killed 14 Italian officers and 700 men, and after the battle 300 were missing. Gen. Arimonds, who went to the succor of Major Toselli, encountered several testies of the enemy and stopped their advance upon Adigrat. He arrived upon the field and found the remnant of 300 men beleaguered and hard pressed by the Abyseiniane. Driving back the enemy, were believed to have a Russian officer to direct their operations and were partly armed with rifles brought through the French possessions, Gen, Arimondi conducted a retreat to Makalle. The Abyssinian loss was reported to be 2,000 killed or wounded. The Italian forces in that region were concentrated at Makalle, which was well fortified; but later, when it was invested,

374 JAPAN.

as well as Antolo, and Adua was also threatened, Gen. Baratieri, the Italian commander-in-chief, ordered all the forces to retire to Adigrat, where

he established his headquarters.

The Abyssinian army that entered Tigre numbered at least 70,000 men, commanded by Ras Mangaseia and Makonen. The latter had shortly before, as a ruse, made overtures of peace in behalf of King Menelek.

The Government asked for and received an

immediate credit of 7,000,000 lire and began at once to embark troops for Africa. Gen. Baratieri ordered the forces at Andowa to fall back upon Adigrat. Makalle and Antalo, as well as Adua, were besieged by the Abyssinians. The Government promised to limit its demands for the campaign to 16,000,000 or 20,000,000 lire. The British Government refused permission to land Italian troops at Zeila, on the Somali coast, the nearest point to Menelek's capital.

J

JAPAN, a constitutional monarchy occupying the long chain of islands between Kainchatka and the Philippines. By the treaty be-tween Spain and Japan, ratified in Tokio Aug. 7, 1895, the line of demarcation was fixed at the line parallel to a degree of latitude passing through the middle of the navigable part of the Bashee Channel. Spain declares that it will never lay claim to the islands lying to the north and northeast of this line, and Japan promises likewise concerning islands to the south and southeast of this line. No part of the Asian continent proper belongs to Japan. The treaty signed at Pekin, Nov. 11, 1895, by Tadasu and Li-Hung-Chang specified that on the payment of 30,000,000 Kuping taels Japan would retrocede to China, and within three months evacuate, the Liao-Tung peninsula. The Emperor, Mutsuthe Liao-Tung pennisha. The Emperor, Mutsu-hito (peace man), was born Nov. 3, 1852, and the heir apparent, Yoshihito, of one of the imperial concubines, Aug. 31, 1877. The Empress, Ha-ruko, born May 28, 1850, was married Feb. 3, 1869. The title of Mikado is now popularly obsolete. In the dynastic line, the oldest in the world, Mutsuhito is recognized as the one hundred and twenty-second in descent from the sungoddess. Officially the empire began with Jimmu, R. c. 660. In the lawfully published list of por-traits, 1895, besides the 9 females, 2 shorn Buddhist monks, warriors in arm, and children who were puppets (showing the vicissitudes of Japanese politics), the six "false" or "northern" emperors of the rival dynasty in the civil wars of 1336-'92 are now presented. Modern critical science rejects the first seventeen names in the list, and recognizes the credibility of Japanese history from about 400 A.D. The Emperor is sole executive, but is advised by a Cabinet made up of the heads of 10 departments, presided over by a Minister President, and consults with the I'my Cancil, composed of 20 statesmen of rank and experience.

Government.—The Constitution, proclaimed Feb. 11, 1886, is theoretically the gift of the sovereign to his people. It makes the ministers of state respensible to the Emperor, and not to the Diet. Only a comparatively small portion of the national expenses is under the control of the national expenses is under the control of the budget, being "fixed by law," can not be influenced by legislation. The ends sought by the various progressive parties is to limit by degrees the imperial prerogative, control the whole budget, make the Cabinet ministers responsible to the Diet, enlarge the franchise, and terminate

forever the practical monopoly of power, office, and emolument held since 1868 by men sprung mainly from the two clans of Satsuma and Choshiu-in a word, to approximate the British and American models of government. The tenth session of the Diet opened in Tokio, Dec. 28, After six months of negotiation between the Liberal or opposition party and the Cabinet or Government leaders, issuing in promises from the latter of long-contemplated reforms and an appeal to the country if defeated in the Diet, union between the two sets of statesmen has been made. Government by party is thus introduced in Japan. In the election of Sept. 1, 1894, out of 460,113 electors, or 11 to every 1,000 inhabitants, 392,036 voted, or 85 per cent. of the whole number for 300 representatives in 257 electoral districts. On Dec. 31, 1894, the number of peers was 599, and of persons decorated 16,231, of whom 1,789 were foreigners. Of decorations received from foreign governments by Japanese there were 959. There are now 636 peers, of whom 120 have been made since 1868, the vast majority being Satsuma and Choshiu men. Since the war with China 2 viscounts and 22 barons with allowances to each person from the civil list of 20,000 and 10,000 yen respectively, have been created. The pension allowance to the families of those who lost their lives during the late war is 8 sen (about 7 cents) per diem. The late war is 8 sen (about 7 cents) per diem. standard of value is the silver yen (worth 78 cents), in which all statements concerning money in this article are expressed.

Population .- The annual census is made late in December and published in detail during the the next year. Statistics since 1872, which then gave a total of 33,110,825 souls, show that Japan has gained over 8,000,000 in population since the old immoral, economic, and sumptuary checks on natural human increase have been re-The average annual enlargement of the census figures is not far from half a million. The pressure of population upon the food product is relievable by the colonization of Yezo and Formosa, both fertile and thinly peopled islands. On Dec. 31, 1894, the enumeration showed that 41,810,202 natives, of whom 21,121,398 were males and 20,668,804 were females, lived in 7.883,369 houses. In the three social ranks were 3,884 nobles, 2,039,475 shizoku or gentry, and 39,766,843 heimin or commoners, the heads of households numbering 607, 432,159, and 7,918,474 respectively. Of the unregistered persons, 4,401 were unadopted foundlings and 1,214 prisoners. There were 251,146 marriages and 112,362 diJAPAN.

vorces. Absconders numbered 312,735, and persons going abroad 53,791. Of centenarians, 24 women and 10 men reached ages ranging from 104 to 110 years. In Hokkaido (Yezo and Chishima) there are but 530,000 persons, of whom 50,000 immigrated in 1893. In Formosa and its islands, with their area of 15,000 square miles, there is a population of 3,500,000, which makes the total number of inhabitants in the Japanese

Empire 45,000,000.

Finances. - At the session of the Dict, Jan. 23, 1895, the country being in the midst of war with China, all parties presented a unanimous front, and the budget, substantially as presented by the Government, was voted without discus-sion: Total revenue, 90,300,700-45 yen; total expenditures, 89,957,415 73 yen, of which 87,633. are reckoned as ordinary, and 2,666,783 extraordinary yield. Compared with 1894, when the estimated revenue was 88,040,000 70, hile the outlay was 80,140,000 yen, there is shown an increase of 6,157,743 10 ven in the ordinary and a decrease of 3,912,267:30 yen in the extraordinary yield. In the items of taxes, largely from duties on alcohol, the estimated inse is over 4,200,000 yen, and in receipts accruing from Government enterprises 1,000,000 yea. Current expenditures of departments have been reduced, but in the items of national loan, nsions, etc., there is a total increase of over pensions, etc., there is a total included the state of th to hasten by two years the steel-clad battle ships now building in Europe. In the War Department, an additional sum of 550,000 ven for cost of cavalry, remounts, and the rise of price of fodder and provisions is noted. (Forty thouand horses were called into requisition in preparation for and during the late war). The sources of ordinary revenue are: Land tax, 70,902,341 yen; licenses and fees, 2,540,381 yen; Governent industries and property, 12,290,207 yen; miscellaneous, 696,093 yen; interest on deposita, 1,214,902 yen.

In 1804 the public debt was 235,814,851 yen, of which 166,482,450 yen bears 5 per cent, interest; 45,465,121 yen is an inheritance from feudal days, debts of the old daimios, pensions to retired territorial nobles and gentry, etc.; and 2,957,280 yen is foreign; with 37,704,773 yen (15,704,773 yen for Treasury notes and 22,000,000 for silver certificates) held as a guarantee of the paper money in circulation. Japan's credit at the Bank of England, Dec. 1, 1895, on account of indemnities paid her by China, amount-

ed to 118,643,910 yen.

The Army.—The military operations of 1894'95, both in the field and with the reserves, showed the accuracy of the official statistics as beretofore given in this "Annual Cyclopadia." In the budget for 1896 "the already fixed expenditures for the army "aggregate 12,558,100 ven, and 16,314,163 yen of ordinary and 19,268,360 yen of extraordinary expenditure are asked for, the increase being for enlargement of the army and expansion of the war administration, which are to be completed by 1905, when the total expenditure on account of the army will be 25,996, 399 yen. This programme has in view the doubling of the present military force and the power, within ten years, of landing and maintaining an

army of 200,000 first-class soldiers for a lengthened campaign on the Asian continent.

The Navy.—The Imperial Japanese Navy List made out in September, 1895, shows 49 men-of-war affoat or in an advanced state of construction. Of these, 17 are wooden, iron, or composite. The others are of steel and equipped in best modern style. In the budget of 1896 the ordinary expenditure for the Navy Bepartment is fixed at 7,663,986 yen, and the eatra amount asked for is 29,456,335 yen, of which 6,450,940 yen are for the construction of war ships "already ordered" and 22,256,294 for "naval extension." The programme is to raise the total displacement of the navy to 209,000 tons by A. D. 1904.

Commerce,-The total foreign commerce of Japan in 1893 was 177,970,031 yen. In 1894 it rose to 230,728,035 yen (of which 98,712,861 yen were for imports and 117,482,951 yen were for exports), thus exceeding the average by about 30 per cent. The depreciation in silver has for some years past facilitated exports, though standing in the way of imports, but the excess of even the latter over the former, in 1894 compared with 1893, shows clearly the development of the Japanese people's purchasing power. In 1894 the outflow of specie exceeded the inflow by about 7,600,000 yen. In the first half of 1895 the foreign trade amounted in exports to 59,444,-559, and in imports to 60,027,078 yen, making a total of 119,471,637 yen, compared with 106,752,-306 yen of the first six months of 1894, an aggregate expansion of 12,719,332 yen. In specie transactions the excess of 15,290,634 yen export over import is explained by the purchase of war material abroad. On the presperous condition of the silk trade and general revival of business in Japan an estimated total trade for 1895 of 250,000,000 yen is based. Especial developments of trade with Australia and the United States are to be noted. In 1884, exports, chiefly rice and native manufactures, to Australia amounted to 246,020 ven, while imports, chiefly leather and raw products, were valued at 31,600 yen. In 1893 Japan sold to the Australians 850,637 yen. and bought 319,034 yen worth of commodities, With the United States the chief trade is in kerosene and raw cotton. From Jan 1 to July 1, 1895, 76,393,439 cattles, or over 100,000,000 pounds of raw cotton, valued at 11,558,158 ven. were imported, an increase over 1894 of 14,112. 732 pounds. Owing to the increase in cotton mills, with 750,000,000 spindles in 1895, compared with 500,000 in 1894, the demand for American cotton in 1895 was for 50,000 bales.

Communications.—The year 1895 was noted for great activity of transport on land and sea, the railways and shipping performing handsomely, safely, and with celerity the extraordinary requirements of war and peace. The length of railways in operation at the end of March, 1895, was 2,130 miles; that of lines under construction or projected was 1,043 miles, and the number of private railway companies was 29. State railways have a capital of 56,554,332 ven, with a total mileage of 979 miles, of which 581 were already open in March. The 29 private companies have a capital of 86,643,290 ven, and 1,550 miles of their total projected mileage (2,193 miles) are open to traffic. Grand total in Japan:

376 JAPAN.

Capital, 143,197,532 ven; mileage, 3,173; open for traffle, 2,131 miles. Floods, storms, and earthquakes cause much annual loss.

In shipping, the Japanese in 1893 had 17,209 junks and 587,490 boats in native style, with 749 sailing vessels, with a tonnage of 44,967. in European form, and 680 steamers, of 110,205 tonnage and 24,080 horse power. By July, 1894, within thirty days, 87 ships, of 132,963 55 tons, By July, 1894. mostly steamers and over 2,000 tons burden, had been bought. Japan's normal demand, however, is for steamers of from 200 to 1,000 tons. In May, 1895, there was a total of 503 vessels of modern build and 314,512 tons burden, owned wholly by Japanese. In the expansion of maritime enterprise following the war direct trade with the United States at Tacoma has been opened. The Nippon Yusen Kaisha made a profit of 3,500,000 yen by chartering steamers and transports to the Government during the war, and have set aside 2,500,000 yen for maintaining a line to Europe with 5 first-class vessels of 5,000 to 6,000 tons each. In 1894 there were 716 telegraph offices with 10,232:06 miles of wire in Japan, over which 6,444,463 messages were sent, while 52,865 international dispatches were received and 58,781 forwarded. Of telephone stations there were 28, most of the lines being between Tokio and Yokohama and Kioto and Osaka. From the 3,818 post offices were sent, and over the 100,000 miles of land and water routes were carried 321,471,080 articles, showing an increase of 15.5 per cent, over the total of 1894. Of this increase, 28.2 per cent, was in commercial samples, 18.7 in postal cards, newspapers 12-1, and letters 11-8. In international mail matter, 1,583,509 packages were received and 1,155,-337 forwarded.

Formosa.—The treaty of Shimonoseki stipulated that at the end of two months the Chinese Government should tranfer Formosa to the flag and Crown of Japan. Expecting easy occupation, a board of administration was formed in Tokio on a purely civil basis, the soldiery to be used chiefly in overcoming the savage aborigines. On the contrary, the Hakkas, Black Flags, and Pepehoans or semicivilized natives rose in arms, organized by Liu. On May 24 a fleet of 14 transports carried the Imperial Guards from Port Arthur to Keelung. Four months of steady fighting began, and re-enforcements were necessary, making a total of 50,000 troops. These, under the command of Lient.-Gen. Oshims, the hero of Ping-Yang, penetrated the the Priam fastnesses and bamboo forests, and forced or stormed the walled towns. Keeling and I was a were first occupied, and the north-1. 1. 1 the island pacified before the summer Despite the intense heat, fever, guerrillas, at I tant to the steady advance was made southwar i to The barn, Chung-hua, Kagi, and Taiwat. It same of the battles as many as 10,000 that water engaged, the resistance being more desperate than to Mancheria. The final stand of Line agors we made at Pang-liau, near which the Japanese fleet, which had been actively co-ejectating with the trapps during the summer, were able to lated late in September a force that compeded the unumitted al surrender of the Chinese in-drgents. Their leader, Liu, escaped to China, and, except a few later skir-

mishes with rebels in bamboo jungles and mountain strongholds, the whole island was pacified by Dec. 1. In both killed and wounded and by accident and invalidism the Japanese, who employed 130,000 men in all services, lost more men in the Formosan than in the Korean and Manchurian campaigns, in which 340,000 men were occupied. Formosa and the Pescadores were first occupied by Japanese colonists in the thirteenth and during the two following centuries, and some of the current geographical names are but Chinese pronunciations of those of old Japanese heroes. In 1894 the total foreign trade at the 4 open ports amounted to \$12,895,770. Contracts have been given for telegraphs, railways, and a submarine cable to connect Formosa with Hondo and Tokio. The chief products of the island are gold, sugar, rice, tea, camphor, drugs, spices, and timber in vast variety.

Events of 1895.—The chief military events

of this year of Japan's territorial expansion were the winter campaigns in Manchuria and the summer occupation of Formosa. After the fall of Port Arthur the naval forces concentrated for an attack on Wei-Hai-Wei. Troops were landed Jan. 20, and the Chinese ships and forts passed into the hands of the Japanese, Feb. 16. Prince Arisuga-wa-no-Miya, uncle of the Mikado and commander-in-chief of the army, died Jan. 20, and was succeeded by Prince Komatsu, fresh expedition sailed from Hiroshima Jan, 10. The members of the first Chinese peace embassy arrived at Kobe Jan. 30, but were not officially received, their powers to treat being insufficient, and they returned home Feb. 2. The erniser "Suma-kan" was launched March 9, about which time also M. Boissonade, for twenty years past engaged in codifying the laws of Japan. returned to France. Li-Hung-Chang, Chinese plenipotentiary, arrived at Shimonoseki Feb. 19, to begin peace negotiations, which were greatly influenced in favor of China by the attempt made upon his life Feb. 24. The assassin was one of the fanatical young patriots, called Soshi, who abound in modern Japan. These half-educated persons presume to dictate policy to Cabinet ministers, endanger the national reputation, and disarrange grave business of state by their easy and frequent resort to violence and murder. Viscount Inouye Ki, Minister of Education and long "the Emperor's pen," was buried March 22. Armistice was declared March 30, to apply only to the northern parts of China, but it extended until May 8, or the end of the war. On April 1 the fourth national exhibition opened at Kioto. It lasted six months, and included the grand celebration of the eleven-hundredth anniversary of the founding of the city. April 13, an expedition sailed for the conquest of the Pescadores and Formosa. The treaty of peace was signed April 17, and the ratification took place at Chefoo May 8. The imperial rescript announcing conditions of peace was issued April 21. These being unpopular with the press, 55 newspapers were suspended and many others severely purged by the censors between April 4 and May 5. Under pressure of Russia, Germany, and France, Japan yielded possession of the Liao-Tung peninsula, receiving pecuniary in-demnity from China instead. The Emperor left Hiroshima April 27, after a stay of two hundred

JEWS.

days, for Kloto, where he remained until May 30, reaching Tokio the same day amid unique demonstrations of rejoicing. Severe storms, during which a train containing 400 invalid soldlers was derailed, several being killed, visited the country in July. Sir Ernest Mason Satow, who from 1861 to 1883 had been an active member of the British legation in Japan, making himself one of the leading authorities in the language and literature of Dai Nippon, arrived as Queen Victoria's plenipotentiary, July 28. Cholera, resulting in 54,928 cases of disease and 37,691 of death, ravaged the empire from July to November, accompanied with typhoons and unusually chilly weather. Of dysentery there were 31,000 cases and 6,500 deaths. In the bacteriological station, Dr. Kitacato, a pupil of Koch, who had discovered the vital cause of the plague in Canton, China, succeeded in inoculating for leprosy, and has declared it curable. Prince Kitashirakawa-no-Miya died in Formosa, Oct. 28, though, as in like instances, not being officially deceased until after posthumous arrival, promotion, and decoration within the precincts of the imperial palace in Tokio. In Govern-ment documents he was alleged to have died Nov. 5, and his funeral took place Nov. 11. The treaty with China for the retrocession of Liao-Tung was signed Nov. 8, and the evacuation soon began, being completed at 3 r. M., Dec. 25. Most of the Imperial Guards and other troops returned from Formosa about the same time. The supplementary convention on the tariff between Japan and Great Britain was ratified in Tokio Nov. 21. The Diet was opened by the Emperor in person Dec. 28. The long-talked-of union or modus vivendi between the Government and the Opposition, which had been practically accomplished by conference and with documents, was shown in the rejection in the Diet by a heavy vote of the address to the throne censuring the ministerial foreign policy (retrocession of Liao-Tung, etc.), and calling for their resignations. The youngest daughter of the last Tycoon, Keiki, who resigned in 1868, was married Dec. 26. The Japanese cruiser " Kohei" was lost off the Pescadores and some of her crew were drowned.

JEWS. The record has been notable for the Jews of the United States in a marked advance in the sphere of education and activity in religious matters. The trend of the year was early shown in the session of the Women's Council at Washington, when representatives of the National Council of Jewish Women took a spirited part in the meetings. The new influence on American Israel was indicated by the casays read by American Jewesses. The keynote of the year was thus struck by the American Jewess, and the work of the various circles in about 20 cities has been of marked benefit. The scheme of operation consisted in monthly meetings, at which papers and discussions on topics of the day were presented; and of fortnightly meetings in small circles, which were devoted to study of the Bible, the history of Israel to the Christian era, and of the methods and aims of preventive philanthropy. In addition, efforts were made to improve and systematize Sabbathschool instruction, and there was issued a simple guide for the study of the prophets Isaiah, Jere-

minh, and Ezekiel. The moral effect of this movement, which has spread in the chief cities from San Francisco to New York and has brought thousands into social and intellectual contact, arousing interest in Jewish study and benevolent methods, can hardly be overestimated Certainly it has shown that the American Jewcan is not Oriental in her exclusiveness, but can work along the lines of education, charity, religion, reform, in even step with her sisters of other creeds. Graceful, then, were the resolu-tions passed by the National Women's Council, protesting against Russian persecution of the Jews, and the invitation extended by Miss Willard to the American Jewess to join her Temperance Union.

In religious matters proper, at the session of the Central Rabbinical Conference in Rechester, composed almost exclusively of rabbis of the reform wing of American Judaism, there was a further breaking away from the old traditions in the admission of prosclytes, and the following formula of confession was adopted as alone ne-

CUSSATV :

I believe with a sincere and a steadfast faith that there is a Ged, who is the and only the treater, Preserver, and Ruler of the World

I believe with a sincere and steadfast faith that man is created in the image of tool, linewest and pure, endowed with reason, consecutive, and free will, and capable of triumphing over sin and developing to perfection.

believe with a sincere and stradfast faith that the soul of man is immortal and righterwisees brings reward, while wickedness brings punishment. Unto Thee, O Lord, belongeth kirdness, for

wilt recompense every one according to his decide.

I believe with a sincere and steadast faith in the common fatherhead of fixed and the common brothes-To make this real is the great aim, and head of men. hope and mission of Israel

And God will be King over all the earth that day. God will be One and his Name One.

The new Union Prayer Book has been universally adopted by the reform congregations throughout the country. The question of circuit preaching received more attention and Rev. E. N. Calisch in Virginia, Kev. Max Heller in New Orleans, and Dr. A. S. Isaacs in New York made efforts in that direction. Rev Dr. J. Kranskoff, of Philadelphia, made further progress in his plan to establish an agricultural school for Russian immigrants near Philadelphia. Rev. Dr. H. Berkowitz, of Philadelphia, succeeded in extending the Chautauqua and giving impetus to a summer school of Jewish studies to be located at Forest Park, Pike County, l'a Rey Henry lhowiri wrote some effective articles against tendencies in American Judaism, tleading for greater levalty and sincerity. Another attempt to organize normal classes for Jewish teachers of Sabbath schools was made in New York late in the year.

There has been the usual number of new synagugues and charitable institutions. The Russian Jewish exodus showed a marked decline, A summary of the work of the United Hebrew Charities of New York city for the year ending Sept. 25, 1895, will throw light upon its opera-tions: The receipts were \$144,539; expenses, \$138,895. The number of cases dealt with was 7,508, representing 27,015 persons; 6,629 persons

378 JEWS.

were given employment, 1,900 provided with transportation; 33,352 cases were investigated, 957 free interments, 5,071 visits made by nurses, 3,545 physicians' visits. Among the disbursements, \$18,498 went in monthly stipends, \$37,712 money gifts, \$16,354 transportation, \$14,-354 clothing and fuel, \$11,765 medical ma-

ternity relief.

At the convention of the Order of Benai Berith, in Cincinnati, it appeared that there are 383 lodges in the United States and Germany, and 9 in the Orient. In the United States, since 1890, 4,709 have been initiated, 381 reinstated, 3,965 suspended, 1,621 withdrawn, 1,907 died. In benevolence \$2,676,723 has been expended since 1890, of which \$289,872 was for homes, \$214,555 sick benefits, \$2,160,535 endowment, and \$51,761 other charities. On Jan. 1, 1895, the lodges had on hand \$2,218,098, of which \$1,360,195 was for endowments, and \$657,903 for general purposes. The receipts since 1890 were \$37,308; expenses, \$18,432. This is the largest of the Jewish fraternities in the United States, and numbers about 25,000 members.

The Gratz College, of Philadelphia, instituted a series of lectures on Jewish and biblical subjects. The Atlanta Exposition had an interesting exhibition of Oriental Jewish objects, arranged by Dr. Cyrus Adler, of the Smithsonian Institution. Temple Emanu El, of New York, celebrated its fiftieth anniversary. On Thanksgiving Day union services were held in 12 cities, in which rabbis participated with Christian clergymen in church and synagogue. At the religious congresses in Toronto and Chicago Judaism was represented. The project of establishing a Jewish university was advocated at length in "The Jewish Messenger." New Jewish weeklies appeared in Atlanta and San Francisco.

In literature, Miss Josephine Lazarus's "The Spirit of Judaism," advocating the abolition of all forms, and an approach in spirit to the religion of the founder of Christianity, free from the dogmas and forms of the Church, aroused considerable discussion; Mrs. Frances Hellman issued a translation of Leroy Beaulieu's "Israel among the Nations"; Simon Wolf wrote in vindication of the Jew as patriot and soldier; the American Jewish Publication Society issued its regular volumes and announced a competitive prize of \$1,000 for the best juvenile story; Mrs. Harriet Lieber Cohen translated Sacher-Massech's "Jewish Tales"; Mrs. Morris Jastrow to blished a translation of some essays by the

A'e James Darmesteter.

Turning from America to Europe, one is disapporated at the continued unrest in Russia, expansion of the Jews and restriction still being makers of daily recurrence. In Romania Jews are the adjects of exceptional measures and are practically disfranchised, notwithstanding the formal tipulations of Article XLIV of the Berlin Treaty of 1878. In Turkey Sultan Abdol Haund has evanced the customary good will displayed by Ottoman rulers to the Jews, and he and his officials have taken increasing interest in the progress of education and charity in the Jewsh h community. The latest report of the Alliance Israelite Universelle gives these statistics as to its work: At the close of 1894 it

had 56 schools in the Orient, 35 for boys, 19 for girls, and 2 for infants, with a total number of 11,555 pupils (6,936 boys and 4,662 girls). These schools are open to all denominations, and among their pupils are Protestants, Roman Catholics, Greek Catholics, Armenians, and Mohammedans. One of the most important is the Technical School in Jerusalem. The Agricultural School at Jaffa shows remarkable results. The net receipts from the strictly agricultural department, in 1893 but 351 francs, rose in 1894 to 16,346 francs. The income of the Alliance for 1894 was 697,987 francs, which included 184,617 francs subscriptions, a donation of 352,677 francs from Baron de Hirsch, and 54,747 francs, the income for the year of his gift of 1,000,000 francs for education in Turkey; 560,329 francs were expended for educational purposes.

On Sunday, Aug. 18, services were held in the Berlin Jewish cemetery in memory of the dead soldiers of the Franco-German War. About 500 old soldiers attended, and Rev. Dr. Weisse said that 12,000 soldiers of the Jewish faith took part

in the war.

The income of the Jewish community of Ber lin for all objects during the current year reached 3,630,102 marks (about \$900,000). Members' contributions aggregated 1,188,847 marks (exclusive of 122,176 marks from seat rentals and 163,134 marks from reserved graves). ries of rabbis, readers, etc., reached 160,242 marks. Jewish and Talmudic science lost by death Jacob Reifmann, David Rosin, and Joel Müller. The Institute of France celebrated the centenary of its foundation. The Jewish element includes Michel Bréal, Henri Weill, and Jules Oppert. The first Jew to enter the institute was F. Halévy, composer of "La Juive." Of 1,878 artists represented at the two exhibitions opened in Paris in October, 68 were Jews and 35 Jewesses. The chief rabbi of France issued a circular letter to the rabbis of the republic, urging them to organize young people's societies for the study of Judaism, its literature and history. The total income of the London United Synagogues grew from £14,880 in 1871 to £25,916 in 189 and the expenses from £8,886 to £16,183. number of male seatholders rose from 1,505 to 3,353 and of female from 778 to 1,847. Near 80 Hungarian rabbis met in Buda-Pesth on Oct. 20 and passed a resolution relating to mixed marriages, with respect to which the rabbis declared, with one dissentient only, that while recognizing the validity of the civil ceremony, they could not bless such unions either by the marriage ceremony or other religious form. The anti-Semitic excesses in Vienna were grave enough to be repressed by the authorities, while the autonomy of the city was abrogated by the Emperor, owing to the election as burgomaster of Dr. Lueger, an anti-Semitic agitator.

From the full report of the Hirsch colonies in South America, it appears that before this year there were 563 families established in four colonies on 209,000 acres. During the present year 10 groups of about 400 families were settled in the Argentine Republic. The association has 444,780 acres, of which 246,077 are unoccupied. From its foundation to Sept. 30, 1894, it spent £376,369. In England, at the recent general election among those returned to Parliament were

KANSAS.

Sir Samuel Montagu, Baron Ferd, de Rothschild, Sir Julian Goldsmid, Messrs, Arthur Strauss, Harry S. Samuel, Benjamin L. Cohen, and Baron Henry de Worms. Sir Israel Hart was knighted. Alderman George Faudel Phillips and Sir Francis Monteflore were appointed high sheriffs for the counties of Middlesex and Sussex. Prof. Raphael Meldola was elected President of the Royal Entomological Society. Hon. Isaac A. Isaacs was appointed Attorney-General of Victoria. New synagogues were formed at Buluwayo (Matabeleland) and Salisbury (Mashonaland)

There was unwonted activity in the Jewish literature of the year abroad. From the lighter work of Joseph Jacobs in "As Others saw him" and Israel Zangwill in "The Master," to Mrs. Henry Lucas's "Songs of Zion" and Miss Loewy's translation of Prof. Erera's book on "The Jews of Russia," the transition is easily made. But there is a large number of more scholarly books and brochures in biblical and

Oriental science and a mass of dissertations on rabbinical subjects. Profs. Barker, Kaufmann, Büchler, D. H. Müller, L. Blau, Drs. J. Lewy (of Berlin), Harkavy, Wiener, Frieslander, Gaster, and Hirschfeld were active in this field, while "The Jewish Quarterly Review" contained many contributions of permanent worth.

379

The closing weeks of the year were marked by the visit of Ahlwardt, the notorious German agitator, to New York (with the avowed purpose of arousing an anti-Semitic movement in the United States), and the opening of a fair in Madison Square Garden, New York, for the benefit of the Hebrew Educational Alliance and the Hebrew Technical Institute. In this the entire Jewish community, rich and poor, reform and orthodox, participated, and it was substantially aided by other than Jewish donors. At the same time the Jews and Christians of New Orleans were organizing a fair for the benefit of the Touro Infirmary.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 906,006 in 1880; and 1,427,006 in 1890. By the State census of March, 1895, it was 1,334,668.

Capital, Topeka.

Government.—The following were the State officers during the year: Governor, Edmund N. Morrill, Republican; Lieutenant Governor, James A. Troutman; Secretary of State, W. C. Edwards; Auditor, George E. Cole; Treasurer, Otis L. Atherton; Attorney-General, F. B. Dawes; Adjutant General, A. J. Davis, succeeded March 1 by S. M. Fox; Superintendent of Public Instruction, Edwin Stanley; Bank Commissioner, John W. Breidenthal; Superintendent of Insurance, George T. Anthony; Labor Commissioner, W. S. Bird; Fish Commissioner, Otis E. Saddler; Grain Inspector, A. C. Merritt; Oil Inspector, M. C. Kelley; Mine Inspector, Bennett Brown; State Architect, J. C. Holland; State Board of Charities, M. Albaugh, George A. Clark, K. E. Willcockson, George A. Baker, and W. N. Allen; State Board of Irrigation, W. B. Sutton, D. M. Frost, and M. B. Tornblin; Chief Justice of the Supreme Court, Albert H. Horton, succeeded, April 12, by David Martin; Associate Justices, W. A. Johnson and S. J. Allen; Justices of the newly created Appellate Court, Eastern Division, W. A. Johnson (Republican) and George W. Clark (Populist); Central Division, T. F. Carver (Republican) and A. W. Dennison (Populist); Western, Elrick C. Cole (Republican) and A. D. Gierson (Democrat.)

Finances.—At the close of the biennial period ending June 30, 1894, the State treasury held a balance of \$842,326.23. The debt on Oct. 15 was \$788,500, of which the various sinking funds held \$545,000. The assessed valuations were: Real property, \$237,086,283; personal, \$40,773,498; railway, \$59,764,683; total, \$337,624,464. The total assessed valuations reached their highest

point in 1889, \$360,815,073, and the decrease since has been due in the main to the reduction in railway valuations by the State Board of Assessors. In 1895 the amount of State taxes paid was reported at \$1,316,257,65, of which the 4 eastern tiers of counties paid \$653,349, or \$9,539 less than half of the taxes of the entire State, Shawnee County paying the most, \$60,678.

Banking.-On Oct. 15 Judge J. S. West decided that section 16 of the State banking laws of 1891, which made it a crime for a lunker to receive deposits after he had knowledge of the insolvency of the bank, was unconstitutional and contrary to the second subdivision of section 16, Article II, of the Constitution of the This provides that when the Legislature State. seeks to amend a section of a pre-existent law, such part of the section as is desired to be continued shall be incorporated in the new section, and the old section shall be repealed. In the new banking law no reference was made to the old section, and as a result there are two sections providing for different penalties and making a difference as to what constitutes the crime.

Education.-The State has an interest-hearing public-school fund, in bonds and contracts. of \$9,686,993; an Agricultural College fund of \$502,927; a State University fund of \$140,731; and a State Normal School fund of \$137,211all derived from the national land-grant endowment. The State University has received by bequest a greater sum than that from the Government, but the excess is not included in the above. There are in the State 9,088 public-school buildings, which have cost about \$10,703,708. The number of teachers employed is 11,888, to whom \$3,060,459 was paid in wages. The tax collected for school purposes in 1894 was \$3,539,986, and the total sum paid for public education was about \$5,300,000. There are also 24 private institutions of learning, mostly maintained by religious organizations, which have property aggregating in value \$1,713,920.

KANSAS. 380

State Institutions,-The following are the charitable, educational, and penal institutions of the State, with the cost of grounds and buildings, to 1895; School for the Blind, \$85,449; School for the Deaf and Dumb, \$144,250; Asylums for the Insane, at Topeka \$616,378, at Ossawaternie \$420,000; Asylum for Imbeciles, \$29,-078; Soldiers Orphans Home, \$49,561; Grand Army Home, \$49,000; State University, \$320,-000; State Agricultural College, \$180,930; State Normal School, \$127,375; Penitentiary, \$1,659,-700: Reform School, \$119.863; Reformatory, \$310,000; Industrial School for Girls, \$40,700; and State Capitol, \$2,000,000, for the completion of which about \$1,000,000 more will be needed. The total present cost of all State buildings, with grounds and equipments, is \$6,932,175.

Railroads .- On Dec. 31, 1893, there were 8,931:28 miles of single-track railroads in the State. During 1894 one line constructed 3:3 miles of new track, making a total on Dec. 31, 1894, of 8,934:58 miles, and giving Kansas the fourth place as a railroad State. The State Board of Assessors in 1895 made a total assessment against railroad property of \$59,645,740.88, a decrease of \$118,942,40 from the total of the

previous year.

Stock Yards.—The annual reports of Jan. 2, 1895, show that the stock yards at Kansas City, Kan., form the second largest plant in the world, being surpassed in extent and operations only by that in Chicago. During 1894 the receipts of stock of all kinds aggregated 4,953,414 head, valued at \$98,577,164, and the total receipts from the opening of the yards in June, 1871, till Jan. 1, 1895, were 52,024,924 head, valued at \$858,525,683. The receipts of 1894 comprised 1,692,512 cattle, 2,550,691 hogs, and 587,599 sheep. Shipments were made to 26 States and Territories

Agriculture.-The United States Department of Agriculture reported as follows on the principal crops of 1894: Corn, 3,731,940 acres, 41,797,728 bushels, value \$17,973,023; wheat, 3,395,698 acres, 35,315,259 bushels, value \$15,-538.714; oats, 1,436,088 acres, 25,705,975 bushels, value \$7,968,852; rye, 149,445 acres, 866,781 bushels, value \$398,719; barley, 16,164 acres, 142,243 bushels, value \$69,699; buckwheat, 2,675 acres, 32,340 bushels, value \$29,106; potators, 108,213 acres, 4,436,733 bushels, value \$3,016,978; hav, 3,305,889 acres, 2,545,535 tons, value \$13,364,059; total value, \$58,359,150.

Taxable Manufactures,-In the fiscal year ending June 30, 1894, the collections of internal recorder aggregated \$362,739.97, from the fol-1 Mail: sources: Distilled spirits, \$65,008.49; tilla \$62,736.75; fermented liquors, \$16,-46019 . mamargarine, \$217,035,22; and penalteta 1 \$277,033,51 in the fiscal year ending June 20, 1895 In the last year there were 308 sing one mun' organ factories, which used 383,-561 possuls of tobacco, and had an output of 20.425,329 cars, and 45 other factories, which had an output of 10.323 pounds of plug and 32,-877 pounds of smoking tobacco. Other taxable manufactures were: Apple brandy, 1,212 gallons; grape brandy, 1,347 gallons; fermented liquors, 6,012 barrols; wheat whisky, 351 gallons; and oleomarganne, 7,189,335 pounds.

Natural Gas.—The discovery of natural gas in Allen and Neosho Counties has been followed by a similar "find" on Hickory creek, Peoria Township, Franklin County, where men were boring for a well. A syndicate controlling the Allen County field has secured a franchise from the City Council of Fort Scott for the construction of gas works and the installation of a com-

plete plant there.

State Census.-The census taken in March showed a total population of 1,334,668, an increase in ten years of 66,138. Forty counties showed an increase over the enumeration of 1894, aggregating 30,246, and 61 counties showed a decrease aggregating 33,909. The most populous counties were Wyandotte, 57,286; Shawnee, 47,978; Sedgwick, 39,108; Crawford, 33,846; Cherokee, 30,651; Cowley, 28,860; Labette, 27,-023; Atchison, 26,995; Reno, 26,492; Bourbon, 25,849; Osage, 24,818; Marshall, 24,567; Sumner, 24,138; Montgomery, 23,948; Lyon, 23,794; Douglas, 23,587; Washington, 21,602; Dickinson, 20,926; Franklin, 20,734; Marion, 20,374; and McPherson, 20,317. The most populous cities and towns were Kansas City, 40,673; Topeka, 30,151; Wichita, 20,841; Leavenworth, 20.822; Atchison, 15,500; Fort Scott, 11,108; Lawrence, 10,084; Pittsburg, 8,932; Hutchinson, 8,515; Emporia, 8,225; Parsons, 7,573; Ottawa, 7,059; Arkansas City, 6,904; Salina, 5,703; Argentine, 5,504; Newton, 5,148; and Winfield, 5,031.

Judicial Decisions.—Besides the decision mentioned under "Banking," two other important ones were rendered. In October the Supreme Court sustained the action of the Legislature of 1895 in adopting a law abolishing certain judicial districts and reapportioning the State. On Dec. 8 the same authority handed down an opinion sustaining the constitutionality of the laws of 1893 which gives eighteen months' time to debtors to redeem their property on all sales on execution or foreclosure

made prior to the passage of the law.

Legislative.—The Legislature assembled in biennial session on Jan. 8. The message of Gov. Lewelling was principally devoted to an attack on the Republican party and the courts of the State. He urged the strictest economy in appropriations; recommended assessment of all property at its actual value; denounced the fee system; declared that the charitable institutions of the State should be under nonpartisan management; upheld the strike of the coal miners; demanded the exercise of State's rights as against "the increasing tendency of the Federal courts to draw to themselves entire administration of affairs of the States and to constitute themselves general guardians of the State governments"; and acknowledged the need of a court of appeals, but one whose findings should not be final. Charles E. Lobdell, of Lane, was elected speaker, and all the subordinate officers who were nominated in the Republican House caucus and the Populist Senate caucus were installed.

The Republican Governor-elect, Edmund N. Morrill, was inaugurated on Jan. 14. His address was a brief review of the material progress of the State and of the condition of its most important interests. In his message to the Legislature he called attention to many measures requiring immediate consideration; urged the creation of an appellate court as a relief to the Supreme Court; pronounced prohibition a settled State policy which must be enforced; advocated an early constitutional convention; denounced repudiation; favored moderate State aid in irrigation; recommended a reduction of judicial districts and the adoption of a new redemption law as an incentive for capital to seek investment in the State; wanted bribery made a crime; and urged that the State Board of Agriculture be kept out of politics.

The total appropriations for the biennial period 1895-'96 were \$2,500,000, or about \$200,000 less than the aggregate of the previous session.

Among the general measures adopted were bills

abolishing 6 judicial districts; reapportioning the State into 8 congressional districts; authorng cities of the first class to fund their indebtedness incurred for internal improvements; establishing the Kansas Industrial Reformatory at Hutchinson; creating an appellate court; providing for an irrigation commission; ex-empting from legal process to beneficiaries the rocceds of life-insurance policies; prohibiting otteries; making gambling a felony; establishing a Grand Army Museum in the State Capitol for the preservation of mementoes of the civil war; and making it a felony for any public licer to receive, in any manner, any consideration to influence his vote, with a special application to legislators.

Lucien Baker, Republican, of Leavenworth, was elected United States Senator, to succeed John Martin, Democrat, for the term ending

March 4, 1901.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 400,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,-684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Gevernment.—The following were the State officers during the year: Governor, John Young Brown; Lieutenant Governor, Mitchell C. Alford; Secretary of State, John W. Headley; Treasurer, Henry S. Hale; Auditor, L. C. Norman; Superintendent of Public Instruction, Edward P. Thompson; Attorney-General, William J. Hendrick; Adjutant General, A. J., Gross; Commissioner of Agriculture, Nicholas McDowell; Commissioner of Insurance, Henry T. Duncan; Register of the Land Office, G. B. Swango; Railroad Commissioners, C. C. McChord, C. B. Poyntz, and Urey Woodson; Chief Justice of the Court of Appeals, William S. Pryor; Associate Justices, Joseph H. Lewis, James A. Hazelrigg, John R. Grace, Thomas H. Paynter, George B. Eastin (succeeded in November by George Durell), and B. L. D. Guffy—all Democrats except Judges Durell and Guffy.

Finances.—At the end of the fiscal year, June 30, 1895, there was a deficit in the treasury of \$41,968.17 and \$39,981.77 to the credit of the school fund. On Dec. 31, 1895, this deficit is said to have been \$19,355. There was at that date \$113,683.94 in the sinking fund, set apart, however, to pay military bonds and interest then

due, The sheriffs had paid in all taxes due the State except \$5,992, owing by the cheriff of Bracken County. The total indebtedness of the State is \$2,992,990.16.

Products.—It was reported in the spring from various parts of the State that the crops were threatened by vast numbers of cut worms or army worms—the third visitation in forty five years. The hemp industry, formerly the source of great revenue to the blue grass region of Kentucky, was now greatly depressed, whereas ten years ago it brought in from \$1,000,000 to \$1,500,000 annually: the product now barely reaches \$300,000. The low price of tobacco has called out appeals to growers to reduce the acreage, since it requires the best land, exhausta the soil, and calls for more labor.

State Institutions.—The number of immates of the two penitentiaries is about 500. The branch penitentiary is overcrowded. The convicts are practically unemployed. The balance unpaid on appropriations to enlarge buildings of charitable institutions is \$176,000 and the unpaid expenses for last quarter \$112,000. The superintendent of the Central Lunatic Asylum reports that there is no additional room for colored lunatics in any of the State asylums. The appropriation for enlargement of buildings for the whites at the last General Assembly has enabled the construction of buildings that will make ample provision for several years.

will make ample provision for several years.

Prisons.—The report of the Penitentiary for the year ciding Nov. 30, 1885, shows that 534 prisoners were received, 12 of whom were under fifteen years of age, 166 under twenty, and 162 between twenty and twenty-five. In the past nine years the population of the prison has doubled, while the population of the State has not increased more than 20 per cent. The total number at the end of the year was 1,104. Of these, 130 are confined for murder and 196 for manslaughter; 43 of the prisoners are women. The average cost of each prisoner for a year was \$82.86, including officers salaries and amounta paid to discharged prisoners. The net earnings of the convicts amounted to \$58.786.42.

The total number at the branch penitentiary, at Eddyville, Nov. 30, 1895, was 560 of whom 337 were negroes. The receipts from the State treasury for the biennial period were \$21,524.52, and the expenditures \$21,179.62.

Charities.—The Central Asylum for the Insane, at Lakeland, had a population of 1,083, Oct. 1, 1895, of whom 445 were women and 198 were negroes. The receipts for the year amounted to \$168,357-42, and the expenditures to \$169,547.42. New buildings, for which the Legislature appropriated \$65,000, were erected during the year.

The biennial report of the Institution for Deaf Mutes at Danville shows that the whole number instructed Oct. 31, 1885, was 285, of whom 39 were in the colored department. The total number of new pupils received during the year was 91. The total receipts for the white department were \$45,473.45 for 1865-74, and \$55,114.71 for 1894-76; for the colored department, \$5,727.27 the first year, and \$7,591.54 the second.

The Institute for the Blind, at Louisville, had 104 white and 26 colored pupils during the year ending Oct. 31, 1894. The receipts for the year were \$31,504.40, and the expenses \$26,576.54.

The receipts of the Institution for Feebleminded Children were \$23,624.07, and the ex-penditures \$23,999.83. There were remaining at the end of the year 49 girls and 45 boys.

Mob Law. Several lynchings took place in the State during the year, notably one of a negro at Winchester, charged with an assault which, as afterward appeared, had not been committed, and another, the murder of a man and a woman in Marion County by a mob who burned the woman in her house and shot the man to death as he attempted to escape. The Governor suggested that a statute be enacted providing severe penalties against all who, by word or act, shall encourage such violence.

Military,-The twenty-ninth annual campment of the Grand Army of the Republic was held in Louisville, beginning Sept. 9. On the 11th a parade of about 45,000 was seen by more than 300,000 spectators. At the head of the column marched two Kentuckians who enlisted in the Confederate service at the outset of hostilities and fought to the end. One bore aloft the Stars and Stripes, the other a silken banner of white, having in its center a golden dove and in its mouth an olive branch. was called "The Emblem of Peace"-the reunion, thirty years after, of the victors and the vanquished.

An address of welcome by Henry Watterson was responded to by Past-Commander-in-Chief Warner, and a poem was read by James Whitcomb Riley. St. Paul was selected as the place for the next annual encampment, and the following officers were elected: Commander in Chief, Ivan N. Walker, of Indiana; Senior Vice Commander in Chief, E. H. Hobson, of Kentucky; Junior Vice Commander in Chief, S. G. Cosgrove, of Washington; Surgeon General, J. Whiting, of Wisconsin; Chaplain, T. E. Hiff, of Utah.

The Committee on Resolutions reported favorably on the suggestion that a permanent national headquarters be selected. The offer of Philadelphia to store the records of the Grand Army in Independence Hall was accepted.

Other resolutions were as follow:

Appointing a committee to arrange for the erection of a monument at Washington to commemorate the loyal women who served as nurses or in other ways aided the soldiers of the Union during the rebellion.

Permitting posts to consolidate as the memberships STIN SOWER

Reminimending that Congress pass a law equalizing the periston of war widows so that all shall receive at last \$. 2 a month.

The report on pensions concluded as follows:

W and for our comrades the just treatment where the first of the contrades the just treatment is such a first part of the concedes. No niggardly concedes the part of the contrader the guise of reissues; the contrader the guise of the contrader the contrader that the contrader the contrader that the contrader the contrader that the contrad Aviet an performance with the approbation of the medianal reference in a firm in a position that medianal research is a firming all our previous declarations of the laws passed for the benefit of the jete one.

The report on membership showed: Members in good standing, June 30, 1864, 371,555; gain by muster in, 14,672; gain by transfer, 5,554; gain by reinstatement, 13,471; gain from deinquent reports, 9,343—aggregate, 414,595. Loss by death, 7,368; loss by honorable discharge, 1,437; loss by transfer, 5,763; loss by suspension, 33,589; loss by dishonorable discharge, 140; loss by delinquent reports, 8,659; total loss, 56,956. Members remaining in good standing, 357,639.

A leading feature was the annual reunion and parade of the sailors, and additional interest attached to the event from the fact that it is probably the last time that the Jack tars will be seen

at a Grand Army encampment.

Political.—The election in the Fourth District for the office of judge of the Court of Appeals, held Nov. 6, 1894, was reported to have resulted in favor of Sterling B. Toney by a majority of 25, and he received a certificate of election. His opponent, St. John Boyle, contested the election, basing his claim on contested ballots returned by the officers of election to the clerk of Jefferson County. The case was heard by the State Board of Contest, consisting of 5 of the State officers, and a majority of them decided in favor of Toney, but the Governor and the Auditor voted negatively on the resolution to declare him elected, believing that Boyle had a majority of 27 on the ballots that should have been counted. Judge Toney then resigned, Feb. 21, and the Governor accepted the resignation.

Judge Eastin was appointed and remained on the bench till the end of the year, when he was succeeded by Judge George Durell, elected to the office in November.

The Republican State Convention met in Louisville, June 5. The platform contained the following declarations:

We are opposed to the free and unlimited coinage of silver, believing that it would involve the country in financial ruin. We believe in a sound currency and in the use of both gold and silver for coinage. provided always that a dollar in one is made precisely as valuable as a dollar in the other.

We favor a tariff so regulated as to protect the in-terests of all classes of our citizens upon articles that may be successfully manufactured or produced in this country, thus insuring good wages to the laborer and a home market to the producer; and in connecand a nome market to the producer; and in connection with this we favor the re-establishment of the doctrine of reciprocity. In view of the past financial history of the Democratic party, its devotion to the old State-bank system and wild-cat tendencies, we affirm that the Republican party can be more safely trusted to regulate the financial system of the nation. When the Democratic party came into rower in

When the Democratic party came into power in Kentucky it found the State able to pay every debt and have millions of surplus left. In the meanwhile it has collected millions of dollars of taxes under the most urgent systems of revenue, and yet we are today in the humiliating attitude of being unable to pay the current expenses of the State, and upon a fair valuation of assets are in debt millions of dollars. They have overridden the Constitution, refused office to one fairly elected by the people, engaged in extravagant legislation, accepted salaries, created unnecessary offices, manifested incompetency to manage the penitentiaries, brought convict labor into competition with honest free labor, diverted the school fund, failed to provide a decent State Capitol, and left its charitable institutions without the necessary means for their proper operation.

The ticket placed in nomination was: For Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Auditor, Samuel H. Stone; Treasurer, George W. Long; Attorney-General, W. S. Taylor; Superintendent of Public Instruction, W. J. Davidson; Register of the Land Office, Charles O. Reynolds; Commissioner

of Agriculture, Lucas Moore,

The Democrats met in State convention in Louisville, June 25. The party is divided on the silver question, and the two leading candilates for the gubernatorial nomination each represented one of the opposing factions. P. W. Hardin was the Free-silver candidate, and C. M. Clay, Jr., the so-called Sound-money candidate. The majority report of the Committee on Resolutions was adopted after some debate, and after a motion to "dispense with the indorsement of Cleveland and Carlisle" had been rejected by a vote of 270 to 598, and one to approve the bond mue by a vote of 844 to 24. The resolutions dopted, after declaring against the re-establishent of a protective tariff, continued as follows:

We declare that our present national Democratic Administration is entitled to the thanks of the party by its honest, courageous, and statesmanlike manageat of public affairs; and we express our undiminhed confidence in the Democracy and patriotism or resident Grover Cleveland and his distinguished dviser and Secretary, John G. Carlisle, of Ken-

When the Democratic party came into power in 167 the bonded indebtedness of Kentucky was over 10,000. Since 1867 the bonded indebtedness has a reduced to \$650,000, and the available assets of sinking fund more than equal that sum.

We have increased the annual appropriations for to support of our charitable institutions from \$250,-to in 1867 to \$500,000 in 1895, and while improving r judicial system by increasing the number of urts and the frequency of their terms we have a compelled to increase our expenditures, one of greatest items of which is the cost of criminal utions, and a noticeable fact in connection with which is that the increase is greatest in districts con-rolled by Republican officials. We have in everthebeen able to decrease the current rate of taxation reneral revenue purposes from 20 cents on the 100 of taxable property in 1867 to 15 cents in 1895. The Democratic majority has voluntarily increased be annual expenditures for the support of common second \$256,000 in 1867 to about \$2,000,000 in 533, and by wisely providing separate schools for be two races are to-day giving to the children of the colored race opportunities for education they no-there else enjoy.

In the face of unexampled difficulties the Demo-

o party has succeeded in wholly withdrawing let labor from competition with free labor and n abolishing the practice inherited from the Repub-lean party of leasing the convicts to parties inter-seted solely in making profit out of their labor.

The vote that adopted this platform was 647 to 233. The ticket follows: For Governor, P. Wat Hardin; Lieutenant Governor, R. T. Tyler; Secretary, Henry S. Hale; Auditor, L. C. Nor-man; Treasurer, R. C. Ford; Register, G. R. Swango; Attorney-General, W. J. Hendrick; Commissioner of Agriculture, Ion B. Nall; Su-perintendent of Public Instruction, Ed. P. Thompson. The vote on candidates for the omination for Governor was as follows: llardin, 4684; Clay, 3304; Stone, 76; Watterson, 3. There was a sharp contest over the name; !! the candidate for Secretary of State, the leading names being H. S. Hale and J. W. Headler neither was in accord with the nominee for this ernor. Charles R. Long was made chairman of the State Central Committee in place of D. Car. roll, a Free-silver man.

During the canvass debates were held in various places between the Republican and Demis cratic candidates for Governor. The free-silver position of the Democratic candidate was not approved by the whole party, and in some quar-ters there was a demand for his withdrawal.

The l'eople's party held a State convention at Louisville in July, and adopted a platform fa-voring free coinage, a graduated income tax. and economy in State expenditures. T. S. Pettit was nominated for Governor, John G. Blair for Lieutenant Governor, Don Singleterry for Secretary, C. H. Deane for Auditor, M. R. Gardner for Treasurer, H. H. Farmer for Superintend-ent, Mr. Spencer for Register, W. L. Scott for Commissioner of Agriculture, and S. M. Payton for Attorney-General.

The Prohibition party had a ticket in the field, headed by W. B. Demaree for Governor.

The election resulted in the success of the entire Republican State ticket. The vote for Governor stood as follows: Bradley, Republican, 172,436; Hardin, Democrat, 163,524; Pettit, Populist, 16,911; Demarce, Prohibitionist, 4,186. The vote for Lieutenant Governor, which was substantially the same as that for the remainder of the ticket, was: Worthington, Republican, 164,000; Tyler, Democrat, 156,045; Blair, Populist, 957; Hughes, Prohibitionist, 872. The political character of the Legislature is given as follows: Senate, 32 Republicans and 16 Democrate: House, 46 Republicans, 52 Democrats, and 2

Populists.

The city of Louisville was also carried by the Republicans.

Gov. Bradley was inaugurated Dec. 10. KOREA, an independent kingdom adjoining

Russia and Chinese Asia, between the Yellow Sea and Sea of Japan. Capital, Secul. (For area, population, and history see "Annual Cv-

clopædia " for 1894.)

Government.-The royal line of Ni came to an end Jan. 15, 1864, while three royal widows were living. Queen Cho nominated Ni-Kung, a lad of twelve, son of one of the royal princes, heir apparent. The father of this boy, to whom was given the title Tai-Wen-Kun, or great Palace Prince, seized the reins of authority, and for more than thirty years has been the most active figure in Korean politics, and most of the time the real ruler of the kingdom. In 1873 the King attained his majority, and married a lady of the Min clan. The Queen, representing and moved by the most powerful faction of nobles, being withal a woman of extraordinary insight, shrewiness, and political ability, has been the chief opponent of the prince father. Two sons have been born to the King. After French, American, and Japanese invasions and hostilities, the first treaty made as a sovereign state by Korea with a foreign power was with Japan, Feb. 22, 1876. This was followed by treatice with the United States, England, Russia, France, Italy, and other nations.

384 KOREA.

One of the first results of the Japanese victories over the Chinese and the Tong-Haks was the attempted reform of the entire national administration. The Min faction and the pro-Chinese element were practically eliminated. Jan. 8, 1895, the King made an imposing jour-ney to the tombs of his ancestors, and with solemn eath and ceremonies abjured all allegrance to or dependence on China, asserted Korean independence, and promised reforms. These latter are: Separation of national expenses from the civil list; flying of the line of succession so as to avoid all court intrigue through the influence of the Queen and palace underlings; a public budget to be made annually; young men to be sent abroad to study; reform of the military system and of civil and criminal law; appointment to office to be made according to ability and not by favoritism; employment of foreign talent for advice and assistance. Of these articles of reform some, despite great difficulty and opposition, have been carried out. Korea is now a constitutional monarchy instead of an irresponsible despotism. On June 20 the first of a series of royal ordinances completely reorganized the provincial administration. The "eight provinces" became geographical expressions only. In their place are 23 prefectures, with 151 districts, in which are 230 revenue officers. In place of the old triple premiership is a Cabinet of 8 boards of administration. These are: Foreign, Home, Finance, Army, Justice, Education; Agriculture, Commerce, and Public Works; and Royal Household. In addition, a new judiciary has been established, with new codes of laws and 6 courts or systems, as follows: Special, convened only by the King on recommendation of the Minister of Justice; supreme, circuit, and for the capital treaty ports, and provinces. There are now 3 legations abroad, the minister at Washington being Hon. Pom-Kwong-Soh. A postal system was inaugurated in July, 1895, with stamps of 4 denominations, engraved in the United States. The army consists of 5,000 men, under the instruction of American and Japanese officers. There is no mint or navy. A telegraph runs from Seoul to Wi-ju, on the Chinese frontier, and from Seoul to Fusan. The survey of a proposed railway from Chemulpo to Seoul, and from Seoul to Fusan, has been completed. In February a 21-inch tramway, 55 miles long, from Chenng-Nam-Po to Ping-Yang, the power used being human muscle, was com-pleted. April 21 117 Korean lads went to study in Japan. Mrs. Esther Pak is a student of and one in Chicago,

Finances, The Government derives its revenues from various sources: 1, A land tax, which that from verious sources: 1, A land tax, which that from verious a house tax: 3, customs to traction of three open ports: 4, licenses to traction of three open ports: 4, licenses to traction of the last of the Government borrowed from Jay in \$4,500,000 to carry out reforms. For 1895 the official statement is: Revenue, 4,860,410 ven: expenditure, 6,273,384 ven, showing a deficiency of 1,65,974. The items of expense are, Rayid h, ischand, 500,000; Foreign Office, 71,392. House Department, 1,406,153; Treasury Department, 1,740,006; Army, 1,028,401; Justice, 47,294; Education, 124,422; Agri-

culture, Commerce, and Public Works, 183,416; extras, 372,300; reserve fund, 800,000 yea.

Seoul and the Ports.-The capital is finely Seonl and the rorts.—Inc capital situated on a soil of decomposed granite, and drainage into Han river. The streets are laid out with drains on either side, yet the city is astonishingly filthy, with narrow streets. On the north and south rise imposing mountains. The 3 palace inclosures are on the north side of the city, facing the sun. On the few elevations above the general level the Japanese, American, British, and Russian legations, and the Methodist and French Roman Catholic establishments are built, breaking the general monotony of one-story tiled or thatched houses. Most of the dwellings are horseshoe-shaped, with an open court and a high wall, which shuts out the view of one neighbor from the other. There is one very broad avenue in the city, running from east to west, from which diverge the wide roads leading to the palace gate, in front of which most of the events that in recent years have been de-scribed in Western newspapers have taken place. Leading from the imposing gate towers that loom up over the city wall on the southwest are wide highways, which open into the center of the main street, where stands the big bell, near which are the chief shops, factories, and store-houses. A crenelated wall 16 feet high incloses the whole city, crossing hill, valley, and stream. The native population of the city and suburbs is computed at 300,000. On June 15, 1895, the Japanese population consisted of: Males, 901; females, 537; total, 1,438. The white foreigners, diplomatists, and missionaries number more than 100. Three treaty ports are opened to commerce and foreign residents. Chemulpo, 20 miles south of the capital, contains a Japanese population of 4,243 and about 200 Americans and Europeans. It has 1 or 2 well-metaled and curbed streets, with several buildings in foreign style. Fusan, on the southeast coast, contains 1,307 Japanese. Gensan on Broughton's Bay, has a small settlement of Japanese and other nationalities. The Chinese are steadily advancing in numbers and business capacity to the status held before the war of 1894-'95.

Christianity.- In 1777 some literary men in the annual Korean embassy to Pekin received a present of books from the Jesuit missionaries. On their return home they organized Christianity after the model of the Roman Catholic Church. After Chinese priests had been sent in the first French missionary, disguised as a Korean mourner, penetrated the forbidden country. Others followed, and native converts increased, despite the ban and bloody persecutions of the Government. In 1864 19 Frenchmen had entered Korea, a dozen of whom were then living. When, to the joy of the hunted native Christians, a fleet of Russian ships seemed to threaten the isolation of the kingdom the Tai-Wen-Kun ordered fresh persecutions. Nine Frenchmen were beheaded, and more than 10,000 Koreans were killed, exiled, or made refugees in Russian terri-In more peaceful times the French missionaries returned. In 1895 Seoul had a church, the orphanage of St. Paul de Chartres with a mother superior and 4 sisters, and the college of Ryong-San with 14 French instructors; the entire establishment in Seoul under the apostolical

vicar numbering 24, with several "religious" in other ports, all under the Society of Missions Etrangères de Paris, with more than 20,000 native adherents. Protestant missions began in 1885, when Dr. H. N. Allen introduced scientific medicine and surgery. American Presbyterians and Methodists quickly followed, with appliances of healing, teaching, printing, and preaching. The tenth anniversary of reformed Christianity in Korea was celebrated Oct. 9 to 11, 1895. The statistics show 42 congregations, meeting weekly, with which 19 stated preaching services are observed. Of 528 baptized persons on the rolls, two thirds are males, one third are females. There are 9 Sunday schools, with 445 persons enrelled. In 1894 202 communicants, or 61 per cent. of the present whole church membership, were

dividuals, who mortgage their crice at ... property. The chief products of the courty are rice, cotton, silk, hidea totacco, and leader The exports of rice for 1894 amounted to 4's the jucula, valued at \$1005 the tof histor three port was \$55,000 less than in 1863 but a director tion in this item shows that rinderpost is hid so prevalent as usual Awaht shells for pounds in 1894) are experted for butten making and inta-1 work. Only a fraction of the gold dust that is carried out of the country figures in the off al returns. Ginseng, heretofore a forcerment monopoly and yielding a revenue from \$30000 to \$1,000,000 annually, to now free though a bears tax is laid upon the traffic in certain kinds. American product has powerfully influenced the whole Korean ginseng trade. In imports, Japa-

THE WEST GATE OF SECCL

received. Of the native churches 6 have Korean pasters. The Church of England, the Canadian and Australian Presbyterians, and 2 independent missions are also at work. Some of the best slifters in the country are those of the missions in the capital and the scaports. Besides tracta and Scripture translations, the missionaries have provided an excellent apparatus for the study of the Korean language, including grammars, lictionaries, and schoolbooks, and "The Korean Repository" is published monthy in Scoul.

Foreign Trade,—Despite the Chino-Japanese war, trade statistics for 1894 show the largest vultime since the country was opened to foreigners. Nearly all the shipping in Korean waters is in lapanese hands, mostly belonging to the Nippsin-Tusen-Kaisha, other vessels that figure in the efficial returns being chartered only for tempsary purposes. The capital in the country the rested in special enterprises is almost wholly lapanese, and is lent to the Government and in-

nese cotton goods, which in 1803 amounted to \$25,000, rise to \$128,000 in 1804. Owing to the low rate of exchange, to their charp labor, to the saving effected in depending with tarpacient to hoops, and tin fined cases, and to lower free glob, the Japanese are able to underself the British fabrics, besides making a profit of from 15 to 20 per cent. During 1894 55 the Japanese had the Korean market almost entirely to the medical that the thinese are now returning. In Justimfly, above hat cape and cotton varies the Japanese importers are crowding out their European competitive. A large variety of miscellanceous imbilitions of American and European goods find their was into Korea from Japan, the labels being imitated with unblashing dishenesty. The petroleum used in Korea in 1894 was in value of American, \$68,500; Russian, \$1,000.

Frents.—At the Royal College in Secol lectures in Korvan history were begun, one of the first of several plans to develop an intelligent spirit of patriotism. A famine broke out in Quelpaert island, and the Government sent for relief 200,000 yen and 5,000 bags of rice. Other famines broke out in the districts desolated during the Tong-Hak disturbances. Prince Yi-Chun-Tong, twenty-three years old, nephew of the King and grandson of Tai-Wen-Kun, charged with conspiracy against the sovereign and implicated in the assassination of Kim-Hak-Ou, the leader of the Reform party, was arrested and tried on charge of treason by the special court and banished for ten years in a one-room hut to Kyo-Dong island. After being five hundred years under ban, Buddhist priests were permitted to enter the capital and walled cities. In July the Tong-Haks made uprisings in the southern provinces. Queen Min, apparently regaining full power, crowded the palace with women, servants, and underlings, as in the old days, and so managed affairs that the Home Minister, Prince Pak (Boku), was compelled to leave the capital, escorted by Japanese troops. The national costume of white was changed by decree to black, and the universal yard-long tobacco pipe was shortened by 2 feet. A conspiracy, plotted by native soldiers whom the Queen had discharged, by irresponsible Japanese and various bad characters, headed by the Tai-

Wen-Kun, resulted, Oct. 8, in an attack on the palace, in which the gates were forced, the Queen was murdered, the verdict of the special court was reversed, and several remarkable proclamations, one of which degraded the queen to the level of a servant, were issued. Later royal proclamations heaped posthumous honors upon Queen Min, appointed a staff of biographers, and ordered a funeral, to cost 70,000 yen. Oct. 26 the lunar calendar was abolished, the sixteenth day of the eleventh moon of the five hundred and fifth year of the dynasty to be Jan. 1, 1896. Sunday has been made a day of rest in the Government offices. Nov. 27 there was another attack on the palace by Koreans who were opposed to the new spirit and policy of the Tai-Wen-Kun. The chief participants in the Wen-Kun. The chief participants in the *émeutes* of Oct. 8 and Nov. 27 were brought to trial and executed Dec. 28. In December the officials and many of the people had their hair cut, an act of vast significance, which changed the style of coiffure in vogue during the past five hundred years. During December most o the Japanese troops evacuated the country The 4 parties in native Korean politics an called, respectively, the pro-Japanese, the pro-Russian, the pro-Chinese, and the "Korea fo the Koreans."

T

LITERATURE, AMERICAN, IN 1895. More books were published in our country in 1895 than in any previous year, the record showing 335 more than the total number issued in 1893, the largest book-producing year hitherto. In all, there were 5,469 books sent from the press, of which 5,101 were new books and 368 new editions. In 1894 647 out of the total of 4,484 were new editions, showing an increase of publication of original work, albeit not of a high order of merit. Of the total number of books manufactured in this country 3,396 were by American authors-by far the greater number of reprints made belonging to fiction-847 were by English and other foreign authors, and 1,226 were imported into this country, bound or in sheets, bearing an American imprint. By far the greatest increase was shown in fiction, the total of novels standing 1,114 against 729 in 1894. Of this number, however, only 287 were by Amermean authors, while 589 were reprints and 238 importations. A marked increase was also not lecable in the department of literary history and missellany-455 new books against 208 in 1894 and in poetry, while a falling off was shown only in books of the useful arts and those relating to sports and amusements. The chief supertate as were in theological and invenile works and in poetry and biography. No book made any decaded sensation.

Biography Th. n. et important work of the year failing in or the boad was beyond doubt "John Sheman's Reache tons of Forty Years in the House, Senate, and Caronet: An Autobiography," in 2 volumes, the appearance of which created a great senation in political circles. A new chapter edition was also made of "The Sherman Letters," published last

year. Mary Abigail Dodge (Gail Hamilton) pul lished a "Biography of James G. Blaine," and anothe work of intense interest, from an opposing standpoin was "The Life of Samuel J. Tilden," by his lifelon friend John Bigelow, who was peculiarly qualifie to give the details contained in these two volume Ward Hill Lamon's "Recollections of Abraham Lit coln, 1847-1865," were edited by his daughte Dorothy Lamon, and were of an entirely person nature. L. E. Chittenden gave us a compilation c "Abraham Lincoln's Speeches," and the 42 article contributed to the New York "Independent" in conmemoration of the thirtieth anniversary of the assa sination of April 4, 1865, was entitled "Abraha Lincoln: Tributes from his Associates: Reminiscenco f Soldiers, Statesmen, and Citizens," and supplic with an introduction by William Hayes Ward, D. I The "Political Debates between Abraham Lincoln as Stephen A. Douglas in the Celebrated Campaign 1858 in Illinois" filled a handsome quarto volum and yet again we had "Political Speeches and D bates of Abraham Lincoln and Stephen A. Dougla 1854-1861," edited by Alonzo T. Jones. "Geor Washington Day by Day" was the title of a new lift of the Father of his Country, by Elizabeth Brya Johnston, and Dr. Eliphalet Nott Potter present "Washington a Model in his Library and Life" a lecture delivered May 12, 1895, at All Ange Church, New York city. "The True Story George Washington" was told for youngest reade by Elbridge S. Brooks, "General Sheridan" was to single issue in the "Great Commanders Series," t author being Gen. Henry E. Davies. A large octavolume of "Critical Sketches of Som Federal a Confederate Commanders," by John Codman Rop Col. Theodore Ayrault Dodge, Gen. Francis Walker, and others, was edited by Col. Theodore Dwight, and from Lieut. Arthur Sinelair, of the Cefederate States navy, we have a record full of intending the states of "Two Years on the 'Alabama." Abert Galla Riddle, who was a Member of the Thirty-seventh Cegres, proffered "Recollections of War Times," a v

of reminiscences of men and events in Washingin 1800-85, while "Cole's Cavalry," by C. Armour
resear, detailed the experiences of three years in
saidle in the Shenandoah valley. "Under the
state of the Clvil War,"
frs. Annie Wittenmeyer, had an introduction by
t. U. S. Grant, and Vol. II appeared of the life
Anna Ella Carroll, under the title of "A Military
stan," by Sarah Ellen Blackwell. Thomas W.
twois a "Boys' Life of General Grant," a comtion volume to which might be termed "The Life
Con. Robert E. Lee for Children," by Mrs. Mary
Williamson. "Jewels of Memory" contained the
states "delightfully discoursed of by Prof. Moses
Tyler were respectively Goorge Berkeley. m "delightfully discoursed of by Frof. Moses yler were respectively George Berkeley, y Dwight, and Joel Barlow. "Letters of haxter were appreciatively edited by her A. F. and R. L.," and contain a sweet and charm. "Under the Old Elma," by B. Claffin, recalls many famous personance of the second gathered in the historic mansion of Gov, so named by Henry Ward Beecher, while in Oar Churchyards, Old New York, Trinsh," by John Flavel Mines (Felix Oldboy), of interest for many readers. "The Old liers of New York, and Other Papers," by a Loring Andrews, and "Sketches of Printers inting in Colonial New York," by Charles R. burn, were issued in limited, expensive editions.
Life and Letters of Dr. Samuel Hahnemann Life and Letters of Dr. Samuel Hannemann to Thomas Lindsley Bradford, M. D. "Con-less with Walt Whitman, by Sadakichi; writ-1894," was by Sadakichi C. Hartmann, a Jap-by birth, and "Down at Caxton's," by Walter was the title of a number of biographical and was the title of a number of biographical and patethes of noted authors. Charles K. was filled 2 volumes with "Personal Recollection of Life in from 1813-1840," by William Cooper Howells, a valuable in a twofold sense, as it not only supara admirable picture of the hardships of the tays of settlement in that State, but also furall class to many of the manual characteristics. a clew to many of the mental characteristics of m of the author, the eminent novelist, who conan introduction to the volume. Joseph A. told of "Half a Century with Judges and "In the Superior Court of Boston. The of the 5 volumes which will contain "The Correspondence of Rufus King," edited by alle a similar service was rendered to a grandby Rev. Charles Cotesworth Pinckney in "The sneral Thomas Pinckney," the interest of intends far beyond the borders of his native a South Carolina, "Carter Henry Harrison: John D. Long published a volume of "After-and Other Speeches," "Townsend Harris, merican Envoy in Japan," by William Elliot contains much new material of high historic opportunely presented. Dr. Asahel C. Ken-sted by Florence Kendrick Cooper, wrote a pay of "Martin B. Anderson, LL. D.," the late of the University of Rochester, and Richard to Call, M. D., prepared for the Filson Clubwille, Ky., The Life and Writings of Radiaciding a bibliography that comprises over a The Pilgrim Fathers of New England. The Pulgrim Fathers of New Englands, by John Brown, D. D., Dr. A. E. Dunning an introduction to the volume, while with the pulgrim of the Women of t Earls to introduce a new series of "Women of and Revolutionary Times." Charlemagns, Jr., contributed by far the most important or published upon "The Marquis de Lafavette American Revolutions" with contributed to the contribution of with contributions. merican Revolution," with some account of de of France toward the War of Independ-2 volumes, characterized by the nest research and warm but impartial admira-

tion for his subject. "Gustavus Adosphus," by the Theodore A. Dedge, in the "Great Cajdante Series," purported to be a history, in fact, of the art of war from its revival after the Middle Ages to the cert of the Spanish encomment war, while fluth Putman portrayed "William the bilent, Primes of Grange" as "The Moderate Man of the histeenth t entury in 2 volumes, based upon his own letters, those of his friends and enemies, and upon orficial documents Montgomery B. (sibbs traced the "Military Career of Napoleon the Great," and "Napoleon Bonaparte's First Campaign " was reviewed, with comments. Lieut. Herbert H. Sargent, U. S. A. "A Short 1 Lieut Herbert H. Sargent, U. S. A. "A misor man of Napoleon Bonaparte," by Ida M. Tarbell, was profusely illustrated, and James A. Weston suggested "Historic Poubla as to the Execution of Marshal Ney." "André Chenter" was the subject of a minuscial by Louie R. Heller. "Famous Leaders & Rod. Ney." "André Chenier" was the subject of a memorial by Louie E. Heller. "Famous Leaders among Women" were the theme of Mrs. Narsh K. Bol-ton, and "Famous Women of History," by William Hardcastle Brown, contained nearly 2,000 brief bio-graphics. The life of "Josephine, Empress of the French," was written by F. A. Ober in the light of recent research, much space being given to her early life in the island of Martinique, while several famous characters are commemorated in " An Old Coomous characters are commemorated in "An Old Con-vent School in Paris, and Other Papers," by Barah C. Woolsey (Susan Coolidge). Bavonarola and Lorenzo de Medici were respectively considered as "The Monk and the Prince," by Attieus G. Hay-good, Sr. From Ashton K. Willard we have "A Sketch of the Life and Work of the Painter Domenico Morelli," one of the foremost contemporary Italian artists, "Pioneer Days," by M. K. D. Trowbridge, artists. In one or Day, by M. P. D. I rownershop, told the life story of Gershom and Elizabeth Day, while "How Marcus Whitman saved Origins," by Oliver W. Nixon, M. D., with an introduction by Frank W. Gunsaulus, D. D., and "The Story of Marcus Whitman," by J. G. Craighead, D. D., alike vindicate early Protestant missions in the Northwest " Luther Halsey Gulick, Missionary in Hawaii, Micronesia, Japan, and China," was written by his dangeter, Frances Gulick Jewett, and to William Rankin we owe "Memorials of Foreign Missionaries of the Presbyterian Church." "Great Missionaries of the by Dr. Charles C. Creegan and Mrs. Joseph-Church." ine A. B. Goodnow, had an introduction by Dr Francis E. Clark, "Charles Francis Harnard A Shotch of his Life and Work," by Francis Tiffany, a "Life of John Livingston Nevius, Forty Years a Missonnary in China," by Mrs. Helen S. Coan, "Forty Years in South China: The Life of the Rev. John Van Nest Talmage, D. D.," by Rev. John Gerardon Fagg., "Reminiscences" of Bishop Thomas M. Clark of Rhode Islandi; a "Memoir of Rev. Baron Now., D. D.," compiled by Rev. J. C. Stock bridge, " Memory of the Life and Religious Labors of Sunderland P Gardner, an autobiography , and " William Mackerge Taylor. Pastor of the Brooks ay Tabernacle Congregational Church," a meroorial volume, belong to religious biography, while "One Rundred Years ago, or, The Life and Times of the Rev. Walter Dulany Addison, was compiled from original papers by 1769-1545 Elizabeth II Morray A new illustrated edition was maurel of "Threescore Years and Beyond," a beek for the aged containing the experiences of a large number the agest containing the experiences of a large number of representative men and women of advanced years, by William H. De. Puy, D. D. Vol. III appeared of "The Writings of Thomas Palme," collected and edited by Moncure D. Conway, covering the period 1791-1804. Charles F. Home edited "Great Men and Famous Women," a series of pen and pencil aketches of the lives of more than 900 of the most prominent personages in history, in 8 volumes, and an amount personages in history, in 9 volumes, and an amony-mous volume supplied photographs and biographies of "Amonou's Greatest Mem and Women." "Studies of Mcn." by George W. Smalley, were collected from the "New York Tribune." Mary Powell Bunker com-piled "Long Island Generalogies; Families of Albert-wer, Redell, Bowne, Carman, Carr. Gowen and others. twing Kindred Descendants of Thomas Powell, of

Bethpage, L. I., 1688"; Henry Carrington Bolton and Reginald Pelham Bolton traced "The Family of Bolton in England and America, 1100-1894," and W. G. Stannard prepared "A Chart of the Ancestors and Pescendants of Rev. Robert Rose."

Criticism and General Literature.—Under both of these heads fall "My Literary Passions," confided to us by Milliam Dean Howells with charming abandon, which awaken many a sympathetic chord. Prof. Hiram Corson defined "The Aims of Literary Study," Hiram Corson defined "The Aims of Literary Study," and Henry Matson, the author of "References for Literary Workers," discoursed of "Knowledge and Culture." Margaret S. Mooney offered "Foundation Studies in Literature," and Greenough White published Part I of an "Outline of the Philosophy of English Literature," devoted to the Middle Ages. Highmar Hjorth Boyesen contributed 7 enthusiastic "Essays on Scandinavian Literature," to which his "Commentary on the Writings of Henrik Ibsen," is "Commentary with the regarded as supplementary." "Commentary on the Whings of Heinit Inseli, such last year, must be regarded as supplementary.
"Old Pictures of Life," by David Swing, to which Franklin H. Head supplied an introduction, filled 2 volumes, and Laurence Hutton was heard from upon "Other Times and Seasons" in the Harper's "American Essayists Scries". Gustav Karpeles wrote on "Jewish Literature and Other Essays." Vol. III of "English Lands, Letters, and Kings," by Donald G. Mitchell (Ik Marvell), carries us through the times of "Queen Anne and the Georges," closing with a portraval of Wordsworth. "Books and their Makers during the Middle Ages" were the subject of 2 volumes by George Haven Putnam, and Brander Mat-thews wrote of "Books and Play-Books." A new enlarged edition was issued of "Essays in Miniature," enlarged ention was issued of "Basays in Miniature," by Agnes Repplier. Thoughts of John Vance Cheney on poetry and the poets were entitled "That Dome in Air," while from Miss Vida Dutton Scudder we have 2 thoughtful volumes, the first tracing "The Life of the Spirit in the Modern English Poets," and the sec-ond offering "The Witness of Denial" in modern English prose writers. Frank Preston Stearns was particularly interesting in "Sketches from Concord and Appledore," and in this connection may be here and Appearor, and it in contection may be near mentioned "Literary Shrines: The Haunts of Some Famous American Authors," by Theodore F. Wolfe, M. D., who also made "A Literary Pilgrimage among the Haunts of Famous British Authors," both volumes exquisite in the technique of book making and fascinating in their affectionate treatment of the subjects of nating in their affectionate treatment of the subjects of each. Elbert Hubbard also made "Little Journeys to the Homes of Good Men and Great." "Hyls of the Big World" were from the pen of W. D. Me-Grackan. Prof. F. M. Warren chose an apparently limited field in his study of "The Novel before the Seventeenth Century," which, however, was found to be wider than was supposed, and which he traversed in an interesting and instructive manner. "Twenty-Mary Fisher. Prof. R. G. Moulton edited "Four Years of Novel Reading," the account of an experiment in popularizing the study of fiction, which he regards, as he tells us in his introduction, as an art, and Hugo Erichsen, M. D., gave special attention to "Methols of Authors." John A. Kersey examined "Ethics of Literature." "Rhetoric: Its Theory and Frances" was the title given to the lectures upon Fraction was the title given to the lectures upon hugash Style in Public Discourse," delivered twelve years ago by Dr. Austin Phelps to the students of Andswer, estited in text-book form by Prof. Henry Adams, resited in text-book form by Prof. Henry Adams Frank. A new revised and enlarged edition was also maded of The Principles of Rhetoric," by Adams Sherman Hill. Gilbert M. Tucker made a prea for the proper use of the English language as "Our Common Speech," and Frances Bennett Callaway treated of "Charm and Courtesy in Letter Writtharies A. Dana collected 3 lectures upon "The Art of Newspaper Making" into a small volume. From Henry Van Dyke we had "Little Rivers: A Book of Essays in Probtable Idleness," and from Rev. George H. Hepworth "Brown Studies; or, Campfires and Morals." George H. Ellwanger entitled 6 com-

mentaries concerning some of those who have aportrophized the joys of the open air "Idyllists of the Country Side"; and among books chiefly description of the beauties of Nature are to be mentioned "Amonthe Northern Hills," by William Cooper Prime, the author of "Along New England Roads"; "From New England Hillside: Notes from Underledge," he William Potts; "Broken Notes from a Gray Numery," by Julia Sherman Hallock"; and "Throug Clade and Mead" by Joseph Jackson, Stetches Glade and Mead," by Joseph Jackson. Sketches life, scenery, and character in Fairfield, Conn., w published by Frank S. Child as "An Old New E land Town," and Mrs. Alice Morse Earle portra land Town," and Mrs. Alice Morse Earte portra "Colonial Dames and Good Wives" in pleasing fa-ion. "The Fast and Thanksgiving Days of N England," as examined by Rev. William De L Love, Jr., presented a striking picture of the religion social, and political life of the times, and also tained a unique calendar in tabular form of all the days actually observed from 1620 to 1815, runn days actually observed from 1620 to 1815, runni through 50 pages. "The Growth of the Idyls of the King" was traced by Prof. Richard Jones. "Fran Bacon and his Shakespeare," by Theron S E. Dize renews a controversy which is still further set forth "The Plays of Shakespeare founded on Liter Forms," by Henry J. Ruggles, who presumes the forms to have been laid down by Bacon. Vols. and V appeared of "Sir Francis Bacon's Cipl Story," as discovered and deciphered by Orville Owen, M. D., who published also "The Historic Tragedy of Mary, Queen of Scots" and "The Traical Historic of our Late Brother, Robert, Earl Essex," both derived from the same source. Par Essex," both derived from the same source. Par Essex," both derived from the same source. Par Elizabethan Lyrics," with an introduction, and 1 pages of notes; "Readings from the Old Engli Dramatists; with Notes," by Catherine Mary Regular Wilson, Silds Wilson, sources, and Prof Morton olds Winslow, filled 2 volumes, and Prof. Morton Easton edited "Readings in Gower." "The Bro Heart" of John Ford was also edited, with notes, Clinton Scollard. Prof. Albert S. Cook preparation of Exercises in Old English," based upon the prose to the cook of his "First Book in Old English." "Elements
Greek Education," by Frederick H. Lane, outlin
the aims, methods, and results of education in Gree
prior to 404 B.c., and "Roman Life in Latin Pre
and Verse" consisted of illustrative readings fre and verse consisted of flustrative readings.

Sloan, and Brander Matthews, and a "History W. M. Sionn, and Brander mainteen, 1824–1824, of the Renselaer Polytechnic Institute, 1824–1824, was written by Palmer C. Ricketts. "A History of Authorst Collins during the Administrations of its Amherst College during the Administrations of First Five Presidents, from 1821 to 1891," by William S. Tyler, D. D., is at once an abridgement and a continuation of the "History of Amherst College during its First Half Century, 1821-1871," and had an introductory note by Dr. Richard Salter Storra. A second edition was made of "How to teach Natural Science in Public Schools," by Hon. William T. Harris, in "School Bulletin Publications," and Frank Owen Payne found One Hundred Lessons in Nature Study around my School," Isabella G. Oakley published "Simple Lessons in the Study of Nature for the Use of Pupile," and " Little Nature Stories for Little People " pais, and lattic Nature Stories for Little People were adapted from the essays of John Burroug he and edited by Mary E. Burt. From James A. McLeilan and John Dewey we had "The Psychology of Number and its Applications to Methods of Teaching Arithmetic"; from Gordon A. Southworth Book II of "The Essentials of Arithmetic, Oral and Written, "The Essentials of Arithmetic, Oral and Written," for upper grades; from John Jackson "The Teaching of Handwriting"; from Spencer Trotter, M. D., "Lessons in the New Geography for Student and Teacher"; from Amos M. Kellegg "Forty Lessons in Clay Modeling"; from W. Bertha Hintz "Illustrative Blackboard Sketching"; and from Amos K. Cross "Free-hand Drawing," "Color Study," and "Mechanical Drawing," manuals for teachers and students. In collaboration with Amy Swain the same author also necessive as "Tentine of Drawing and previous as "Continue of Drawing and previous as "Continue of Drawing." same author also prepared an "Outline of Drawing Lessons " for primary and for grammar grades, the series of "Eelectic School Readings" we "Stories of Great Americans for Little American and "Stories of American Life and Adventure," Edward Eggleston, while "The Story of Patrices Edward Eggleston, while "The Story of Patricas" Day, Lexington and Concord, April 18, 1775," by George J. Varney, shows how the anniversary may be commemorated by schools. "Arthor Day and Aids for its Proper Observance by the Schools of Wisconsis" was issued by the Department of Pablic Instruction of that State. Charles H. Leversore and Frederick Reddall compiled "The Academy Songs Book," for use in schools and colleges, Edward & Ellis edited "The Youth's Classical Dictionary for Boys and Girls," and "The Schoolmaster in Cosmedy and Satire" was argained and edited as a commension. and Satire "was arranged and edited as a company volume to "The Schoolmaster in Literature."

Piction.—Ten hundred and fifty new books of faction were recorded in 1895 against 575 in 1895, and but 64 new editions against 156 the preceding year. F. Marion Crawford continued the story of "Ratharino Lauderdale" in 2 volumes devoted to "The Ratharino Lauderdale" in 2 volumes devoted to "The Ratharino," and then returned to his more congenial Italy for the setting of the powerful story of "Casa Braccio," which was also issued in 2 volumes and illustrated by A. Castaigne. Richard Harding Davis told a sweet and satisfactory love story in "The Irinossa Aline." Frank R. Stockton was hardly at his best in relating "The Adventures of Captain Horn," but his admirers were delighted with "A Chosen Few." of his best short stories collected into a volume, which how all known authors were represented only by vol-

umes of short stories. Henry James published "Terminations"; Henry Harland (Sidney Luska) entitled his "Gray Roses"; F. Hopkinson Smith portrayed "A Gentleman Vagabond and Some Others"; Constance Fenimore Woolson was sadly recalled by "The Front Yard, and Other Italian Stories" and "Dorothy, and Other Italian Stories"; Charles Egbert Craddock (Mary N. Murfree) published 2 volumes, "The Phantoms of the Footbridge, and Other Stories" and "The Mystery of Witchface Mountain, and Other Stories"; and Kate Douglas Wiggin gave the title of "The Village Watch Tower" to 6 tales. Maria Louise Pool contrasted the opposing tempera-Maria Louise Pool contrasted the opposing temperaments of our widely separated sections of country in her novel, "Against Human Nature," and Eliza Orne White produced a strong story in "The Coming of Theodora." "The Life of Nancy," as told by ing of Theodora." "The Life of Mancy, Sarah Orne Jewett, was at once pathetic and hope-ful, while from Mrs. Constance Cary Harrison (Mrs. Burton Harrison) we had "An Errant Wooing" un-der varied skies. "With the Procession" was ander varied skies. other novel of Chicago life by Henry B. Fuller (Stanton Page), who apparently succeeds as well in his realistic vein as in his ideal and remantic one. From realistic vein as in his ideal and romantic one. From Brete Harte came "Clarence" and "In a Hollow of the Hills," and Capt. Charles King told "The Story of Fort Frayne," publishing also "Captain Close and Sergeant Cressus," 2 stories in 1 volume, and "Trooper Ross," with which was also bound "Signal Butte." He also edited "Captain Dreams, and Other Stories." "A Madeira Party," by Dr. S. Weir Mitchell, was the title given to a volume of 2 short stories which show he has lost none of his power. stories which show he has lost none of his power, and "Philip Vernon," also from his pen, proved to be a tale in prose and verse of the days of Elizabeth and the Spanish Armada. "Mr. Rabbit at Home" was intended as a sequel to "Little Mr. Thimble-Harris, whose "Uncle Remus" went through a new Harris, whose "Uncle Remus" went through a new and revised edition during the year. "A Singular Life" was outlined by Elizabeth Stuart Phelps (Mrs. Herbert D. Ward), and "A Dash to the Pole" was made by her husband in a wildly imaginative flight in an air ship. "The Wise Woman" was the title of Mrs. Clara Louise Burnham's helpful novel, and Rose Porter made a charming picture of "My Son's Wife." "Bernicia," the only contribution of Mrs. Amelia E. Barr, was an English story of the close of the eighteenth century. "On the Point" was a sum-"On the Point" was a sumthe eighteenth century. mer idyl by Nathan Haskell Dole; Hezekiah Buttermer idyl by Nathan Haskell Dole; Hezekiah Butter-worth related the romance of a colonial fireside "In Old New England"; and Dr. Charles Courad Abbott described "A Colonial Wooing." Mary Catherine Lee, the author of "A Quaker Girl of Nantucket," was equally successful with "A Soulless Singer"; Mary Hallock Foote was welcomed once more with "The Cup of Trembling, and Other Stories": "The Sister of a Saint, and Other Stories," by Grace Ellery Channing, appeared in the "Carnation Series"; and Julien Gordon (Mrs. Julia Van Rensselaer Cruger) teld of " A Wedding, and Other Stories," Amanda M. Policias sent out 3 books, "Sherburne Cousins," "A Sherburne Romance," and "In Wild Rose Time. The vested problem of capital and labor formed the theme of an entirely new writer, Helen Choate Prince, a granding ther of Rufus Choate, in "The Story of threshie Roshefort," the scene of which is laid in Bles the retwn times. The book preserves throughout not a one its interest, but the elevated tone which is its in st attra tive characteristic. "The Doctor, has Wite, and the Clock" and "Doctor Izard" belonged to Anea Katharine Green (Mrs. Charles Robits). A lead flavor attaches to "Miss Cherry-Blesseem of Tickyh," by John Luther Long, and "The Pangirina Muda," a romance of Malaya, by Rounseville Wildman. "The Princess Sonia," by Julia Magruder, was a pretty romance of the Latin quarter.
"Notes of a Professional Exile." by E. S. Nadal, analyze the character and foibles of the American woman abroad. "In the Land of the Sunrise" was he story of a Japanese family and the wonderful

land they live in, written by Robert N. Barrett with land they live in, written by Robert N. Barrett with object of awakening interest in missionar labor, while "The Land of the Sun (Vistas Mexicanas)," by Christian Reid (Mrs. Frances C. Fishe Tiernan), under the form of a story, gives a vivid in pression of travels in that republic. "Wild Rose, by Francis Francis, was a tale of the Mexican from the company of Mexico," by San Labe invalidated a story of Mexico, by San Labe invalidated a story of Mexico, "by San Labe invalidated at the methods of the control of the control of the methods of the control of the control of the methods of the control of th Hale, inveighed strongly against the methods of th Catholic Church in that country, and "Through Forest and Piain: A Tale of Flowers and Filibus ters," by Ashmore Russan and Frederick Boyle, and "Under the Lone Star," a story of the revolution is "Under the Lone Star," a story of the revolution in Nicaragua, by Herbert Hayens, are akin in theme-viz., the expedition of William Walker. "Sinner Twain" and "The Devil's Playground," by John Mackie, were romances of the Canadian northwest and, returning to our own country, we have "Lisbet Wilson: A Daughter of New Hampshire Hills," I Mrs. Eliza Nelson Blair, the wife of Senator W. Blair, who appears for the first time in the literary world with this sweet and simple story. From Alie Brown we have "Meadow Grass," 5 tales of New Eng land life; from Dane Conyngham, "Eunice Quince," a New England romance; from Henrietta G. Rowe. "Queens-Hithe," quaintly named from an old English custom; from Christopher Craigie, "An Old Man's Romance"; from William Whittemore Tufta, "A Market for an Impulse"; from Francis H. Underwood, "Doctor Gray's Quest"; from Emory J. Haynes, "A Farmhouse Cobweb," a tale of rural life in Vermont in the war time; from Augusta Campbell Watson, "Off Lynnport Light"; from Anne Kendrick Benedict, "An Island Story"; and from George Wharton Edwards, "The Rivalries of Long and Short Codiae," 10 short stories of the coast of Maine, illustrated by himself. "The Keys of Fate," by Herman Shores, also has its seene laid in New England, and deals with current questions of reform. land life; from Dane Conyngham, " Eunice Quine England, and deals with current questions of reform.
"Four Girls at Cottage City" had their adventures narrated by Emma D. Kelley Hawkins, and Blis Perry described a Connecticut town as "The Plated City." "Doctor Hathern's Daughters" was a story of Virginia by Mrs. Mary J. Holmes; "A Girl's Life in Virginia before the War," by Letitia M. Burwell, was illustrated by W. A. McCullough and Jules Turcas; and "Christmas Week at Bigler's Mill" was according to Dora E. W. Spratt, a sketch in black and white James Lane Allen published "Aftermath," Part 11 of "A Kentucky Cardinal," and "Young Greer of Kentucky" was the title of a novel by Eleanor T. Kinkead. "The Heart of Old Hickory, and Other Stories of Tennessee," by Miss Will Allen Dromgoole, had a preface by B. O. Flower, and "A Little Sister to the Wilderness," by Lilian Bell, told of life among the poor whites of West Ten-England, and deals with current questions of reform Allen Dromgoole, man a preme by D. O. S. Allen and "A Little Sister to the Wilderness," by Lilian Bell, told of life among the poor whites of West Tennessee. Opie P. Read (Arkansas Traveler) located a romance "On the Suwanee River," and North Carolina was the seene of "Jack O'Doon," by Maris Beale, as Texas in the war time was that of "Under the Man-Fig," by Mrs. M. E. M. Davis, "Mammy Mystic," by M. G. McClelland, and "Beatrice of Bayou Téche," by Alice Ilgenfritz, have for motify the existence of African blood in their respective the cristes, and the race problem of the South is discussed in "The Sons of Ham," by Louis Pendleton, who published also "Corona of the Nantahalas." "The Hand of Fate" was a romance of the navy, by Kate Lilly Blue, and rural life in Arkansas formed the Kate Lilly Blue, and rural life in Arkansas forme background of "Beholding as in a Glass," by Mrs. Virginia D. Young. "Stories of the Foothills" of Southern California, by Mrs. Margaret Collier Graham, were collected into a volume, and the same country is the scene of "Go Forth and Find," by Thoma try is the scene of "Go Forth and Find," by Thomas H. Brainerd. "'Cension: A Sketch from Paso del Norte," by Maude Mason Austin, appeared in "Harper's Little Novels," and Louis B. France led his readers with interest "Over the Old Trail" to a Colorado mining camp. "The Company Doctor," by Henry E. Rood, pointed out the dangers resulting the constructed engineering as accomplified in the construction. on unrestricted emigration as exemplified in the coal

of Pennsylvania, which are the scene also of False Charge," by Seward W. Hopkins; and the Hill made a plea for free silver in "The Cafeen." Demonstration of silver and its attendant evils were the theme of "A Tale of sations," by William H. Harvey. Eugene F. and Maurice Eisenberg wrote "Doctor Canada Maurice Eisenberg wrote "Doctor Canada Maurice Eisenberg wrote" ria and Maurice Eisenberg wrote "Doctor Cain the interest of toleration for the Jewa,
y Olivia," by W. C. Falkner, carries the reader
to days before the Revolution; H. C. ChatTaylor published "Two Women and a Fool,"
fork life is portrayed in "The Manhattanby Edward S. Van Zile; "His Father's Son,"
to Brander Matthews; and "Dolly Dillenby James L. Ford, who was also the author
themia Invasied, and Other Stories." Historical
of fetion were: "The Story of the Other Wise
by Henry Van Dyke; "Hadassah; or, Esther,
to Ahashuerus," by Mrs. T. F. Black, in the
ten Rod Edition," and "Dervorgilla; or, The
fall of Ireland," by Anna C. Scanlan, completed
wised by Charles M. Scanlan. "In Defiance of

Carlisle B. ex described "An Odd Fellow," as Julian Starr The Disagreeable Woman," and Frances E. I "A Quaint Spinster," "The Veiled Doctor" title of a strong, if gruesome, story by Varina the title of a strong, if gruesome, story by Varina be defenson Davis, a daughter of the late l'resiste of the Confederate States. Music was the theme lim Triumerei: A Weimar Idyl," by Albert cris Begby, and "The Minor Chord," a story of a medonas, by J. Mitchell Chapple. Mrs. Reginald Koven wrote "A Sawdust Doll"; C. E. Francis, Kovey Day's News"; Clement Wilkes, "Sidney wrote"; Mrs. Katharine S. Macquoid, "Berris"; y Harriott Norris, "Lakewood"; Mrs. Julia College Herbert wildy, "Hill-Creat"; Mrs. Evelyn H. Haydd, "The Mushroom Cave"; George Herbert wildt, "Water Tramps; or, The Cruise of the Scandit, "Water Tramps; or, The Cruise of the Scandit, "Girls Together," "The Master Kites, "Another Story," by Conover Duff, appeared in

the "Buckram Series"; and Jean Foreith, tolli of "The Making of Mary" Jessie Van Zile Bedden med "Fate at the Door," and Ethel Davis found something left after all "When Love is done" Blanche Fearing told the story of "Roberta." "The Lady and her Tree," by Charles Stoken Wayne, was professedly a story of society; as was "Franc Elliott. A Story of Society and Bohemia," by Charles Howell, S. Wells described "The Time Machine: An Invention." "The Young Reporter: A Story of Printing-House Square," by William Drywlale, came out in the "Brain and Brawn Series"; Mabel Henehaw Ward published "The Diary of an Old Madd," Francis Tillou Buck settled the affairs of "A Man of Two Minds," and "Miss Jerry," by Alexander Black, proved interesting as expanded from a reading into a novel. "His Way and Hers," by W. A. Robinson; "Three-and-Twenty," by Mrs. Nathaniel Conklin (Jennie M. Drinkwater); "The House of Hollister," by Fanny E. Newberry; and "Almost a Genius," by Adelaide L. Rouse, were all helpful in tone. Elizabeth Knight Tompkins attempted the social problems in "Her Majesty," a romance of to-day, William H. Bishop solved the labor quention to his satisfaction in "The Garden of Eden, U. S. A.," and a strike is described with effect in "Men Born Equal," by Harry Ferry Robinson. "An Experiment in Altruism" was by Elizabeth Hastings (Margaret Poliock Sherwood). "A Street in Suburbia," by Edwin W. Pugh, "The Human Drift," by King C. Gillette, and "Altruis," by Titus K. Smith, deal also with social questions, and "A Modern Despotism," by Marcus Peterson, claimed to be a true story of American political life in 1893. "A Daughter of the Tenements," by Edward W. Towntrue story of American political life in 1892. "A true story of American political life in 1893. "Appendix of the Tenements," by Edward W. Townsend, the successful author of "Chimmie Faidden," was illustrated by E. W. Kemble, and from Alvan Francis Sanborn we had "Moody's Lodging House and Other Tenement Sketches." "Doctor Judas," by William Rosser Cobbe, was intended as a pertrayal of the opium habit, and "A Voice in the Wilderness," by Maria Weed, also protested against it. "At Last," by Maria Weed, also protested against it. "At Last," by Mrs. Maria E. Lauder, was written from the W. C. T. U. standpoint. Frances Campbell Spas-hawk again made a plea for the Indian in "Senator nawa again made a pies for the indican in "Schador Intrigue and Inspector Noscby: A Tale of Speaks." A Minister of the World," by Caroline Atwater Mason, "A Great Appointment," by Myra Gossidwin Plantz, "The Rev. John Henry," by Percival K Benson, and "One Woman's Story," by Ellen A Lata, were religious in tone; "What I told Dorcas," by were religious in tone; "What I told Dercas," by Mary E. Ireland, was intended for mission workers; and "Zeinab, the Panjabi," by E. M. Wherry, D. D., claimed to be founded on facts. "Elebings from a Parsonage Veranda" we owe to Mrs. E. Jeffers tira-ham. "The Fisherman's Daughter," by Asse Kem-drick Benedict, "Five Stars in a Little Pool," by Edith Carrington, and "A Waif—A Prince," by Esse. W. T. Andrews, were written with a medive, as was also "After which all Things," by George W. Warder. Among books written for amusement mere-ly, and with no attempt at edification, are to be men-tioned "Patricia," a sequel to "Two Bad Reeum Eyes," by Marie St. Felix; "The Rise of Mrs. Simp-son," by Robert Appleton (Roman I. Zubof); "A Eyes, by Marie St. Feitt; "The Rise of Mrs. Samp-son," by Robert Appleton (Roman I. Zubof); "A Title Rejected," by Octavia Clouston; "A Modern Pharisee," by Edward De Brone; "Sarah Martha in Paris," by Sadee Bourgoin; "Campuigns of Curi-Paris," by Saidee Bourgoin; "Campungue of an entry," an account of the journalistic adventures of an entry," an account of the journalistic adventures of an osity, an account of the journalistic advantures of an American girl in London, by Elizabeth L. Banke; "Paul St. Paul," by Ruby Beryl Kyle; "The Lost of the Danvers," by Edward Lyman Bill; and Albert Rose's two books, "Out of Wedlock" and "A Black Adons." Richard Henry Savage was prolife as ever, publishing "Miss Devereux of the Marquita," a story of bonanza days in Novada." A Dandard. of benanza days in Nevada; "A Daughter of Julia of benanza days in Nevaga; "A Paugnter of Juna, a fin of wicele tale of New York city H6; and "In the Old Chateau," a story of Russian Poland. Hallie Erminie Rives, a count of Amelie Rives, contributed "A Feol in Spots." "The Strange Disappearance of Eugene Comstock," by Mrs. Mary R. F. Hatch, and

"Caught: A Romance of Three Days," by George Douglas Tallman, were both detective stories; "A Social Highwayman" was the hero of Elizabeth Phipps Train, and "Ronbar," by R. S. Dement, advanced opinions and facts connected with the free comage of silver. William Gill told of "The Woman Who Didn't" and William C. Hudson (Barelay North) asked "Should She have left Him f" "Storm King" was a story of want and wealth which involved the invention of an air ship, and another improbable story was "Thomas Boobig," by Luther Marshall. "The Mystery of Evelin Delorme? was a hypnotic story by Albert Bigelow Paine; spiritualism was the answer to "Pilate's Query," according to S. C. Clark; and theosophy was responsible for "Etidopha; or, The End of Earth," by Llewellyn Drury and John Uri Lloyd, a handsomely illustrated volume of philosophical fletion; as well as for "The Double Man," by F. B. Dowd, "The Hidden Faith," by Alwyn M. Thurber, and "In the Sanctuary," by A. Van der Naillen. Psychic science was touched upon in "Zaphra," by John P. Stockton, and "Brother of the Third Degree," by Win, L. Garver, must close the list of works of the kind. "A Savage of Civilization "was published ainonymously; Wilbertine Teters entitled her novel "The Snows of Yesteryear"; and in the "Enterprise Series" we had "The Adventures of Uncle Jeremiah in the South," by C. M. Stevans; and "An Appalling Passion," by Steele Mackaye.

Volumes of short stories not previously mentioned were: "Foam of the Sea, and Other Stories," by Gertrude Hall; "A Mad Madonna, and Other Stories," by L. Clarkson Whitelock; "Yarns," by Alice Turner; "Old Man Savarin, and Other Stories," by Edward "Old Man Savarin, and Other Stories," by Edward W. Thompson; "The Old Settler, the Squire, and Little Peleg," by Edward Mott; "Bunch-Grass Stories," by Mrs. Lindon W. Bates; "College Girls," by Abbe Carter Goodloe; "The Nimble Dollar; with Other Stories," by Charles Miner Thompson; "Tales of an Engineer," with rhymes of the road, by Cyrus Warman; "A Man without a Memory, and Other Stories," by W. H. Shelton; "Tenement Tales of New York," by J. W. Sullivan; "People we Pass," life among the masses of New York city, by Julian Ralph; "Princeton Stories," by Jesse Lynch Wil-Ralph; "Princeton Stories," by Jesse Lynch Williams; "Yale Yarns," by John Seymour Wood; "A Cumberland Vendetta, and Other Stories," by J. Fox, Jr.; "Aunt Billy, and Other Sketches," by Alyn Yates Keith (Mrs. Eugenia L. Morris), the author of "A Hilltop Summer"; "Hippolite and Golden-Beak: Two Stories," by George Bassett, in the series of "Har-Jer's American Story-Tellers"; "An Accidental Ro-mance," by William Sidney Rossiter; "The Bacho-lor's Christmas, and Other Stories," by Robert Grant; "Red Men and White," by Owen Wister; "A Truce, and Other Stories," by Mrs. Mary Tappan Wright;
"The Face and the Mask," by Robert Barr; "Kitwyk
Stories," of Holland, by Anna Eichberg King; "Me
an' Methuselar, and Other Episodes," by Harriet Ford; "Legends of Fire Island Beach and the South Side," by Edward R. Shaw; and "From Dixie to Canada," remanders and realities of the underground railroad, as H I Johnson. An edition of Corners parely TO H U Johnson. An edition of Cooper's novels, known as the "Mohawk Edition," was published durthe year, in 32 volumes; and Thomas Nelson l'age's "Une' Edinburg" was made into a holiday voland "Meh Lady," and "Meh Lady," and "Latrated by B. W. Clinedinst. William Me-Tills broaded published "A Descriptive List of America , Part I of a similar volume covering an-cient Listory = A Descriptive List of Books for the Young . and a new enlarged edition of "A Descriptive Larged International Novels."

Fine Arts—In summing up the literature of art for the year we find fundamentals treated in "Æsthetic Principles," by Henry Rutgers Marshall, the author of "Pain Pl assire, and Æstheties"; George Lansing Raymend considered "Painting, Sculpture, and Architecture as Representative Arts" in a profusely illustrated volume, which Le termed in subtitle an essay

in comparative aesthetics, and which follows out the principles laid down in "Art and Theory," published by him last year, as applied to the arts of sight. To other essays on "Rhythm and Harmony in Poetry and Music" and "Music as a Representative Art." also from his pen, were bound in one volume. John La Farge published lectures given by him at the Metropolitan Museum of New York, under the title of "Lectures on Art, Considerations on Painting", and John C. Van Dyke was an authority upon "Old Dutch and Flemish Masters," the engravings of which (30 in number) were the work of Timothy Cole, from the original paintings, and were collected from the "Century Magazine," in which they have appeared during the last three years. The book was appeared during the last three years. The book was intended as a companion volume to "Old Italian Masters." Frank Preston Stearns treated of "The Midsummer of Italian Art," and William Ordway Partridge of the "Technique of Sculpture." "A Cyclopedia of Architecture in Italy, Greece, and the Levant," edited by William P. Longfellow, was a sumptuous quarto, abounding in illustrations, which represented the labor of years in preparation, and was issued in uniform style with the "Cyclopedia of Painters and Painting" and "Cyclopedia of Music and Musicians." William Winter brought out a third series of "Shadows of the Stage." and Charles E. L. series of " Shadows of the Stage," and Charles E. L. series of "Shadows of the Stage," and Charles E. L. Wingate dealt with "Shakespeare's Heroines on the Stage." S. S. Curry published Course I of "Lessons in Vocal Expression," given to "Principles of Thinking in the Modulation of the Voice." John H. Roser wald compiled "The Musician's Leisure Hour," full of facts and fancies of interest to the music lover, and Margaret Reintzel arranged "The Musician's Year-Margaret Reintzer arranged The Musican's Teachers book." Anna Siedenburg gave instruction in the different kinds of "Glass Painting," and Mrs. Flora E. Haines published "A Keramie Study" of half a dozen dinner plates. Aimée Osborne Moore made "Studies in the Science of Drawing in Art." James Brander Matthews contributed "Bookbinding, Old and New: Notes of a Book Lover" to the "Ex-Libris Series." Foremost among illustrated works is to be mentioned "The Abbey Shakespeare," or, more properly, "The Comedies of Shakespeare," in 4 volume containing 131 full-page photogravure reproductions of drawings by Edwin A. Abbey; and from another publisher we had reproductions of "The Quest of the Holy Grail," a series of paintings done by the same artist for the decoration of the delivery room in the Boston Free Public Library, with descriptive text Gilbert White's "Natural History of Selborne" was brought out in a handsome holiday form in 2 volumes, illustrated by Clifton Johnson, and furnished with an introduction by John Burroughs, who, with with an introduction by John Burroughe, the artist, visited the quaint little Hampshire village the artist, visited the quaint little Hampshire village the artists are reformed. the artist, visited the quaint little Hampshire village in order that the part of each might be performed satisfactorily. Another beautiful book of American manufacture was Edmund H. Garrett's "Victorian Songs," a companion volume to his "Elizabethan Songs," "Joseph Jefferson's 'Rip Van Winkle'" was illustrated with drawings and photogravures; 5 from paintings of the actor himself; and yet other gift books were "Dames of High Degree," by Thomson Willing, portraits of beautiful women by old son Willing, portraits of beautiful women by old son Willing, portraits of beautiful women by old English masters; "A Cluster of Gems," selections of poems, edited by Volney Streamer, with facsimiles of water-color paintings by Ellen G. Emmet; "Fac-similes of Water Colors," by W. Granville Smith; and "Fair Women of To-day," previously unpub-lished poems by Samuel Minturn Peck, filustrated with facsimiles of painting in water calcable. with facsimiles of paintings in water color by Caroline C. Lovell. Irving's "Tales of a Traveler" were issued in 2 volumes of the "Buckthorne Edition," uniform with "The Alhambra" and "Sketch Book." unnorm with "The Albamora" and "Sketch Book.
Frederick Remington furnished 22 full-page illustrations for "The Song of Hiawatha," and Mrs. Jane G.
Austin's "Standish of Standish" received artistic treatment at the hands of F. T. Merrill. Scott, "Rob Roy," "The Betrothed," and "The Talisman," and De Amicis's "Spain and the Spaniards" were made into superb volumes.

Consed Science.—Worksfalling under this head were, in usual, largely of a popular character. Among the list in point of interest is to be mentioned "Domestated Animals: Their Relation to Man and to his Advancement in Civilization," by Prof. Nathaniel louthque Shaler, illustrated by such famous artists a Dalort, of Paria, who drew the horses; Hermann Lien, the dogs; Edwin Lord Weeks, the beasts of orden; and Ernest E. Thompson, the Canadian orthologist, the birds. Rush Shippen Hindekoper, L. D., made a study of "The Cat." "Elementary Lemais in Zoology," by James G. Needham, was insided as a guide in studying animal life and structure in field and laboratory, and Margaretta Burnet usuared a "Zoology for High Schools and Academa" "Geological Biology," by Henry Shaler William, proved no less interesting to the general reader has to the students in universities and colleges, and lavid Start Jórdan published under the title of "The laters in Organic Evolution" a syllabus of a course of the forms and probable relationships a outline of the forms and probable relationships "Takes Living and Fossi!" illustrated by the anmer session of 1894 were collected into a volume an outline of the forms and probable relationships Fishes Living and Fossil," illustrated by the authoral Dean, appeared in the "Columbia versity Biological Series," edited by Henry F. O. Costa. Parts IX, X, XI, and XII of the second mae of H. Nehrling's "North American Birds" is insued; "Birderaft," by Mabel Osgood Wright, a handbook of 200 song, game, and water birds, a numerous full-page plates; Frank M. Chapman to a "Handbook of Birds of Eastern North American Shore and Dan Giraud Elliot "North American Shore d Dan Giraud Elliot " North American Shore and Dan Giraud Elliot "North American Shore that," a reference book for the naturalist, sportsman, at lover of birds. Prof. M. A. Willeox supplied a resket Guide to the Common Land Birds of New Find," and a new edition of Henry D. Minot's Land Birds and Game Birds of New England "was blished, edited by William Brewster. Prof. John cary Comstock and Anna Botsford were joint autor of "A Manual for the Study of Insecta." Trail Children of the Air," as Samuel Hubbard and the rentitled his excursions into the world of butfelles, consisted of selections for the general reader sted of selections for the general reader as, consisted of selections for the general reader his costly work upon the "Butterflies of the rm United States and Canada." Parts XV and of W. H. Edwarda's third series of "The But-mof North America" appeared, and yet two moful little books were "The Night Moths of meful little books were "The Night Mothe of England" and "The Day Butterflies and Dusks of New England," by Edward Knobel. Vol. of "The Silva of North America," by Charles the Bargent, was issued, devoted to "Cupulif-Emily L. Gregory set down the "Elements of Anatomy," and D. T. Macdougal treated of the Milliam Hamilton Gibson not only told of Edilla Teadatoole, and How to Distinguish Edible Toadstools, and How to Distinguish but illustrated the selection of 30 native food ies with many full-page colored plates and 57 age in black and white. "Wild Flowers of ortheastern States," were drawn and described by Rilen Miller and Margaret Christine

g and a new revised and enlarged edition was

of Mrs. Frances Theodora Dana's "How to

be Wild Flowers," to which 52 new plates

ded and descriptions of 60 additional flowers. Mar Flowers of Field and Garden" were deand illustrated by F. Schuyler Matthews; it Knobel furnished "A Guide to find the of all Wild-growing Trees and Shrubs of New and by their Leaves." and another for the demination of "Ferns and Evergreens of New Eng-mination of "Ferns and Evergreens of New Eng-d." The relations existing between "Ten New tand Blossoms and their Insect Visitors" were ted in a dainty volume from Prof. Clarence Mesers and W. Whitman Bailey was at home "Among ode Island Wild Flowers." S. C. Young illus-led with many photogravures from the living

plant "All of Nature's Fashions in Lady's Migyers for the Northern and Eastern Parts of the Indies States. In astronomy we have a hands one velume upon " Mare," by l'ercival Lovell, the result of a ejeccial study of that planet from an observatory at Plagcial study of that planes from an observatory at Fagge staff, Arizona, erected for the purpose during the last opposition; "The Source and Mode of Solar Energy throughout the Universe," by I. W. Heysinger, M. D., and "Studies in Spherical and Practical Astronomy," by George C Comstock, the last a bulletin in "University of Wisconsin Science Series" teorology " was the subject of a volume by Thomas Russell. "Minerals and how to Study them " was a book for beginners in mineralogy by Edward Salis a look for occurrence in mineratory by natural main-bury Dana, and Alfred J. Moses and Charles La-throp Parsons were joint authors of "Elements of Mineralogy, Crystallography, and Blowpape Analy-ris" from a practical standpoint. William Herbert Hobbs made a A Constitution to the Monetage of Hobbs made " A Contribution to the Mineralogy of Wisconsin" in the bulletine published by the Univerwisconsin in the bulletins published by the University of that State, and a monograph upon "The Constitution of the Silicates," by Prof. Frank W. Clark of the United States Geological Survey was sent out by the Government Printing Office. From John H. Long appeared "An Elementary Course in Experimental and Analytical Chemistry"; Ira Remsen and Wysts and Analytical Chemistry"; Ira Remsen and Wyats W. Randall published "Chemical Experiments prepared to accompany Remen's Introduction to the Study of Chemistry'"; a "Laboratory Manual of In-organic Preparations," by H. T. Vulte and George M. Neustadt, was designed to meet a long-felt want in training the student to prepare and test his own so-agents; E. W. Morley added a nonegraph " (in the agents; r. w. morrey assers a montegraps "on the Densities of Oxygen and Hydrogen and on the Ra-tio of their Atomic Weights" to the "Smithsonian Contributions to Knowledge"; and a "Manual of Home-made Apparatus, with Reference to Chemistry, Physics, and Physiology" was a small but helpful publication by John F. Woosthull. "The Principles of Physics " were set forth by Alfred P. Gage is an entirely new work; S. P. Meads arranged " Elements of Physics for Use in Secondary Schools"; Part I of "Physics for University Students," by Henry S. Car-hart, covered "Mechanics, Sound, and Light." Vol. HI of "The Elementary Principles of Mechanics," by A. J. Du Bois, was devoted to "Kinetics"; A. D. Risteen treated of "Molecules and the Molecular The-ory of Matter" in a popular manner; and Robert ory of Matter" in a popular manner; and Robert Stevenson in "Elasticity a Mode of Motion" gave a popular description of a new discovery in someon. Two volumes contained the "Fourteenth Annual Report of the United States Geological Survey " for th rear 1892-93 by the then director, J. W. Powell, and from the same distinguished authority we have a small brockures, published in the series of " National Geographic Monographs," into which he has consistent the results of a lifetime of study and exponention. These are respectively "l'hysiographic Esgions of These are respectively "Investigraphic Processes," and "Physiographic Features," the two last illustrated. To the same series Prof. 6. K. Gilbert contributed To the same series Prof. G. K. Gilbert contributed "Niagara Falls and their History"; Prof. Nathaniel S. Shaler, "Beaches and Tidal Marshes of the Atlantic Coast"; William Morris Davis, "The Physical Geographs of Southern New England"; C. Willard Hayes, "The Southern Appalachians"; and Israel Clark Russell, "Present and Extinct Lakes of Newarla." From the Isst-mentioned author we had also a volume upon "Lakes of North America," intended as a reading lesson for students of geography and geology. Prof. R. S. Woodward prepared the "Smithmonian Geographical Tables," the second volume of the sonian Geographical Tables," the second volume of the new series of valuable tables issued by that institution. In ethnology we have "A Primer of Mayan Hiero-glyphics," by Dr. Daniel G. Brinton, in the "Publicaglyphics," by Dr. Daniel G. Brinton, in the "Tubiconion to the University of Pennsylvania," and "Notes on the Ethnology of Tibet," by William Woodville Evskhill, taken from the "Report of the United States National Museum." "The Origins of Invention," a study of industry among primitive peoples, by Prof. Otis T. Mason, appeared in the "Contemporary Science Series." "Some First Steps in Human Progress" were traced by Frederick Starr, who also contributed an introduction to "The Beginnings of Writing." by Walter J. Hoffman, M. D., in the "Anthro-

pological Series."

To mental philosophy there were some important additions, notably "Philosophy of Mind," an essay in the metaphysics of psychology, by George Trum bull Ladd, and "Mental Development in the Child and the Race," the methods and processes of which were traced by Prof. James Mark Baldwin. "Thinking, Feeling, Doing," by Dr. E. W. Seripture, Director of the Psychological Laboratory in Yale University, is, it is claimed, "the first book on the new or experimental psychology written in the English language," and contains over 200 illustrations. "The Growth of the Brain," a study of the nervous system in relation to education, was contributed by Prof. Henry Herbert Donaldson to the "Contemporary Science Series"; a second edition was issued of "The Psychology of Childhood," by Frederick Tracy; and Psychology of Childhood," by Frederick Tracy; and an introduction to the study of mental phenomena was offered by E. A. Kirkpatrick under the title of "Inductive Psychology," "The Unity of Fichte's Destrine of Knowledge," by Anna Boynton Thompson, one of the "Radeliffe College Monographs," had an introduction by Josiah Royce; "Comte, Mill, and Spencer," by Prof. John Watson (Canada), was presented as a continuous for the general as a continuous for the contract of the contr sented as an outline of philosophy according to the tenets of the idealistic school; C. C. Post published "Metaphysical Essays"; "Elements of Inductive Logic" were treated by Prof. Noah K. Davis in a Logic were treated by 1701. Noan R. Davis in companion volume to his "Elements of Deductive Logic"; and in mathematics we have "Elements of Descriptive Geometry," by C. W. MacCord, with applications to isometrical and cavalier projection; "Elements of Geometry, Plain and Solid," by John Macnie, edited by Emerson E. White; "Problems of Description of Calvin Sanda Capacita Capacit Differential Calculus Supplementary to a Trentise on Differential Calculus," by W. E. Byerly; and "An Experimental Study of Field Methods, which will insure to Stadia Measurements greatly Increased Accuracy," a thesis for the degree of civil engineer submitted to the University of Wisconsin by Leonard Sewal Smith. Brobst, of Chicago, delivered in

Boston; "Love, the Law of Universal Life" was a discourse upon l'aul's elogium on character by Dr. J. T. Wightman; Dr. George Dana Boardman published a dissertation on the thirteenth chapter of the First Epistle to the Corinthians, entitled "Coronation of Love"; from Dr. Adoniram Judson Gordon we had "The Ministry of the Spirit"; "How Christ had "The Ministry of the Spirit"; "How Christ came to Church," a spiritual autobiography, which was accompanied with a biographical sketch and in-terpretation of this "pastor's dream," by Rev. A. T. Piersen; "Risen with Christ," an address on the resurrection; and a short pamphlet on "Elements of Christian Character." "Christ and His Friends" was the title of a series of revival sermons by Dr. Louis the title of a series of revival serinous by Dr. Louis Albert Banks, who also published another volume of temperance revival discourses, "The Saloonkeeper's Ledger," to which Dr. Theodore L. Cuyler furnished an introduction, and "Heavenly Trade Winds," a collection of 22 sermons. Rev. J. F. Love edited "The Southern Baptist Pulpit"; Dr. James D. Burrell preached "The Spirit of the Age, and Other Sermons"; from J. W. McGarvey we had "Sermons Library in Louiselle Kortolly Inc. Sertender. delivered in Louisville, Kentucky, June-September, 1894," while E. P. Tenney chronicled "The Triumphs of the Cross" in a large octave volume of 700 pages, with upward of 300 woodcuts, to which special contributions were made by Edward Everett Hale, Theo-dore L. Cuyler, Alexander McKenzie, Bishops Huntador L. Cdyrer, Alexander Interaction of the Country of the Country of the Cook, and others. The seventh series of "Sermons," by Phillips Brooks, was edited by Rev. John Cotton Brooks. Dr. J. R. Miller sent out 3 books, "Life's Byways and Waysides," "The out 3 books, "Lite's Byways and Waysides," The Blessing of Cheerfulness," and "Family Prayers for Thirteen Weeks"; Horatio W. Dresser dwelt at length upon "The Power of Silence"; and E. H. Kellar gave "Lessons in Soul Winning," with special reference to house-to-house visitation. Dr. G. M. reference to house-to-house visitation. Dr. G. M. Grant considered "Religions of the World in Relation to Christianity" in the "Guild Text-books"; Dr. William Elliot Griffs collected into a volume lectures delivered on the Morse foundation upon "The Religions of Japan from the Dawn of History to the Era of Meiji"; and Edward Washburn Hop-kins contributed "The Religions of India" to the series which it initiated of "Handbooks on the History of Religions," edited by Morris Jastrow, Jr. In the "National Church History Series," we had "The the "National Church Instory Series," we had "The Church in America," by Bishop Leighton Coleman; new revised editions were issued of "Christianity in the United States" and "The Problem of Religious Progress," by Dr. Daniel Dorchester; Charles Woodruff Shields published essays upon "The United Church of the United States"; "Christ and the Church" were the theme of lectures delivered at Chautauqua, July 5-12, 1894, by different writers, to which Dr. Amory H. Bradford contributed an introwhich Dr. Amory II. Bradiora contributes an inter-duction; Bishop William Stevens Perry added to his long list of works on Church history "The Episco-pate in America"; "The Historical Position of the Euscopeal Church" was defined in a brief paper by Rev. Francis J. Hall; 2 volumes appeared in the "American Church History Series," one containing the "History of the Presbyterian Churches in the United States," by Dr. Robert Ellis Thompson, and by Dr. Robert Ellis Thompson, and United States," by Dr. Robert Ellis Thompson, and the other "A History of the Reformed Church, Dut lie, The Reformed Church, German; and the Markevan the Linkshin the United States," by E. T. Corwin, D. D., J. H. Dubbis, D. D., and J. T. Hamilton, "The Prist yerian System" was explained by Rev. William H. H. berts; "Addresses delivered at the Quarter Century Anniversary of the Rennion of the Old and New Sheed Presbyterian Churches," held Old and New School Presbyterian Churches," held in Pattellurg, Pa. May 22, 1895, by Dr. Francis Landy Patten, Dr. Henry Matthias Booth, and William H. Reberts, were collected into a volume; Vol. 11 appears) of "Annals of Trinity Church, New York, Newport, Rhole Island," by George Champlin Mason, completing the work; Charles H. Corey wrote "A History of the Richmond Theological Seminary," with reminiscences of thirty years work among the

colored people; and William P. White, D. D., compiled and edited "The Presbyterian Church in Philadelphia," giving a camera and pen sketch of each church and institution. "The relation of Religion to Civil Government in the United States of America. by Isaac A. Cornelison, proved us a state without a church but not without a religion; William Prall delivered sermons upon "Civic Christianity"; Joseph Cook contributed an introduction to special lecture upon "Practical Christian Sociology "given by Rev. Wilbur F. Crafts before Princeton Theological Semi-pary and Marjatta Collage: Dr. W. S. Rainefeld preached a sermon which was published in pamphle form on "The Church's Opportunity in the City To-Day." "Social Problems and the Church" was an Day." "Social Problems and the Church" was an article by Bishop Frederick D. Huntington, reprinted from the "Forum," and "The Christian State," as a political vision of Christ, was the theme of 6 lectures by Dr. George D. Herron. Archbishop (now tures by Dr. George D. Herron. Archdenop (now Cardinal) Francis Satolli spoke on "Loyalty to Church and State"; lectures delivered under the auspices of the Church Club of New York in 1894 on "The Rights and Pretensions of the Roman See were bound together; and John S. Hittell enlighten were bound together; and John S. Interneument was as to "The Spirit of the Papacy." Dr. John T Christian asked "America or Rome, Which!" A "Chronology of the Society of Friends, 1644-1828" was the work of Alice N. Townsend. Vol. V of Henry William William Paparameters. Dr. John T. Gractz's "History of the Jews" was published, coming down to 1870 C. E., from 1648; Josephine Lazz orned to 1870 C. E., from 1648; Josephine Lazarus, a sister of the gifted poetess, made a plea against persecution in "The Spirit of Judaism"; and Isabel E. Cohen compiled "Readings and Recitations for Jewish Homes and Schools." To missionary literature belong "A Hundred Years of Missions," by Rev. Delavan L. Leonard; "The Islands of the Pacific from the Old to the New," a sketch of missions in the Pacific, by Rev. James M. Alexander; "Modern Missions in the East," by Edward A. Lawrence, D. D., with an introduction by Dr. Edward T. Eaton; "Missions at Home and Abroad," papers and addresses presented at the World's Congress of Missions, Oct. 2-4, 1893, compiled by Dr. E. M. Wherry; "The Irquois and the Jesuits," by Dr. Thomas Donohoe, "Indian and White in the Northwest," by Rev. L. B. Palladino; "The Minute-Man on the Frontier, by Rev. W. G. Puddefoot; and a second series of "The Miracles of Missions," by Dr. Arthur T. Pierson, who published also "Lessons in the School of Prayer as published also "Lessons in the School of Prayer and Taught by the Lord Jesus Christ himself" and " Life-Power," devoted to character, culture, and conduct. Joseph Merlin Hodson delivered a discourse on the resurrection from the text "With what Man-ner of Body do they Come?" "The Lambs in the Fold" was a consideration of the relation of children to the Church and their proper Christian nurture, by Dr. John Thompson, a subject which was further set forth in "The Children, the Church, and the Communion," by Rev. Charles Cuthbert Hall; Rev. G. V. Reichel asked "What shall I tell the Children!": Mary Hastings Foote wrote "A Life of Christ for Young People in Questions and Answers"; and Louise Seymour Houghton told of "Antipas, Son of Chuza, and Others whom Jesus loved," also for children. Jesse Lyman Hurlbut and Robert Remington Doherty prepared "Illustrative Notes, 1896," as a guide to the study of the Sunday-school lessons; Dr. A. F. Schaufer suggested "Ways of Working" for Sunday-school officers and teachers; "The Teacher and the Class" was a symposium of Sunday-school teaching; and M. C. Hazard wrote for "Home Classes" of the same. In "The Fishin' Jimmy Club" Dr. John Clark Hill made a brief contribution to evangelic liturgies. Dr. S. G. Wilson published "Occasional Addresses and Sermons." Vol. VIII of the second series of "A Select Library of Nicene and Post-Nicene Fathers, edited by Drs. Philip Schaff and Henry Wace, considered by Brs. Philip Schaff and tained the "Letters and Select Works of St. Basil." "Church Harmonies New and Old " were edited by Charles R. Tenney and Leo R. Lewis; Rev. Rober Stuart MucArthur found "Quick Truths in Quain

Texts ": " The Wise Men of Ancient Israel and their Proverbs " formed the theme of Charles Foster Kent! and Noah K. Davis entitled a study in the Hebrew lyries "Juda's Jewels." Dr. T. A. Gossiwin pub-lished "Lovers Three Thousand Years Ago as Indi-cated by the Song of Solomon." Volumes of seleccated by the Song of Solomon. Volumes of selec-tions were "Light Unto My Path," compiled by Dr John Hall; "Beautiful Thoughts of Life Eternal," by Elisabeth Cureton; "Responsive Readings," selated from the Bible and arranged under lects for common worship by Henry Van Dyke; "Gleanings, Pure, Pointed, and Practical" for Christian Endeavor and Epworth League members; and Talmudio Sayings," which we owe to Rev. Henry Cohen. William Marshall treated of "Nature as a Blook of Symbols," and Dr. David O. Mears wrote Inspired through Suffering." Literature of Theby Bishop John Fletcher Hurst, was a classiand bibliography of theological and general religious fied bibliography of theological and general religious iterature, and a third revised and enlarged estition was published of Dr. John Wright's "Early Hibles of America." Parts II to V appeared of "A He-brew and English Lexicon of the Old Testament," by Dr. Francis Brown and others. Two books, not strictly theological in character, but which dealt with the life of Christ on earth were: " As Others Saw lim," an anonymous work, which attracted much attention in England, and " Iesut Nassar: The Story of the Life of Jesus the Nazarene," by Peter von F.,
Anna F., and B. A. F. Mamreov. Part I of the
"Weman's Bible" contained comments on the first fee books of the Bible by leaders of the woman's

soffrage movement. Unclassifed -Supplement I of "The United States," by Josiah Dwight Whitney, covered "Population, Immigration, Irrigation"; in "The Building of a Nation" Henry Gannett traced the growth, present condition, and resources of our country, with a forecost of the future; William M. Black described " The United States Public Works"; and the " United States Treasury Bureau of Statistics published the seventeenth annual "Statistical Abstract of the United States "for 1894. Parts III-VII appeared of "Yankee Desile at the Fair." A handsome volume by Samuel Ward Stanton upon "American Steam Vessels" contained over 200 illustrations of the most famous vesmis built since 1807, while only those of the past five years were covered by "Steam Vessels and Marine Emelios," by G. Foster Howell. "Serew Propellers and Marine Propulsion" was written for workmen by and Marine Propulsion "was written for workmen by
L McKlm Chase; W. J. Henderson wrote "The Elements of Navigation," and Howard Patterson published "Patterson's Naval Dictionary illustrated."
James Mercur treated of the "Attack of Fortified
Places"; Arthur L. Wagner, of "Organization and
Tactics"; and F. N. Maude wrote "Military Letters
and Essaya," Vol. III appeared of "The Mineral
Industry," edited by Richard P. Rothwell; G. W.
Warnfoed, Look temporal, a practical handlessk of Industry, edited by Richard P. Rothweit; of warnford Lock prepared a practical handbook of Economic Mining"; J. T. Beard wrote on "The Economic Mines"; and John R. Holibaugh on The Lead and Zine Mining Industry of Southwest Kansas," Allen Haren in "Into Lead and Zine Mining Industry of Southwest Missouri and Southeast Kanssu." Allen Hazen in vestigated "The Filtration of Public Water Supplies"; George E. Waring, Jr.'s "How to Drain a House" went through a second edition, with acrosta tions bringing the matter down to date; the latest approved devices and appliances used in "Practical approved devices and appliances used in "Practical list Water Heating Steam and Gas Fitting" were set forth by James J. Lawler; Redla C. Carpenter published an elementary treatise on "Heating and Ventilating Buildings." W. M. Patton was the author of a "Treatise on Civil Engineering"; F. Dye, of "Popular Engineering"; Charles H. Coshraise of "The Wonders of Modern Mechanism"; P. O. Tart, of "Dynamics"; Reginald Bolton, of "Modern Konders of Modern Machinist." Albert W. Smeth Ison tributed "Elementary Machine Design", John J. Flather, "Rope Driving"; Henry T. Borgs. "V. Treatise on Hydraulics"; William Kent, a "Mechanism".

Competensive Index of the Publicat

down to the close of the year 1894.

Voyages and Travels.—No less than three distinct works upon "Constantinople" were published during 1895. That of Prof. Edwin A. Grosvenor, by far the most elaborate, was in two volumes, containing 250 illustrations and had an introduction by Gen. Lew Wallace. The fact that the author formerly held the Wallace. The fact that the author formerly held the professorship of history in Roberts College in the city of which he writes with enthusiasm fitted him peculiarly for the work which he undertook. F. Marion Crawford's "Constantinople" was illustrated by Edwin Lord Weeks, and gives us the city of to-day; while Mrs. Clara Erskine Clement (now Mrs. C. E. Waters) reviewed rather the history of "Constantinople, the City of the Sultans," in her volume uniform with those she has given us on Naples and Venice. Richard Harding Davis was interesting as ever "About Paris," Charles Dana Gibson supplying Charles Dana Gibson supplying his illustrations, while Constance Fenimore Woolwelcomed in this collected form. Isabel Florence Happened described her "Russian Rambles"; "Letters of a Bardone," by Francis Walker, told of Italy as We'll as art life, and Charles Godfrey Leland was charming as of old as "Hans Breitmann in Ger-many Tyro" Walter Cronston Larned dwelt upon hany Tyte water's robusion Larinea awar apon "Criat his and Caspies of Mediceal France"; Caro-line Lar With chronicled "A Holiday in Spain and Norway", In the Land of Lorna Doone and Other Pleas some Exeursions in England "came to us from William H. R. leng; "Brown Heath and Blue Bells" from William Winter; Neah Brooks outlined "The Monterration Trip, marks of Jerusa, " were expe " Literary Land-Two volumes contain "My Early Travels Hatton. I we voluces contain "my ranty lines and Adventures in America and Asia," as told for our benefit by Henry M. Stanley; Frank Vincent reported a tour of exploration in "Actual Africa; or, The Coming Continent". John R. Spears in "The Gold-Diggings of Cape Horn "made a study of life in Tierra del Fuego and Patagonia; H. C. Mercer visited the "Hill Caves of Yucatan"; and Charles A. Stoddard spent summer days in winter months "Cruising among the Caribbees," Julius A. Palmer, Jr., was heard from "Again in Hawaii," "Out of the East" was a volume of reveries and studies in new East" was a volume of reveries and studies in new Japan, from the fiscinating pen of Lafcadio Hearn, and Henry T. Finck was eloquent also over "Lotos-Time in Japan"; Alfred Parsons illustrated his own "Notes on Japan," and Edward S. Wilson took "An Oriental Outing." "From the Black Sea through Persia and India" was a handsome volume, of which Edwin Lord Weeks was at once author and illustrator; Rev. Samuel Graham Wilson described "Persian Life and Customs" after a fifteen years' residence in that country as a missionary; and William Woodville Rockhilf's "Diary of a Journey through Mongolia and Tibet in 1891 and 1892" was published by golia and Tibet in 1891 and 1892" was published by the Smithsonian Institution, under whose auspice partly, he made the same. Chester Holcombe do partly, he made the same. Chester Holcombe de scribed for us "The Real Chinaman" after a real scribed for us "The Real Chinaman after a residence of many years in that country as charge draftaires; a new edition was published of Dr. William Butler's "The Land of the Vedu," first issued in 1871; "On India's Frontier; or, Nepal, the Gurkhas' Mysterious Land" was illustrated from photographs. often obtained at great risk by the author, Henr Ballantine, American consul to Bombay, and M. M. Shoemaker visited "Trans-Caspia," the scaled provinces of the Czar. "This Goodly Frame the Earth. by Francis Tiffany, conveyed stray impressions of seenes, incidents, and persons in a journey touching Japan, China, Egypt, Palestine, and Greece; Bishop Charles B. Galloway made "A Circuit of the Globary Theorem I. Stew Charles B. Galloway made "A Circuit of the Global and Rev. Thomas H. Stacy went "In the Path of Light around the World." Hezekiah Butterworth continue the "Zig-Zag" Series with "Zig-Zag Journeys around the World." William T. Adams (Oliver Optic) carried his young people "Half Round the World." carried his young people "Half Round the World and "Across India," in the "All-Over-the-World Library." Other books of travel strung on a thread of fiction were Thomas W. Knox's "Hunters Three" of fiction were Thomas W. Knox's "Hunters Three" and "In Wild Africa," the last in the "Travel Adventure Series," "Alaska" had its history, resources, gold fields, routes, and scenery described at length by Miner W. Bruce; Henry M. Field termed the same country "Our Western Archipelago"; and James T. Dennis also told of what he saw "On the Shores of an Inland Sea." V. Wilson prepared a "Guide to the Yukon Gold Fields," Returning to our own maintained to the same first a gueral volume on the "Concession". land we have, first, a superb volume on the "Canons of the Colorado," from Major J. W. Powell, who was the first to explore their wonders, and who has illustrated his work with photographs taken by himself. Charles and Lilian Westeott Eickemeyer told and photographed what they saw "Among the Pueblo Indians," and "In the Heart of the Bitter-Root Montains," by "Heclawa" (A. L. Artman Himmelwright), tains, by Heelawa (A.B. Allaman than told the story of the Carlin hunting party September-December, 1893. "The Yellowstone National Park: Historical and Descriptive" we owe to Hiram M. Chittenden. A valuable old work was revived in a new edition in 3 volumes of the "Expeditions of Zebulon Montgomery Pike to Head-waters of the Mississippi River through Louisiana Territory, and in Spain, during the Years 1805-6-7," printed in full from the original of 1810, with a cor critical commentary, a menoir of Pike, and other interesting material from Prof. Elliott Coues, who went over the whole ground, and made a canoe voyage in over the whole ground, and made a cance voyage in order to give his remarks the weight of personal ob-servation. Bishop O. P. Fitzgerald published "Cali-fornia Sketches, New and Old," and Julian Ralph described "Dixie," "New Orleans, the Place and the People," by Grace King, was illustrated by Frances E. Jones. Teresa Dean picked up "White City Chips"; Rev. P. C. Croll examined "Ancient and Historic Landmarks in the Lebanon Valley" of Cen-Historic Landmarks in the Lebanon Valley" of Central Pennsylvania: Gen. H. V. Boynton was the author of an historical guide to "The National Military Park, Chickamauga-Chattanooga." "The Canadian

Gulde Book" of Charles G. D. Roberts was issued; Guide Book" of Charles G. D. Roberts was lesued;
"Concord, Historie, Literary, and Picturesque," by
George B. Bartlett, went through the fifteenth revised
edition; Part I of "Picturesque Worvester" in the
"Picturesque Series" was written by Elbridge Kingsley and Frederick Knat, and was devoted to the
"City and Environments." Henry R. Blaney gave repredictions of etchings in half tone of " Old Beston," and "The Boston Picture Book " also appeared A new edition was made of Theodore Roosevelt's " New York " in the series of "Historic Towns" with a past-York "in the series of "Historic Towns" with a post-script, 1890-95; and John J. Post published an ex-pensive "Abstract of Title to Kip's Bay Farm in the City of New York, with all Known Maps relating thereto, together with the Water Grants on the East River, adjoining Sald Farm." "A Brief Descriptive Geography of the Empire State," was published for the use of schools, by C. W. Bardeen, and Appletons' handbooks of summer and winter resorts were issued as menal.

The following are the figures of book production in the United States in 1895, from the columns of the

LITERATURE, BRITISH, IN 1895, record of book production in England during the year showed a total of 6.516 volumes, against 6,485 in 1894, a difference of about 30 only; but of this number, it is to be noted, 5,581 were new books, and but 935 new editions, while of the books of the preceding year, 5,300 were new works, and new editions numbered 1,185. It is a little curious to note that in this increase of publication of new books there is a falling off of works of fletion (in which juvenile books are to be included). But 1,584 new novels and tales appeared, against 1,544 in 1894, and but 347 new editions, as compared with 366 the year previous. Less than half as many new works on law and jurisprudence were issued, and there were fewer new books of voyages and travels, while there was a remarkable gain in the departments of history and biography, of poetry and the drama, and of medicine and surgery, and there was also an increase in educational, classical, and philological works, in belles-lettres, and in works on theology and political and social science. summing up the quality of the literature of the year, it may be said to be of unusual excellence.

Biography - As usual, several wides if her you are to be found in this department and go year individualities worths of note are after led it three instances through the less of all medium per sonal correspondence "Letters of "amore land Coleridge "were colited by Ernest Harties Coleridge filling 2 volumes; and again 2 volumes of "Letters of Matthew Arnold, 1949 1999," collected and arranged by trearge W. E. Russell, presented their writer in a twofold capacity of disagreeable critic and charming man of family, "The Life and Letters of Edward A man or taining, "The Life and Letters of Edward A. Freeman," in 2 volumes, we one to W.R. W. Stephens, Dean of Winchester, and for twenty years a near and dear friend of the historian, and "Dante Gabriel Rossetti, His Family Letters" were published in 2 volumes, with a memorr by William M. Rossetti. "Letters and Verses of Arthur Penrhyn Stanley, D.D., between the years 1929 and 1981," were edited by Rowland E. Prothero, supplementing the "Lefe and Correspondence," by the same author and Dean Bradley, published last year; and 2 volumes contained the correspondence addressed by Robert Louis Stevenson to Sidney Colvin, November, 1890 October, 1894, entitled " Vailima Letters." "The Life and Ad ventures of George Augustus Sala, Written by Himself," and "Memoirs of an Author," by Percy Vitagerald, both in 2 volumes, appeared simultaneously and were warmly received from these two of Dichem's "Young Men," and the latter also edited a new edition of the "Life, Letters, and Writings" of Charles Lamb, in 6 volumes. Anna M Steeldart gave us a boography of "John Stuart Blackie," in 2 volumes , "The Letters of Edward Fitzgerald to Fanny Keenble" were collected and edited by William Ablic Wright, and in some ways supplementary to the volume was the pos-trayal of "Two Suffolk Friends," by Francis Hindes Groome, who pleasingly recalled his father, Archdeacon Groome, and the charming and versatile personality of Fitzgerald. John Charles Tarver made somity of Fitzgerald. John Charles larver manus acquainted with "Gustave Flaubert, as seen in his Works and Correspondence," and "The Life and Writings of Turget" were edited for English readers by W. Walker Stephens. A remarkable and varied career is chronicled in Sir Joseph Crowe's "Kominiscences of Thirty-five Years of my Lefe," and yet another autobiography of interest interest was "Memanother autobiography of intense interess orics and Studies of War and Peace," by Archibald Forbes, the famous war correspondent. Messestes and Thoughts of a Life," by William O'Connet Morris, relate principally to the Irish question, "Memories" of W. J. Linton included many impertant events and famous people, Rod ich Laborate contributed " An Artist's Reminiscences", Radard contributed "An Artist's Reminiscences", Enchard Le Gallienne, 2 volumes of "Retrospective Reciews", and W. F. A. Gaussen, "Memorials of a "host Life." Reminiscences of "Platfern, Press, Politics, and Play "came from T. H. S. Favetti," My Lafetamer, I'd here, and First cattic from 1 in Francis I am Shand from John Hollingshead, and Vexasier Innes Shand wrote. The Life of detectal Set E. Brace Hambey," in 2 volumes. Set G. F. Du Actt published "American Set G. F. Du Actt published. dotal Remin serves f an this Nonspenarian";
"Three-ove Years and Ten" contained the remain centies of the late South a Elizabeth De Morgan, adited by her laughter Mary A De Morgan, " Journale and 6 creeperstence of Lady Eastlake," in 2 volumes. were edited by her nephew, thurbs Eastlake; and "The Mammaa's of Mrs. Henry Wood" were compiled by her son, C. W. Wood. Two volumes were piled by her not, C. W. Wood. Two volumes were devicted to Maria C. Bishop to "A. Memoir of Mrs. Apparent traces. Builto de la Ferromayo, Author etc. 1.c. Best d'une Nora?" "Days of a Soldier's 1 fr." was the little given to letters written by the late tires Nor ! I' Beanchamp Walker during active service, and yet another distinguished British officer, ton Sir John Adve, published "Recollections of a M tary Life." large in Exile" and "Storm-drift." Arthur J
diagor published 2 volumes, "Watchers of Iwatht" and "Pauline, and Other Poems"; M. W.

Findlater, but one, of " Southete and Notice" - No. Findinger, but one, of "nonfiete and nonger." No Lattice, and Other Poems "name from Profile I forms of the Programme of the Profile Poets, "Lays of the Dragon blaver, from Manuel toray, and "The Suicide at Sea," from E. C. H. Three poets of profiles how dear more recalled. David Buchanan by "Man and the Years"; Lewis Morrison trant. D "Protomantis, and Other Poems"; and "Lewis Med rison-Grant: His Life, Latters, and Last Pourse, edited by Jessie Annie Anderson; while "Botert F Murray : His Postus" was furnished with a morne of by Murray; the remains the drama belong "The East of Jhanel," by A. Bogers, with an introduction by not Edwin Arnold; "Ernest England," a drama for the closet, by J. A. Parker; "The Pity of Love," by Theodore Wratislaw; and "King Arthus," by Committee Wratislaw; and "King Arthus," by Committee the machinese. the Carr. ne Carr. Among selections are to be mentioned. The Golden Pomp," a procession of English lyrics from Surrey to Shirley, by Arthur T. Quiller Couch; "The Golden Book of Colerage," edited, with a "The Golden Book of Colerbige," edited, with a critical introduction, by Rev. Stopdord A. Breoke; "A Century of French Verse," translated into Eng-lish, by W. J. Robertson; "English Pasterals" as-lected and with an introduction by Edmand K. Chambers; "The English Posts in Defense and Chariters; "The English Forts in Deterate and Praise of their Own Art," edited by Ernest Rhys, a companion volume to which was "Forts on Posts," by Mrs. Richard Strachey. "The Irish Song-book," with original Irish airs, was edited by Alfred Persoval Graves, in the "New Irish Library "; Vol. II appeared of "Songs of the North," gathered from the Highlands and Lowlands of Scotland, edited by Harold Boulton; and Vol. VI completed the "Cambrian Minstreleic," a national collection of Welsh some, edited by Joseph Parry and David Bowlands. "The Tale of Beowulf" was translated by William Morris and A. J. Wyatt, and the laster also estited the perlogue to the new edition of "The Canterburs Ta logic to the new edition of "The vanisation" and "The in the "University Tutorial Series," and "The Knight's Tale," S. J. Evans supplying a glossary, "The Poems of William Drummend of Hawthernden "were edited with a memoria and notes by W. C. Ward, and "The Friend of Sidney," Lord Brooke, was represented in the "Elizabethan Library" by a Lord Brecke, Volume of quotations from his prose and verse, edited by Dr. A. B. Grosart. Voyages — Vacation Rambles," by Themas Hughes

Vorges — "Vacation Hambles," by Thomas Hughes (Vacuus Viators, the well-known and new aged assisted of "Tom Brown's Schooldays," covered much of the ground of both continents, while other Englishmen who found pleasure and recreation abread were numerous as usual. C. Bogue Loffmann peoped himself "A Vagabond in Span". A F. Mummery tolds of "My Climbs in the Alpa and Cancususe", "The Romance of the Woods," by F. J. Whishaw, consisted of ten studies of Russian and Finland outdoor life, and F. Sandeman wrote of "Auging Travels in Norway." "Northwestern France, Normandy, and Reitstany "were treated in his conferency delightful manymer by Augustus J. C. Hare, and Margaret Sudaes spent "Three Months in the Forests of France" on a pilgrimage in search of the vestiges of the Irish saining that expurity. Katharine Tvanas Hinkson was at home in "The Land of Most and Mountain." "The Buried Cities of Vesavius" were described by Dr. John Fifetber Horne, and H. P. F. Marriott told "Facts about Pompeis." Ser C. Wilson relited a "Handlook for Travelers in Asia Minor," and Owald H. Barry illustrated his own account of "Six Months in a Syrian Monastery," Rev. W. Wright, D. D., visited "Plainyra and Zenobia," and "A Visit to Hashan and Argobi" was chronicled by Major-Heler Percy. "With the Yacht, Cansera, and Cycle in the Moliterranean" came from the Earl of Cavan, and H. M. B., C. E. B., and T. R. spent time "din Fanny and William H. Workman, described in the Sale of the Red Sea." "Algerian Memorico" he cycle tour over the Atlas of the Sahara, and Henry Norman, the author of "The Real Japan," gave much time and thought to "The Proples and Politer of the Far East." Canon H. B. Tristram published

"Rambles in Japan," which were illustrated by Edward Whymper, and "Advance Japan" was pro-nounced a nation thoroughly in carnest by J. Morris. A. Henry Savage Landor left the hairy Ainos, whom A. Henry Savage Landor left the hairy Aines, whom he visited last year, for "Corea, or Cho-sen, the Land of the Morning Calm," and the same country was again described by Louise Jordan Miln as "Quaint Corea," "China Present and Past" was a supplementary volume by R. S. Gundry to his previous work on "China and its Neighbors," Dr. Henry Laisslell took a ride to Little Tibet through "Chinese Central Asia," which he described in 2 volumes, and G. E. Morrison was "An Australian in China." "Out of India" described things which Rudvard Kudung saw and failed to see in certain days Rudyard Kipling saw and failed to see in certain days and nights at Jeypore and elsewhere; Walter R. Lawrence devoted a handsome volume to "The Valley of Kashmir; Major C. S. Cumberland described "Sport on the Pamirs and Turkestan Steppes"; and R. Carstairs treated of "Human Nature in India." Frank Athelstane Swettenham vouchsafed "Malay Sketches"; "From Far Formosa," by Dr. George Leslie Mackay, was edited by Rev. J. A. Maedon-ald, "Seventeen Trips through Somaliland" was a record of exploration and big-game shooting, 1885'93, by Capt. G. C. Swayne; Capt. C. J. Melliss
wrote on "Lion Hunting in Somaliland"; and Col.
Francis Cornwallis Maude outlined "Five Years in Madagascar," with notes on the military situation. "Twenty Years in Khama's Country, and Pioneering among the Batauana of Lake Ngami" were told in among the Bataunna of Lake Ngami were told in the letters of Rev. J. R. Hepburn, edited by C. II. Lyall; and "Rhodesia of To-day," by E. F. Knight, embraced Matabeleland, Mashonaland, and Manica-land. "In the Veldt," by Harley, was a collection of stories and sporting sketches of which South Africa was the scene, while 3 volumes contained C. S. Goldwin and J. Kitchin's information concerning "South African Mines." "In Stevenson's Samoa," "South African Mines." "In Stevenson's Samoa," by Marie Fraser, found a pleasing companion volume in "The Home and Early Haunts of Robert Louis Stevenson," by Margaret Armour. "The Story of Australian Exploration" was told by R. Thynne, and "Travels and Adventure in Northern Queensland" were narrated by Arthur C. Bicknell. "Letters and Sketches from the New Hebrides," by Mrs. John G. Paton, were edited by Rev. James Paton, and ably supplement the "Autobiography" of the famous Luissionary. Dean Hole described "A Little Tour in America"; "On the Cars and Off" was the journal of a pilgrimage along the Oueen's highway to the of a pilgrimage along the Queen's highway to the East from Halifax, in Nova Scotia, to Victoria, in Vancouver's Island, kept by Douglas Sladen. George Vancouver's Island, kept by Pougas Suaren. George E. Parkin made studies of Canada, entitled "The Great Dominion," which was again described as "The Land of the Muskeg," by H. Somers Somerset. "Ice Bound on Koguev" was a chapter in the exploration of Arctic Europe by Aulyn Trevor-Battye, and Arthur Montessore edited from the journals of Frederick theory, Jackson The Great Frozen Land (Bolshaia Zanalskija Tundra," the narrative of a winter jourby a res the Tundras and a sojourn among the Sara- Returning to the mother isle, we have a 2 Cal volume upon "Westminster," by Sir Walto the said, another upon "The New Forest," its tra-The analysis and enstorms, by Rose C, de Cres-I wild H man Hutchinson; "Wild England of yet J. LITERATURE, CONTINENTAL, IN 1895. Although the immense amount of matter issued annually naturally imposes restrictions on this list, it will be found to include, as usual, the most representative and interesting publications of each given land, movement, or author.

Belgium .- National history, always assiduously cultivated in Belgium, is represented by L. Gilliodt-van-Severen's important "Bruges Port de Mer"; "Quatre Ans d'Evolution ; Relation des principaux "Quatre Ans a Evolution: Relation des principaux Faits politiques et sociaux accomplis en Belgique de 1890 à 1894," by Ladislas van Hoorebeke; Ch. Woeste's "A travers dix Années (1885-'94); Etudes politiques, sociales, etc."; Th. Juste's "Histoire de Belgique"; and "Le vieil Anvers," by M. Rooses. J. P. Waltzing's "Etude historique sur les Corpora-tions professionelles chez les Romains" (novel in idea and treatment) and Franz Cumont's "Les Mysidea and treatment) and Franz Cumont's "Les Mystères de Mithra" are remarkable contributions to accient history. In the division voyages and travels we have "A travers l'Afrique australe," by Jules Leclereq; "A travers l'Asie," by Constant de Deken; "L'Allemagne, sa Vie et ses Arts," by J. G. Fréson; similarly interesting "Notes de Voyage sur Kent, Oxford, Cambridge, et Northampton," by Paul Saintenoy; H. Hautecœur's description of San Marino; and J. Van den Heuvel's "Croquis américains." An important work on military matters is Gen. Brialportant work on military matters is Gen. Brialmont's "La Défense des États et la Fortification à la Fin du XIX. Siècle," while the Chevalier Ed. Descamps has issued an equally noteworthy volume on "Les Offices internationaux et leur Avenir." It appears that the introduction of universal suffrage has given an impetus to the study of social questions. The large number of books on social and political science includes: Maurice Vauthier's "Le Gouvernescience includes: Maurice Vauthier's "Le Gouverne-ment local de l'Angleterre"; Ernest Dubois's "Les Trades-Unions et les Associations professionelles en Belgique"; Ernest van Elewyck's "Les Salaires et la Protection"; Hubert Langerock's "Le Socialisme agraire"; G. Legrand's "L'Impôt sur le Capital et le Revenu en Prusse"; C. Scheyven's "Code électoral belge expliqué d'après les Travaux parlementaires"; "La Diversion despayique et sociale et l'Histaire "La Dépression economique et sociale et l'Histoire des Prix," by Hector Denis, "the leader of the scientific socialists," and "L'Organisation de la Liberté et le Devoir social," by Ad. Prins (two remarkable works): Victor Brants's interesting "Les Théories économiques aux XIIIe et XIVe Siècles"; and Guillaume de Greef's "Le Transformisme social" (discussing the development and degeneration of society

a radical standpoint), Vol. II of the late Émile Laveleye's "Essais et Etudes" has appeared, and the stery of "Emile de Laveleye, as Viet son tEurre" sympathetically told by Count Gobiet d'Alviella. Marie de Wulf is the author of interesting "Etudes Heart de Gand" and a learned "Histoire de la l'Histoire de la l'Euraphie scolastique dans les Pays-Bas et la riminanté de Liège jusqu'à la Révolution française." in the department of literary history important works et Prof. Thomas's "Histoire de la Littérature latine wax Antonina"; a learned "Etude sur l'Ysegribus Antonina"; a learned "Etude sur l'Ysegribus et littéraire du Mouvement flamand," by Hamelius, an impartial account of the efforts to reve the Flemish language in Belgium; the Visco de Spoelberch's "Lundis d'un Chercheur" (interes et littéraire du Mouvement flamand," by Hamelius, an impartial account of the efforts to reve the Flemish language in Belgium; the Visco de Spoelberch's "Lundis d'un Chercheur" (interes et l'Heavel Marie et l'elemish and ther French writers); and essays ou and transfers of Novalis and Emerson by Maurice Machanas of Novalis ("Novalis Kermesses" and "Mes Communions"), Albert de Corps anong "), A. Boschot ("Réves blancs"), Ernins ("Histoires lunatiques"), Sander Pierron, wanner, etc. A want of seprit de corps anong of letters appears to be indicated by reports of a corveny between "La jeune Belgique," "Le Révir Bierry magazines of the same kind.

Of the Flemish literature of the year, monographa of letters appears and a madature machanas macha

Of the Flemish literature of the year, monographs by R. de Potter, L. Meea, Edm. van der Straeten, all others, again attest to assiduous researches in hall history. George Bergmann's "Gedenkschriften" effers a striking picture of Flemish-speaking Bactess before 1830. In literary criticism we have "Leterkundige Studien," by Max Rooses (essays on Riline Swarth, Jan van Beers, Prudens van Duyse, etc.); R. Claeys's monograph on Jan van Ruusbreec, to acted Brabantine mystic of the fourteenth centry; Arthur Cornette's "De Aesthetiek van het lymash Dramsa," discussing the combination of drama medic; and Paul Fredericq's "Onze historische Lielers van voör de Hervorming." Noteworthy stillers to prose fiction are Van den Bergh's historische against the French Republic; Cyriel Byzoch "Sursum Corda" (one of the most notable medic against the French Republic; Cyriel Byzoch "Sursum Corda" (one of the most notable medical properties of the year), "Mea Culpa" (considered rather free in tone), and "Wroeging"; Virginia Levellag's "De Bruid des Heeren," a work of "much criticality and power"; Gustanf Seegers's sketches of the in the Campine district; and new works by the experienced writers Aug. Snieders and L. van Bakhelingen. In poetry there are Pol. de Mont's "In," the veteran Emmanuel Hiel's "Symphoniën on moiere Gezangen," and Hilda Ram's "Nog cen Riverhen uit's Levens Akker." J. Haller has templated some ldyls from Theocritus. And one of the best plays of the year is Frans Gittens's "l'alma's Research."

Busine.—National history has been contributed to a Tunek's "History of the City of Prague," Vol. X; hash's history of Robemia during the reigns of Ferdinand III and Leopold I (completed); and Emler's Busine, "Vol. IV. Political affairs and duties form the theme of T. G. Masaryk's "The Bohemian Question. A long-felt want has been filled by the founding of a "Historical Magazine," and the Robemian Gognaphical Society has also begun the publication of a magazine. V. Kotyika has issued a gazetteer of Bohemia, Ant. Kotik writes of "Bohemian Family Names," Cenik Zibrt tells the "History of Dancing in Bohemia, Moravia, and Silesia," the "Evolution of Bohemian Miniature Painting in the Time of the Jayellons " is described by K. Chvtil, and various important works are being continued, such as Z. Winters history of Bohemian costume, A. Sedlaček's

"Castles of Bohemia," Otto's ency clopusitis in Novembraisen"), and Jar. Viček's "History of Bioheman Literature." The celebration of the hundredth bond day of Paul Joseph Safaria in one of the founders of modern Bohemia.") railed forth some cassays in the periodical press which form valuable contributions to Bohemian Culturgueckickie. The twenty Eth anniversary of the death of the poet Vitéaslay Halek, who played an important part in the development of recent literature, occasioned new criticisms on his work (J. S. Machar being especially fair and frank's, giving evidence of a growing spirit of honest self-critisism.

S. Machar being especially tair and tremb, giving evidence of a growing spirit of honest self-criticism. The life of the people again forms the well treated theme of various novelists. The second part of M. Havel's "Memoirs of Philip Kohnek, busdent of the control of the cont Philology," like the first, excels in character dram-ing; Klostermann introduces us into the depths of the Bohemian forest in "From the World of Forest the Bohemian forest in "From the World of Forest Solitudes," and depicts the life of Bohemians in Vienna in "In Search of Good Fortune." K. M. Capek's "In the Third Courtyard," Kukla's "From all the Corners of Frague," Hadik's "From the Atmosphere of Frague" and "Third Love," and J. Switch's historical novel "Becrets of Frague" deal with various phases of life in the Bohemian capital. M. Simsicek's powerful "The Soul of the Factory" again dearthes factory life: Kolda Malinsk? sistemes life cek's powerful "The Soul of the Factory "again describes factory life; Kolda Malinský pietures life in a Village"; and J. L. Hrdina telle "Bradachime Stories." K. V. Rais delineates "Forgotten Patriote," and in "Toil "gives feeling pictures of highland life. Further prise Betion to be noted: A. E. Mulik's "Ruins of Life" ("touching pictures of human sale-ery"); J. Arbes's "The Last Days of Humankind" and "For a Brother Socialist"; Ig. Herman's humnerous "Pell-Mell"; F. X. Svoboda's "Stories of Different Frames of Mind"; Kuńeticka's "Little Idyls"; and Julius Zeyer's characteristically individual "Renovated Pictures" (four stories in his familiar "Annovated Pictures" (four stories in his familiar "Annovated Pictures") "Renovated Fictures" (four stories in his familiar fanciful vein). Juvenile literature has been enriched by J. V. Sladek's "Great Hells and Small" and "Songs and Stories for Children" and Aug Sud-laček's "Historical Tales of the Hohemian People." Among the most noteworthy portical publications of the year are "Here Rosco ought to blew " and " Magdalena," by J. S. Macher, whose "warm oy mpathy with human wee" finds truthful expression in his realistic and beautiful verse. Systoplus Coch's realistic and beautiful verse. Svatopluk Carchy "Songs of a Slave" (20 editions), a passionate appeal for liberty, naturally has a political tendency that strikes a responsive chord in the hearts of his countrymen. Subjectivity and possimism are becoming more noticeable characteristics in Jaroslav Vrchlicky's latest volume of poems, "Windows in Starms," and "Asters," "Before I become silent foreven," and "New Fragments of an Epic." A Klastersky amouth lyrics "Heart and Soul and Viole of the Night" (said to show too much surerficial annuments) could to show too much superficial contiment); rather than poetical impressions of Nature; O. Merather than psetical impressions of Natures; or servina's "Mysterious Distances", J. Zeyer's "Karolinska Epopeje" cromantic lays regarding Charlesmagne); Cervinks's "Landscapes and Tempers" and Cenkov's "Year of Solitude," both characterized as rather crude; J. Karasek's "Walled-up Wholeus," and K. decadent production lacking in true feeling; and K. Mälek's humorous " Sour Grapes" are further new particul preductions.

postical productions.

Demark - National history and biography have been excitabated to in L. Holberg's "Konge og Danehof in det 12 og 14. Aarhundrede"; H. Mataen's "Forelæsninger over den danske Retshistorie "; C. J. Anker's "Uddrag af diplomatiske Indberstninger om Unionens Forbertslebe og Tilbitrebe 1814"; H. F. Biritam's "Peter Riedam: Blade af hans Levnedebig og Brewverling"; the "Efterladte Papirer fra 1915-14" of the "Gebeime Konferenstand" Blanstrup, cilited by T. Bensstrup; and "Efterladte Papirer fra den Keventlowske Familiekrede i Tidsrummet 1716-197." P. A. Heiberg offers a "Bidrag til et psykologisk Billede af Silven Kierkegaard i Barndom og Ungdom." A "Grundrise af den kristelige Etik " has

been drawn up by F. C. Krarup. P. Weilbach has begun a "Nyt dansk Kunstner-Lexikon," and M. tralschiét is the author of "Thorvaldeses Museum." Literary history has been enriched by V. Andresen's able, though rather landatory monograph on "Paul Moller; haus Liv og Skrifter"; that conspicuous psychological critic G. Brandes's "William Shakespeare"; V. Vedel's fine though somewhat unpolished book on Swedish romanticism of the first half of the nineteenth century; A. Olrik's "Sakses Oldhistorie; Norrone Sagaer og danske Sagn"; and J. Clausen's "Jens Baggesen." Other books published at Copenhagen are; H. Clod-Hausen's "Mand og Kvinde"; N. Juel-Hansen's "Samfunds Livet"; H. Jensen's "Sotter Helene."

M. Jensen's "Sloter Helene."

Among the best novels of the year is "Hjarl: en Ungdoms Historic," by E. Christiansen (editor of "Hlustreret Tidende," Denmark's illustrated magazine, in which the author, as usual, gives evidence of clever character study, especially in the delinea-tion of young women. In "Vilhelm Vangs Studenteraar," S. Schandorph (author also of "Tre Appel-siner" shows a good eye for humorous situations. Here, as in other countries, the complaint is that views and theories succeed each other so rapidly that art, instead of being quickened, declines and decays. It appears also that the tendency to abandon the unvarmished realism, rampant yesterday, for vague symbolism and mysticism is present here as well. Even so uncompromising a realist as E. Brandes is said to have bowed to this changed taste by "transferring the seems of one of his latest comedies to a sort of dreamland, and of another to the ancient days of the North," "Bekendelse," by Johannes Jörgensen (author also of "Rejsebogen"), is a collection of poems of beauty, despite a certain monotony and emotionality, which characteristics, as well as a certain archaic imagery and an absence of ideas, are said to mark the work of the vounger men in general. C. Fons depicts the beauties of Italian scenery in the melodious verse of "Angelina," and Alfred Ipsen has issued "Ekko" (poems, mainly sonnets). Finally, "Võlund Smed," in which Holger Drachmann (hailed by some as the "foremost representative" of modern Danish literature: deals with a subject from the elder Edda, is criticised for "exuberant and somewhat sentimental sensuousness, strangely opposed to the rigorous chastity of the sagas and tradition of ancient Scandinavia."

France.—In this country's extensive literary production history as usual holds an important place. The publication of memoirs is rather overdone, want of critical discrimination resulting in an abuse of this literary fashion. The "Mémoires" of Chancellor Pasquier and Gen. Thiébault have been followed by those of Gens. Paulin ("Souvenirs, 1782-1876"), Fantin des Odoards ("Journal, 1800-20"), De Baratte ("Souvenirs, 1782-1866"), Roch-Godard, and the spiritesl and plain-spoken Maréchal de Castellane "Journal, 1804-62"). There have also appeared "Souvenirs du Comte de Montgaillard, Agent de la Diplomatic scerète pendant la Révolution, l'Empire et la Restauration"; "Souvenirs de la Vie militaire du ton Baron Lahure, 178-1815"; "Mémoires du Comte de Paroy: Souvenirs d'un Défenseur de la Familia Royale ja indant la Revolution, 1789-297"; "Memoires du Comte de Paroy: Souvenirs d'un Défenseur de la Familia Royale ja indant la Revolution, 1789-297"; "Memoires du Gente de Paroy: Souvenirs of Barras (which, with all their rancorous malevolence, throw much 12st en aboute vising periods, and those of Larevellere Lepenov and tocontain little of interest on the Ecvichien "Memoires de François Lavaux, Sergeant an io" de Ligne, 1793-1814", edited by A. Daronen, in account of a typical soldier of the Napolesone wars, "1792-1816", delided by A. Daronen, in account of a typical soldier of the Napolesone wars, "1792-1816", delided by A. Daronen to the Capataine La Tourd'Auvergne, premier Grenader de la Republique "Illustrate an noteworthy manner by A. Pulitzer; and A. Dayot's

"Napoléon raconté par l'Image" and J. Grand-Carterets "Napoléon en Images: Estampes anglaise are iconographic histories of the great Corsican, de la Rocheterie and Le Marquis de Beaucourt have de la Rocheferie and Le Marquis de Beaucourt have edited the "Lettres de Marie Antoinette"; M. de Maulde sitts much documentary evidence in "Louis de Savoie et François I"; the "Vie militaire de Général Ducrot, d'après sa Correspondance, 1839-711 has been published by his children; the Duc de Broglie's "L'Alliance Autrichienne" is an interesting contribution to the diplomatic history of the reign of Louis XV; and the Marquis de Dreus Rrèxé's "Notes et Souvenirs pour servir à l'Histoir du l'arti Royaliste, 1872-'83" has been energetically exploited by the royalists. The second empire his recent years been receiving increasing attention exploited by the royalists. The second empire his in recent years been receiving increasing attention M. de La Goree is the conscientious and generally impartial author of a "Histoire générale du Secont Empire"; Gen. Lebrun's posthumous "Souvenimilitaires, 1866-70: Preliminaires de la Guerre. Monthe de la Guerre. militaires, 1866—70: Preliminaires de la Guerre. Massions en Belgique et à Vienne "contains interesting revelations regarding Napoleon III's policy toward Austria; Emile Olliver's apologetic "L'Empire libéral" traces the political causes of 1866 which led to the military disaster of 1870; Comte Benedett's "Essais diplomatiques" have appeared; and Alfred Duquet continues his patriotic but unprejudiced series of books on the Franco-German War, on which period works by Thoumas, A. Chuquet, X. Euvrard, Rousset, P. Lehautcourt, A. Burdeau, and A. Wachterhave also been published. General historical works dealing with France are A. Franklin's "La Vie privée d'Autrefois" (Vol. XVII); M. Loir's "Gloires & Souvenirs maritimes"; F. Aubert's "Histoire de Parlement de Paris, . . . 1250–1515"; C. Jullian's "Histoire de Bordeaux," published under the auspices of the municipality; and A. Touchemolin's "Strabourg militaire." G. Maspero, a scholar of remarkable attainments, in "Histoire ancienne des Peuples de l'Orient classique" proves himself a writer of unusual ability, concise and nervous in style. J. J. Jusserand's "Le Roman d'un Roi d'Écosse" is a little volume dealing with the son of Robert III; A. Ramend virtes of "Russea et Prussions", Guarra de servent Missions en Belgique et à Vienne" contains intere volume dealing with the son of Robert III; A. Ram baud writes of "Russes et Prussiens: Guerre de se on Ans"; and "La République d'Haîti: son Présen son Avenir économique" is drawn by P. Viber Gaston Boissier's "L'Afrique romaine" gives the r sults of the careful archæological investigations of the French in simple and charming language. Gasto Routier has written "L'Histoire du Mexique." Affairs Oriental are treated of in L. E. Bertin's "L Anairs Oriental are treated of in L. E. Bertin's "La Guerres Civiles du Japon, 1156–1392"; M. Courant's "Bibliographie Coréenne"; E. Foa's "Le Dahomey"; F. Benoit's "Madagascar, 18.15–'95"; L. Catat's "Voyage à Madagascar, 1890"; J. B. Piolet's "Madagascar et les Hova"; and J. L. de Lanessan's "La Colonisation of La française en Indo-Chine," a frank recital of the at trançaise en Indo-Chine," a frank recital of the author's four years' governorship. Pierre Loti recorded poetical impressions of "Jérusalem," "Le Désert," and "La Galilée," and Th. Bentzon wrote on "La Condition de la Femme aux États-Unis" for the "Revue des deux Mondes." T. de Wyzewa's "Chez les Allemands: L'Art et les Mœurs" tells little that is now. In relitional history and conomics publications of the conomics publication of the conomics publications of the conomics publications. is new. In political history and economics publications have been numerous. "Combats constitutionels" and other posthumous works by J. J. Weiss is pournalist and historian "of singular sagacity and penetration") have appeared; "L'Expansion de France" is treated in an able and brilliant manner by the dislocation of the control of the c the diplomatist René Millet; and Spuller has c lected his discourses on the "New Spirit" and other subjects, the preface throwing some light on affair during the presidency of Casimir-Périer. Demoeratic government is the theme, frankly and boldly treated, of "Souveraineté du Peuple et Gouvernment," by Eugène d'Eichthal; Yves Guyot continue ardently to combat the "Tyrannie socialiste" in his pamphlets; and Clémenceau's "La Mélée sociale" has been variously rated as "rant from beginning to end " and as a most original work of great importance.

Joseph Challley-Bert and A. Fontaine have collected the "Lobs sociales" passed by the third republic; Emile Chevallier was awarded a prize by the insti-tute for his volume on the history of the pear laws, and L. Vacher has written an elaborate treatise on "Le Homestend any Etats-Unis," "Histoire econo-"Le Homestead aux Étate-Unis." "Histoire economique de la Propriété, des Salaires, des Denrece et de tous les Prix en général depuis l'An 1200 jusqu'en PAn 1800 les an Important work by G. D'Avenel, sem rized by him in "La Fortune prives a travers sept Siècles." Louis Proat discusses "La triminalité politique." A subject of importance le dealt with in E. Villey's "Le Socialisme contemporain", E. Garofalo's "La Superstition socialiste"; P. Bodley's "Les trois Socialismes: Anarchio—Collectivisme. "Le lebtemberger's "Le Socialismes au Reformismo"; Lichtenberger's "Le Socialisme au 18" Siècle"; A. Onclair's "Le Communisme dans l'Histoire et les Systèmes socialistes d' à l'résent"; Garraud, D'Haussanville's "Socialisme et Charité." Beaums and Binet's "L'Année philosophique" realizes a praise worthy idea, and is probably the most notable philosophical publication of the year. Brunctiere's article in the "Revue des deux Mondes" on the failure of science, which aroused so much discussion, has been lound in separate form, as has also Berthelot's reply. Jean Breton has published interesting "Notes d'un Eudlant français en Allemagne"; E. Lavisse apaks "A propos de nos Ecoles," and M. Leelere of "Les Professions et la Société en Angleterre" and "L'Education des Classes moyennes et dirigeantes en "Efficient des Classes incychies et dirigeantes en Angleterre" (upholding the superiority of English popular education); and the "Livre du l'entenaire de l'Ecole Normale" recounts the history of that institu-tion. Gabriel Séailles has written "Ernest Benan: cosal de Biographie psychologique," R. Allier has studied "La Philosophie d'E. Renan," and Benan's "Ma Saur Henriette" is a fine example of his style and a sweet and tender tribute to his dead sister, who had such an influence on his life. J. Barthelemy Saint-Bilaire has issued "Victor Cousin, sa Vic. et sa Cor-respondance." There are as usual numerous studies in hierary history and criticism, among them being P. Stapfer's "Montaigne," Bourdeau's "La Roche-bacauld," D'Haussonville's "Lacordaire," and E. Spullers "Royer-Collard" (all four in the series "Les grands Ecrivains français"); the "Journal intime" grands Ecrivaius français"); the "Journal intime" of Benjamin Constant; Monod's successful and impartial studies of Michelet, Kenan, and Taine; A. Colugnon's life of "Diderot"; A. Devaux's biography of "George Sand" (crowned by the Academy of Gaston Paris's "La Poésie du Moyen Ago" (Vol. II; Edmond Biré's excellent literary "Études et Portraits"; E. Scherer's "Etudes aur la Littérature contemporaine "(Vol. X); F. Brunetiere's "Nouveaux Emais aur la Littérature contemporaine"; A. Soubies's "La Comédie Française depuis l'Einstuc probies's "La Comédie Française depuis l'Ejssque re-mantique, 1825-'94"; J. Rousse's "La l'oésie bretonne au 19" Siècle "; "Trois Années de Théatre, 1885 '83," by J. Weiss; T. de Wyzewa's "Nos Maltres " Onteresting discussions of important literary and withatle questions); H. Bordeaux's " Ames modernes " (thoughtful studies on very modern writers—Heen, Lott, Heredia, etc.); G. Lanson's "Hommes et Livres; secof that French scholars have begun to escupe themselves with a thorough study of German litera ture). Among the important works on art, which breach publishers issue in such tasteful sumpt are the third and last volume of Monta's " Ill as toire de l'Art pendant la Renaissance italienne and mirable guide to the study of that brilliant person Salomon Reinach's "Description reasonnes Li Missos de Saint Germain" (Vol. II); Collignon's sympathal leally written "Histoire de la Sculpture groups Gense's "La Sculpture française, du 14" au 15"

Siecle", Robert de la Sieratrico vers vi, ce cesay upon "La l'enture anglane i ditional dimie Michelo" Etudico sul l'Hot, roll alle dealing with Velasquez. Lorrain latonale in le Flemiah school, and art at the court of Project al l'M Vachon describes "Leo Arto et co li bissima l'Espect en France" and Il Beral i "La he he sul 196 Specie."

met of fairy dream in one act, in verse; Parry

Wolff's "Fidèle" (one act : Lefèvre's "Le Faune" (one act); Jacques Normand's "L'Amiral" (a two act comedy); Henri Lavedan's "Viveurs," a sattre nimed at the rich niddle classes (as his "Prince d'Auree" was directed against the nobility; Maurice Bon-nay's "Amants"; Henri de Bormer's romantic "Le Fils de l'Arctin"; Émile Fabee's "Argent," a poor play, not without promise, by a new man; Melline and St. Albin's spectacular "Panurge"; "Messire du Gueselin," a rather bonder. du Guesclin, a rather bombastic production by the chauvinistic Paul Deroulede; Berre de Turique's "Crise cenjugale"; young Edmond Rostand's drama "La Princesse Lointaine," produced by Sarah Bern-bardt, and praised for its "smooth, melodious verse" and "pure tone and sentiment"; Lennaitre's "L'Age difficile"; and "La Peur des Coups," by G. Courtedinche ; and "La Teur des Coips, by G. Courte-line, "one of the few real humorists in France." Vol. XX of Noël and Stoullig's "Annales der Théa-tre" has appeared. Antony Réal fils has issued a brochury on "Le Théatre antique d'Orange et ses Representations modernes," that noble Roman stage restored through the efforts of Auguste Carestic and Michel pers. And this calls attention to the poets of Provence, the "Felibres"—with their journal "L'Aioli" and their two Parisian societies, the "Feliand the "Cigaliers" - men like Frédéric Antony Réal fils (son of Fernand Michel), Alexis Mouzin, Batiste Bonnet (who found a translator for his autobiography in A. Daudet), the late Anselme Mathieu ("lou Felibre di Poutoun") Count Foléo de Baroncelli, etc., whose work, full of local color, gives force to the Provençal renaissance of today, the genesis of which is told in the Félibre Paul Mariéton's "Histoire d'une Renaissance."

Germany .- In the well-cultivated field of history, local history receives a very generous share of atten-tion. Individual works like O. Bähr's "Das frühere Kurhessen," F. Münschner's "Geschichte von Hessen," G. Wustmann's "Quellen zur Geschichte Leipzigs." R. Holtzapfel's "Das Königreich Westfalen, Richard Graf du Moulin Eckart's noteworthy "Bay-ern und das Ministerium Montgelas, 1799-1817," Jos. v. Zahn's "Steiermark im Kartenbilde der Zeiten," Heyd's "Bibliographie der württembergischen Geschichte," and Von Scharfenort's "Die Pagen am brandenburgisch-preussischen Hofe, 1415-1895"; and serial publications, such as "Forschungen zur deutschen Landes- und Volkskunde"; "Die Chroniken der deutschen Städte"; "Forschungen zur branden-burgischen und preussischen Geschichte" (Verein für Geschichte der Mark Brandenburg); "Bau- und Kunstdenkmäler der Provinz Westpreussen"; "Ab-handlungen zur Landeskunde der Provinz West-preussen"; "Mecklenburgisches Urkundenbuch, preussen"; "Mecklenburgisches Urkundenbuch, hrsg. von dem Verein für mecklenburgische Gehrsg., von dem Verein für meskenburgische Ur-schichte und Alterthumskunde"; "Dortmunder Ur-kundenbuch"; P. Clemens's "Die Kunstdenkmäler der Rheinprovinz"; "Publikationen der Gesellschaft fur rheinische Geschichtskunde"; "Regesten der Ffalzgrafen am Rhein," "Regesten der Markgrafen von Baden und Hachberg, 1050-1515," "Oberba-disches Geschlechterbuch," and Alb. Krieger's "Toautraphisches Wörterbuch des Grossherzogthums Baden," all four issued by the Badische Historische Kontinssion; "Die westfälischen Siegel des Mittel-aiters," and "Westfälisches Urkundenbuch," both issued by the Verein für Geschichte und Altertums-kunde Westfalens; "Statistik des Hamburgischen kunde Westfalens; "Statistik des Hamburgischen Staates", "Hanssche Geschichtsquellen, hrsg. vom Versitt für hansische Geschichte"; "Wirtemberg-is des Urkundenbuch"; "Urkunden und Akten der State Strassboltz": "Regesta diplomatica neenon Figistellar a Historic Thuringiae" (Verein für thürigische tosch, hie und Altertumskunde); "Bau-und Kunstdenkmaler Thuringens"; "Thüringisch-saches he Geschichtshibliothek"; "Codex diplomasache » he trescuents unnounce trous "savonne Regue"; "Beiträge zur sächsischen Kirchenge» hahte"; "Beschreibende Darstellung der alteren Bau- und Kunstdenkmaler der Provinz Sachsen und angrenzender Gebiete, hrsg. von der historischen Kemmission der Provinz Sachsen";

"Die Kunstdenkmale des Königreichs Bayern, 11.-18. Jahrh.": "Forschungen zur Kultur- und Lit-teraturgeschichte Bayerns, hrsg. von K. v. Reinhard-stöttner": "Quellenschriften und Abhandlungen zur Staats, Kultur, und Kunstgeschichte der Reichstadt Nurnberg"; and "Quellen zur Geschichte de Stadt Hof"-all, apart from their merits or demerits attest to the active spirit of historical research in vari ous parts of the empire. Nor are family histories wanting. Austrian history is contributed to in Il. wanting. Austrian instory is communice to in v. Zeissberg's life of "Erzherzog Carl von Oeste reich," whose "Aphorismen" have been followed b his "Ausgewählte Schriften" ("remarkable for the his "Ausgewählte Schriften" ("remarkable for the stern self-criticism"); the voluminous "Österreich ische Statistik"; "Fontes Rerum austriacarum"; Gs Strakosch-Grassmann's "Geschichte der Deutsche in Österreich-Ungarn" (good, but somewhat prolix) "Quellen zur Geschichte der Stadt Wien" (Vol. I) and W. Porth's "Denkwürdigkeiten aus dem Le des k. und k. Feldmarschall-Lieutenant Ludwig Fr herr v. Kudriaffsky." Vol. VII of F. Dahn's "Kon der Germanen" has appeared, as has also the third and last volume of "Kulturgeschichte der Deutschen im Mittelalter," by the late Franz v. Löher, who, in his learned and thorough "Das Kanarienbuch," again supports his theory that the aboriginal inhabitants of the Canary Islands were of Germanic extraction. There have been numerous additions to the voluminous literature on the Franco-German War, to which the celebrations of the twenty-fifth anniversary of that event have given a special increase. Much that event have given a special increase. Much of a popular character has seen the light—H. v. Selhin's "Aus grosser Zeit: kleine Erinnerungen," Kunste "Die deutsche Reiterei," Th. Lindner's "Der Kriegegen Frankreich," etc. In the deluge of personal reminiscences, such as those of Gen. Verdy du Vernois (published in the "Deutsche Rundschau"), called forth by this renewed interest in the acceptance. called forth by this renewed interest in the war, va ous generally accepted historical accounts were siderably modified. The "Einsiedler von Sach wald" holds an important place in the literature of the year, there having been a swarm of addition Bismarck literature. H. v. Poschinger has publish the ex-Chancellor's "Ansprachen" and "Neue Ti gespräche und Interviews"; Horst Kohl, having is sued his "Politische Reden" in 12 volumes, has be gun a "Bismarck Jahrbuch." "Bismarck-Literatur, by P. Schulze and O. Koller, is a bibliography of 7 pages; and "Unser Bismarck" is a collection of drawings by the well-known C. W. Allers (whose biograph)
—"Freund Allers"—has been written by A. Ohnda Bismarck naturally forms also an important figure i Vols. Vl and VII of the late Heinrich von Sybel Begründung des deutschen Reiches durch Wilhels Among the very large number of biographics monographs are Ernst Haffter's life of Georg Je natch, general of the Grisons; E. zu Putlitz'a "Gus tav zu Putlitz"; R. Koser's "König Friedrich de tav zu Putlitz"; R. Koser's "König Friedrich de Grosse"; "Erinnerungen aus dem Leben von Han Viktor v. Unruh, 1806-86, hrsg. von H. v. Poschin ger," an "opportune and instructive biography"; Ru dolf Thiele's "Ernst Moritz Arndt: sein Leben und Arbeiten für Deutschlands Freiheit, Ehre, Einhei und Grösse"; and "Aus dem Leben des Königs Unvon Rumanien: Aufzeichnungen eines Augenzugen." Other historical works are C. Wachsmuth gen." Other historical works are C. Wachamas Einleitung in das Studium der alten Geschichte Einleitung in das Studium der Alten Geschichte G. Diereks's fair "Geschichte Spaniens"; M. Phi lippson's "Ein Ministerium unter Philipp II: Kardi nppson's "Em aministernim under Philipp 11; American al Granvella am spanischen Hofe, 1579-366"; and Alfred Stern's "Geschichte Europas seit den Verträgen von 1815 bis . . . 1871" (criticised as too de trailed and too sketchy). The late Rud. v. Hering "Vorgeschichte der Indoeuropäer" is a noteworth effort of a specialist in another field to deal with problems of Culturgaschichts. The art writer is problems of Culturgeschichte. The art writer I Thode's charming "Der Ring des Frangipani" (fac or fiction?) is a bit of theorizing to prove that th ring in question is the one that was given by Apolonia Lang to her husband, Christopher, Count Fran gipani, in 1513. Among the additions to the ever

nereasing number of books chronicling German ex-derations and colonization, especially in Africa, are L. Schmidt's " Deutschlands Kolonien," Karl Peters's Deutsch-Ostafrikanische Schutzgebiet," Eug graffe "Nord Kamerun," Cr. Weidman's "Deut-Manner in Afrika: Lexicon der hervorragenddeutschen Afrika-Forscher, Missionare, etc., Alfred Zimmermann's " Kolonialgeschichtliche d Alfred Zimmermann's "Kolonialgeschichtliche selen." Ernst v. Hesse-Wartegg describes a sumier voyage to "Korea." Two interesting contributes to scientific biography are Max Lauc's "Christaffet Ehrenberg, ein Vertreter deutscher gurferschung im 19. Jahrh., 1795-1876," and the Jakob Moleschott's "Für meine Freunde: Lesserinnerungen." W. His, the famous anatomist, "Johann Sebastian Bach: Forschungen über des-Grabstäte, Gebeite. Grabstätte, Gebeine und Antlitz," pronounces the intly discovered skull of the musician authentic. seatly discovered skull of the musician authentic, it is various phases is treated of in Jakob v. Falke's Ass alter and neuer Zeit: neue Studien zur Kultur di Kunst."; Gust. Ebe's "Abriss der Kunstge-lichte des Alterthums"; Jul. Allgeyer's "Anselm serbsch"; and Johannes Volkelt's excellent "Aesstische Zeitfragen" (combating "the excesses of aliem in art."). Laurenz Mullner, author of "Liteiem in art"). Laurenz Müllner, author of "Lite-up- und kunstkritische Studien," is described as " a e example of a combination of extensive knowledge independent judgment with religious warmth and rical orthodoxy." The enthusiastic idealism of the at orthodoxy." The enthusiastic idealism of the set astheticist Moritz Carrière again finds vent s posthumous works "Christus," "Das Wachs-der Energie," and "Fichte's Geistesentwickand a kindred spirit breathes throughout Hek-Arneth's "Das classische Heidenthum und die stliche Religion " (with its conception of " human rion free from all sectarian coloring"). ion free from all sectarian coloring"). In the resting "Schopenhauer; ein Beitrag zur l'sychoe der Metaphysik" Rud. Lehmann strives to trace pessinist's philosophy psychologically and hissally, while Ludw. Schemann has edited "Karl, desprache und Briefwechsel mit Arthur Schobases." The personal note in Friedr. Nietzsche's has a malestinist that his historrants by hauer." The personal note in Friedr. Nietzsche alsophy is so predominant that his biography, by sister, Frau Elisabeth Förster-Nietzsche, will be test with interest. Hieronymus Lorm has given views concerning Nietzsche in "Der grundlose timismus." Richard Wahle, with keen but sometimismus." Richard wahle, with keen but sometimismus." at bairsplitting criticism, deals in an agnostic spirit with "Das Ganze der Philosophle und ihr Ende," and Paul Deusen traces the "Allgemeine Geschichte der Fallscophle, mit besonderer Berneksichtigung der Beligionen." In literary history, monographs of more or less interest are H. Düntzer's "Goethe's Stammbaume", Richard Mayr's essays on Goethe; R. Weissenfels's "Goethe im Sturm und Drang "; Karl Heissenan's "Goethe im Sturm und Drang "; Karl Heissenan's "Goethe in Sturm und Drang "; Karl Heissensan's "Goethe in Sturm und Drang "; Karl Heissensan's "Goethe und Schiller im persönlichen Verhältniss"; Louis P. Betz's "Heine in Frankreich"; E. Kahnemann's thorough "Herder's Leben" (finel) enneived, despite some faults of execution); E. Wolf's ceived, despite some faults of execution); E. Wolff's ottacheds Stellung im deutschen Bildungsleben"; "Gottscheds Stellung im deutschen minungssen.
G. Ellinger's "E. T. A. Hoffmann"; H. E. v. Rer-lepsch's "Gottfried Keller als Maler"; and A. Ro-lepsch's "Gottfried Keller als Maler"; and Schaffen." " Fritz Reuter in seinem Leben und Schaffen"
tav Könnecke has issued a "Bilderatlas zur Gehichte der deutschen Nationalliteratur," and Mich. rnays "Schriften zur Kritik und Litteraturge-liehte." R. Wolkan's "Geschichte der deutschen restor in Bohmen bis zum Ausgange des 16. Jahreals with 19 contemporary writers of various ionalities in "Studien zur Literatur der tiegenof the new political situation on literature, and course to this rather depressing conclusion: "The literature of United Germany is neither hot nor cold, but dread illy commonplace and destitute of individuality."
he elevation of public taste is the aim of a new and
ristically presented periodical, "Pan," issued by
the "Genoscenschaft Pan," which publishes also

the editor, O. J. Bierbaum's, "Lebetant can bug . spiel."

Novels and stories by noted obier authors are Spielhagen's "Stumme des Himmels" directed against arietiscratic prejudices and "Susi". A Widhrandt's "Die Osterinsel" and "Die Esthenburger" (bestinite descriptive passages , both " below his usual level"; G. Ebers's "Im Schmiedefener Ecenan aus dem alten Nürnberg " and " Im blauen Hecht" et Boquette's "Somierlinge" (short storces , W. Jen-sen's " Die Katze" and " Jenseits der Alpen Novel-len"; and Paul Heyse's " In der Gessterstunde" etfeetive short stories: The subject of Rud a tests schall's "Im Bann des schwarzen Adlars" is taken from Prussian history, as is also that of "Wider dear Kurfursten," by Hans Hoffmann, whose "Novellen Kurfürsten, by Hans Hogmann, whose Averages aus Hinterpoinnern "form excellent pertures of the life of his native land, while a breath of bracing mountain air blows through Ludwig Gangbofer's "Die Martinsklause." A. Schnitzler's "Sterben" describes the cruel sufferings of a consumptive with extreme modern realism. Leopold Andrian's "Gar-ten der Erkenntniss" has been classed as impressionich der Erkeinfilms. Ins beeh classed as impression-istic. Grouping the women by themselves, we have Ilse Frapan's "Old Hamburg." and "Zu Wasser und zu Lande"; S. Junghaus's "Geschieden"; "Die Ted-tenwacht" and "Das Schädliche" sloert iteries and "Margarete," by M. v. Einer-Eschenbach. I dia Boy-Ed's "Die Schwestern"; Marie von Bunsen's Berlin stories (such as " lbr Mann " and " I do in England," published in the "Deutsche Kundechau"; N. v Eschetruth's "Johannisfeuer" short stories; and W. Heimburg's "I m fremde Schuld" Further titles W. Heimburg's "I im fremide Schuld" Further titles in the lengthy list of prose fiction are: E. Ecksteiniv "Familio Hartwig" and "Nora. Novelle", H. Heuberg's "Zwischen drei Feisern," "Graf Jark," and "Fieberndes Blut"; E. v. Wolmgen's humorous Die Erbschleicherinnen", W. Raabe's "Gesammelte Erzählungen", E. Wichert's "Blinde Ließe" and "Die verlorene Tochter", H. Hopden's "Im Schlaf geschenkt"; M. Kretzer's "Im Ecssemment", H. v. Zobeltitz's "Die Kronprinsenpassage", Ech. Skowronnek's "Mein Vetter Josua", filld. Ortmann's "Casamicciola"; Arthur Zapp's "Der tella Schmettwitz," "Martha und Maria," "Moderne Frauen," and "Der neue Don Quinte", F. v. Zobeltitz's "Die Johanniter" and "His in die Wiste"; and Felix Holländer's sensational "Starm-Whate "; and Felix Hollander's sensational " Starmwind im Westen ; ein Berliner Rossan " & manufely accurate account of a notorious Berlin soundal's The epic does not flourish in this age, but a notice worthy example of this form of poetry is "Robes-pierre," by the young Hungarian Marie Engenie delle tirarie, impressive and effective, although marred of times, we are told, by unpleasantly extreme naturalism. Hermann Hangel's "Faust and Presenthous," marked by deep thought, is a "delactic and scientific ing the attendant law learness and possession. wern," dealing with the amence of to day, and eq two works quite overshadow the other marrielive generate of the year such as Held's strongly emilic." Tannhumers Recodivus." and Johannes Trojan's humorous. "Dus Wustrower Königsschiessen." "fragrant of the tax-Wustrower Königsschiessen, "Fragrand of the tar-ern". Voung Hans Falke, who, like that other Ame-trian, E. Marmett, writes so understandingly of the spiritual lite of the priesthesid, has followed up the success of his trace consist idvia "Der Stiftmertia von Kreummineter" and "l'flarrer Habsemann" in a new see. "Fiat Lax." Numerous collections of lyrical joints have again seen the light works by in-dividual authors such as the elegient Alberta v. l'utrkammer ("Offenbarungen") and the celebrated Victories Hetty Paoli i posthumous poems, amouth in style, marked by deep and warm feeding cand anthol-ogies, such as the "Cotta scher Musemalmanach." Albertha, Graf Wickenburg, sings with warm feeling and kindly humor of "Mem Wien." The none of passion in Call Busse's posmis is accommand to excess in the cristic "Neurotika" of Folia Istermann is string and modernly nervous genius, and even more so it l'aul Fischer's "Hallocinationen." The teams of

Johanna Ambrosius (Frau Voigt), a simple peasant woman of East Prussia, ran through 4 editions within three months. Written in poverty and illness, these verses, tinged with sadness, are noteworthy examples of psqular poetry. On the stage, the social drama, dealing with social and sexual problems, presented with crass, sometimes strained realism and studied commonplace, is having its day. A. Wilbrandt's "Viola"; Fulda's comedy "Die Kameraden"; F. Philippi's "Der Dornenweg"; Max Dreyer's "Drei" (a piece of psychological analysis artistically presented by a new man); H. Sudermann's "Gluck im Winkel" (skillfully constructed, but not without faults and weaknesses); Robert Misch's comedy "Nachruhm" and his drama "Liebe von Heut" (conventional in action, but marked by a striving for naturalness); "Ohne Geläut," the promising maiden effort of F. v. Zobeltitz; "Der Hexenkessel," the first play of Georg Engel, known as the author of some pronouncedly realistic novels; the Kulturdrama "Des Sonnenreiches Untergang" (dealing with the conquest of the land of the Ineas) and "Gordon Pascha," a 5-act drama, by Wolfg, Kirchbach; the farcical "Zwei Wappen," by Blumenthal and Kadelburg; by Richard Nordmann (Fran Agnes Langkammer), by Richard Nordmann (Fran Agnes Langkammer) by Richard Nordmann (Fran Agnes Langkammer) by Richard Nordmann (Fran Agnes Langkammer). The version of the fallen womann) and Max Nordau's "Die Kugel" (which has not the tragic effect intended by the author). Paul Lindau has issued dramaturgic essays, "Vorspiele auf dem Theater"; and 2 books and Emil Thomas's "40 Jahre Schauspieler."

Greece.-Valuable and interesting historical publications are Paul Calligas's important "Studies of Byzantine History from the First to the Final Conquest of Constantinople"; the posthumous "History of the Despots of Epirus," by J. Romanos, "the best Corfiote historian"; a readable compendium on the history of Corfu by A. Hidromenos; F. Albana's valuable pamphlet on "The Titles of Nobility in Corfu and the Feudal System"; and a "History of the Old Asiatic Peoples," by P. Carolides. E. Stamatiades has written the first biography of Jacob Basilicus, a Samian adventurer who sat on the throne of Mol-davia during 1561-'63, and "Demetrius Phalereus and Athens" is the subject of a monograph by C. Papazis. Archaeological publications include pamphlets by A. Skias ("Contributions to the Topography of Athens") and C. Lambros ("The Cupping Glasses and Cuppers of the Ancients") and the lists, by P. Castriotis and B. Leonardos, of the antiquities in the museum of the Aeropolis and at Olympia, respectively, N. Politis writes with knowledge of "Popular Cosmographic Myths"; M. Gedeon, of "Education and Poverty in the Last Ten Years"; and J. Mesoloras, of the " Confessions of Faith " of the Greek Catholic Church. Sp. Lambros has compiled a "Catalogue of the Orreck Manuscripts on Mount Athos," An admirable, learned treatise on "Greek Meters," by D. Semitelos, the "Publisheral Adversaria" of C. Contos, and a "filtetry of Greek Literature," by G. Mistriotis contribute to conthous degree of ancient Greece. In the don ain of biller lettree, less than ever of the material appearing in periodicals has found its way into book appearing in personant mis found in many man form. From near in w books in this field are "Island Stories" by A. Libhaliotis, "a master of the popular dialect", tre "First Fairy Tales," also written in the per mar torgett of the ajannis canew man, of much promose dest to he distante ; and D. Bernardakis's approach trace by Pareta."

Holland There is again much activity to report in the department of history, and the serial "Oud-Holland" is the mid-am through which many important researches are brought before the public. The late Prof. Jor san's valuable historical studies have been reprinted; Van Arkel and Weissmann have written an injustrated description of the an-

tiquities of the northwestern part of Holland; Dr. Knuttel is issuing an elaborate study of "De Tockand der Nederlandsche Katholicken ten Tijde der Republiek"; and Dr. van Deventer proceeds with his history of the Dutch in Java. Books dealing with the Dutch East Indies are: "Encyclopaedie van Nederlandsch-Indië," by P. A. van der Lith and A. J. Spaan; P. J. F. Louw's "De Java-Oorlog van Nederlandsch-Indië," by P. A. van der Lith and A. J. Spaan; P. J. F. Louw's "De Java-Oorlog van Nederlandsch-Indië," in Repertorium op de Literatuur betreffende de nederlandsche Koloniën, voor zoover zij verspreid is in Tijdschriften en Mengel-werken"; J. F. van Bemmelen's "Ut Indië; Reisindrukken en Herinneringen uit onzen Archipel vand W. F. H. Wunderlich's "Insulinde: Land ex Volk van Nederlandsch-Indië." S. Kalff's "Japansche Schetsen," H. C. M. van Wickevoort Crommelin's "Een herlevend Volk: Schets van de Japanners ee hun Land," and G. O. Van Wijk's "Naar Atjeh en terug" also describe Eastern lands. Vol. II. of C. Snouk Hurgronje's "De Atjehers" has been published after all. L. Legrand is the author of a "Geschiedenis der Bataafsche Republiek." L. van Depseel (K. J. L. Alberdingk Thijm) has issued "Verzamelde Opstellen." Works of note in literary hiery are: W. G. C. Byvanck's learned "Hoofdstukken onzer Geschiedenis. De Jeugd van Isaäe da Costa"; S. A. Naber's brochure "Vier Tijdgenooten," dealing with Cd. Busken Huet, E. J. Kiehl, J. T. Buys, and C. G. Cobet, the essays being described as personal recollections rather than scholarly monographs; H. J. A. M. Schaepman's "Menschen en Boeken," interesing reminiscences and literary opinions; W. G. van Nouhuys's "Walt Whitman"; the interesting letter of the wife of Multatuli (the late E. Douwes Dekker), edited by Julius Pée, one of the most important of the many books dealing with that writer; and the

We are told that although less prose fiction has a peared, the proportion of promising works is great However, the turbulent movement of the young element, which began about fifteen years ago, has no been so very extraordinary in results. Mrs. Zwaardemaker-Visscher's "Sterk in Leed," a novel on the old lines, is praised as a serious work, careful in characterization. Mrs. Hamaker-Brooshooft's " De Van Es terization. Mrs. Hamaker-Brooshoott's "De van ze-perens" has been commended as a "homely and really Dutch "product. More modern in tone are "Om het Geluk," by Mrs. Knuttel-Fabius, and the work of Van Nievelt, while a link between old and new has been found in Mrs. Therese Hoven (a pacedonym), who is becoming more modern in taste style and who has published two short novels ("Uit vrije Beweging "and " Zonder Illusie") and a volu vrije Beweging" and "Zonder Husse") and a votage of tales. A. Werumens Buning, author of "Binne en buiten Boord," has earned a well-deserved reputation while Minister of the activities while while Minister of the activities while while Minister of the activities w tion as an artistic writer of sea stories, while Mis-Cath. Alberdingk Thym, who has written "Gouden Ketenen" and "Boven den Afgrond," appears, like Louise Stratenus ("Tegengift"), to have a propensity for utilizing sensational occurrences in high life topics for her novels. Marcellus Emants, perhaps the oldest of the moderns, is a careful artist, but his "Eer nagelaten Bekentenis" is described as too thrilling nagelaten Bekentenis" is described as too thrilling in its minute analysis of agonizing mental processes; Louis Couperus (whose "Wereldvrede" continues "Majesteit") has not enjoyed his usual success with his impressions of a tour through Italy; and "My Lady Nobody" (New York), by Maarten Maartens, though not, perhaps, offering the same opportunity for a display of thrilling power and a deft use of the uncanny and unusual as his former works, depicts social life in Holland as eleverly as these, albeit with uncanny and unusual as his former works, uchassocial life in Holland as cleverly as these, albeit with a touch of pessimism. Two promising young writer deserve mention: the author of "Bertha," a little who made a stir with "Dat," which he surpassed in "Bouton de Rose." The latter author's fault seems an overconcise style. C. Huygens's "Zomer," Johanna van Woude's "Van de Muziek des Levens," A. Buls's "Binnenskamers en Buitenhuid," and L. J. Lamberts Hurrelbrinck's "In Limburg en darlie also appear on the year's lists. Some of the
poets are being revised in reprints; the younger
ration is doing little. Dr. A. Worp is issuing an
extent edition of Constantyn Huygens's complete
while J. N. van Hall, in "Dichters van onsen
the efficient the best and most characteristic
makes of the art of les jeuses. Books by men of
the wide shool are "De Gebroeders," by Frederist
les (a psychological analysis of the human
a gitated by good and evil), and "Verzen,"
y. Kloca ("the most boisterous of our young
""", of which "scarcely any word is fit for retion in good company." Louis Couperus has
"Williswinde: een nieuwe Bundel tiedichten."

""Anarchisten" is loosely constructed and
he characterization. There are excellent actors
leiland, but hard times close up the theaters, with

Milennial National History of Hungary" (writh Marcail and other eminent historians, well by B. Szilágyi, and finely illustrated) has been in anticipation of the millennial celebration by the Hungarian Athenseum Society, which is also a biographical "History of Hungary" (writh Marcail and other eminent historians, well by B. Szilágyi, and finely illustrated History of Lorenter," a similarly monumental product of little operation. G. Sebestyén has written a "History a similarly monumental product of little operation. G. Sebestyén has written a "History of the Walland"; P. Hunfalvy, a "History of the Walland A. Vambéry, "Origin and Growth of the brank Stata." The celebrated Istvan Széchenyi's the same "Journalistic Articles," edited by A. Sely under the auspices of the Academy, form values strain for the history of Hungarian political culture. Adolf Agai gives delightful sketches ("well") On Water and Land." Alexander Matlewsky subable "History of the Hungarian Budget, "Vol. H of Földes's "Social Economy," and bett Koha's "History of the Hungarian Budget, "The well" of the history of Budget, "The well "In January, 1995, and attention has alled also to the "Budapesti Szemle" ("Budazeria Velled by Paul Gyulai, the main observity we begun in January, 1995, and attention has alled also to the "Budapesti Szemle" ("Budazeria Monuments of Ancient Pannonia" and his "Hungarian Linguistic Monuments to the of which is "to acquaint the Hungarian publication of Ancient Pannonia" and has "Hungarian Linguistic Monuments to the of the Art of Printing" are of national interest. "Comments the Art of Printing are of santional interest." "The solution of the cellected edition, in 12 volumes, of Sandales and stories, as well as in his novel-

published; however, there are some works of In the collected edition, in 12 volumes, of Sandra Bridy's novels and stories, as well as in his novels "Bowwhite" ("Höfehérke"), this gifted dicertification for strange and morbid subjects, mying, disdain of plots, and subjectivity are made.

Robert Tabori's "The Key of the Temple (a "story of religious polities in the time of the Temple (a "story of religious polities in the time of the theres.") again shows this prolific writer's the lie in pure and simple narration, interesting and thrilling, without any admixture of psychology of "problems." In his prize novel "Kaialin," or "problems." In his prize novel "Kaialin," a riskey young author, has written a captivating pleasant and heartfelt story, and Géza Gardin, who some critics place at the head of contents of the language and delicate inny, has way successful with "The Destruction of Nineverty, and Other Stories" and the novel "King Midas"

(published as a serial in a newspaper. Feretar Reviseg continues his success in the charming "too, dental Tales" (including the striking stor) "brins". Tamas Kobor's "Frost" shows a preference for treating pathological conditions; letvan Barsony, the noted delineator of nature, is at his best in "In Private" (a collection of tales); tieza Malonyay shows improvement in "Struggles" inovelettes, giving cridence of "an interesting, warm hearted individuality"); and Béla Agai, the young nephew of Adolf, began well with "Feuilleton Novelettes." Another very young writer, lignous (Hugo Vergelsherg), sustains his reputation in "Confessions" and "Verses." both marked by glowing and vigorous language. Odon Jakab's "Prince Argirus," a "fairy tale in four songs," has won an Academy prize; Bishop Gerő Sassa's new "Poems" unite "spritual pathos "with philosophio humor; "Parterre," by Letvan Môra, a vouthful poet, though not without faults, is premising; and Helen Béhassy's new "Poems, while faulty in verification, are noteworthy for their charmingly sweet simplicity. Finally, a complete collection of the revolutionary poetry of 1848-'49 is offered in Lajos Hentaller's interesting "Songe of the War for Liberty." Antal Varady's important prise tragedy "Charitas," romantic in style, has found favor; Jóssef Bokor's "In Winter" (a prize estaderille) shows close observation of character; and Béla Budai's "The King" (one-act consety) is pleaseast and harmless, though not strikingly mentorious. The publication of A. Silberstein's "Dramstarge Works"

Haly.—Once more comes the complaint that al-though historical works have been published in abundance, there are hardly any of high literary merit or scientific import. Carlo Cipolla's "Fer la Storia d'Italia e de' suoi Conquistatori nel Medio Evu Storia d'Italia e de' suoi Conquistatori nel Medio Evo-più antico " ia a noteworthy work of research; Ang. Vit. Vecchi has well told " La Storia generale della Marina militare "; and Raffielle Barbiera's " Il Sa-lotto della Contessa Clara Maffei " presenta a strikina picture of both literary and political interest. The Cesare's " Vita della venerabile Maria Cristina di Savoia, Regima delle due Sicilie," E. Mass's " La Monarchia di Savoia," G. André's " Nizza, 1989-1814," C. Trevisani's "Storia di Roma nel Medio Evo," and L. Chiala's " Politica segreta di Napula-one III e di Cavour in Italia e in Unseleria, 1836one III e di Cavour in Italia e in Unglierta (1838-61) " also illustrate various aspects of national his tory. French affairs are dealt with in I Silvagai's "Napoleone Bonaparte e i suoi Tempi " and E. ff. cini's "Guerra franco-germanica del 1870 "1," and A. Professione recounts "Storia mosterna e contempo-Nor should R. Lancianis "Forms artis Remarkers silio et auctoritate Regiae Academis Lincourum dimensus et ad modulum 1:1,000 delineavit "be emitted here. "Nuovo Lettere inedite," of C Cavour, have been edited by Edm. Mayor; a new, short "Vita di Vittorio Emanuele II," by O. Po, has appeared; and Col. Severino Zanelli's "Comini di Guerra dei Tempi Col. Severino Zancilita "Lomini di Guerra dei Tempi nostri: Moltke" is described as a sympathetic psy-chological study of the great strategist. E. Contin "Storia del l'assaggio di Nord-Ret," G. Baggiantia "Viaggi di un Artista nell' America meridionale," and R. Favala "Recordi russeni: Note di un Viaggio in Transilvania e Romania" avell the list headed aventes and tracche. in transitional a normalia well the lost members toyages and travels. A great social question is discussed by I' Receistif ("Idealf del Socialismo"), R. Garefalo ("La Superstizione socialista"), and L. Florentini ("Socialismo ed Anarchia"). C. Lombisson entres of "Gil Anarchia" and Vit. Donati of "Anarchia," and A. Loria has collected his lectures "Anarchia," and A. Loria has collected his lectures on "Problemi sociali contemporanci." The "Kiforma Sociale," edited by F. S. Nitti, continues "to process more vital energy and more actuality than any other Italian magazine." Bibliographical works of intervet are 6. Ottino and G. Fumagalib's "Bibliotheca bibliographica Italian," and Gi. and C. Salviolib's "Bibliografia universale del Testro drammatico Italiano." The tercentenary anniversary of Tusse's

death was celebrated by solemn and imposing public cerementes, and unofficially by the publication of a number of books dealing with the poet. Angelo Solerti's 3-volume "Vita di Torquato Tasso," the result of conscientions and impartial research, strips the veil of romanee from much in Tasso's life, such as his love for the sister of Duke Alfonso. We are told that some of the critics still find it difficult to believe in Tasso's madness, and give most unlikely reasons for his disgrace. Solerti is also issuing an edition of Tasso's minor works in 10 volumes. Further books concerned with Tasso are V. Prinzivalli's "Torquato Tasso a Roma" and "Torquato Tasso nella Vita e nelle Opere," ("fairly successful pueces of biegraphy, but indifferently written"); F. Vismara's "L'Animo di Torquato Tasso i Genitori di Torquato Tasso"; Enrico Proto's "Rinaldo"; Belloni's "Epigoni della Gerusalemme liberata"; and books on "Aminta," by Guido Fortebracei and Charlotte Banti. Other contributions to literary history and criticism are: A. d'Ancona and O. Bacci's "Manuale della Letteratura italiana" (fifth and last volume); B. Zumbini's "Studi sul Petrarea"; Crescini's "Contributi agli Studi sul Boccaccio"; Fabbris's "Studi Alfieriani"; L. L. Boccomino's "La Poesia esplicata nei principali Poeti italiani"; G. R. Cesarco's "La Poesia siciliana sotto gli Svevi"; Martini's "I Teatro"; Novati Flamini's "Studi critici's a volume of literary criticisms by Croce, which has aroused unusual interest and clieted some acrimonious replies; F. Flamini's "Studi di Storia letteraria italian e straniera"; E. Portal's "Scritti vari di Letteratura provenzale"; P. Toldo's "Contributo allo Studio della Novella francese del XV. e XVI. Secolo"; Giac. Barzellotti's "Ippolito Taine"; A. Foa's "Studi di Letteratura tedesca"; and G. M. Scalinger's "Ibsen."

Novels are as usual exceedingly numerous, and noteworthy ones very much less so. Gabriele d'Annoteworthy ones very much loss so. Gabillet d'An-nunzio, whose style one Italian critic finds labored and affected, is in vogue just now. His novel "Le Vergini delle Rocce" (first published in "Il Con-vito," the dainty organ of "Young Italy") is the first of the "Romanzi del Giglio." D'Annunzio appears to have a decided preference for French critics and readers, in which connection we are reminded that there is much imitating of the French among Italian novelists, and that French books are much read in Italy. Giuseppe Errico publishes four sad but cleverly written stories of poverty and sorrow under the title "Piccoli Schiavi bianchi." Further new fiction, named without comment: La Marchesa Colombi's "Cara Speranza"; E. Ruta's "Il Gusta d'ama-re"; A. G. Barrili's "Fior d'Oro"; E. Castelnuovo's "L'onorevole Polo Leonforte"; and L. Arbib's "Catena." Of poetry, there is even less to say. Carducci's "Ode to the City of Ferrara," written in honor of the Tasso commemoration, is criticised as obscure, like much of his recent work. Giovanni Pascoli, hailed as a new poet, has issued "Myrice" (third edition). His poetry, though somewhat labored and obscure in language, is chaste and simple in tone and thought, and shares the melancholy which, we are told, characterizes all modern Italian poetry. The drama "La Soltara," by G. Sinovoli, a schoolmaster, treating of the lamentable condition of the workmen in the sulphur pits of Sicily, enjoyed a triumphant success in that island a success attributable to any but artistic causes, for in Italy the play was criticised to ankward technique and clumsy dialogue.

Norway O A Overland has completed his scholarly history of Norway to 1814, D. Schnitler offers Hisdo at Vorges Krigshistorie," and A. C. Bang relates "Don Norske Kirkes Historie i det 16, Aarhundrede". An admirable monograph on the "father of Norwegian painting," "Professor [Johan Christian] Dahl; et Stykka af Aarhundredets Kunst- og Kulturhistorie," is by the art critic Andreas Aubert, and K. Dahle tells of "Röres Kobberverk, 1944-1894," S. Bugge offers as "Belrag til den ældste Skaltedigtnings Historie"; Erik Lie, a sen of Jonas, has written

a volume on Balzac; and Carl Nærup, a newcomer among literary critics, has shown considerable power in his clever essays on contemporary writers. Chr. Collin, in "Kunsten og Moralen: Bijdrag til Kritik af Realismens Digtere og Kritikere" (meritorious, though faulty in style), makes a plea for morality in art, attacking naturalism, and has aroused warm discussion. Hegelianism has again found a support in the well-written "Rummet og Sjælen" of the young philosopher H. C. Hansen.

It is perhaps in the field of belles-lettres that some of the most noteworthy publications have appeared.

Jonas Lie has given rein to his fancy in "Trold"
two volumes of peculiar eventyr, some of which have been pronounced veritable masterpieces of sublime simplicity. Arne Garborg's qualities—mastery of language, both the literary tongue and dialects, brilliancy, introspection rather than creative ability-are apparent in "Fred" and "Haugtussa" (in vers so naively gentle that his "morbidly reflective mind" seems hardly to have had part in its production). Knut Hamsun, noted for his captivating style and audacious, though somewhat superficial manner, has in " Pan : af Loitnant Thomas Glahns Papirer given some daring love seenes and intensely enthusiastic and deeply poetical descriptions of Nature. This same deep love for Nature is felt in the pictures of coast life by Thomas P. Krag (author of "Mulm"). Jens Tvedt, who has drawn such realistic and faithful pictures of Norwegian peasant life, appears to have adopted symbolism in "Velaug," a "hymn of love," rather stiff despite its gorgeousness. He writein the popular dialect, as does also Rasmus Loland the peasant poet, to whom some ascribe finer gift, and who has promised much in "Skuld," "Skattegraveren," etc. Hans E. Kinck, who uses the local dialect in a masterly style, again deals with life on the beautiful Hardanger Fiord in his poetical "Flagthe beautiful Hardanger Fiord in his poetical "Flag-germus-Vinger." Hans Aanrud, Jacob Hilditch, Hans Seland, and the sculptor Matthias Skeibrok also describe peasant life in various parts of the kingdom, in stories and sketches more or less humorous in character, while Rosenkrantz Johnsen's "Kaptein in character, while Rosenkrantz Johnsen's "Raptem Appenes' Daughter "deals with the life of fishermen. Gloomy pictures of Bergen life are furnished in Theodor Madsen's graphie "I Drift" and in "Professor Hieronymus," by Mrs. Amalie Skram, an audacious naturalist. Joyless and gloomy themes are also preferred by the energetic and daring naturalist Gabriel Finne, who has published "Dr. Wangs Born," "Unes Syndere" (short stories), "To Damer," and "Unge Syndere" (short stories), "To Damer," and the somewhat less unpleasant "Rachel"; and by Mons Lie (son of Jonas), discreet in method, in "Remen!" (novel) and "Streif" (collection of sketches). On the other hand, a joyful view of life is expressed in the works of Hans Angard and of Bernt Lie (cousin of Mons), whose richly colored word painting is again in evidence in "Justus Hjelm." Ole Bang's "Indin evidence in "Justus rijeim." Ole Bang's "Ind" is described as incoherent, yet having both merit and humor. Flirtation is again the theme of Hjalmar Christensen, in "Mat Blod"; the "new woman" is portrayed with some originality in Alvilde Prydz's "Mennesker" and "Dröm"; the rights and the state of the Vilde Prydz's "Mennesker" and "Drom"; the name of woman are advocated in Helene Dickmar's "Ud i Livet" and "Ellen," and in the novels and plays of Anna Munch, whose keenly psychological "To Hustruer" is the work of a sympathetic artist. Further new fiction includes J. Vibe's "Om tusend Aar," O. Hansson's "Reisen hjem," and J. Paulsen's "Kunst-nernaturer." Lyrical poetry is being cultivated by a number of very talented young writers. Nils Collett number of very talented young writers. Nils Collet Vogt (author of the romance "Familiens Sorg" sings the praise of a passionate delight in love and life; Sighjörn Obstfelder, a "gentle visionary" of life; Sigbjörn Obstfelder, a "gentle visionary" of deep feeling, is perhaps not as intelligible to the general public in his tender and peculiarly individual poetry as in his melancholy novel "Liv"; and Vilhelm Krag (author of the prose poems "Nat") expresses the rich variety and eolor of his fancies in tender, melodious verse. Otto Sinding, the painter, has issued a collection of gloomy and strangely ropoems, and Sven Nilssen's "Skygger" (pris poems) give proof of a vivid imagination and brilliant style. Of dramatists, Gunnar Heiberg, whose great talent, we are told, is not yet fully apprected in Norway, is as original, ingenious, unavestional as ever in "Det store Lod." Fru Hulda Cherry "Môdre" (a peasant subject) is gloomy in a vettle Visile's "Fru Gerde" is a sympathetic distinction of sorrow; T. Madsen's "Marionetter" elected a "scenic success"; Jacob B. Bull, in "Usa Ansvar" and "Alvorsmend," makes fanatical tasks on the naturalistic school, although, it is id he is in his ardor guilty of the same excesses this he condemns; V. Krag's charming "De Gantalenten" affected one critic like "a bliths some "; G. Finne handles complicated psychological telesia well in "Uglen" and "For Afskeden"; Christensen (author also of "Unge Nordmænd," "Christensen (author also of "Unge Nordmænd,"

"O. Finne handles complicated psychological publishs well in "Uglen" and "For Afakeden"; I. Christensen (author also of "Unge Nordmend," a transe of elever critical essays) analyzes the flirt in "In Celrherre" and "Folkets Tjener," as in his novel; Jens Lie's "Lystige Koner," despite its sparting dialogue, has not made a strong impression; Keet Hamsun's "Ved Rigets Fort" is weak and maker essmonplace; and Thomas P. Krag's peculiar "Lag. Again." Is illevise not faultiess.

Kini.—National history has been contributed to a R. W. Berg's "Memoirs of Polish Conspiracies and hallions, 1831-'82"; St. Peplowski's "Revolt of Kaniwake"; K. Górski's "History of the Polish vally"; N. Konie's "A Page from the History of Crillimation in Poland"; S. Komornicki's "Poland in the West in the Light of Figures and Events; Test I: The German Colonization"; Fr. Papée's "History of Lemberg"; Ig. Pradayński's "Historico-likey Memoirs of the Polish-Russian War in 1811"; A. Kraushar's "Frank and the Frankist, 173-1816," an account of the "adventurous reformer of the Polish Jews"; Z. Kaczkowski's "Woman in Polish History," A. Roman's "The Tatra Mountains: A Physics-geographical Study"; and M. E. Trepka's quantition. "The Book of Polish Proverbs" is by Adalberg. L. Finkel and S. Starzyński's "History of the University of Lemberg" is good, though someths nationalist in tone. J. B. Antoniewicz has issued as "Hiustrated Catalogue of Polish Art from 1866: Exhibition at Lemberg, 1894." W. Sorvies has written of "Schiller and Goethe: Their test Years' Friendship," and in Polish literary history we have the fourth and last volume of the "Life Adam Mickiewicz," by a son of the famous poet; C. Coarnowski's "Slavie and Polish Journalism" at Second series of "Our Novelista," by the noted while P. Chmielowski, who in "The Polish Poets of Day " deals with younger men such as Z. Praesaynki, K. Tetmajer, J. Kasprowicz, S. Rossowski, A. Orman, and A. Niemojewski.

H. Stanklewicz's "The Poloniecki Family" is the

It is takiewiezh "The Poloniecki Family" is the sense important novel of the year. The veteran J. Schargesiewiez sustains his reputation in "Bread" (decling with the political situation in Prussian Political), "Under Three Governments," and "Orion and Crywathema "(a stinging eatire on modern naturalism; B. Prus has published a collection of very new neveletten; the Pollah Jew is again portrayed in The Dark Cot "and "Life and Decke of Monsicur and "Life and Pecke of Monsicur and "Life and The Cotton and "Life and The Cotton and "The Dark Cot "and "Life and The Cotton and "The Dark Cot "and T. T. Jez describes Galician affairs in his antirioal romance "Elizabeth." The list of fiction includes also M. Gawalewicz's "Begun in the Mornisches also M. Gawalewicz's "The Goldien Chaina," the first longer work by W. Gawaliski, a noted poet and short-atory writer; Object The Pupil "; Mile. M. Rodziewicz's "On the Path of the Swallows " and short-atory writer; Object The Soldier's Stock "; Mme Hajota's somewhals the "Her Son"; Mme A. Krzyzanowski's even more drastic "For Others' Faults"; "Cotton,"

a description of life in a manufacturing town, by Kosiakiewica; Abgar boltaris "Friem a Court's, Kosiakiewica; Abgar boltaris "Friem a Court's, House" (warm-hearted tales of the mitter authority the prolific A. Krechowiecki's "The Limit", "Janka" and "Limbs," by Mine G Zapoleak, a present has "and "Limbs," by Mine G Zapoleak, a present ent exponent of naturalism and endorsem. A kiemar's "The Malinowski Bisters", "High-life Itoshor," "The Countess," "The Actress" (all three with subtite "The Nemessis of Life"), and "Nem Polasca," by W, Lod; Esteja's "Foggy Weather", K tilifiaki's "The Architects of Fortune"; B. Baryczaka's "Stories and Novelettes"; T. I. Choifaki's "Boitude: Pictures and Stories." In poetry of the year includes a second volume of preens by K. Tetrasjer and "Love," a collection of lyrios by the gifted J. Kasprowicz, both somewhat marked by doubt and skepticism. A more healthy tone is found in the poems of J. Wierzbicki. Deodyma, a very talented woman, has attempted a herosc poem in "Sobiseki before Vienna," and K. Kasaewski has issued a very satisfactory version of the tragelies of Æchylus. There were no startling successes on the stage, but K. Zalewski's "The Woman Cheat."; Z. Sarmecki's "Proud Souls," alapted from Mine. Ornearko's noved is Bene Nati."; and M. Wolowski's "Towarrys Pancerny," a historical connedy, were well received. "The Rich Widow," by M. Balucki, and "The Straggler," by S. Graybber, have added nothing to the repostation of those popular writers of cosmody.

of those popular writers of connedy.

Peringal.—The very infrequent appearance of Pertugal in these annual summaries is in part caplained
by the published results of the censes of 1990, which,
it is reported, show that of the 5,000,000 inhabitants
of the little country, 4,000,000 are available and

is in reported, anow that of the appeal, and inhabitants of the fittle country, 4,000,000 are analphabetes.

Bassia.—A "Russian History," by Belov, an old pedagogue; Evarniteki's "History of the Zapsoujski's Cossacke "(Vol. II); Philipoffs "History of the Sensate, 1725-730"; and Brueckner's "The Russianovski Family" (Vol. V of his collection), illustrate various phases and periods of Russian history, as do also Count Leliva's "Russo-Polish Relations", N. Notovitch's "L'Empereur Nicolas II et la Politique russe" (Paris); V. Vereshtchagin's "In Was in Asia and Europe"; and M. G. Volkhovski's "Russian History in Biography; Nineteenth Century". Discussion of "the economical aspect of the sicoul programme" has been animated, as always. The "Marsites"—such as N. Bellov (pseudonym), in "On the Question of the Development of the Monistic View of History: A Reply to Messra. Mikhailovski, Kaesed & Co.," and P. Struve, author of "Critical Notes on the Question of the Economic Development of Russia," who receives support from Skvortaov sin "Economic Studies") and Golovin—are determinedly attacking the doctrines of the "Populists" as well as of the influential circle of writers on the staff of the "Russian Evonomic Propulsts" as well as of the influential circle of writers on the staff of the "Russian Evonomy" in Studies." His eventory ", upon which this latter critical school was founded, is again put forward in Narveits "- Jurislico-Philosophical and Socialogical Studies." However, we are told that the repilies to Struych book, by Mikhailovski, the "Populist "Venotrony (whose "Outlines of Theoretical Political Economy has appeared), the economist Karulshef, Krivenko, N—on (Danielsson, author of "Outlines of Agriculture after the Reform "), Vujaked, and others less notable, only serve to show that a more thorough and unbiased study of the reconomic condition of Russia is necessary before a final settlement of the Question can be thought of. Interesting of Contemporary Democracy"; Manuilov's thorough study of "The Irish Lan

tary Question." The Franco-Russian J. Novicov, in "Les Gaspillages de la Société moderne" (Paris), reduces to figures the time and money lost through militarism, bureaucratic red tape, lawsuits, tariffs, etc. I. Ivanof has made interesting researches con-cerning "The Political Rôle of the French The-ater in Connection with the Philosophy of the Eightcenth Century," and the Psychological Society of Moscow assiduously pursues the study of its specialty. The growing interest in reading and self-culture is voiced by Prugavin's "On the Demands of the People and the Duties of the Intellectual Classes with Reference to Education and Culture" (second edition) and Rubakin's "Study of the Russian Reading Pub-lic," and finds expression in the activity of the "Com-mittees of Education" of Moscow and St. Petersburg and the Moscow Commission for the Organization of Home Reading, whose traveling lectures are further-ing the cause of university extension. The imporing the cause of university extension. tance of this movement is pointed out by a Russian writer, who states tersely that misrule and ignorance " are the principal plagues of contemporary Russia." "are the principal plagues of contemporary Russia."
In this connection we note the increase in popular scientific works, many of them translations. V. S. Baskin, in "Russian Composers," deals with P. I. Tchaikovski, In literary history, the most important publications are Vengerof's "Russian Poetry" (works of poets of the eighteenth and early nineteenth centuries); I. Zhdanof's "The Russian Heroic Epos,"

the work of an authority on ancient Russian litera-ture; and V. Goltzef's "Literary Sketches."

To especially important work of fiction has seen the light. D. Mamin-Sibiriak describes life in the Ural territory in "Sibirian Tales," gives a sympa-thetic and humorous picture of literary Bohemianism in St. Petersburg in "Sketches from the Life of Pepko," and unfolds "an entire epos of local life at the time of the economic revolution" following the emancipation of the peasantry in "Bread." Boboruikin, though always showing literary skill, is, we are told, more successful when he can seize upon some momentary social fad as a subject for his novels than when he is compelled to draw upon his imagination. Thus he has had alternately success and failure with "On the Wane," "Basil Terkin," "Crossing the Top," and "The Pleader." Garin continues his "Child-hood of Tema" and "Gymnasiasts" in a truthful hood of Tema" and "Gynnasiasis" in a truiniu picture of the life of "The Students"; Count Leo Tolstois "Master and Workman" met with great success; Stanyukovich has written "New Naval Stories"; Korolenko's visits to England and America have inspired "A Free Fight in the House"-i. e., the House of Commons-and "Without a Tongue" (relating a touching experience of some Russian emigrants in New York); and Mme, Lukhmanof, a new writer, has published "recollections of her school days and a picture of Siberian life." It was reported Darkness," hitherto prohibited by the censor, had been performed with immense success.

Spain - Historical works are, as ever, plentiful; and if, as one American critic has written, "the new spirit in historicography is but slowly penetrating the intellectial gloom," yet Spanish critics hopefully see improvement. Spanish historians are industrious, and Rataol Airanira, author of "La Enseñanza de la Historia," is deing much to prepare the way for new mothers. Of the voluminous "Historia general de Espira, estad per Individuos de Número de la Real Adalma a cha Historia hajo la Dirección de Ant. Canadas de la Historia hajo la Dirección de Ant. Canadas de la Historia hajo la Dirección de Ant. Canadas de la Historia hajo la Dirección de Ant. Canadas de la Historia hajo la Dirección de Ant. Canadas de la Historia hajo la Dirección de Ant. Canadas de la Historia de Assarba de la Historia," reached Canal ges in 1804. Cade Casa Valencia has issued "Estanies" hat reas "Many contributions to local history lave again appeared, though but few give evidence effect cual reseava, anong such being F. Canadau y Brarreds "Perhasteria de la Provincia de Sevilla"; C. Cafais "Yacinientes prehistóricos de la Provincia de Sevilla"; E. J. de Labayru y Goicoe-

chea's "História general del Señorio de Bizcaya"; Sancho's "Mallorca en 1612 y los Libros de la Tabla Sancho's "Mallorca en 1612 y los Libros de la Tabla numularia"; R. Alvarez de la Braña's "Galicia, Léon y Asturias"; "Tarragona antigua y moderna"; "Apuntes históricos sobre la Villa de Torrijos"; and M. Bonet's "Rebellión de Menorca en 1468." Much attention is also paid to Spanish-American history, to the study of which the Columbus quarter-centenary gave a decided impetus. Vol. XIII of Father Cappa's "Estudios criticos acerca de la Dominación estudios de América" and Vol. XI of the Father Cappa's "Estudios criticos acerca de la Dominación española en América" and Vol. XI of the collection of "Libros raros que tratan de América" have appeared; J. Coroleu died when two volumes of his "America: História de su Colonización, Dominación, é Independencia" had been issued; J. T. Medina has edited "Descubrimiento del Rio de las Amazonas, según la Relación hasta ahora inédita de Fr. Gaspar de Carvajal." Cuban affairs have inspired numerous pamphlets and books, dealing mainly with politics and the question of home rule, among them being "La Guerra de Cuba," by E. A. Flores. The Philippine Islands form the topic of Montero y Vil'hitippine Islands form the topic of Montero y Vidal's "Història general de las Islas Filipinas"; Belloc's "Misiones de Filipinas"; "Biblioteca històrica Filipina" (Vol. IV); R. Comenge's "Cuestiones filipinas; 1º Parte: Los Chinos"; and L. Comenge's "Recuerdos de Filipinas." The "Història general de las Islas Canarias." by A. Millares, is completed with Vol. X. The diplomatist E. Dupuy de Lôme, in "Estudios sobre el Japón," gives the fruit of experience in Yokohama, and explains why Spanish influence in the East has declined. C. Gimeno de Flaquer's " Madres de Hombres célebres" is marked by quers "Madres de Hombres celebres" is marked by "magic of style, profundity of thought." In the broad division geography we have "Pericia geografica," a series of lectures on colonization in the East: R. Torres Campos's "Estudios geográficos"; and Soriano y Rodrigo's "Moros y Cristianos," notes of a journey to Melilla. The taste for archæological staticious properties of these geográficos and contractors. studies appears to have greatly increased, resulting in the publication of new works on the art and anin the publication of new works on the art and antiquities of Spain, among which are: Cano y Cuestash "Prehistória y Tradiciones de Sevilla"; Vives's "Sepulcros prehistóricos de Ciempozuelos"; Saralegui y Medina's "Estudios sobre la Época ecltica en Gulicia"; "Viaje á Asturias pasando por Leon"; La Braña's "Galicia y Asturias"; and Perez Galdós's "Cuarenta Leguas por Cantabria." Several books obull fighting haya appeared, including one by Can-"Cuarenta Leguas por Cantaoria." Several books on bull fighting have appeared, including one-by Can-dela, a self-styled adept in "Tauromaquia." Eduardo Verdegay y Fiscowich's "Història del Corréo" has been praised. An important bibliographical work is the catalogue of the library of the collegiate church of Xerez de la Frontera. The voluminous literature of Xerez de la Frontera. The vocaniana on Cervantes has been added to in Julian Apraiz y Sainz del Burgo's learned "Cervantes vascótlo, o Cervantes vindicado de Antivizcamismo." F. Marti-nez Ruiz writes of "Anarquistas literários: Notas sobre la Literatura española."

Novels are numerous as ever, the successful ones including José Maria Pereda's "Peñas arriba"; Juan Valera's "La buena Fama"; Enrique Sepulveda's "Cuentos ": La buena Fama"; Enrique Sepulveda's "Cuentos ": Altamira's "Cuentos de Levante"; "Narraciones vulgares," by Juan Guillen y Sotelo, a young writer of promise; and the prolific Perez Galdós's "Torquemada y San Pedro" and "Torquemada en el Purgatorio." Father Coloma, S. J., has again caused a stir with "Retratos de Antaño," aimed, like his "Pequenezes," against the vices attributed to the upper classes, and dealing with historical characters. Further prose fiction includes J. K. Mélida's "Don Juan decadente"; "Viages, Hazañas y Aventuras de un Héroe del Siglo XIII," a historical novel of merit by A. M. del Valle y Serrano, Marqués de Villa Huerta; and M. Hernandez Villaeseusa's "Jurar en vano." "Poetry, both lyrical and dramatic, is," we are told, "visibly on the wane," although there are numerous young versifiers "still adhering either to the semiclassical school of Cienfuegos, Melendez Valdés, and Quintana..., or to the romantic of Espronceda and Zorilla," and Menendez y Pelayo

continues to issue his "Antologia de l'octas liricos estellanos" (Vol. V). Among those who have issued volumes of poetry during the year are N. Diaz de Escher, J. Perez Zuñiga, R. de los Reyes, J. Giuerra Ojida, M. Reina, A. Sanchez l'erez, and Manuel del l'alacio, who ranks with Campoamor and Nuñez de Arec. Jesus Rodriguez Lopez ("Cousas das Mulleres") is prominent among those Gallegan poets who urite in the local idiom, which, "both as to prosoly and orthography, is in an anarchical state." H. Pérez Placer's "Contos da Terriña" (No. 38 of the "Biblioniem Gallega") is praised for interesting local color. Wa are likewise informed that "the classical coince (Gallega") is praised for interesting local color. Wa are likewise informed that "the classical coincely is being ground and being replaced by short pieces in case or two acts, frequently in prose." The number of plays performed and published every year is very large. Relegaray's "La Monja descalza" and "Mancha que impia" have been well received, while "Teresa," by Laspoldo Alas (Claris), and Perez Galdios's dramatization of his popular novel "Torquemada v San Podema"; "Nada," by Muñez; Ferrer y Coslina's "Un Concert de Bofetadas"; and "Miel de la Alcarria" were produced with more or less success. J. Baskson Veyán, A. J. Afan de Ribera, M. Echegaray, J. Abate, C. Arniches, J. Dicenta Luciano, C. Guma, C. Navarro, J. de Velilla, F. Milgares, F. Perez y Gonales, J. Baleedo, and E. Navarro Gonzalvo have written plays, many of which are one-act comedies.

C. Lindström's "Anteckningar om Gotlands Medelai" (Vol. II): a new and in part rewritten edition of C. G. Malmström's excellent "Sveriges politiska Histeria från Carl XII's Död till Statshvålfningen, 1772"; and a continuation of H. Hildebrand's interesting and full "Kulturhistoriska Teckning af Sveriges Medelail" Kulturhistoriska Teckning af Sveriges Medelail" The commemoration of Gustavus Adolphus, eslebrated with great enthusiasm, occasioned much new writing in honor of the great hero king. "Tal vid faskilliga Tillfallen" is by Oscar Fredrik (King Oscar II), whose speeches are praised as specimens of peculiarly national literature. O. H. Dumrath has written of "Furst Otto von Bismarck, Tyska Riketa Grundläggare i hans Anforanden, Bref och Samtal." The Swedish Academy has begun the publication of a voluminous "Ordbok öfver Sveriges periodisha Litteratur"; O. Levertin deals with "Gustaf III som dramatisk Författare"; P. G. Lythunskes a study of "Tegner och Frittofssaga"; G. Ljungren continues his "Svenska Vitterhetens Häfder efter Gustaf III's Död," a work of extensive research; and J. F. Stenbergsk has written "Skådebanoma: Bidrag till Stockhelms Theaterhistoria." The centenary of the death of Karl Miksel Bollman, the famous poot and humorist, gave rise to a quite extensive Iterature dealing with this most popular poet of Sweden, who created types of universal interest. V. Rydberg (author also de "Singoalia") attacks modern materialism with youthful enthusiasm in "Varia: Tankar och Bilder" Here, as elsewhere, realism is being succeeded by Temanticism and symbolism. A "sublusel remanticism and symbolism.

flore, as elsewhere, realism is being succeeded by romanticism and symbolism. A "subdued remantic coloring" pervades "Purpur," a series of sketches by P. Hallström, whose "Vildna Faglar" had proved him to be a poet of merit and a keen and sympathetic observer of human nature. "En Roman om Förste Kassala" (published anonymously by Fru Malling, as Kruse), which enjoyed a great success, gives excellent portraits of numerous historic characters—Napoleon himself, however, being treated two romantically. New contributions to prose fiction by G. Nordensvan, Turdus Merula ("En Roman på I andisbyrden"), A. Noreen ("Spridda Studier"), O. Schröder ("Gamla Minnen"), and Sigurd) "Patron Jönssens Memoirer") have also appeared. The essentially tric character of the Swelish poetical temperament is again exemplified in noteworthy verse by wellsknown poets such as W. V. Heidenstamm, G. Fréching, and O. Levertin, as well as younger men—among them

marked individualities like A.V. Klinickneshrder, who has treated themes in boandinavian mythomes.

Some interesting tooks have been potential in Helsingfors. The fine work "Finland in the A new teenth Century," described by Finnish authors and artists, an excellent picture of the astenishing material and intellectual development of Finland, was resucd in Swedish, Finnish, German, Russian, French and highligh editions during 1893-35. Liv Bergh tells the story of "Finland under det första kritomidet af Kapar Alexander III's Regering" and quel tirodenfeld has compiled "Katalog der Hibbothek der finnischen Litteraturgesellschaft. Literatur über finnische hjerachen und Völker," "George Elliot och den engelska materalistiska Romanen" is the theme of H. Westermark Beference should be made to the "Finsk Tidskrift," an admirably conducted magazine, the "Skrifter utgiftna af Svenska Literaturallskapet i Finland," and the "Acta Societatis Scientiarum Fennisca."

Switzerland (see also report for 1891 - Although all looks in German are grouped under Germany of the an exception is again made in favor of hwise s which have a distinctly national or local interest. Important serials and periodicals are "Bibliographic der schweizerischen Landeskunde," published by "Centralkomission für schweizerische Landeskunde" "Schweizerische Statistik" (to which subject the "Zeitschrift für schweizerische Statistik" amd the "Statistisches Jahrbuch der Schweig" am also de-voted); "Schweizerische Rundschau", "Jahrbuch für schweizerische Geschichte"; "Anseiger fur schweizerische Geschichte"; "Anzeiger für sehwei-zerische Alterthumskunde"; "Mittheilungen der Antiquarischen Gesellschaft in Zürich ", and " quee-len zur Schweizer Geschichte," publisheid by the "Allgemeine geschichtsfierschende Geschichte der Schweiz," as is also G. v. Wyso's "Geschichte der Historiographie in der Schweiz." New biographical monographs are Rusi. Stachelin's noteworth; "Hul-dreich Zwingli" and W. Kavser's "Postalozz." Jacob Bacchtold has edited "Schweizerische Schunepiele Hacchtoid has celited "Schweinerische Schmingenens des 16. Jahrhunderta"; and a "Schweiner Dichter-mappe" contains contributions by the late Gestfried Keller, Karl Henckell, Josef Josephin, Mathieu Schwann, Friedr. Wrubel, Elec Tomarkim, Longoold Jacoby, Adolf Frey, etc. P. Godeth "Bladow little-raire de la Suisse Française," crowned by the French Academy, has appeared at Paris in a second solition. The publication of a "Bulletin bubblegraph que de la Suisse française" was begun in November, 1886.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,730 square miles. The population, according to each devennial census since admission, was 152,923 in 1830; 215,739 in 1830; 352,411 in 1840; 517,736 in 1830; 708,802 in 1890; 726,915 in 1870; 939,946 in 1880; and 1 118,587 in 1890. Capital, Baton Rouge.

and 1,118,587 in 1890. Capital, Baton Rouge.
Government.—The following were the State
officers during the year. Governor, Murphy J.
Foster; there was a vacancy in the office of
Lieutenant Governor; Hiram R. Lott, who had
been Astring Lieutenant Governor, resigned to
become rousial at Managua, and died there,
June 6: Secretary of State, T. S. Adams;
Treasurer, John Pickett, Auditor, W. W. Heard;
Adjutant General, T. F. Bell; Superintendent of
Education A. D. Lafargue; Commissioner of
Agraculture, A. V. Carter; Commissioner of Insurance, Simeson Toby; Attorney-General, Milton J. Curningham; Chief Justice of the Supreme Goort, Francis T. Nicholls; Associates,
S. D. McEnery, Lynn R. Watkins, Joseph A.
Breaux, Henry C. Miller—all Democrats.

Finances.—The State bonds have risen in value since the decision to begin busing them up with the surplus of the interest funds in the treasury. The Board of Liquidation advertised

for bids on them, and when the bids were opened. in November, it was found that bonds aggregating \$1,122,000 were offered, more than half at par and above. The Board of Liquidation purchased \$200,300 at an average price of 99%.

The levee bonds are also in favor, as shown by the fact that the Pontchartrain Levee Board redeemed \$22,000 of its first issue at par, in June.

Judicial Decision .- A case that had been in the courts for years was settled in August. The First National Bank of Shreveport refused to pay its taxes of 1890, on the ground that the assessment was illegal and excessive; that the police jury sitting as a board of reviewers had assessed the stock of the bank, which was in United States bonds, exempt from taxation; and that the assessing of the stock of the bank at a higher rate than the tax of individuals was in violation of the Constitution of the United States. A rule to compel the bank to settle or produce its stock for seizure and sale was tried and sustained and made absolute.

Education.-The latest report of the public schools available is that for 1894, made to the State Board of Education, Oct. 31, 1895, by the State Superintendent. The enrollment was 155,-926, and the average attendance 109,435. The total number of public schools was 2,746, an increase of 101 over 1893. The white schools numbered 1,921, and the colored 825; 3,421 teachers were employed, of whom 2,506 were white and 915 colored, one third of the force of

white teachers being men.

The average annual expenditure for a pupil is \$4.89 for tuition; including the whole cost of the system, it is \$6.91. The average length of school sessions in months is: White, 5:69; colored, 4.66. The total receipts of the year 1894 amounted to \$1,166,995.01, against \$982,119.71

in 1893 and \$1,114,915.52 in 1892.

The most prominent increases in revenue are noticeable in the gains of current school funds accruing from the State tax, amounting in 1894 to \$213,549.62; but there was a slight decrease of revenue from the poll tax, which yielded \$95,028,25. The amount realized from jury taxes has gained steadily, showing in 1894 a gain

of 4 per cent., being \$143,364.58.

Another large source of revenue for 1894 was the corporation or municipal tax, though most of the \$343,681.01 reported was levied by the city of New Orleans. The interest from the sales of sixteenth sections has increased perceptibly. The amount paid to the school boards in 1894 wa- \$44,273.88. Other receipts are from rent of school lands and such miscellaneous sources as fines, donations, sale of ferries, etc., and in a few cases beans. The aggregate of these in 1894 was \$241,349,34,

The expenditures amounted to \$732,388.37, and the total for the last five years, 1890-'94 inclusive, \$3,134,267.75. The late Legislature appropriated \$1,500 to aid the work of teachers' institutes of which 14 of one week each were

held in 1894-195.

The State Normal School in ten years has sent

out 167 graduates

Louisiana has a Chautauqua-at Ruston, on the Vicksburg, Shreveport and Pacific Railroad. The grounds occupy 15 acres and the auditorium seats 2,000. There is a large hotel, a natatorium, and a bath house supplied from the mineral springs. It has been in operation four years,

Products.—A new process for mining sulphur, the Frasch method, has been put in operais the first time that sulphur has been liquefied in the earth and removed in a molten state, and as an engineering feat it is one of the most novel. The peculiarity of the sulphur deposits here, on account of the quicksands overlying them, and the enormous quantities of contamia in the sulphur-bearing rock itself, made all attempts at mining this sulphur by ordinary means impossible. A bore hole was sunk, such as is used in pumping oil. Superheated water was introduced under pressure, and the sulphur liquefied and removed by pumps, like oil.

The cotton crop for the year ending Aug. 31 showed a large increase over that of the preceding year, the Gulf States showing a gain of 784,-587 bales; but the prices were lower, the average at New Orleans being 5.92 cents. The crop of Louisiana alone was placed at 600,000 bales.

The consumption in all the mills in the South was 144,323 bales more than in the previous year; in Louisiana the gain was 3,123 bales.
The Cotton Growers' Convention, held at

Shreveport in January, strongly advised reduction of the cotton acreage, diversification of crops, and establishment of mills and factories, and resolved further "that it is the sense of this convention that the legislatures of the cottongrowing States make appropriations with a view of creating a fund to be paid to the successful inventor of a plantation cotton-seed-oil mill." The Cotton Bale Convention adopted measures looking to uniform and improved baling.

The outcome of the rice crop this year was discouraging. The extreme high rate of freight which the Southern Pacific Railway is charging on rough rice is eating up from 25 to 50 per cent. of the value of rice. It appears that the Calcasieu rice is greatly injured in the sale by the presence of red grains in large numbers, which is due to

failure to renew the seed.

According to the annual sugar book of Mr. Bouchereau, which is the recognized authority on the sugar crop of the State, the yield of 1894-'95 was 355,384 short tons, which is by far the largest sugar production in the history of the State. Last season's crop was made in 449 sugar houses, as against 906 houses in operation ten years ago. Each of the sugar houses in operation last season, however, averaged a production

of 220 long tons. The sugar-planters have been kept in suspense this year by the varying prospects for payment of the bounty on the crop of 1894. First, in January came the decision in the Miles Planting Company's case adverse to their claim; the Court of Appeals of the District of Columbia decided not only that the law authorizing the payment of a bounty on sugar has been wholly repealed, but that, in addition, the paying of bounties and subsidies by act of Congress is not only wrong in principle, but finds no warrant in the Constitution. In March the amendment to the sundry civil appropriation bill, appropriating \$5,000,000 for payment for the unpaid bounty claims of 1893 and eight tenths of a cent

per pound on the crop of 1894, finally passed Congress, and it seemed that the matter was settled satisfactorily to the planters, though, as the claims somewhat exceeded the appropriation, it was inferred that a pro rate distribution would be made and the claimants would be obliged to wait for a further appropriation. Then came the decision of the Comptroller of the Treasury, July 17, not to pay the bounty un-til be should be convinced of the constitutionality of the act, or till it should have been estab-lished in the courts. His decision given two months after the date, July 1, at which it was expected that the appropriation would be availe, was adverse to its constitutionality, and he directed, Sept. 5, that the papers in the case before him be sent to the Court of Claims for the establishment of a precedent. Secretary Carlisle granted an appeal from the Comptroller's decision, Sept. 10. In November suits were filed as test cases in the United States Circuit Court by the Realty Company, Andrew II. Gay, and others to compel the payment. The answer of the Government, Dec. 12, asked that the bounty law be declared unconstitutional. Judge Pardce held the bounty act constitutional, and that it must be enforced; that an act of Congress for the expenditure of money can not be revised by court or official. The District Attorney was in-structed, Dec. 30, to take an appeal to the United States Supreme Court.

Public Lands.—The report of the register and receiver for the New Orleans land district, which comprises 52 parishes, shows that 870 homestead entries were allowed by the Land Office, covering 97,723-53 acres; 582 final certificates and receiver's receipts were passed, covering 74,604-54 acres, There were 12 timber-culture entries passed, covering 1,563-97 acres. Of the 401 homestead entries canceled, 46,016 acres were thrown open to the public. During the fiscal year 20,746 acres were relinquished.

Water Ways.—The beginning of work on the locks of Plaquemine Bayou was celebrated at Plaquemine Sept. 3, and was attended by more than 3,000 persons from adjoining parishes. This work, which can be completed, it is estimated, in five years, if Congress keeps up the appropriations, is to connect the waters of the western part of the State with the Mississippi.

Changes in the Land Level,—Major Quinn, in charge of the lighthouse district, has recently made a close inspection of the alleged increase in the height of the tides. He placed tide gauges in deep water, and from the "continuous record kept on these tide observations discovered that since 1875, when the levels were made, the delta had subsided exactly 1 foot. These gauges and tide levels were placed in position in 1875 and verified in 1877. Between that date and 1880 the level went down 1 foot, but within the past five years the tides have been stationary or nearly so." The city of New Orleans is about 16 feet above the level of the Gulf.

Prize Fighting.—In a suit brought by the State against the Olympic Club, for an injunction to restrain it from giving prize fights, a retelect in favor of the club was given by a jury in the district court, March 11. The State appealed to the Supreme Court, which remanded the case to the district court on the ground that expert testi-

mony should not have been admitted to ; ; , trial the jury was waited and the judge garjudgment for the club. He said the statue forbids prize fighting and permits give con-tests without defining them; he found that a prize fight is a glove contest and a glove o miest is a prize fight, and that the act is "a power of legislative fraud and mendacity," neither define ing the crime of prize fighting mor providing "any penalty which can not be evaded by the mockery of covering with gloves the hands of the gladiators"; therefore, he found that "prize fighting is now what it never was before the enactment of statute No. 25 of 1800, a legitimate business and domestic industry, under the operal protection of the law, while before the passage of that statute it would constitute the crime of assault and battery, and in some cases of manslaughter." A second appeal was taken by the State, and the Supreme Court reversed the decision and granted the injunction defining the meaning of glove contests in the law " We comclude that the glove contests in athletic clubs, or elsewhere, when the object to only for a display of the art of boxing, as generally understood and practiced, without the prerequisites of challenge and training and the attendant esrcumstances of a prize fight, are not what is commonly known as prize fights, and therefore the proviso has no relation to, or connection with the offense denounced by the statute.

Aid for Nebraska.—In response to a call from the Governor, 20 cars were leaded with supplies for the destitute people of Nebraska and sent off Jan. 6. Among other goods they contained 586 barrels of molasses and 66 barrels of sugar, 145 barrels of corn, and 160 barrels and sacks of rice; flour, commeal and grite, potatoes, beans, coffee, tea, and many other articles of food, besides dry goods, clothing, and other necessaries; also a car load of salt from the mines of Avery's Island, and a car load of dressed lumber of great value.

Labor Troubles, — The tremble on the wharves between white and colored laborers which began in October, 1894 usee "Annual Cyclopadia" for 1894, page 443, continued and broke out in a rist March 11 and 12. Four men were killed, and 8 were lastly wounded.

The business of leading cytten has been me-

nopolized by the white crew who serew or load the cotton bales into the holds of sessels. constitute one of the strongest labor unions in the country. They have an annual income of \$50,000, and have \$160,000 in bank. Ther have dictated terms on the lever, commanding wages of \$5 or \$6 a day. At the beginning of the last season, the white laborers, considering that there was not enough tuniness for them and the ne-gries, concluded to drive the latter from their work. The ship agents, under orders from the ships where abroad, who are mainly finglish, stuck to the negroes, and the result was a running warfare, in which a number of Jevers were natrifical and some property destroyed. The war legan with incendiary fires, which destroyed the wharves of the West Indian Steamship Company, with \$250,000 loss; the wharves of the Toxas and Pacific, with 25,000 bales of cotton; line, \$300,000,

Gov. Foster issued a proclamation calling out

the militia, and the negroes resumed work the afternoon of March 14 under protection.

The State Legislature passed an act in 1880 declaring that "no sailor or portion of the crew of any foreign seagoing vessel shall engage in working on the wharves or levee of the city of New Orleans, beyond the end of the vessel's tackle" under penalty of imprisonment for ten days. Recently the Cuban Steamship Company, during a period of trouble on the levee, when men could not be got to work, attempted to use their own sailors to load one of their ships lying in this port. The men were arrested under the State law and operations were stopped in the bandling of eargo. The agents of the ship applied to the United States Court for relief, and Judge Parlange, in the circuit court, issued an order prohibiting the Mayor and other authorities from interfering with the foreign sailors.

Care of Lepers .- A home for lepers has been secured in Iberville parish, according to an act of the last Legislature. An old plantation was bought, and cottages were fitted up for the use of the patients. The board will receive applications for admission, and if the whereabouts of other lepers not applying are learned, the services of the law will be used to bring them in. Hereafter they will be in charge of the Sisters of Charity. It is believed that the disease can be

wiped out within fifty years.

Political.—A largely attended Free-silver Convention was held in New Orleans, June 10, and resolutions calling for the free coinage of

silver were adopted.

The Ballot Reform League called a convention to meet at New Orleans, July 20, and another at Shreveport, Dec. 17, with the object of influencing the Democratic State Convention to pass a resolution in favor of the proposed amendment to the Constitution limiting the suffrage to citizens who are able to read the Constitution in the mother tongue or are owners of taxable property to the amount of \$200; "and also to commit the party to a thorough revision of our laws for the registration of voters and the enactment of an Australian ballot law, so as to prevent false and fraudulent registration and to secure a free ballot and an honest count of the votes of voters legally qualified under the amended Constitution as actually cast."

The Democratic State Convention met at Shreveport, Dec. 18. The ticket nominated was: For Governor, Murphy J. Foster; Lieutenant Governor, Robert H. Snyder, Jr.: Auditor, W. W. Heard: Treasurer, A. V. Fournet; Secretary of State, John T. Michel; Attorney-General, Milton J. Cunningham; Superintendent of Educa-

tion, J. V. Calhoun,
II THERANS. The reported statistics (not LUTHERANS. The reported statistics (not I nited States and Canada for the year 1895 are as follow: There are 4 general bodies, 61 distreet symple, 5 725 ministers, 9,573 congregations, and 1,402 189 communicant members, with a total personal Lat. of about 6,000,000. There are 2,103 parov "11' schools, 3,026 teachers, and 188, 529 pupils, 1,958 Sunday schools, 49,329 officers and teachers, and 424.188 pupils. The benevo-lent contributions for the year 1894-95 (7 woods not repor inglamounted to \$906,240,50. This does not include the contributions for educational work by individuals and congregations. nor the contributions from similar sources toward benevolent operations not under synodical control, nor the large sums sent directly to missionary and other benevolent societies in Europe.

The educational institutions of the Church number 122, of which 26 are theological seminaries, 42 colleges, 41 academies, and 13 ladies' seminaries, aggregating property valued at \$4,530,350 and endowment amounting \$1,373,157, having 257,462 volumes in their libraries, employing 679 professors and instructors, and having 11,821 students, 2,833 of whom have the ministry in view. There are 92 benevolent institutions, which report property valued at \$2,643,620, endowment amounting to \$196,-874, and 32,164 inmates.

Of the four general bodies, three held con-

ventions during the year.

General Synod.—The thirty-seventh biennial convention of this general body, which is composed chiefly of English synods, was held in Hagerstown, Md., June 5-13, 1895. Delegates were present from the 25 district synods. following officers were elected: The Rev. Prof. H. Louis Baugher, D. D., Gettysburg, Pa., president; the Rev. William S. Freas, D. D., York, Pa., secretary; and Louis Manss, Cincinnati,

Ohio, treasurer.

The Committee on Common Service reported an abridged form of the service, which was adopted for the use of such congregations as are averse to the use of the full service. The report of the Hymn-book Publishing Committee set forth its work in the publication of an approved edition of the catechism and of a larger German hymn book with the common service and psalms. The committee appointed to revise the hymns of the Book of Worship reported that they had selected 170 hymns to be inserted, and proposed to omit about the same number. Committee on the Revision of Tunes of the same book proposed numerous changes. The reports of both committees were adopted, and instruction was given for immediate publication of the revised book.

The Woman's Home and Foreign Missionary society of the General Synod reported 686 local societies, with 18,352 members and contributions amounting to \$42,456.34. About \$8,000 of this amount was contributed for purchase or erection of church buildings and the medical missionaries' home in India. The society supported 8 home missions. In India the society supports 4 missionaries, of whom were sent out in the autumn of 1894, and 2 more are preparing to go out during this year. It supports 22 schools

and 35 teachers, with 1,092 pupils.

The report of the statistical secretary presents the following summary: 1,476 churches, 173,408 communicant members; estimated value of church property, \$10,377,387.33; local expenses for all objects, \$1,228,229.36; Sunday schools, 1,425; officers and teachers, 22,350; pupils, 178, 201; contributions for local objects, \$104,981.08; for benevolence, \$56,391.01; contributions for benevolence, for the General Synod, \$91,765.94; synodical treasury, \$7,355.51; home missions, \$42,639.08; foreign missions, \$37,699.38; church extension, \$34,304.08; board of education. \$7. 960.27, beneficiary education, \$22,531.86; Woman's Home and Foreign Missionary Society, \$25,407.74; pastors' fund, \$5,385,55; orphans' home, \$16,392.62; Deaconess Board, \$501.89; external objects, \$110,779.94; total benevolence, \$21,953.97; grand total, \$1,533,448,53.

The twenty-eighth biennial report of the Board of Foreign Missions was presented by the secretary of the board, the Rev. George Scholl, D. D., of Baltimore, Md. The receipts for the last two years were \$99,655.22, and the ex-penditures \$97,104.82. During the same period of the woman missionaries returned from India, and 4 new missionaries were sent thither, while another has been called for the work in Africa. The status of the mission in India, with headquarters at Guntur, is 8 missionaries, 1 native pastor, 5 subpastors, 18 catechists, 109 subcatechists, 4 colporteurs, 42 helpers, 427 villages containing Christians, 322 organized congregations, 132 prayer houses or chapels, 6 mission bungalows, a printing press and book-bin lery, a reading room and book depot, and a dispensary, 10 mission stations, and 14,265 baptized members. The educational department contains 170 elementary schools and 3,357 pupils; 1 boarding school, with 106 pupils; 1 college, with 36 teachers and 664 students, receipts amounting to \$6,331.02, and expendi-tures amounting to \$15,587.29. The zenana department contains 6 woman missionaries, with 85 assistants, 166 home pupils, 18 schools, and 900 pupils. The medical department had nearly 300 patients. The work in Africa has its beadquarters at Monrovia, Liberia, the Rev. David A. Day, D. D., being the senior missionary in charge. Following are the statistics of this mission: 2 ordained missionaries, 1 native pastor, and 197 communicant members; 14 Sunday schools, with 300 pupils; 3 teachers in the mission schools and 126 pupils. The industrial department contains buildings, machinery, 50,000 coffee trees, and 360 acres, valued at \$73,045.

The thirteenth biennial report of the Board of Home Missions was presented by the general secretary, the Rev. A. Stewart Hartman, D. D., of Baltimore, Md. The board employs two secretaries and carries on all the missionary operations of the district synods, with the aid of auxiliary missionary committees in the district synods. The balance in the hands of the board was \$3,962.13. To this was added during the two years by contributions of the churches \$85,-\$81,446.11. During the same period 163 missions were sustained, cared for by 192 missionaries, serving 205 congregations, and having a communicant membership of 13,392. The missions are distributed as follow: California, 7; Colorado, 5; Connecticut, 1; District of Columbia, 2; Illinois, 9; Indiana, 9; Iowa, 7; Kan-ass, 16; Kentucky, 2; Marvland, 11; Michigan and Missouri, each 1; Nebraska, 18; New Jersey, 1; New Mexico, 2; New York, 12; Ohio, 13; Pennsylvania, 42; Tennessee and West Vir-ginia, each 1; Wisconsin, 2; and Wyoming, 1 Of these, 148 are English, 11 German, 2nd 2; Scandingsian, The thurteenth German, and 2 Scandinavian. The thirteenth biennial report on Church extension was present. ed by the secretary of the board, the Res. Harry H. Weber, of York, Pa. This board, boardes the general secretary, employs a field secretary. whose location is in the West at 1 w/w w or 1 that of exploring new territors w or 2 to 5 for the building of churches and pars larger and for the building of churches and pars larger and receipts for two years, including a bandle on hand of \$10,636.70, amounted to \$100 201 to Loans, donations, and special appropriation were made to 127 congregations, amounting to \$80,741.54. The assets of the beard are suit to \$258,216.26, besides 311 unimproved late.

Midland College, at Atchison, Kan. has assets amounting to \$85,146,16, employed 13 professore and instructors, and has 109 students of whom 6 are in the theological department. This department has been colleged and reorganized as the Western Theological Seminary. Carthage to dilege, Carthage, Ill., has property and endowment valued at \$58,803,47, 10 professors and instructors, and 136 students. Hartwick Seminary, Hartwick, N. Y., received and from the beard during the past two years. It has real estate valued at \$41,655, a productive endowment of \$41,000, 64 students, and 9 instructors. The whole number of calucational institutions under the control of this general body is 6 throughest seminaries, 5 colleges, and 1 academy.

The third biennial report of the Beaconess Board was presented by the Res. George I. Wenner, D. D., of New York city, president of the board. This is a comparatively new work for this general body. The institution in Baltimore is intended as a training school. The duties include the care of the sock and dependent in hospitals and institutions of public charity ministering in the local church, looking after the neglected and dependent, teaching in Sunday and sewing schools, and managing scoring people's associations. The treasurer's report shows receipts amounting to \$1.255.8L and capenditures aggregating \$2.218.76.

The Publication Sensity reported assets amounting to \$75,000 06. The expect of periodicals issued monthly numbered 275,250 new books, pamphlets, and tracts 12 and 2 new editions of books. The parent Education Secret aided 17 young men in preparing for the minimum, with \$1,374.

General Council,—This general leads is composed of English terman. English terman, and Swedish terman, in the twenty 6th convention was held in Easten, Pa. Oct 9-15, 1865. All the avrieds were represented by large delegations. The following officers were elected. The Res. Edward F. Modienke, D. D., New York entr. president, the Res. Prof. Wiffiam K. Frick, Milwaukee, Wis., English secretary, the Res. Prof. J.-hn Norum, D. D., Roschester, N. Y., German socretary, the Res. Prof. L. H. Bieck, Ph. D., Rischester, N. Y., Serbish secretary, and Wiffiam H. Staake, Esq., Philadelphia, Pa., treasurer.

The invention represented 650,000 communicant members of the Lutheran Church in North America, or nearly one half of the membership of the thurch in this country. The evocal of Ivianders in America was organized June 24, 1885, at Winnipeg, Manitoba, two pastors participating in the organization, together with lay designed from 12 congregations. Since then a number of pastors have been secured directly from Icoland, and a few have been educated in this country for work among the widely make

tered Icelanders, of whom there are 20,000 in this country, all Lutherans,

The report of the Board of English Home Missions showed 22 missions under its care, located in Massachusetts, New York, New Jersey, Ohno, Illinois, Indiana, Wisconsin, Minnesota, North Dakota, Oregon, Washington, and Utah. The amount expended during the last two years was \$29,500. The board asked for \$20,000 for each of the next two years, and this amount was apportioned among the district synods. port of the Board of German Home Missions showed 34 missions cared for by 8 missionaries, located as follows: 1 in Kentucky, 1 in Utah, 2 in Manitoba, 2 m Assiniboia, and 2 in Alberta. The communicant membership numbers 5,000. The treasurer's report showed an income of \$8,355.54, and expenditures amounting to The report of the Swedish board, \$8,029,20. which embraces the missionary operations of the Augustana Synod, showed 155 missions, the expenditures for the two years amounting to \$52,599,20. The missionary operations of the district synods of this body, together with those of the general boards, embraces 321 missions, and the expenditures for the last two years amounted to \$135,241.44. The complete report on Church extension for 1895 has not yet appeared, but that of the previous year shows that the society has assets of over \$10,000, with which missions and needy congregations are aided. All the larger district synods have their own Church extension funds. The foreign missionary operations of the Council are carried on in East India, with headquarters at Rajahmundry, whence the missionaries have gone out to hundreds of villages and have planted numerous stations. seminary has been established at the central station for the training of Christian teachers and ministers. Three zenana sisters teach the women in the districts, under the care of the missionaries. A new church building is in course of erection at Bhimawaram, and the senior missionary has recently received a gift of \$8,000, with instruction to build another new church. The income for the last two years was \$40,783.-61, and the expenditures \$37,333.99. The present status of the mission is as follows: 8 missionaries, with their wives, 3 zenana sisters, 2 native pastors, 4 evangelists, 2 entechists, and 137 teachers, a total of 164 mission workers. There are 7 principal stations, 102 villages where schools have been established, 191 villages where the Gospel is preached, 1.763 communicants, 4.484 Christians, and 1.893 children in the wholes. Three monthly periodicals are published, with a combined circulation of 30,000.

The report of the Immigrant Mission in New York My shows that during the past two years 20,000 immigrants were cared for in the Emigrant H dec. The Augustana Synod has estab-

lished a Swedish emigrant house in the same city. I'r the work of the desconesses there are now 7 mother houses, with 143 sisters, having properts valued at \$700,000, and an annual expenditure of \$70,000. These institutions are in Philadelphia, Omaha, Neb., Milwankee, Wis., Minneapedis, Minn., Brooklyn, N. Y., and Balti-more, Md. According to language, these may be classified as English, German, Swedish, Norwegian, and German-English.

The report of the Church Book Committee showed that the new edition of the Church Book had been favorably received. It also showed that, according to the action of the body at its last convention, a new edition of the Sunday-school Book would be issued early in 1896, containing about 300 additional hymns, and being supplied with ample liturgical formulas for the opening and closing of the sessions of the schools. It stated that the revision of the translation of Luther's Catechism under the labors of the joint committee of the English-speaking Lutheran bodies would soon be finished. Resolutions were adopted declaring that the General Council is ready to co-operate with all Lutheran bodies that may be willing to enter into the movement for the preparation of one common book of worship for congregations using the English language, on the conditions according to which the common service was prepared; and that the General Council requests other Lutheran bodies in which the English language is used to co-operate in the movement for the attainment of uniformity in the churches. Committee on Sunday-school Work reported that a twenty-years' course of Bible studies had been completed, and recommended that in future the work should be put on the basis of a graded course of Bible studies. It was decided to adopt a graded system. The committee was instructed to prepare and the Board of Publication to publish a full series of pictures illustrating Old and New Testament history, and in chart form the Ten Commandments, the Apostles' Creed, and the Lord's Prayer for the primary department. This was followed by courses of study outlined for the other departments of the schools, to be published in book or quarterly form, beginning with Advent, 1896.

The Committee on Statistics reported the following summary for 1895: 8 synods, 1,091 ministers, 1,786 congregations, and 323,649 communicant members; 329 parochial schools, 574 teachers, and 24,188 pupils; 1,453 Sunday schools, 19,715 officers and teachers, and 180,183 pupils; benevolent contributions for missions and other charitable purposes, \$252,033.94; 3 theological seminaries, 8 colleges, 4 academies, and 25 orphanages, hospitals, deaconess institutions, and other charitable institutions, with property valued at \$2,500,000 and endowment amounting to \$500,000, the educational institutions employing 147 professors and instructors, and having 2,340 students, of whom 480 have the

ministry in view,

United Synod, South .- The fifth convention of this general body, composed chiefly of English synods and congregations, was held in Staunton, Va., Sept. 18-21, 1895. Fifty-six clerical and lay delegates were present to represent 7 district synods, the Mississippi Synod not being represented. The following officers were elected: The Rev. Prof. George W. Holland, D. D., of Newberry College, Newberry, S. C., president, since deceased; the Rev. Lewis G. M. Miller, D. D., of Roanoke, Va., vice-president; the Rev. Melaneththon G. G. Scherer, of Concord, N. C., secretary; and Mr. C. H. Duls, of Charlotte, N. C., treasurer.

The business of the convention centered on the 3 subjects of fraternal relations with other

Lutheran bodies, Christian education, and the synod's missionary operations. Action was taken with reference to the overture of the General Synod bearing upon the matter of practical cooperation of the several bodies in carrying on Church operations. The action of this body was favorable to such co-operation, and a resolution was adopted in accord with the action previously taken by other bodies. This led to consideration of the common Book of Worship for all the Eng-lish-speaking churches. The common service as adopted by several of the general bodies was declared to be not only the "common service of the Lutheran Church of the Reformation period, but essentially the form of worship of apostolic The United Synod has adopted this service as it came from the hands of the joint mmittee. The following resolution was adopted:

That our Committee on Common Service be instructed to confer with similar committees of our other general bodies, or in any other way which may be proper, concerning the securement of a common book of service throughout, including liturgy, ministerial acts, hymns, or, in other words, a book identically the same, and that our committee be instructed to be as urgent and pressing and prompt as the circumstances will admit, believing, as we do, that such action would greatly promote the common welfare of the whole Church.

The report of the Committee on Literary Institutions showed that the synod has 1 theological seminary; 5 colleges for young men, with property valued at \$193,500, endowment amounting to \$91,000, employing 39 professors, and having 556 students, 110 of whom are preparing for the ministry; and 5 colleges for young women, having property valued at \$164,000, with 40 instructors and 389 pupils. This report does not embrace the educational work of the entire Church in the South. There are within the bounds of the synod 24 educational institutions, having property valued at \$697,300, endowment amounting to \$122,500, employing 157 professors and instructors, having 2,376 students. The report of the directors of the theological seminary emphasized the need of an increased faculty, enlarged facilities, and better equipment.

ty, enlarged facilities, and better equipment. The report of the Board of Home Missions showed that the synod is carrying on mission work at Knoxville, Bristol, Greenville, Johnson City, and Morristown, Tenn.; Augusta and Atlanta, Ga.; Asheville and Winston, N. C.; and Richmond and Norfolk, Va. With the exception of the one at Atlanta, all these missions were

begun within the past five years. They is a represent 12 congregations, 793 members 668 Sunday-school pupils, and church property inued at \$59,000. The annual expenditures amount to \$2,000.

The report of the Board of Foreign Massace presents the following: The United Sancel since 1891 has carried on mission work in Japan, with headquarters at Saga, in which the samel's massionaries are the only resident Christian missionaries. There are 6 stations, one of which to entirely supported by the native Church. The communicant membership numbers 31, 11 of when were added in 1894, and the total membership is 100. Three Sunday schools are maintained, having 60 pupils. Three are studying theology and 6 attend a class for special Bible study, Luther's Catechism has been translated into Jaganese, and is largely used. The common service and the orders of ministerial acts have also been translated and are used. The annual expenses of the board amount to \$1 MM.

Following is a summary of the statistics of this body: 8 synods, 188 ministers, 361 congregations, and 35,910 communicant members; 297 Sunday schools, 2,778 officers and teachers, and 22,354 pupils; and benevolent contributions amounting to \$24,435.89.

The Synodical Conference, composed of 1 English and 4 German district synods, held so convention during the year. This body is composed of 1,698 minuters, 2,365 congregations, and 479,221 communicant members; it reports 1,722 parochial schools, 905 teachers, and 97,949 pupils; 188 Sunday schools, 215 officers and teachers, and 18,000 pupils. The benevolent contributions for the last year amounted to \$268,406,49. Of the 15 independent success, the Joint Synod of Ohio, with its 78,000 members, the old Norwegian Synod, with its 58,000, the German lows Synod, with 56,000, and the United Norwegian Church, with 105,000 members, curry on their own educational, missionary, and benevolent operations. These expects embrace 1,636 ministers, 3,592 congregations, and 382,817 communicant members, 91, parcebial schools, 1,422 teachers, and 65,566 pupils, 1,322 Sandar schools, 5,319 officers and teachers, and 27,116 pupils; and the benevolent contributions of the churches amounted to \$121 660 12

The reports of the missionary operations of the Lutheran Church in North America include also work among the freedimen of the South and the Indians in various parts of the country. No statistics can be given of this work.

M

MADAGASCAR, a kingdom occupying the island of Madagascar, in the Indian Ocean, cast of Africa, recognized as a French protectorate in a convention concluded between France and Great Britain on Aug. 5, 1890. The reigning sovereign is Queen Ranavalona Manjaka III. born in 1862, who succeeded her aunt in 1883 and married the Prince Consort and Prime Minister, Rainilairivony. The treaty concluded by the Queen with the French Republic in 1885.

at the conclusion of military operations lasting three years, acknowledged the right of France to control the foreign policy of the Government: This was the thirty-second war with France once the first occupation of a part of the island by the French in 1645. The treaty recognized the survereignly of the Hova Queen over all the tribes of the island, and permitted the French towernment to maintain a resident general with a guard at the capital. Subsequently the

Oncen's Government, encouraged by the English and American consuls, denied the French protectorate, and refused to grant exequaturs through the French resident. The friction continued after the English receded from their position in consideration of the abandonment by France of her right of joint protection over Zanzibar. Rainilairivony, the real ruler of the Hoyas, made grants of land and mining and forest rights freely to Englishmen or Americans, but refused all concessions to French applicants. Notice was given in July, 1894, that any concession that is not approved by the French resident general and registered at the residence general will be considered null and void. The natives committed many hostile acts against the French and the attitude of the Hova Government became distinctly unfriendly. French resident general, Le Myre de Vilers, presented a new treaty, defining the French protectorate more clearly, and when the Hova minister refused to sign it he left the capital on Oct. 27, 1894. The French Parliament voted 65,000,000 francs for an expedition of 15,000 troops, and the Hova Government imported arms and prepared for a new war under the military direction of Col. Charles St. Leger Shervinton and other English officers who volunteered to organize the defense.

The area of Madagascar is about 228,500 square miles. The population may be 3,500,000. The most numerous tribes are the Sakalavas and the Hovas. The French formerly protected the former in their resistance to the Hovas, who have exercised dominion over the other inhabitants for two hundred and fifty years. The Hovas, numbering about 1,700,000, are a mixed race of Malay origin, with some Polynesian characteristics. Antananarivo, the capital, has about 128,000 inhabitants. There are some foreign planters and traders in the coast districts, mostly creoles from Mauritius and Réunion. In Tamatave, the chief port, in 1894 the white population consisted of 200 French and about an equal number of British, Germans, Americans, and

The Government derives its revenue from customs and a poll tax. The French Government has a lien on the customs, securing a loan of 15,000,000 frames made after the war of 1883–85. The imports in 1890 were valued at 5,597,260 frames, of which 2,725,780 frames were for textile goods, mostly American cotton sheeting to make the white robes worn by the Hovas. The value of the exports, consisting of rubber, hides, wax, cattle, gums, silk, and raffa fiber, was 3,741,355

Italians

The French Expedition.—A state of hostilities was formally announced by the French Government on Nov. 13, 1894, in a proclamation reciting vicinities of treaties by the Hovas and affirming the French protectorate. The Hovas assembled in the market place at Antananarivo, and swore to fight for their independence to the death. The French residents retired to Tamataxe, where the French troops, of whom there were on the island about 1,000, strengthened the fortifications. The Hovas threw up carthworks behind Tamatave, but whenever they approached the town they were shelled by the French ships in the harbor. They surrounded in like manner

the French position at Diego Suarez, and from their stronghold at Ambahimarina intercepted all communication and trade. On Jan. 19 Capt. Jacquemin captured the Hova position at Antananikarana, where he secured some English arms. On Jan. 21 the French artillery began to play upon the Hova positions around Tamatave. The fighting lasted four days, at the end of which the Hovas, having been twice repelled,

retired from the neighborhood.

A great military assembly was held at the capital on Feb. 20. The Queen addressed over 100,000 men of the military class, promising to prosecute the war to the utmost, while they pledged themselves to serve the fatherland wherever she should send them. The chiefs swore that they would provide funds to carry on the war, even if they had to sell their wives and children into slavery. The veterans of the last war were sent to the front, and 20,000 of new levies went into training at Antananarivo. Some white adventurers were enlisted in Natal and Cape Colony to fight for the Hovas. Several French traders and planters, and one who was a British subject, were killed by the Hovas.

In one of the battles the Hova commander in chief, Gen. Rainandriamampandry, was killed. Early in April the Hova strategic positions on the coast near Tamatave were bombarded. In the middle of April the town of Ambodivohive was captured without the loss of a French soldier. The French officials collected the customs duty of 10 per cent. on all goods landed, not only at Tamatave, but at other ports. These were paid by the European merchants on the understanding that the ports would not be blockaded. After three Englishmen who had been expelled from Tamatave landed at Vatomandry and proceeded to the capital, the French kept a

vigilant watch on English shipping.

The French, on Jan. 16, 1895, occupied the port of Majunga, on the west coast, in the country of the Sakalavas, and prepared it for the reception of the expedition that was to set out thence against the Hova capital. The Hovas gradually withdrew their forces from the eastern and southern parts of the island toward the center in order to make ready to resist the advance of the French into Imerina, their own country. Notwithstanding the bold and eloquent speeches of defiance, the Hovas were not generally willing to go to the war. Besides the English instructors there were a number of native officers who had received a military education in France. check desertions an old law was revived, which condemns any deserter to be burned at the stake. The regular army consisted of six brigades, each numbering 2,000 soldiers, all armed with Remington or Snider rifles, besides auxiliary forces raised among the other tribes, 10,000 strong and equipped with spears and shields. The Hove force was increased to 30,000 men ready for the field, and 20,000 new levies relieved the garrison at Antananarivo.

The French expeditionary force, which begat to embark at Lyons in the beginning of April 1895, consisted of a mixed regiment of the French line, 2,700 strong, 1 of marine infantry, 2 squad rons of mounted chasseurs, 1 Algerian regimen of zonaves and tirailleurs, 3 battalions of native tirailleurs, 1 of French tirailleurs, 6 batteries, and

a squadron of train, making altogether about 15,oromen. The French Government found it cheapor and more expeditious to charter English steamers to transport the troops to Majunga, provoking thereby angry criticism in the Chamber, while the British Government was called to account in the House of Commons for allowing British vessels to be used. French contractors laid a cable from Majunga to Mozambique to connect with the cable of the Eastern and South African Company. At Fort Dauphin the Hovas ex-plied the French and for a time maintained communications with their English supporters; but later the inhabitants of the whole southern part of the island drove out their Hova officials, attack I and plundered all Europeans, and rebelled against their hereditary Arab rulers and f rmed petty republies. There was a considerable French party in Antananarivo, headed by relatives of the Queen and the Prime Minister. who expected to supplant them when the French became masters of the Government. When the Hovas knew that the French expedition would certainly be sent, their loyalty and discipline weakened and the revolutionary party increased and grow bold. The Hovas generally were indiff rent. A force of 3,000 men was dispatched to Majunga from the capital to aid the Hova garrison of 1,000 men in resisting the landing of the troops, but the majority of the troops deserial. Another force of 4,000 men was sent to oppose the French on the northwest coast, Hef to the arrival of the French expedition Col. Shervinton and the rest of the British and American officers resigned all at once, finding it impossible to make the Malagasy Government realise the dangers that it had to face or to agree to the preparations necessary to overcome them,

When the French troops began to arrive, in the beginning of April, at Majunga they had several encounters with the Hovas, who were easily put to flight, although much superior in numbers. The Sakalavas, on the northern bank of the river Betsiboka, fled with the Hovas, who carried off the relies from the graves, from which the people would not be separated. Learning of this custom, the French took care to guard the graves on the southern bank and soon made the natives their friends. The outposts were extended up the river 40 miles, as far as Ankaboka, the head of navigation for the larger steamers drawing 10 feet of water. The Hova fort at Mahabo, 8 miles above, was captured after a fight. On April 3 Gen. Metzinger stormed the intrenched camp of Miadane, killing 100 Hovas. The Hova fortress of Ambohimarina, near Diego Suarez, was beleaguered by the French, and at length captured after a vigor cus attack. Fort Dauphin was occupied by a naval force. From the delta of the Betsibska the Hovas were expelled and the villages of 14spisca and Betsiboka were occupied without the loss of a man. Sickness, however, decumated the French forces and filled the hospital ship " Shain rock" with patients suffering from fever and de-French civilians who fell into their hands. The lown of Maravoay, on a tributary of the Betaboka, was attacked on April 27 by the Algerian troops and Sakalava auxiliaries, who were repelled by a heavy fire opened upon them by the

Duchestic commander in hel of the French forces arrived at Majurga Salaiara chiefs, after going to Antaganari on to a wear allegiance to the Quieu, endeaviered to stop the French. The advanced guard defeated a party of them, killing 60, and also captured the linea camp at Amboudemente. Nakala cas cullisted us the French and and did good serve a to the lonial regiment of tiralleurs Ther drose in all the cattle of the neighboring country, for which the French paid good prices. The Hovas reenforced by fresh troops from the capital, at tempted to make a stand, but their position was turned and they were again routed being 500 killed. The Huras were badly mared by the invisible death dealt by the smakeless fire of the Algerian troops. The French advanced in the left bank of the Betsiteka toward Mevalanana. A force of 6,000 parked men was west out to help hold that place, but the Horas had no organization or disposition for fighting. The commanders used their power cold to practice extertion upon the men. The new was had to feel themselves, returned to their force for fresh supplies when their roc gate at a siseldom returned. Three quarters I the traps sent to the front deserted on the man's. The general who was in command at Maras as was the first to run away. He was decord for a w anlien, but was reinstated became the program who was sent from Antananaries to take his place turned back on bearing of fresh desistars and went off to his estate

There the French eat down, the transport saler of a d arriving final withem til er umulate sufficient er minimariat africes at they whatevel have of Sabert wille to everticuse the all and immediately. One of the English tringing gontwate in sections had be decdient in the Mediterranean and afterward there were other delays. The health of the French

troops was not as bad as had been expected; the proportion of sick was 10 per cent. They were furnished with comforts by patriotic citizens at The volatile Hovas regained their spirit of confidence when the French ceased to advance, and were cheered by imaginative accounts of victories. On June 29 a force of 3,000 Hovas attacked the French outposts at Tsarasaotra, and were repelled. Gen. Metzinger then ordered an attack on their position, held by 10,000 men, on the Beritzoka. The French troops attacked them in front, mowing down their ranks with the fire of the Maxim guns and repeating rifles, and when they fled in terror before the pursuing cavalry on July 1, in the second battle, their retreat was cut off by a large body of black troops which had outflanked them and occupied the roads. Some escaped into the mountains, only to perish of starvation and exposure, for, according to their custom, they went into battle naked, leaving their white lambas in their tents, which, with all their guns, ammunition, and stores, fell into the hands of the victors. The French losses consisted of 2 killed and 15 wounded. The road was built ahend, and in August the French advanced column began its march. On Aug. 13 the French occupied Malatsy, which the Hovas evacuated at the approach of the enemy. Gen. Raimanjalahy, the Hova commander-in-chief, complained that his men ran away whenever one or two were killed. They deserted to the French in ever-increasing numbers. The Hova army intrenched at Andriba was 12,000 strong. Gen. Voyron's brigade attacked Andriba on Aug. 21. The Hovas were so demoralized by the artillery fire that they abandoned their 6 fortified posts and numerous encampments without waiting to encounter the infantry. The French lost 1 Malagasy soldier. At Andriba, 150 miles from Majunga and half way to Antananarivo, Gen. Duchesne waited till he collected enough provisions and ammunition for a flying column, to be sent over the mountains to take the capital. On Sept. 15 a French column by a forced march surprised 6,000 Hovas in the Tsinainondry defile and cap-tured their position. The flying column found the pass in the Ambohimena mountains barred by the entire Hova force and 30 guns. Delivering his attack unexpectedly on Sept. 19, Gen. Voyron completely routed the Hovas and captured Antoby. The Hovas offered a feigned resistance only in the Ankaratra mountains, which the French crossed on Sept. 23. On Sept. 27 they easily dislodged the Hovas at Lavohitra by a reconnoissance. The road, 200 kilometres in length, terminating at the entrance of the plain Imerina, was completed before the end of Vagust. The flying column of 5,000 men carried university provisions to reach Antananarivo. The deaths up to this time had numbered about 2,000, wearly equally divided between Europeans and the native troops and coolies. Scarce 50 died in battle or of wounds. About 7,000 persons were treated in hospitals, and those who succumbed were mostly French soldiers under twenty-five years of age and coolies. The older men and the Algerian troops resisted the en-demic diseases or receivered quickly.

From Ambatearana the Hovas made several futile attempts to check the invaders, but the French artillery was so well served that they did not stand, either behind earthworks or in the open. Their last and most spirited effort was the final defense of the capital city. The French captured the city by a brilliant attack, in which they lost only 7 killed and 54 wounded, on Sept. 30, the day that Gen. Duchesne had fixed several months before.

Terms of Peace.-The French commander entered into negotiations with the Hova Queen on Oct. 1. The terms agreed upon provisionally were that the Queen was to continue to reign under a rigorous French control. The Hova administrative organization throughout the island would be maintained under the supervision of French officials. The Prime Minister was exiled. Gen. Metzinger was nominated Governor of Antananarivo. The native army was disarmed and replaced by French garrisons. The French assumed charge of the police and collect ed the customs and the taxes. The Queen of Madagascar in the treaty accepted the French protectorate, and the French Republic accepted all the consequences of such protectorate. France reserved the right to maintain military forces on the island, and the French resident general is to control the internal government of the island The Hova Government is not allowed to contract loans without the authorization of France. French Government assumed the financial responsibilities that Madagascar had previously incurred and promised to assist in the conversion of the loan of 1886, and also agreed to fix with out delay the limits of the French territory of Diego Suarez, the uncertainty of which had lee to disputes and in part caused the war.

The Waller Case.-John Langston Waller formerly United States consul at Tamatave, was arrested on March 6, 1895, for sending letters ou of Tamatave without submitting them to the mil itary authorities for examination according to the regulations, and for attempting to convey in formation to the enemy of the movements o French troops. He was tried by court-martia on March 18 and sentenced to twenty years' im prisonment for high treason in holding a clan destine correspondence with the enemy. Waller was sent to France and confined in Clair vaux prison. The United States ambassador a Paris requested the French authorities to furnish him with a copy of the proceedings of the court martial. Mr. Waller is a colored citizen of th United States, formerly resident in Topeks Kan., who had obtained from the Hova Government in April, 1894, a grant of 250 square mile of rubber forest in the vicinity of Fort Dauphin The French resident contested at the time th validity of this concession. All his rights wer abrogated by his sentence. The French Govern ment declined to furnish a record of the proceed ings of the trial as a matter of right, but wa willing to do so as an act of courtesy to th United States Government. A full copy was no obtained till autumn, when it was transmitte to Washington. The proceedings were found t have been regular and the evidence sufficient at cording to French law.

The American gunboat "Castine," which as rived at Tamatave on June 5 for the purpose of inquiring into the Waller case, omitted to saluf the French flag, on the ground that the Unite States had never recognized the French protection.

torate. As the United States treaty with Madaguear recognized the sovereignty of the llova O een over the whole island, the naval regulations prescribed a salute to the Malagasy flag, and since that had been pulled down and the French flag was flying no salute was fired. When the officers and men attempted to land they were roughly ordered and pushed back by the French officials. The French naval authorities subsequently apologized for this discourtesy, explaining that the regulations required that the ship's papers should be examined before any one was permitted to come ashore.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decenn'al consus since admission was 298,269 in 1820; 20 455 in 1830; 501,793 in 1840; 583,169 in 1830; 628,279 in 1860; 626,915 in 1870; 648,936 in 1880; and 661,086 in 1890. Capital, Augusta.

Government,-The following were the State officers during the year: Governor, Henry B. Cleaves; Secretary of State, Nicholas Fessen-den; Treasurer, F. M. Simpson; Attorney-General, Frederick A. Powers; Superintendent of Common Schools, W. W. Stetson; Adjutant O- ral, Selden Connor; Railroad Commissioners, Messrs. Peaks, Chadbourne, and Danforth; Fish and Game Commissioners, T. H. Wentworth, H. O. Stanley, and C. E. Oak; Land Agent, Charles E. Oak; Liquor Commissioner, P. P. Gilmore; Superintendent of Public Buildings, B. F. Harris; Labor Commissioner, S. W. Matthews; Insurance Commissioner, S. W. Carr; Registrar of Vital Statistics, A. G. Young; Laberarian, L. D. Carver; Factory Inspector, R. F. Chalk; State Assessors, Otis Hayford, George Pettle, Hall C. Burleigh; Mr. Burleigh died in May, and was succeeded by W. C. Marshall; Chief Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, Andrew P. Wiswell, Lucilius A. Emery, Enoch Foster, W. P. Whitehouse, Thomas H. Haskell, and Sewall C. Strout—all Republicans except the last-named.

Finances.-The cash on hand at the beginning of 1805 was \$458,195.85, with receipts for the year of \$1,533,700.15, making a total of \$1,901,896. The expenditures amounted to \$1,-701,655.30, leaving cash on hand Dec. 31, 1895,

\$200,240.70.

The liabilities of the State are as follow: Bonded debt, \$2,353,000; trust funds held by the State on which no interest is paid, \$748,331.07. The bonded indebtedness has been reduced by

\$50,000.

Charities.-About five years ago 100 acres of land were bought at Bangor as a site for a new hospital for the insane of the eastern part of the State. The last Legislature voted \$130,-000 for buildings, and the Governor appointed a commission to visit other institutions and examine plans,

The expenditures for the insane in 1894 was \$64.973.07; for the deaf, dumb, and blind, \$11,-139.97; and for the feeble minded, \$1.657.74 In 1895 the expenditures were respectively \$61.

900, \$18,667, and \$2,081.

The Children's Aid Society of Maine has purchased a building and 40 acres at Belfast, and is fitting up a home for homeless girls.

Education .- Summer school of these Level held at Orono, Forenit, Frieburg, San, S. .. port, and Turner Center The attendance was Me. The course of study at thornary and t as our Normal Schools has been catefuled to there years, and the buildings at all the permal where

have been improved

New regulations have been made for examination of teachers. The State Superintendent will issue certificates after examination which will be probationary or for life, as warranted by the scholarship and skill of the candidate as shown Probationary certificates in the schoolrean. will be granted for three years, and may be re-

The sixty-fifth annual convention of the American Institute of Instruction was bell to

Portland, beginning July 5

A class of 51 was graduated at Bowlins in June. The Board of Trustees at 1 Overseers vides! to accept as a substitute for the Greek requirement any one of the following: 1. Three years of French; 2, three years of German , J, two years of physics and one year of mathematics, 4 two years of chemistry and one year of mathematica.

Colby University celebrated in July its seventy fifth anniversary, with an address by Prof No. thaniel Butter, of Chicago University, and an ode by Rev. Samuel F. Smith Large classes were graduated in both the men a and the

en's colleges.

The State College, at Orono, openedate actumo term with 110 new students, 230 in all About 30 were graduated in June. Advanced degrees were conferred on 6 students-merhanical engineer 3; civil engineer, 2; master of soleme is the istry, 1.

Railroads, -The Ashland branch of the Bangor and Aroostook need was ready for the terginning of regular train service Jan 1 1886. The system now comprises 30% miles, built for ing the past three years. The Ashland translates is 43 miles long, and gives access to the burden region. The report for the year coding June 10. 1895, shows that the gross carrings were \$342. 832.12, and the operating expenses \$301 500 63

The report of the Maine (entra) fe the name time, and compared with the processing year, shows these items. Gross carrings and ther items, \$4,839,761 38; operating expresses, \$4,839,761 172 23, total marine \$1 531 519 15 and marine, \$420,889.38; surplus from operations, \$122,369. 78; total surplus, June 10 \$612 669 94.

The annual report of the Portland and Ramford Falls Railroad gives the gross earnings of the real for the year as \$173.149 a gain I \$61. 914. The total to was \$73.478, and the net movine \$30 5.1 at in reason of \$16,460

The report of the Portland and Recomment read makes the gross carnings \$356.469 an inrecaw of \$34.171. The operating expenses were \$61,904, net income, \$191.301 total income. \$34 560 a gain of \$12,7%

The Railroad Commissioners report that 117-6 additional miles of road have been built,

Localitaral (a' ; lea

The returns of the steam roads on June 30 1904, showed a falling off in transportation carn ings over those of 1898 of \$508,150.20. The me turns to June 30, 1895, show an increase over there of 1894 of \$581,735.06,

The total mileage of street railroads is 93.89 miles. The total of transportation earnings was \$502,477.80, against \$440,026.58 in 1894.

Vital Statistics.—The second annual report for the year 1893 has these items: Births, 14,604; of these 63:17 per cent, were of native parents, 18:29 of foreign, 13:75 of mixed, remainder not stated; marriages, 5,795; divorces, 627; deaths, 11,134.

Insurance.—A new plan has been adopted for fixing insurance rates. There will be insurance boards in the various counties; and when owners think the rating of the agents too high appeal can be taken to the board; if the board agrees with the agent, the insurer can then apply to the exchange, with headquarters in Boston.

The Maine Committee of the Insurance Exchange made report in June, recommending reductions on specially rated risks in the State, from 5 to 15 per cent., according to class. Only Bangor and Portland are in the first class—that is, having approved water supply, fire alarm, and a paid fire department. They would be entitled to the 15 per cent, reduction. A reduction of 124 per cent, on farm property was also recommended.

In 1894 the State taxes of the insurance companies amounted to \$32,683,34. Of this amount \$14,234.04 was for fire insurance; \$17,380.63 for life; \$1,063.67 for accident.

Farming.—The secretary of the Board of Agriculture sums up the general crop result as follows:

In 1895 Mgine produced the largest potato crop known, which has proved in some cases a source of poverty in the midst of abundance. The abundant harvests of hay, grain, and corn have given our feeders plenty of food for their animals. Our dairy animals are increasing in numbers and in average productiveness; our young stock has increased in numbers and in average value. The sheep industry, although somewhat crippled by the low price of wood, has afforded a reasonable income on the capital and labor expended.

The number of farmers' institutes held during the year was 46; cost, \$1,784.89; total attendance, 6.210.

Two bills of importance to the dairy interest were passed by the Legislature: one regulating the sale of oleomargarine, and one requiring "the testing of all articles used in connection with the Babcock test in the butter factories."

Game and Fish Laws.—The secretary of the Fish and Game Association reports that excellent results have been obtained from the operation of the new law in regard to fish, the supply being on the increase. Sebago Lake has been steeked with trout. The change of the close time on partridges has also been beneficial. In reference to large game the report says:

We are confronted with difficulties which it was but-of the change in the law and the increased apprential of would in a large measure overcome. I have letters from guides and others which indicate that large game were in greater numbers in our forests at the first of O ty ber than ever before, and that we have row, at the close of the season, not lost the natural increase as far as relates to deer. Caribou are more plenty, and it is a mooted question whether the moose is in as large numbers as at the close of last season.

It is estimated that 5,000 head of large game were killed in the State during the year, and that these cost the hunters (including board bills, guides, etc.) an average of \$100 apiece.

bills, guides, etc.) an average of \$100 apiece. Fisheries.—The Labor Commissioner says: "There are enrolled in the customs districts of the State 437 vessels, which are exclusively engaged in the fisheries, and in addition there are employed in the shore fisheries more than 6,000 fishing boats with a valuation of not less than \$500,000. The sea and shore fisheries of the State give employment to upward of 10,000 people, and involve an investment in apparatus and cash capital of \$3,000,000."

Cities and Towns.—Lewiston celebrated its centennial, July 4, with a procession 2½ miles long, athletic sports, a contest of fire companies, and a display of fireworks. Exercises in the park consisted of an address by the Mayor, an historical address by ex-Gov. Garcelon, an oration by Senator Frye, and a prophecy by Congressman Dingley.

New Sweden celebrated its twenty-fifth anniversary, June 25. In 1870 a colony of 51 Swedes, under the lead of Hon. W. W. Thomas, Jr., sailed from Gothenburg for northern Maine and settled in what is now known as New Sweden, then an unbroken wilderness. In New Sweden, then an unbroken wilderness. In New Sweden to-day there are 717 Swedes, while in the adjoining township are 735 more. The colonist have erected 686 buildings, built 71 miles of road, and own live stock to the value of \$72,045.

The new bridge connecting Calais and St. Stephen was formally opened, Jan. 19, with appropriate ceremonies. This is the first free bridge over the St. Croix. It consists of two steel trusses of the Pratt type. The bridge proper is 385 feet long, 36 feet wide over all, and has a head run over the floor of 16 feet.

Legislative Session.—This opened Jan. 2, and closed March 27. The Senate voted to adopt the Reed rules as the standard of procedure, but the measure met with opposition in the House and was tabled.

Acts to the number of 493 were passed, and 134 resolves. The appropriations for 1895 amounted to \$1,758,406.59, and for 1896 to \$1,624,107.53. Some of these are the following

For pensions, \$140,000; Eastern Insane Hospital \$150,000; General Hospital, \$15,000; Eye and Ear Infirmary, \$10,000: Bangor General Hospital, \$10,000; Central General Hospital (conditionally), \$20,000; Penobsect Indians, \$16,164; Passamaquoddy Indians, \$16,080; Cattle Commission, \$10,000; State Library, \$8,000; Maine Insane Hospital, \$14,000 State College, \$40,000; Farmington Normal School \$20,000; Reform School, \$50,500; Military and Nava Orphan Asylum, \$19,500; State Prison, \$19,000 School for the Deaf, \$16,000; Industrial School, \$14,000; Children's Aid Society, Belfast, \$3,000.

A very long petition was sent in, asking for legislation in regard to fish and game, and the enactments on that subject were among the most important work of the session, beginning early and continuing till near the close, when the resolve appropriating \$25,000 became a law. Under the new general law the Governor appoints 3 commissioners of inland fisheries and game, 1 of whom shall be the land agent, and who shall hold the office so long as he remains land agent. The othe 2 shall hold their office for three years and shall

receive a salary of \$1,000 and actual traveling expenses. They shall make no decisions contrary to existing laws, but after a hearing, of which due notice has been given, may entirely prohibit the taking of any kind of game or in-and fish in any part of the State for a series of years not exceeding four. The wardens shall be allowed the same fees as sheriffs for like services, and bonds to the amount of \$2,000 shall be required of them. The guide of a party that violates the fish and game laws shall be field equally responsible with other members of the party, The hunting or taking of cow or calf mouse in any manner is forbidden. All fishing through the lee for trout or landlocked salmon in any of the waters of Franklin and Oxford Counties to prohibited. No person shall now kill more than bull moose, I caribou, and 2 deer between Ost. 1 and Jan. 1 of each year. The number of pounds of trout or salmon that may be taken is 23, and not 50 as heretofore.

In reference to seashore fisheries, acts were passed defining certain duties of wardens and commissioners, and regulating the packing of cardines. From July 10 to April 19 it will be unlawful to catch or deal in lobsters less than 10; inches long, under penalty of a fine of \$1

for each lobster.

Railroad legislation included the following

Steam railroads are authorized to use electricity. When an owner of a building along the line of the railroad damaged by fire from a lessonistive shall have an insurance on the building that insurance, less premiums, etc., shall be deducted from damages as premiums, etc., shall be deducted from damages as premiums, etc., shall be deducted from damages that amendments to existing legislation was that which requires the Railroad Commissioners to passe upon the question whether public convenience requires the construction of an electric railroad. The country of Washington is empowered to aid in the construction of the Washington County Railroad to an amount not exceeding \$200,000.

The laws regulating insurance are as follow;

The Insurance Commissioner may, with the consent of the court, wind up the affairs of fraternal bene-Sciary and assessment corporations. Investigation must now be made as to the causes of all fires by muni pal officers within six days after such fires, and a copy of the clerk's record shall be transmitted to the linearance Commissioner semiannually. The Insurance Commissioner may appoint brokers who, if unable to place certain kinds of insurance in any companies authorized to do basiness in the State, do business in Maine. The anticompact insurance law and the one prohibiting coinsurance have been repealed. The Insurance Commissioner has been an thorized to compile and publish 2,000 repres of the insurance and fraternal beneficiary laws of the State In towns or cities of more than 2, and inhabitants the m sicipal officers shall appoint an inspector of build ings skilled in the construction of buildings or I and shall define the limits of his jurisdiction over the construction of buildings to see that proper safe guards against fire are used

By an amendment a lien to secure payment of tax upon real estate shall take precedence of all other claims. If such tax remains unpaid on the first Monday in December of the year succeeding that in which said tax was assessed the property shall be sold.

One of the important acts is that relating to the faxation of sailing-vessel property. The new law provides for a valuation of \$00 every results. The valuation is to be relied at a ton for each year of the vessels are applicable in the valuation of a before at \$1 a ton.

Appeals from the assessors to the Sagaran

Court have been authorized

A law has been passed requiring the "table assessors to make lists of lands in unincorporated places.

Under the medical registration act m4 methan 2 of the board of 6 shall be members of any one school of medicine: the section providing that unregistered practitioners of all of collect their pay was stroken out.

Solne defects in the conlateral inheritance has have been amended. Charitable bequests are

now exempted from its province.

Thirty days' impresenment or flee to 4 exceeding \$100 are the penalties prescribed for selling state eggs as fresh. Adulterable or initial of maple sirup or sugar has been problette. A flee not more than \$100 and in less than \$50 is the penalty for the adulteration of cardy or for the sale of brandy, whisky runs or wine drops. Obcumangarine may be seed if consellation other than yellow or butter also

The law protecting innkeepers was made to apply to keepers of bearing houses and the penalty for defrauding them was dealed.

A general law was passed for the ergs that of telegraph and telephine companies under which they are to have the right of emission to the Corporations by majority with of sick most diminish their capital stock, giving a few within ten days to the Secretary of State. The gas of policy is made subject to the same of policy is made subject to the same of sixthesis.

Veterans of the late war r 4 or the quals of Maine, but who were residents of the State at date of enlistment and at the of appeals had been residents for five years and are

ment, shall provide Male jette to

titing or to wee with more than 10,000 meabstant's man receive State stipped on \$1,000 appropriated for free public libraries, instead for \$100 as for riv, and the State stipped is left per cent of the amount expended by the 1 strong or the use and benefit of such public library and for the running expenses there?

Among the commissions to be appointed by the Governor is that for securing uniformity of legislation with other States in respect to divorce, insolvency, and probate laws, also those relating to descent and distribution of property.

The law relating to recognizances for debt

was repealed.

An attachment of real estate expires in five years after date of filing, unless brought forward at the request of the plaintiff or his attorney.

A law affecting installment sales provides that no agreement whereby the property shall become that of the buyer till it is paid for shall be valid unless recorded in the city clerk's office.

Vessels of 5 tons or less on inland waters are now exempt from fees for inspection or license.

The State has allowed savings banks to require ninety days' notice for the withdrawal of deposits, and in turn has provided that these banks shall not invest in street railways, excepting those already built in Maine, unless there is paid in on the stock 331 per cent. of the amount of bonds.

The laws on liens were amended; the claimant has forty instead of thirty days in which to

file his statement.

Changes were made in the law governing the sale of liquors. Among the important features added is the requirement for an assay of the liquors

MANITOBA, a western province of the Do-

minion of Canada.

Legislation.—The third session of the eighth Legislature was opened at Winnipeg on Feb. 14, 1895, by the Lieutenant Governor, Sir John Christian Schultz, with a speech from the throne, which contained these passages:

It appears that during the past year unusually large shipments of stock have been made out of the province—an encouraging indication that our farmers are no longer wholly relying upon the production of

A substantial increase in the provincial subsidy has been obtained from the Dominion authorities

By the judgment of the Judicial Committee of the Privy Council, recently pronounced on an appeal from the Supreme Court of Canada, it has been held that an appeal lies to the Governor General in Council in behalf of the minority of this province, inasmuch as certain rights or privileges given by prior provincial legislation to the minority in educational matters had been affected by the public-schools act of 1800, and that therefore the Governor General in Council has power to make remedial orders in respect thereto. It is not the intention of my Government it any way to recede from its determination to up-I the present public-school system.

It has been determined by the Department of Eduto introduce a carefully prepared course of The the past year a considerable amount of pre-

Finlay M. Young was elected Speaker. The principal bills passed were the following:

Respect to a reporations incorporated outside of Mamitina

Respecting humane societies.
To amen title public schools act.

To make further provision respecting mortgages of real catate

To amend the Manitoba insurance net.

To amend the act respecting life assurance for the benefit of wives and children.

For prevention of fraudulent statements by companies and others

Respecting aid to creameries and cheese factories.
To incorporate the Red River Valley Colonization Land Company.

A special meeting of the Legislature was called on May 9, primarily to deal with the school question. It was prorogued on June 28, after passing the following measures, among others:

To amend the municipal boundaries act. Respecting municipal hail insurance.

To make further provision respecting the liens of laborers and mechanics.

To incorporate the Canadian Live Stock and Fire Insurance Company.

To enable the Government of Manitoba to loan limited amount of money to the rural municipality of Gimli.

The most important subject of discussion dur ing the two sessions of the Legislature in 1895 was the school question. The Manitoba legis lative acts of May, 1890, with reference to the public schools of the province, abolished the system which permitted separate Protestant and Catholic sections of the School Board, and ordered the arrangement of all the school districts. both Protestant and Catholic, under one scheme of free and nonsectarian schools, to be sustained by the collection of a public-school rate, Any school refusing or neglecting to work under the new law was not to be allowed the privileg of enjoying a share of the grants or allotments. The Imperial Privy Council having decided that, while the Manitoba act of 1890 was constitu-tional, it yet remained with the Dominion Government to see that the rights of the Roman Catholic minority were respected and guarded, the question at once became a Federal one. Ottawa ministry, sitting as a court of final ap peal, heard the complaints and the defense, and finally issued a remedial order or instruction to the Manitoba Government to restore the privi-leges taken from the Catholics by the abolition of their separate schools in 1890. This decision was made by the Governor General in Council. on March 18, declaring that the rights and privi-leges enjoyed by the Catholic minority in Manitoba prior to the provincial acts of 1890 were prejudicially affected by those acts, and requesting legislation that should repeal the existing law, in order that the wrongs complained of by the Catholics might be removed. This the provincial Government flatly refused to do, and were supported in their opposition by a large majority of the Assembly, and apparently of the people of Manitoba. It was pointed out that the difficulty of maintaining separate schools in a large and scattered country like Manitoba practically amounted to an impossibility. decision of the Government created two distinct issues—one between Catholics and Protes tants, the other between the provincial and Do minion Legislatures. The situation was awk-ward. The Minister of Justice for the Dominion, Sir C. H. Tupper, considered the emergency so serious that he resigned in order to brin about a dissolution, this, in his view, being the only constitutional course open to him. resignation was tendered on March 26, but three days later he was prevailed upon to remain in office. Matters now await the legislation that is

pledged by the Dominion Government at the January session of the Federal Parliament.

On March 3 Attorney-General Sifton carried a resolution abolishing the provincial expenditure upon the maintenance of a residence for the Lieutenant Governor. This leaves that official dependent upon the \$10,000 salary paid to the lieutenant governor of each province by the Federal authorities under the terms of the act of union. A few months later, the Hon. J. C. Patterson, formerly Minister of Militia at Ottawa, succeeded Sir John Schultz as Lieutenant Governor.

On April 8 a judgment was rendered in the Supreme Court of Manitoba which sustained in a local case the contention that provincial legislatures have not the power to prohibit, either directly or through the municipalities, the sale of intoxicating liquors. This decision did away with local-option laws in 10 municipalities.

Finances.-For the year ending Dec. 31, 1894, the chief items of receipts were as follow: Annual subsidy from Dominion, \$418,267.31; interest on school lands, \$10,465.21; county court fees, \$10,205.85; law stamps, \$11,926.50; land titles, \$42,402.19; liquor licenses, \$26,111.60; interest, \$40,895.71; support of lunatics, \$26,-654.19; insurance act fees, \$7,891; official administration, \$10,958.61; municipal sinking fund, \$13,344.79; central judicial district, \$31,290.40; municipal debentures (1890), \$9,588.84; leans to municipalities (1894), \$8,934.91; Manitoba and Northwestern Railway Company debenture account, \$14,647.43; Manitoba Southwestern Colonization Railway debt and interest account, \$49,-402.51; provincial debentures, \$202,619.83; Court of Queen's Bench, \$26,539.17; balance brought forward from 1893, \$574,458.06; miscellaneous, \$47,839.34; total, \$1,584,443.45. The chief expenditures were as follow: Legislation, \$40,400,-43; Treasury Department, chiefly interest on debentures, \$152,065,33; provincial Secretary's department, \$7,911.84; public schools, \$119. 997.12; Manitoba University, \$3,500; agriculture and immigration, \$74,680.72; Attorney-General's department, \$127,580,13; Railway Commissioner's department, \$6,887.70; public works, \$177,573.08; treasury loans, etc., \$107,020.19; interest on railway bonds, \$101,263,00; miscellaneous, \$56,633,98; cash on hand, \$608,929.84; total, \$1,584,443.45. The outstanding debentures of the province at the end of 1894 included \$787,426 issued in 1885 for aiding the Manitoba and Northwestern Railway Company; \$859.846 in 1885 for aid to the Manitoba Southwestern Colonization Railway Company; \$255,986 in 1886 to aid the Hudson's Bay Railway and Steam-ship Company; \$1,498,933 in 1888 for general purposes; and \$997,666 issued in 1893, also for purposes of public expenditure.

Agricultural.—The crops of 1895 were unprecedented. The comparative areas in acres may be seen from the following table:

CROPS.	1894.	1895.
Wheat	1,010,196	1,140,274
Chica	419,696	442.620
Everwy	119,70%	105, 588
F (1) (1) (1)	Shit Swist	102 664
Pocatoes	12, 20	14,114
Rects	2, 46,46.)	6,600

The estimated production for 1865 from a ports received from all parts of the production includes 33,843,392 bushels of wheat, or 2200 bushels to the acre; 5,663,667 bushels of barrer, or 38,96 to the acre; 25,555,889 bushels of oats or 38,96 to the acre.

The development of the dairy interest has been noticeable, more than 20 new cheese and butter factories having been established during the season. According to the statements contained in bulletin that was issued by the Department of Agriculture in June, 1865, 6,842 mer. were employed as farm help, at wages averaging \$16.50 for the summer months and \$10.50 for

those hired by the year

Education. - The school population in 1864 was 36,459, compared with 14,129 in 1884. number of pupils was 32,600, and the average attendance 16,260. The teachers numbered 1,047; the schools in operation were 884; the average salary of teachers was \$410, as against \$433.50 ten years before. The legislative grant to the schools was \$101,013.46, and the school taxes, raised from the municipalities, amounted to \$354,963. Before the abolition of separate schools (or their Government maintenance) in 1890, there were 91 Catholic and French school districts. For various reasons 24 of these have since disbanded and 27 have accepted the public-school system. Nine newly formed districts, where the French and English populations are about equal in numbers, have also accepted what is called the "national" system. Convent schools are still in operation in 9 centers, and 28 other schools in various parts of the province are conducted as separate schools and maintained by voluntary subscriptions.

Industries and Trade,—At the time of the last census (1891) there were 1,001 industrial establishments in the province, with a working capital of \$2,561,836, employing 4,603 persons at wages aggregating \$1,900,981. The reports of the province in 1894 amounted to \$2,202,202, and the duty collected to \$602,466. Up to June 1895, the export of cattle for the year was placed at 30,000 head; the export of bags, at 10,000, and the export of sheep, at 4,000; while the tital value of the dairy products experted was suf-

mated at \$500 (set) Keewalin. - This large district, of 282,000 square miles, is still under the jurisdiction of the Lieutenant tovernor of Manitolia. The principal occupation of its mattered inhabitants -who are mainly libitians to hunting and fishing. In his annual report for 1894, Ser John Schultz urges the Is million to vernment to take steps for the protection of the rich whaling grounds to the north, and suggests restrictive measures against the use of the bomb, lance, and swicel guns by foreign whaleboats. He also protects rigorously against American vessels which have "traded with the Eskimos on our anti- coast carrying on a barter with the articles upon which no duties have been paid, and furnishing as matters of trade or reward for it land trading expeditions magazine rifles, fixed ammunition and intesicants, thus so lating the laws of Canada and defrauding her tyrenue." He then refers to the value of the trade thus controlled from San Francisco.

MANUFACTURES IN THE UNITED STATES. Under the general heading UNITED STATES in the last issue of the "Annual" is included a tabular exhibit of census results concerning manufactures. The table gives many important facts relating to the development of industries in 165 cities, showing, opposite each name, for 1880 and 1890, the aggregate number of manufacturing establishments, total amount of capital invested, total number of hands employed, and aggregate of wages paid. The last two columns contain the total cost of material used in each city, 1890, and value of products or goods manufactured in the same year.

The following exhibit shows in detail, alphabetically, by industries, the capital invested, cost of materials used, and value of products (goods manufactured), 1890, including receipts from custom work and repairing, in 165 cities, whenever the amount used in any city for any given

industry exceeds \$200,000.

The total given for each city under the heading "Capital" includes both hired property and direct investment, because the aggregate thus made represents truly "all the property strictly pertaining to a manufacturing business."

The industries included in the compendium report for 1890, but not in any previous census returns, were bottling; cars and general shop construction and repairs by steam railroad companies; china, decorating; clothing, women's, dressmaking; coffins and burial cases, trimming and finishing; cotton, cleaning and rehandling; cotton ginning; cotton waste: drug grinding; druggists' preparations, not including prescriptions; gas, illuminating and heating; hay and straw, baling; millinery, custom work; petroleum, refining.

Some of these industries do not reach \$200,000, and will not therefore be found in the tables.

Each industry having 3 or more establishments in any city is given a separate heading. Those industries in which less than 3 establishments were engaged are grouped under. "All Other Industries," in order that the operations of individual establishments may not be disclosed. Industrial operations of the municipal governments of cities, also the manufacturing operations of penal, reformatory, and charitable institutions, are not included in the Compendium, because such enterprises are conducted under conditions "essentially different from those which prevail in the case of individual or private corporations."

Summary.—This statement is intended to exhibit briefly, for rapid reference, the cities most prominent in the matter of capital invested and goods manufactured at the taking of the eleventh census, in 1890, under some of the most important headings. Attention is directed to the explanatory remarks at the beginning of this article.

Agricultural Implements.—In 1890, Chicago, Springfield, Ohio, Auburn, N. Y., Akron, Ohio, and Racine, Wis., were, in the matter of capital, much in advance of the 18 other cities mentioned under this heading. In value of products or goods manufactured, it will be noted that Chicago, Springfield, and Auburn take leading rauk, followed by South Bend, Akron, and Canton, Ohio. Twelve cities have more than \$1,000,000 invested, and the product in 10 cities exceeds that amount.

Boots and Shoes: Factory Product.—In capital in 1890, Lynn, Mass., Haverhill, Mass., Philadelphia, Pa., and St. Louis, Mo., took the lead. In value of goods manufactured the most important cities were Lynn, Haverhill, Chicago, Philadelphia, and Cincinnati. Of 28 cities mentioned, 13 have a capital exceeding \$1,000.000, and in 20 cities the value of products exceeds that amount.

Carriages and Wagons.—The 5 leading eities in capital invested were South Bend, Ind., Cincinnati, Chicago, New York, and St. Louis. The largest amounts under value of products or goods manufactured were shown for Cincinnati, Chicago, New York, St. Louis, and Columbus. Of 58 cities given, the capital in 16 is beyond \$1,000, 000, and in 15 cities the value of products ex-

Clothing, Men's.—New York, Chicago, Boston, Cincinnati, and Baltimore were millions ahead of other cities in the amount of capital invested under this heading, the same cities also leading in value of products. Thirty-one cities are mentioned, and of these the capital invested in 15 cities (1890) exceeds \$1,000,000. In value of

cceds that amount.

products, 18 cities report amounts aggregating

ore than that sum. Clothing, Women's.—New York is reported as ing by far the largest amount of capital in-ted in this industry. The other cities nearest mak are Chicago, Philadelphia, Cincinnati, San Francisco. The first 4 named are hest in value of products, Cleveland being Toities (1800) is more than \$1,000,000, and value of products in 8 cities exceeds that

fion Goods.—Fall River, Mass., is the most picuous in the matter of capital invested, cities coming nearest being Lowell, Mass. Bedford, Mass., Manchester, N. H., and lelphia. In value of products the cities as follows: Fall River, Lowell, Philadel-Manchester, N. H., and New Bedford, Among 27 cities in the list 21 employed more than \$1,000,000 capital, and the of products in 20 cities exceeded that

York, Akron, Ohio, and Milwaukee, Wis., e lead in capital invested. Minneapolis, St. Louis, New York, Chicago, and Rochester, N.Y., take rank in the order named as to value products. Of the 48 cities given under this dustry, the capital in 9 cities is more than 0,000, and in 33 cities the value of products as this amount.

undry and Machine-shop Products.—The less leading in capital invested were Phila-A. Chicago, New York, Brooklyn, and St.

The ranking in value of products for the year was as follows: Chicago, Philadel-New York, Brooklyn, and St. Louis. The of cities given under this heading is Of these, the amount of capital in 61 cities is \$1,000,000, and in 59 cities the value of icts or goods manufactured exceeds that

and Steel.-Pittsburg, Chicago, Clevehen and Sleel.—Pittsburg, Chicago, Cieve-land, Ohio, Scranton, Pa., and Youngstown, Ohio, hold the highest rank in amount of capital invested and value of products. Out of 19 cities given, the capital invested and value of products in 18 exceeds \$1,000,000.

Loother.—The 5 leading cities in capital world under this heading are Milwaukee, invested under this heading are minument. Wis., Chicago, Cincinnati, Louisville, Ky., and Allegheny, Pa. Those highest in rank in value of products are Milwaukee, Chicago, Cincinnati, Allegheny, and Louisville. Ten cities of the 20 Allegheny, and Louisville. Allegheny, and Louisville. 1en cities of the list have more than \$1,000,000 included in the list have more than \$1,000,000 ital invested, and in 12 cities the value of ducts exceeds that amount.

Liquora, Mall.—In amount of capital invest-ed in the manufacture of malt liquors, New York holds first place. Next in order of rank are Philadelphia, Chicago, St. Louis, and Milwankes. In value of products the cities rank thus: New York, St. Louis, Brooklyn, Milwaukee, and Philadelphia. There are 54 cities meti-tioned. Of these, the capital invested in 28 is more than \$1,000,000; the value of products in

more than \$1,000,000; the value of participal stress exceeds that amount.

Lumber and Similar Products.—The principal cities in the matter of capital were Minneapoles, Minn., Muskegon, Mich., Williamsport, Pa., Bay

City, Mich., and Saginaw, Mich. In value of products, Minneapolis, Bay City, Muskegen, Oct. kosh, Wis., and Williamsport are most correpient Thirty-nine cities are shown, and of this total 22 had (1890) more than \$1,000,000 capital invested, and the value of products in 19 cities exceeded that amount.

Printing and Publishing, Book and Job. -1n this industry New York, Philadelphia, and Chicago are far ahead of any other cities. The 2 cago are iar aneau or any other crises. The are st. Louis and Cincinnati. In value of products the cities rank as follow: New York, Chicago, Philadelphia, Cincinnati, and Washington, D. C. Of the 45 cities given under this heading, the amount of capital invested and value of products in 10 is more

than \$1,000,000.

Other Industries,-The same method of comparison can readily be adopted with reference to the other industries given by cities in detail. Among the most important not included above. but well worthy of examination, are bookbinding, brick and tile, chemicals, furniture, jewelry, shipbuilding, silk and silk goods, slaughtering and meat packing, woolen goods, and worsted goods. As a matter of fact, the cities in many instances do not hold the same rank in the several industries to-day that they held when the eleventh census was taken; but the scope of the investigation was so broad, and the ground to be covered so extensive, that the figures given have but recently been made available in corrected form. State statistics of more recent date will, in many instances, be found under the State name in each year's issue of the " Annual Cyclopadia." The figures given in this article are the latest Federal statistics, and will remain so until the taking of the twelfth census, in 1990.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and

1,042,390 in 1890. Capital, Annapolis. Government.—The following were the State officers during the year: Governor, Frank Brown, Democrat; Secretary of State, Edwin Gott; Comptroller, Marion de Kalb Smith; Treasurer, Spencer C. Jones; Insurance Commissioner, Thomas J. Keating; Superintendent of Public Instruction, E. R. Prettyman; Advictor General Henry Kuil Domesia. jutant General, Henry Kyd Douglas; Attorney-General, John P. Roe; Chief Justice, J. M. Robinson; Clerk of the Supreme Court, J. Frank Ford.

Finances.-The balance in the treasury at the close of the fiscal year, Sept. 30, 1894, was \$550,074.47, the receipts during the year were \$2,609,244.09; total, \$3,159,318.56. The amount of disbursements during the year was \$2,454. 750.37. This is less than the sum of disbursements during the previous flecal year by \$170,-329.41, and the balance in the treasury Sept. 30, 1895, was \$704,568.19,

The amount remaining to the credit of the Free School fund at the close of the fiscal year 1894 was \$5,843.50. The receipts during the last fiscal year on account of the same fund were \$73,300,65. The disbursements from this fund for the same period amounted to \$77,144.15, leaving a balance Sept. 30, 1895, of \$2,000.

The receipts on account of the several sinking funds during the fiscal year were as follow: general fund, \$24,216.70; for defence redemption loan, \$346,200.17; for the exchange loan, 1889, \$6,641.38; for the exchange loan, 1886,

\$10,115; total, \$387,173,25.

The funded debt of the State at the close of the fiscal year 1895 was \$8,684,986.24. productive assets and the investments to the credit of the sinking funds aggregate \$5,679,-733.11. No allowance is here made for the amounts overdue from incorporated institutions, collectors of taxes and other accounting officers, aggregating \$684,812.69, nor for the difference between par value and market value of the assets If these were treated at the market value, the net debt of the State would be practically extinguished.

Taxation and Valuation.-The assessment of real and personal property for the fiscal year 1895 was \$534,930,476, being greater by \$5,792,-

393 than that of 1894.

The levy for State taxes for 1895 on real and personal property, at 17% cents on each \$100, amounted to \$949,501.59. From collectors was received during the fiscal year \$908,411.18, an increase of \$33,252.29 over the receipts of 1894.

From railroads and other corporations was received, as a tax on gross receipts during the year, \$131,788.71, being \$4,471.59 less than was received in 1894. From the tax on the capital stock of incorporated institutions the receipts were \$77,495.30, a decrease of \$8,720.58. For licenses and from tax on premiums paid to insurance companies \$124,401.48 was collected. an increase of \$3,398.58 over receipts from the same source during 1894. Registers of wills paid in \$141,599.82, \$23,875.84 more than the preceding year, and clerks of court \$896,100.83.

The levy for public schools, at 101 cents on each \$100, amounted to \$561,677; the receipts from all sources during 1895 were \$608,629,-74; the balance from 1894, was \$264,826.71; the total disbursements during the fiscal year 1895 were \$601,088.04, leaving a balance of publicschool money applicable to school year beginning Oct. 1, 1895, of \$272,368.41, on which date \$102,625 was distributed to white schools and

\$25,000 to colored schools.

Under the provisions of the ovster act of 1894 the revenue of the oyster fund has increased, while there has been a decrease in expenditures. The receipts for 1895 were \$64,994.09, being greater than the receipts for the previous year by \$20,345.40. The disbursements for the same tarilel were \$61,410.42, leaving a balance for 1895 of \$3,583.67. Included in these disbursetheir's is \$4,306.99 balance due on 1894 and other soms aggregating \$10,457.27, so that the a hald stursement on account of maintenance of the oyster police fishery force for the fiscal year was \$50,953,15, and the revenue above this amount \$14,040,94,

Education. - In the year ended July 31, 1895, the number of persons in the counties of Maryland between the ages of five and twenty years was 239,876; in Baltimore city, 140,016. The colored school population in the counties numbered 62,091; in Baltimore, 20,594. For th support of the schools the counties receive from the State \$441,587.95, and from local taxe tion \$537,454.67. Baltimore received from th State \$214,726.14, and from local taxation \$793 658.49. The total of disbursements for school in the counties was \$1,263,487.71; for Baltimor city, \$1,125,759,91.

State Institutions .- Under an act of th last Legislature \$75,000 was appropriated to th purchase of a site and buildings for a secon hospital for the insane, and \$25,000 as a main tenance fund. In September \$50,000 was pai for 530 acres in Carroll County, near Sykesville on which are the historic Patterson mansio and other buildings, now in process of prepara tion for patients. A resident physician was a lected whose salary was fixed at \$2,500.

At the Maryland Blind Asylum a new buile ing. 82 feet long and 3 stories high, was con pleted this year. In this institution at the en of the fiscal year there were 23 pupils.

For its hospitals, asylums, and reformatoric the State paid out, during 1895 more than quarter of a million dollars.

Savings Banks.—An act of 1894 provides the in October, 1895, and every second year ther after, there shall be sent to the Comptroller ! the treasurer of every savings institution in th State, a sworn statement giving the name every depositor not known to said treasurer be living, who has not added to or decreased h deposit during the preceding twenty years, wit the amount standing to his credit. Sever banks in the city of Baltimore this year cor plied with this provision. The number of d positors in the savings banks during 1895 w 148,342, who had to their credit \$45,490,279.

Chesapeake and Ohio Canal.—From tv acts passed at the session of 1894, making pr vision for payment of certain obligations again this canal, the Governor withheld his signatur with the desire to have all particulars of the idebtedness determined. Without interest, il obligations are found to amount to \$176,324.6 Within the year the Board of Public Worl offered for sale the State's interest in the cane and the two bids submitted, the higher being of \$526,000 with certain conditions, were r jected, and other bids were invited. As litig tion affecting the State's interest had not be determined in December, the board then adopte resolutions that any bids that might thereaft be tendered to the board be returned to the bi ders unopened, and advising that the proper be sold at auction to the highest bidder.

Mineral Production.—The Bureau of Min

and Mining, of the Geological Survey, in its 1 ports of 1895 states that for 1894 the coal of put was 3,501,428 short tons, valued at \$2.68 270; the value of the marble output was \$17 000; of the limestone, \$672,786; the grant was worth \$308,966; and the slate, \$69,138.

Industrial Statistics.—The third annureport of the Bureau of Industrial Statisti states that in the sweat shops of Baltimore dt ing 1894 wages were reduced 50 per cent., at compensation for female labor was brought starvation figures; while in none of the sho did the employees make more than half tin As to the value of personal estates, the followi

gures are given: During the period from 1888 5 1863, inclusive, 5,914 estates were probated, he value of which was \$59,055,564. Of these, 6, or 1.5 per cent., were over \$100,000, and agregated \$25,836,140, or 44 per cent. of the hole value. The estates under \$10,000, to the number of 5,045, aggregated \$9,941,531, while he 869 estates over \$10,000 aggregated \$49,114,137

Soldiers' Monument,—Congress in Februry appropriated \$40,000 for a monument in altimore to Gen, William Smallwood and other

laryland heroes of the Revolutionary War. The coney is to be expended under the direction f the Maryland Society, Sons of American Revution.

Electric Railways.—The Maryland and Coimbia Electric Railway Company this year bean the construction of an electric railway beween Baltimore and Washington, which is said
be the American pioneer of electric trunkine railroads and the beginning of a great sysim that will connect New York and New Orleans.
The company received its charter in 1892. The
ne now under construction extends from Baltisore to Washington, 37 miles. It will be laid
ith double tracks of 85-pound "T" rails, standrd gauge. The bed will be similar to that of
se Pennsylvania system, and the design is that
he passenger coaches shall correspond to those
ow running on steam railways. The authorisd capital stock is \$4,000,000, and it has been
coded for \$6,000,000.

The Baltimore and Ohio Railroad has in opertion a 96-ton electric locomotive, which handles a freight traffic through the belt-line tunnel at altimore. Other engines of the same type will som be in service, whose duty it will be to hand very day about 100 trains, weighing from 500 p 1,200 tons, 3 miles through the tunnel.

Political.—The election in November was to il the offices of Governor, Comptroller, and ttorney-General, and members of the Legisture.

The Democratic State Convention met in altimore, July 31, and framed a platform which sclared its "unabated confidence in the wisdom, attictism, and fidelity of President Cleveland," enounced the McKinley tariff law, and said In its stead we have a law which, while net ariff reform hoped would be secured, gives us, evertheless, the best tariff which the country

has had for thirty-five years and enables as a exult in the accomplished fact that under as practical operation we have come to the facility payment of the bleasings of restored confider a and renewed prosperity in all branches of indicatry, while at the same time the national Treasury will be supplied with revenues sufficient to meet all obligations of the Government and maintain unimpaired its high credit at home and abroad." The administration of too firews was commended, and the following resolution was adopted:

Regarding uniform and equal tassion as a motion of controlling and parameters to lead to we call to pecula attention to the teconomy of reasonment, and pleeding the party, through its delegates in convention assembled, to an unqualified fulfillment of this pleeding, we further recommend and appeal to the Democratic voters of the State to cased of their regressiatives on the Democratic tollets a selection presents to carry out the wishes of the property of the State.

John E. Hurst was nominated for Governor, Marion de Kalb Smith for Comptroller, and Charles C. Crothers for Attorney General.

The State Convention of Prohibitionists mot in Glyndon, Aug. 1. The platform declared anew for absolute suppression of the sale of liquor as a beverage; favored an income tax, declared that import duties should be levied primarily upon luxuries; desired a currency of gold, eliver, and paper, all of equal value, and to be secured by the Government, declared that United States Senators should be elected by direct vote of the people, and that immigration should be restricted; favored the system of legislation known as initiative and referensium, ola servance of the Sunday law, restriction of child labor and working hours for women in factories, and general weekly payment of wages, laws for reassessment of the property of the State: place ing public roads under State supervision woman suffrage. Joshua Levering was been nated for Governor; J. L. Nicodemus, for Comptroller; and W. Frank Tucker, for Attorney-General.

The Republican State Convention met in Baltimore, Aug. 15. Its plaiform declared that a Republican victory in the State would insure to the people the prompt passage of a reassessment law so framed that every person helding property in the State should contribute his proportion of public taxes for the support of the Government, according to his actual worth in real or personal property, urged the necessary for the adoption of an amendment of the State Constitution, effectually limiting the debt-incurring capacity of cities and counties; promised that a free and fair expression of the public will at the palls should be made possible, and contril of the machinery of their election be restored to the people of the several counties; that registration should be made annual in Baltimore, and quadrennial, with annual revision, in the counties, that the supervisors powers of the courts over the action of the registers should be made effective and not illusory, and that the right to places on the official ballot should be secured to the nominees of independent citizens, as well as to those of the regular parts organizations, promised to secure such amendments of

the school laws as should exclude politics from school management and secure free schoolbooks to the pupils, and to submit to popular vote the question whether appointments to the police, fire, and all other departments of public service should be in accordance with the principles of the merit system; and condemned the partisan management of the oyster police force, and denounced every effort to deprive the people of their independent rights to the public oyster beds and the leasing and selling of them. Lloyd Lowndes was nominated for Governor; Robert l'. Graham, for Comptroller; and Harry M. Clabough, for Attorney-General.

At the election in November the Republican ticket was successful, the vote east being as follows: Lloyd Lowndes, Republican, 124,936; John E. Hurst, Democrat, 106,169; Joshua Levering, Prohibitionist, 7,719; and for Henry F. Andrews, candidate of the Populist and Labor parties, 1,381. The Governor's plurality was 18,-The Republican candidates for Comptroller and Attorney-General also were elected. The composition of the Legislature of 1896 is; In the Senate, 12 Republicans and 14 Democrats; in the House, 70 Republicans and 21 Demo-

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,-699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; and 2,238,-943 in 1890. By the State census of 1895 it was

2,500,183. Capital, Boston. Government.—The following were the State officers during the year: Governor, Frederick T. Greenhalge; Lieutenant Governor, Roger Wolcott; Secretary of State, William M. Olin; Treasurer, Henry M. Phillips till April, when he resigned and was succeeded by Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Adjutant General, Samuel Dalton, all Republicans; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Charles Allen, Oliver W. Holmes, Marcus P. Knowlton, James M. Morton, John Lathrop, and James M. Barker.

State Census,-This was taken during the year, giving a total of 2,500,183 for the population of the State and 560,802 for the number of legal of the State and 560,892 for the number of legal voters. By counties the population was as follows: Barnstable, 27,654; Berkshire, 86,292; Bristol, 219,019; Dukes, 4,238; Essex, 330,393; Franklin, 40,145; Hampden, 152,938; Hampstire, 54,710; Middlesex, 499,217; Nantucket, 4946; Norfolk, 134,849; Plymouth, 101,498; Suffalk, 539,799; Worcester, 306,445. The population of Beston is 496,920; Worcester, 98,767; Fall River, 89,203; Lowell, 84,367; Cambridge, 81,643; Lann, 62,354; New Bedford, 55,251; \$1.643; Lynn, 62,354; New Bedford, 55,251; Somerville, 52,200; Lawrence, 52,164; Springfield, 51,522; Holyoke, 40,322; Salem, 34,473; Breekton, 33,465; Chelsea, 31,264; Haverhill, 30,209; Malden, 29,708; Gloucester, 28,211; Newton, 27,590; Taunton, 27,115; Fitchburg,

Valuations, -The total valuation of assessed estate, May 1, 1895, was \$2,542,348,993, the real

estate being valued at \$1,964,834,106 and the personal property at \$577,514,887. Of the res estate, the value of land, excluding building was \$973,660,883. Of the personal estate, \$38 355,674 was resident bank stock. The number of persons assessed was 922,850, of whom 492 386 were for poll tax only. The number of nor residents assessed was 81,058. The tax for State county, and city or town purposes, includin overlayings, was \$38,084,609. The number of dwellings was 404,388; of horses, 195,483; cows, 175,016; of sheep, 39,843, of swine, 37,994 of neat cattle other than cows, 36,817; of fowl 536,244. The number of residents assessed o property in Boston was 47,566; of nonresident 4,701; the number assessed for poll tax onl was 124,207. The value of assessed real estat in Boston was \$744,751,050; and of persons estate, \$206,616,878.

Charities.-The total number of insan under supervision of the State Board of Lunac and Charity was: In hospitals and asylum 5,763; in town almshouses, 803; in private families, 202. The total receipts at the 6 States hospitals were \$811,503.47; the expenditure \$819,217.95. The weekly cost of patients wa \$3.29. There were 327 recoveries and 446 death The asylum at Medfield is nearly finished.

The State Primary School, at Monson, we closed July 1. It has been maintained twenty nine years as a place of maintenance and educi tion for boys and girls who must otherwise hav been in the almshouse, during which time it have received over 6,000 inmates. The plan of boarding pupils out was adopted in part in 1882 an extended from time to time. There were 11 inmates at the time of closing, most of ther juvenile offenders. The current expenses of th school during its last nine months were \$24 012.92, giving a per capita cost of \$7.06, this hig rate being due to the sudden changes of pla in reference to carrying on the school.

The Lyman School, at Westborough, for n forming boy offenders is in its forty-ninth year The aggregate number in the school within th year was 436, and the average was 240. Beside the 264 boys in the school at the close of the year there were 635 others who had left the school either on probation or by transfer to other is ions. The total appropriation was \$61. The expenditures from Oct. 1, 1894. stitutions. Sept. 30, 1895, were \$57,237.58; the gross pe

capita was \$4.46.

In the State Industrial School for Girls, Lancaster, there were 367 in custody in th school and out on probation at the beginning the year. During the year 65 who had bee placed out were recalled and 72 were committed the average number at the school was 116. Th cost of the school from Sept. 30, 1894 to Sept 30, 1895, was \$28,801, a per capita of \$4.62. new house was opened in June, and the girl are now divided into 5 families.

At the State Hospital for Dipsomaniacs an Inebriates, at Foxborough, there were 110 in mates at the beginning of the year, 212 admitted and 129 remaining Sept. 30, 1895. The Stat appropriation was \$20,000; the whole expense \$52,838.64. This institution is reported in a unsatisfactory condition. Patients continue t escape in large numbers.

The School for the Feeble-minded, at Waltham, had 423 inmates at the end of the year. The average per capita cost is \$3.15 weekly. The admissions are fewer than the applications, e account of lack of room and funds.

In the Hospital Cottages for Children, at Baldinville, there were 109 patients at the beginning of the year and 105 at the end. The expenses acre \$27,797.68.

The Legislature of 1885 passed an act to es-tablish a hospital for epileptics at Monson, on the premises occupied by the State Primary

hool. Building will be begun in the spring. The report of the Perkins Institution and schusetts School for the Blind gives the sher of pupils in the institution as 153, and e kindergarten 64. A class of 4 was graduthe kindergarten ou. A class of the din the din June, the exercises being held in the ton Theater before an audience of more than 2,500 persons.

The number admitted to the State Almshouse, at Tewksbury, was 3,071. The average number was 1,167. The expenditures were \$138,802.76,

and the weekly per capita cost \$2.29.

The whole number of poor receiving relief in he State for the year ending Sept. 30, 1895, was

74,405, and the cost was \$2,631,221.

Prisons.—In the year ending Sept. 30, 1895, he State Prison received 172 prisoners and dis-harged 141, leaving 700, the highest number ince 1880, and 34 more than at the end of the previous year. The cost of support was \$138,-475.02, and the labor of the prisoners yielded a profit to the State of \$28,903.29, making the et to the State \$109,571,73.

The Reformatory Prison for Women received 534 prisoners, and at the close of the year there ere 336 remaining, 13 more than in the preceding year and the highest number since 1879. The expenditures were \$58,430, and the net cost of support \$39,181.06, the labor having amounted apport \$39,181.00, the labor naving all balance.

The net cost for each prisoner was \$128.89.
At the Massachusetts Reformatory 815 priswere received, and the number remaining it the close of the year was 1,011. The average age of those committed was twenty-one years. There was expended for maintenance for the year \$309,211.72. The net cost was \$162,743.65; the average population was 1.036, making the

The average number of prisoners in the county prisons was 3,190, and the expenditures were \$470,411.62. The gross cost for each prisoner varied from \$98.22 at the Springfield Jail and House of Correction to \$304.91 at the Edgartown Jail, where the average number of prisonwas only 2. The net cost varied from \$76.96, at the Salem House of Correction, with an average of 145, to \$304.91, at Edgartown. The largest umber was at the Boston House of Correction, where the per capita cost was \$116.32 net. The Boston House of Industry had an average

of 1.491 prisoners; the expenditures were \$157,-

191.33, and the receipts \$48,322.78.

The State farm had an average number of 1,002, of whom 529 were convicts, the remainder supers and lunatics. The expenditures were 98,002, and the receipts \$5,008.

The whole number of prisoners in all the prisons within the year was 44,376, of whom 36,74% were discharged or otherwise withdrawn the

the year, leaving 7,628 in custraly Sept. 30, 1895. Civil Service. The annual report of the commission, made in October, shows that the present classified service, ever increasing and varying, includes, outside of the later service about 5,500 public servants, drawing from the public treasuries of the Commonwealth and her cities an aggregate annual compensation of over \$4,000,000. The expense of the commission in classifying, examining, and certifying appli-cants for these offices is less than half of I per cent, of their compensation. Of those clamined, 1,551 passed and 785 were appointed, of whom 158 were women. The number of veter ans appointed under the Veteran Exemption law passed by the last Legislature was 134, against 59 in 1894.

Against Prize Fighting. - The jury, in a trial in the Superior Criminal Court for prize fighting, having decided that the defendants had not engaged in a fight, but only a bearing match, the movement against this sort of exhibition has been spreading with great rapidity Protests were heard all over the State, and Sept. 30 a meeting called by the Christian Endeavor Union was held in the People's Temple, Boston, at which resolutions were adopted expressing sympathy with the Governor of Texas in his efforts to prevent prize fighting in his State, and commending the police commissioners in Boston for their action in making the arrests.

Good Roads, -The State Highway Commission had constructed 50 miles of first class roads before the end of the year. The plan is to join the centers of trade and connect with through roads in adjoining States by means of these highways. They will be of varying width, some 18 feet wide, some 15, while in more thinly settled districts they may be not more than 9 feet, with wider portions at intervals.

Strikes,-Haverbill was the wrone of lakes trouble throughout the year on account of doagreements as to wages in the shoe factories. There was a strike at Waltham in August involving over 300 employees, mostly spanners. At Fall River there was trouble between the Spinners' and the Weavers' I'nion, and at Amesbury 400 weavers struck in June There was a strike of spinners at Andover in Max

Celebrations .- Manchester, in Esser County, celebrated the two hundred and fiftieth anniversary of its settlement, July 18, with an historical entertainment representing the "Arabella bringing Gov. Winthrop and his meeting with the Naumkeage and Masconomos, and with other festivities. A collection of antiquities of the town was exhibited. In connection with the anniversary a history of Manchester has been published by the town.

The Nantucket Historical Society held July 9-It a celebration of the one hundredth anniversary of the change of name of the town from Sherburne to Nantucket, with boat races, a hanquet,

and literary exercises.

The Pilgrim Society celebrated Dec. 21 the two hundred and seventy-fifth anniversary of the landing of the Pilgrims at Plymouth. Hon. ticorge F. Hoar was the orator of the day, and Richard H. Stoddard the poet,

Lawrence celebrated the semicentennial of the

founding of the city Sept. 16 and 17 with literary exercises, athletic exhibitions, a regatta, a

parade, and a banquet.

Third Army Corps held a reunion at Hadley May 7 and placed a tablet on the house where tien, Joseph Hooker was born, in 1814. Gen. Sickles addressed 3,000 people in a tent on the green in front of the house.

Fisheries. - A controversy arose in February over a cargo of herring which were bought in Newfoundland by United States fishermen. Free entry was claimed for the herring and sustained by the collector at Gloucester, where the vessel touched; but at Boston, where it entered, the collector assessed a duty. A reference to the Board of General Appraisers brought out the decision that the fish, having been taken by Newfoundland fishermen and delivered salted, were subject to duty.

Interest in whaling in Hudson Bay has revived in New Bedford, and more vessels went to that locality during the year, some with the in-

tention of wintering there.

The halibut fishing in Greenland waters was reported a failure this year. Ice, fog, and rain interfered with operations. Large receipts from the Grand Bank, however, were reported, where it is said a new fishing ground has been found and halibut have been taken in great abundance.

Legislative Session.—This began Jan. 3 and ended June 5. Hon. George F. Hoar was re-elected to the United States Senate by a vote of 180 in the House and 34 in the Senate, against 39

and 4 for John E. Russell.

During the session the Governor signed 504 acts and 127 resolves, vetoed 16 bills, and allowed 2 to become laws by statutory limitation, withholding his signature. The most important among the measures passed was the act to provide for a metropolitan water supply. It creates a water board, who are to construct, maintain, and operate a system of metropolitan water works and provide thereby a sufficient supply of pure water for the cities of Boston, Chelsea, Everett, Malden, Medford, Newton, and Somerville, and the towns of Belmont, Hyde Park, Melrose, Revere, Watertown, and Winthrop, which cities and towns shall constitute the Metropolitan Water District. Bonds may be issued on the request of the board to an amount not exceeding \$27,000,000.

An act to revise the charter of Boston provides that the mayor shall be elected for the term of two years. The election department, the fire department, the water department, and the institutions department are created as departments of the city, and officers are designated to have them in charge. The offices of rege rars of voters and the board are abol-1-hed, and their duties devolve upon the Boston Ballot-law Commission, made up of 4 election commissioners, 2 of the party that east the highest vote at the election next preceding their appointment, and the other 2 of the party casting the next highest vote. There is to be 1 fire commissioner, 1 water commissioner, and 1 institutions commissioner, the corresponding boards being abolished. The offices of inspectors of milk, vinegar, provisions, and animals intended for slaughter are abolished, and their

duties devolve on health inspectors appointed by the city board of health. Other departments and offices abolished are the surveying department and office of surveyor, the architect department and office of city architect, and the board of survey, their work being given to the city engineer, the superintendent of public buildings, and the street commissioners.

The charters of several other cities were

amended.

An act to be known as "the Caucus act of 1895" provides strict rules for the control of 1895" provides strict rules for the control of political committees and caucuses. Some changes were made in the registration law.

Provision was made for establishing textile schools for instruction in the theory and practical art of textile and kindred industries in cities having 450,000 or more spindles.

Other acts of the session were:

Appropriating \$50,000 for expenses in connection with the extermination of contagious diseases among animals.

Appropriating \$125,000 for taking the decennial census, in addition to the \$25,000 appropriated in 1894.

Requiring specifications of the character of work required and rate of compensation to be furnished t persons employed in cotton, worsted, and woolen

Incorporating the city of North Adams.

Authorizing savings banks to invest in and loan upon bonds of the States of Missouri and Minnes and such cities thereof as have a population of 30,000 or more and whose net indebtedness does not exceed 5 per cent. of their assessed valuation.

Requiring school committees to furnish public

schools with national flags.

Providing for the seizure and disposition of prop erty found where opium is smoked or sold or given away to be smoked, and for punishment of persons there found present.

Exempting disabled soldiers and sailors from taxation upon \$2,000 worth of property, provided the whole estate does not exceed \$5,000, exclusive of property otherwise exempted.

To prevent fraudulent transfer of property by insolvent debtors. Providing that tenement houses in Boston shall

have adequate open spaces.

Providing for the teaching of illiterate prisoner Providing that any political party which at the five annual State elections next preceding shall have east for any office voted for at a State election as large a number of votes as equals the number of periods. titioners required to nominate for that office by nom nation papers, may nominate candidates for any such office, and shall be entitled to have the names of its candidates printed on the official ballot, subject only to such restrictions as apply to a party that casts 3 per cent. of the vote for governor.

Prohibiting the sale of intoxicating liquors on Feb.

22 and July 4.

Making certain army nurses eligible to receive State aid. Authorizing the appointment of a registrar of labor

by the civil-service commissioners, at a salary of **\$2.000.**

Imposing fine or imprisonment for feeding food animals with garbage refuse or offal.

To regulate the observance of Sunday, providing that no entertainment shall be given on that day for which a fee is charged, unless the proceeds are to be exclusively devoted to charitable or religious purposes, and imposing a fine of \$5 on any person attending such a performance, and \$50 on any one who gives or takes part in it, and \$500 on the owner of any hall where this law is violated. The \$50

fine is imposed also on any one who on the Land's thay keeps open his shop, warehouse, or work to see or down any manual labor, business, or work, except works of necessity and charity.

frampting veteran soldiers and sailors from the

Incorporating the Massachusetts Ship Canal Com-

thiving preference to veterans for employment in

Providing that any person or corporation engaged in manufacturing, which requires from persons in his or its employ, under penalty of forfeiture of a part of the wages earned by them, a notice of intention to have such employ, shall be liable to the payment of a like ferfeiture if he or it discharges without similar notice a person in such employ

Amendments to the Constitution were pro-posed by which State elections are to be held blennially and State officers and members of the General Court are to be chosen for terms of two years. A person shall be eligible as Treasurer and Receiver General for three successive terms, and no more. If the amendments are agreed to by the General Court next to be chosen they will be submitted to the people, and if they are ratified the first election to which the change will apply will be that of November, 1898.

Other resolves were:

Relative to national legislation for the suppression of the lottery traffic.

In favor of uniform hours of labor throughout the

To provide for the preservation of the Bullfinch Statebouse on Beacon Hill.

To provide for printing and distributing the "Mas-

. Hloginson, State historian.

Directing the payment of a sum not exceeding the o, to be expended under the direction of the state Board of Agriculture, for continuing the work

of exterminating the gypsy moth.

For marking and mapping the line between Massa chassits and New Hampshire.

The Committee on Mercantile Affairs spent ten days in the South, investigating the conditions of cotton manufacture with a view of determining what measures should be taken to prevent New England mills from being removed to the South. The experience of manufacturers seems to have led them to the conclusion that, while the South has several natural advantages over the North in this respect, such as the nearness of the cotton fields, an equable climate, daylight all the year to work by, and abundant water power, and has now, in addition, cheaper coal and cheaper labor, one great source of advan-tage is the result of labor legislation in Massachusetts by which the hours are shortened and employers are harassed by such bills as the Employers' Liability bill and the Weavers' Specification bill: sixty-six hours' work against fifty-eight makes a great difference. Moreover, the offers from the Southern States include exemption from taxation for ten years.

In a report of the Commission on the Unem played, made to the Legislature, several projesitions for relief are discussed. The conclusion is that neither State factories nor State farms are practicable. After considering the suggest an that public works should be constructed directive by the public authorities, and that no work

should be done by contract the acconcludes that it is only mer epin a metal as that a city can do its work as I had a as a j vate employer of later and that a calc wages fixed in certain put is depart and a land than that carried by the average tale set comwhere is an evil in several ways The territors ter do not, therefore to embered leg and or re stricting the rights of other to let work to one tract They find that the end of a went in the is greatly aggravated by the influe of heaven dents and winetimes aliens, and that it should be the policy of municipalities and public believe making contracts to secure the employment of residents as far as possible and to present the introduction of large gauge of a new lente. and to prevent a so the set ling of wich out of the State, even though at a role to not expense.

Political. - The Denverate State Consists on met at Worrester, Oct 2, and normaled the following: For thevermer, the rac F Williams Lieutenant troverror, James & trypedly were tary of State, Edward J. Elvan, Treasurer, Edward S. Stevens, Auditor, Alfred C. Whitney, Att. r. ney-General, Henry F. Hurburt, A. platform was adopted commending the national Admirintration " for its elignifici, crergete, and patriotic management of our fire at a face for the commissional reforms effected in all trabeles of the Federal service and many age of the fall civil service, particularly the recent of a starting the consular service, congrata along the manufacturing interests of the State on the conful operation of the present tariff, in large that the increase of experts about the reduced duties will furnish sufficient revenue for the Government, and decouncing the effects of the Republican parts to respen the tand question it demanded the maintenance of the exercise gold standard, opposed free in tage of olive and any further purchase of obser toll - In the Government, declared that the traces and should not "carry on a banking to a comthe untaxed notes of State or national banks shall be the only credit correrer and that the tiovernment shall, with the here and to fin i-arking system adequate to the decards of trade, retire as rapidly as possible as I miss States paper mores

Home rule for ridge was far eed and the Republican party was decreased for its of sta " to centralize the policy power of many a the Gover-

ermur of the Slate

The Republican Convention was held to Box ton that it. There were two carefulates for the gulernativa to collaborative tires age and Flight A More The control Green Lage, 1 out, More 21 The Abert a male a were For Lacutement to sorroe, Roger Wolcott, Secretary of State William M. Ohm; Treas rev. F. I' Shaw Auditor, J. W. Kimball: Attemption of the Market The platform understood the tariff policy of the Democratic parts and said that "the Republican parts is not pludged to any wheelule, but offers to each therman industry such protection as shall equalize differences in price of laker, and that "the farmer and the miner are as much entitle i that as the manufacturer," and that "if Repullicans were liberal in appropriations they furnished revenue to meet them, and steadily re-

duced the public debt. The last Congress provided a revenue shamefully inadequate, and by the issue of bonds shifted to the succeeding administrations the burden of their outlay." the currency question the platform declared that the Government should maintain each dollar which it issues on a par with its standard gold dollar, and should not permit the free coinage of silver at any ratio not established by international agreement; expressed regret that the Democratic majority in Congress has forced the national Treasury to a humiliating dependency on private bankers, and believed that there should be legislation to protect the metallic reserve from concerted attacks of speculators; declared in favor of the Monroe doctrine, civilservice reform, restricted immigration, and increasingly rigid liquor laws.

On State issues, the resolutions urged that Representatives in Congress endeavor to secure improvements in Boston harbor, that the laws for regulating State corporations be extended to those of other States doing business in Massachusetts, and that additional laws be passed for promoting road improvement and for suppress-

ing prize fights.

Tickets were also placed in the field by the People's, the Prohibition, and the Socialist-La-

bor parties.

At the election, Nov. 5, the Republican ticket was successful. Following is the vote for Governor: Greenhalge, Republican, 186,280; Wilhams, Democrat, 121,599; Kendall, Prohibitionist, 9,170; Brown, Populist, 7,786; Ruther, Socialist-Labor, 3,249.

On the question of granting municipal suffrage to women the vote stood: Male vote—yes 86,970, no 186,976; female vote—yes 22,204, no 861.

The State Legislature for 1896 stands: Senate, 33 Republicans and 7 Democrats; House, 180 Republicans and 59 Democrats.

The Supreme Court handed down a decision in October that the Australian ballot law is con-

stitutional.

At the municipal elections in December Democratic mayors were elected in Boston, Newburyport, and Lowell, while in Beverly, Lynn, Salem, Chelsea, and Cambridge Republican mayors were chosen. In Everett and Worcester, Citizens' tickets were successful. On the vote for license, Boston, Lowell, Worcester, and Newburyport gave majorities in favor, and Beverly, Cambridge, Chelsea, Everett, Lynn, Medford,

and Salem majorities against license. MENNONITES. The 12 branches of the Mennonite Church report for 1895, according to the tables given in the "Independent," New York, 950 ministers, 600 churches, and 47,669 commumeant members. The largest of these branches are the Mennonites, 18,378 members, and the Aulish, 19,700 members. These two branches, between which a close affiliation has been developed, report, together, a gain during the year of more than 2,000 numbers. A committee representing the several State and district conferences is engaged in arranging for the holding of a general penference of the two branches. If it is successful in bringing this meeting about in 1896, the event will mark the two hundredth anniversary of the division of the Mennonite Church, which took place in 1696. The year's contributions of these two branches for mission and other purposes amounted to a little less than \$9,000. A home for orphans has been provided near Orville, Ohio, and a commodious school building has been erected at Elkhart, Ind. Several young men are preparing themselves for medical foreign missionary work.

The Mennonite Brethren in Christ (40 ministers, 54 churches, and 4,000 members) report about 500 accessions to church membership and contributions of \$28,629 for mission and charitable purposes. Eight new home-mission stations were founded during the year; an orphan home has been established at Berlin, Ontario; and a foreign mission has been begun at Wuhu, China, with 1 missionary, to whom others are to be added.

The General Conference of Mennonites (100 ministers, 50 churches, and 6,000 members) returns an increase during the year of nearly 1,000 members. It has an Indian mission station at Cantonment, Oklahoma, has opened another among the Cheyenne Indians, and is about to open an orphans' home at Bluffton, Ohio.

The Bundes Conference of Mennonites (37 ministers, 12 churches, and 2,000 members) hamade an appropriation for a mission school among the Comanche Indians, and has sent its

first foreign missionary to Africa.

The Light and Hope Society, of which Elder J. A. Spreenger, of the Swiss Mennonite Church is president, sustains deaconesses' homes in Chicago, Ill., and Cleveland, Ohio, and an orphans' house of Parme Livel.

home at Berne, Ind.

METALLURGY. Iron and Steel .- The nature and properties of malleable east iron have not been studied with sufficient thoroughness. Now that larger uses have been found for it in railroad-car couplers, etc., than the smaller articles to which it had been applied, its qualities have become a subject of more importance. Mr. H. R. Stanford supplements an account he gives of the process of manufacture with a few general conclusions. Next to iron. the most important element in malleable cast iron is carbon. A high percentage of this substance is necessary for fluidity—a quality of prime importance. For strength and malleability, the unannealed castings must have no graphitic carbon, but the total percentage must be in the combined state. Variations in these qualities and in the fracture are described as connected with the larger or smaller section of the mold. The chemical action in the furnace seems to be primarily the combining of the graphitic carbon of the charge with the iron, a combination made possible in the fused mass by the temperature, and a small burning out of carbon and slagging out of silicon and manganese. The secret of mixing is in using material containing combined and graphitic carbon in such proportions that at the temperature best adapted for pouring the graphitic carbon shall all have combined with the iron. The definition might be given for malleable cast iron that it is essentially a mixture of malleable iron and graphitic carbon, the carbon being in finely divided or atomic particles, and the iron being the matrix for those particles. Gray iron differs from malleable cast iron in that the carbon, instead of being in atomic particles, is in crystals,

and those crystals cut the iron structure and make it discontinuous. In malleable cast tron the strength of the product depends on the contianous cellular iron structure, and its malles bility and ductility are limited by the nondeformable particles of graphite that occupy the cells. The process of making malleable cast from is then, first, to make the hard, brittle carbide of iron, which is a stable compound at ordinary temperature; and, second, to change the carbon to the graphitic state by annealing. After car-bon, sulphur is the most important element in malleable east iron. It tends to hold the carstronger product in consequence of the semisteel which it produces; but it is undesirable because of the hindrance it offers to annealing. General conclusions are not yet warranted regarding the effect of manganese and phosphorus, further than that phosphorus seems to be a very passive element.

A secondary or subcrystallization of fron has been observed by Thomas Andrews in the course of a research with high microscopic powers on the microcrystalline structure of large masses of wrought iron. The normal primary crystals of the fron, or those which have hitherto been regarded as constituting the ultimate structure of the metal, were found to inclose a formation consisting of very minute and much smaller crystals of pure iron, also belonging to the regular order of crystallization. These crystals sometimes manifested the hexagonal form, the predominant angle being about 120, and often they assumed the form of simple cubes. They were contained within the area of the larger primary crystals. The markings of their intercrystalline shapes or junctions were very clearly defined, but they were exceedingly minute. The author estimates that there were approximately 1,000,000,000 of the secondary crystals within a cubic inch of the metallic iron. In further experments the author found, with still higher powers, that the secondary crystals sometimes inclosed a still more minute form of crystals of pure iron, of the cubical form, which may hence be regarded as constituting a tertiary system of crystallization. All these crystalline modifications appear to be connected with the regular system of crystallization.

An allowance of A leab crystallization. periments the author found, with still higher

An allowance of 1 inch per foot of the dimensions of the casting is usually made by iron molders and founders for contraction or cooling; but, according to Thomas D. West, experience teaches that there may be a difference in the contraction on any two forms that differ in their proportions even when poured with the same fron. The form of the mold and the manner in which it is made and the casting is couled also have much to do with the size of the cast ing, as compared with the pattern. When this difference in contraction is observed it is found that a heavy casting or parts will contract less than a light one when conditions permit free contraction to take place. It also appears, as cording to Mr. West, that the length of time becupied in cooling a casting after the multen metal has solidified may often be more effective an causing different degrees of contraction and hardness than any varying percentages of sale phur, silicon, etc., which exist in ordinary frame

dry iron. The author further finds that a reverse condition occasionally prevails at the castings prove to be larger than the patiettes from which they were made or the ire place at the moment of solidification and is supposed to be due to artificial influences exerted by conditions in easing, cooling, and forms of patterns, to overcome or retart free contraction. The subject is further and more fully discussed in a paper read by Mr West at the meeting of the Western Foundrymen's Association, in Chicago, Nov. 20, 1855.

The mean results of experiments by the Volson Wood to determine the effect of out jecting iron to stress while hot indicate that a elight diminution of strength is caused by stretching the metal while in that evaditives, but if the stress does not exceed one quarter of the ultimate strength, the loss of strength is scarcely

more than 14 per cent.

The results of certain experiments by M. M. cosan, in which carbon in melted cast iren was displaced by boron and by silic a go to the w that cast from when fused to subject to provide tations and replacements quite and g - a to these which occur in aqueous solutions. the displacement of carles is not eventiete there exists a position of chemical equilibrium between silicide and carbide of true, which carpes with the temperature and with the importion in the lath.

Seeking to obtain, with alaminum as a reagent, a pure iron, Mr. E. A. Halfield fermed an alloy of iron and 36 per cent of a common men which was hard enough with it a trace of carbon in it-to wratch glass. Proveding with his experiments and working with ferr a a de and granulated aluminum, a sample of ir a

99:73 per cent, pure was obtained at a seet of about 36 cents per pound. The results of investigations by T. Wrightom with iron and steel at welding temperatures lead to the conclusion that we ght it at a welding temperature possesses the same to corte of cooling under pressure which was percent by Lord Kelvin to exist in freezing water on which demonstration the general's received theory of regulation deposits. The anti-e day tinguishes the prises of melting together of metals from that of welling between forms a junction but the latter takes place at a temperature outs teral a below the melting joint. The priparty of welling in the appears, therefore to deposit as in the case of regulation in me up a the ratioal entitle a that ex sto wer a limited range of temperature between the molten and the plant state

" me observat to described by M. C. Charpy had reference to the question of the trialion beture the physical chemical phenomenon known as re-alemeters and the charge in the mechanical properties of steel by hardening, and of the imperture of the escapes of heat called by Osmond in that points as as "which take place in tron at temperatures of aless 745' C. and MW' C respectively. The results indicated that the hange in the mechanical properties is always caused, to an almost complete extent, at an aypresimate temperature within a very narrow limit of 700° C. In all the specimens tested the

process of hardening resulted in similar modifi-cations—increase in breaking load, decrease in elongation, and increase in the resistance to bending and impact. The extent of these modifications varies notably with the chemical composition of the metal and with the nature of the hardening bath. A further conclusion is that, generally speaking, if a metal is heated to a temperature higher than 700° C., there is a risk of its not being hardened, while if it is heated to a temperature of more than 750° or 800° C. there is no longer any great advantage to be The result is regarded as showing that gained. the elementary phenomenon of hardening is very simple, and that the only difficulties to be overcome are concerned with the equal heating and complete transformation of large pieces of material.

By a strict observance of the rule that a steel casting should, as far as possible, be of uniform thickness founders have been able to make within the past few years castings 20 feet long by 10 feet wide, which would have previously been considered almost impossible. Yet, while been considered almost impossible. perfectly satisfactory large steel eastings can be obtained, good small ones are much less easily produced. Mr. H. L. Gantt says that this is because in the necessarily large meltings of the open-hearth furnaces, where most of this work is done, the metal becomes cooled during the many pourings required for the smaller castings. The difficulty is overcome by the use of a small Bessemer converter, "from which we may get 2 or 3 tons of metal as hot as we may wish it. Add to this the fact that we can get from the converter that quantity of metal of any composition we may desire every half hour through-out the day, and we realize the advantage of the Bessemer process for making small and medium weight eastings." weight castings." Among the other advances recently made in casting steel Mr. Gantt mentions a method for making a casting having one or more faces of a steel much harder than the body of the casting. The process consists in lining such faces of the mold as will be adja-The process consists in cent to the parts of the casting it is desired to harden with a metallic alloy in a crushed or powdered state, capable of being melted and absorbed by the molten steel in contact with it, and of such a nature as to impart to the steel a hard face or a face of such composition as may be readily hardened. If it is desired that the casting have a permanently hard face and be used for stamp shoes, crusher jaws, hammer dies, etc., ferro-manganese gives the best results, If it is desired to do machine work on the face, and make it extremely hard afterward, ferrochrome is most suitable. The fact that it is possible to produce a soft-steel casting having a face that can be hardened without causing the remainder of the casting to become brittle will make it practicable to use steel castings in place of chilled iron in many places with great advan-

Nickel steel containing about 34 per cent. of nickel is now produced. Mr. Henry A. Wiggin says, with the same elongation as wrought fron, a tensile strength fully 30 per cent, higher than ordinary steel, and an elastic limit at least 75 per cent, higher. The material possesses great uniformity, the nickel being evenly distributed

throughout the ingot, and not liable to segregation like other of the ingredients of the steel Its greater strength, and particularly its high elastic limit, make it far more advantageout than ordinary steel. It is the elastic limit than ordinary steel. It is the elastic limit than ordinary steel. It is the elastic limit than there is in nickel steel a considerable range of ultimate strength, with a large elongation. The use of nickel steel in beams, channels, belong the steel in the steel steel steel with a saving of the steel steel possesses a marked at vantage in being less corrodible than other steel

Besides the application to which nickel is put in armor plate, gun forgings, and marin shafting, Mr. F. L. Sperry finds a still wide field open to its use for structural steel, heavy castings, car couplers, car wheels, boiler plate small pinions and knuckles, shear knives, hi cycle spokes, gears for motors, and all varieties of work demanding hardness, toughness, malleability. Plates of iron or steel and ni when laid together and heated to welding ten perature, may be rolled into thin plates with continuous nickel surface on both sides, or iro or steel on one side and nickel on the o The union of the two metals is not merely welding, but is of the nature of cementation actual alloy being formed to some depth belot the surface of contact. The additional cost in curred by the use of the nickel is regarded more than made up for by the advantages th are gained.

The nickel-steel plates on the new armore vessels of the United States, being hardened by the Harvey process, are proof against the harder steel drill, and it has been found necessary to anneal them locally in order to make it possible to insert rivets and bolts in them in building In the first attempts it proved impracticable to confine the effects of the annealing to the expension where the drill was to be applied, or to prevent their spreading around it. An electrical application was finally made, and the work is

now done satisfactorily.

The observations of J. E. Stead on the e of arsenic on steel lead to the conclusions the between 0.10 and 0.15 it has no material effect on the mechanical properties for structural parposes; that with 0:20 per cent. slight effects we noticed in an acid open-hearth steel in the bend ing properties of pieces cut across the directi of rolling after they have been tempered. With 1 per cent. the tenacity is increased, the elong tion is slightly reduced, and the contraction m terially reduced; the bending properties of the steel are, however, fairly good. When the senic amounts to about 1½ per cent, the tenseit is still further increased and the elongation an contraction of area are still further re while the bending properties are poor. per cent. of arsenic the tenacity is increased, an the elongation and contraction become nil These tests were made on small bars not as we worked as larger ones would have been. The effect of quenching the steel when arsenic was present in large quantities, after heating to a recommendation of the steel when arsenic was heat, was to improve the bending property. Ar

senie showed no tendency to produce red-shortness, corrosion is not increased, but oxidation is retarded by the presence of small quantities of arenic, welding is made more difficult, and electrical conductivity is materially reduced.

The formation of blowholes in the manufacture of steel is prevented by J. L. Lebenius by bringing the liquid directly at the close of the casting under the influence of centrifugal force. steel gradually solidifies the gases, which tofore have been dissolved in it, are liberated. Other advantages of the process are the tained, the reduction of the piping by about 60 per cent, and a lessening of the amount of fuel ed, made possible by the avoidance of the sity of maintaining a welding heat,

It has been shown by the experiments of Mr. Thomas Andrews, that when immersed in sea water steel corrodes more rapidly than wrought a; that the rapidity of corrosion increases the the carbon content; that on account of the difference in potential between steel and wrought iron their contact, when they are immersed in sea water, very greatly increases the total amount of corrosion; that the difference in concentration of sea water due to tidal flow and like causes increases its corrosive action on iron and steel; and that any distortion of the metal, as by bending it while cold, cold rolling, etc. changes its potential sufficiently to influence very considerably the rapidity with which the metal corrodes when immersed in sea water. Steel thus distorted when cold, or "strained cel." is electro-negative to unstrained steel; whence the contact of the two in sea water again increases the corrosion. Distortion of steel when cold also decreases its strength, for which son structural plates of different kinds are drilled rather than punched; and when they are punched, sheared, or subjected to other distort-ing process are afterward annealed or have their homogeneity otherwise restored. The inrence is made from these facts by Henry M. Hearne that boiler plates which have been punched will corrode more rapidly than those which have not been so treated.

Aluminum.-The following method of producing alumina from clay is proposed by Joseph lleibling: Suppose a clay of a known strength in alumina. For each molecule of alumina we incorporate with the clay 3 molecules of am-monium sulphate and an almost equal weight of neutral potassium sulphate; I molecule of potassium sulphate is theoretically sufficient. The whole is well worked up and made into hollow bricks. These bricks are baked at 270'-280°. The ammonium sulphate is then decomposed into acid ammonium sulphate and ammoniscal gas, which may be collected in a con-denser. The acid of the acid ammonium sulphate is first thrown upon the neutral potassium sulphate, which becomes acid sulphate. The latter, at this temperature, in presence of alumina and clay, is neutralized by the alumina. forming double aluminum and potassium sul-phate, i. e., alum. The bricks are then exphate, i. e., alum. The bricks are then ex-tracted by methodic lixiviation. The silica may be used for cement. The alum is freed from iron by recrystallization, and the solution may be treated for the precipitation of the alumina

by means of the ammonia which has teed to tilled off. To obtain the alumina in a grat ... lated state it is spread out upon stages in a tower traversed from bottom to top by the hot moist ammonia obtained on taking the tooks The alum is thus transformed into a misture of ammonium and potassium sulphates and of

granular alumina.

An important experiment in the use of aluminum for the construction of vessels was made in the building of a second-class torpedo boat by the Messre, Yarrow. As the result of numerous experiments the builders determined to use for the hull aluminum plates of 50 per cent. greater thickness than they would have adopted had steel been employed. Even then the weight of the hull was reduced by one half. Plates of pure aluminum seem to be very deficient in strength, and although they may be greatly strengthened by being rolled cold and used unannealed, such treatment did not give all that was required. An alloy was used of alumi-num with 6 per cent, of copper, the strength of which could be considerably varied during the rolling. A medium degree of hardness was adopted, giving from 14 to 16 tons per square inch tensile strength, combined with a toughness that enabled the plates to be hammered into shape cold and to be bent to a sharp angle without showing signs of cracking From a series of experiments extending over twelve months to determine the conversion from sea water, it was found that, provided there is no galvanic action due to other metals being in contact with the aluminum, the corresion may be taken at under 4 per cent, per annum for plates about i inch thick, unpainted. But the boat should always be painted with pigments that exert no chemical action on the aluminum. The great enemies to the use of aluminum are heat and the alkalies. Aluminum anneals at a comparatively low temperature, and thus losses strength, while alkalies act very rapolly upon it. Aluminum plates were used above the water line on the American yacht "Defender," which was built to compete for the "America's "cup. They were 12 feet long, A of an inch third, and from 22 to 30 inches wide, and were said to have an alloy of 10 per cent, of copper, plates below the water line were of manganese bronze. Tests of aluminum totals constructed under the supervision of the Navy Department of the United States gave very satisfactory results as to busyancy and capacity to get sid of water shipped aleard.

The qualities desired in an aluminum solder are thus named by Mr. Joseph Richards: It must wet the aluminum and adhere firmly; it must not disintegrate after exposure to the air; it must be as malleable and strong as aluminum; it must have a low melting point, so as to be easily worked with a soldering iron; it must have the same color as aluminum, and not change color; and it must be cheap enough for general use. None of the solders in use possecond all these qualifications. After experimenting about two years, Mr. Richards obtained an alloy of sine and tin containing a little aluminum and some phosphorus, that realized nearly every qualification. On remelting this solder, a more fusible alloy liquated from it, which

soldered better than the original mixture. It is now obtained by using the ingredients in a little different proportion from those used in the first solder, and has a percentage composition-aluminum, 2:38; zinc, 26:19; tin, 71:19; phosphorus, 0:24. This solder has come largely into use in Germany, Switzerland, England, and the United States.

A method has been devised for imparting hardness to aluminum by the addition of chromium. Care has to be taken in the process to secure a true alloy, which is difficult on account of the difference in the melting points of the two metals. The aluminum is said to be made as hard as steel by this method. F. Allard, of Quebec, is credited with the discovery of a method of tempering aluminum, so as to give it

the consistency of iron.

To cover aluminum with other metals, Herr Neesen, of Berlin, plunges it into caustic potash or soda, or into hydrochloric acid till bubbles of gas appear; then into a solution of corrosive sublimate, by which an amalgam is produced on the surface. The first immersion is then re-peated, after which the aluminum is plunged into a solution of a salt of the metal of which a coating is desired. A closely adherent layer of this substance is rapidly formed. So perfect is the adhesion of silver, gold, and copper that a plate covered with either of these metals can be hammered or polished.

Gold.-Concerning the relative cheapness of the evanide and the chlorination processes for extracting gold, Mr. E. A. Schneider publishes the conclusions, in the "Engineering and Mining Journal," that under exceptionally favorable conditions evaniding is cheaper than chlorination, but under all eircumstances it is safer to operate chlorination works. Chlorination can be successfully applied to almost any ore, while evaniding gives satisfactory results only with a certain class of ores. The cyaniding process labors under the disadvantage of requiring, in most instances, an extremely skilled chemical supervision. The chemical part of the chlorination process is, on the other hand, very simple.

In the Haveraft process of gold extraction the ore is passed through a fine crusher and conveved to an iron pan having a capacity of one ton ore. Beneath the pan is a furnace. Water is mixed with the ore to bring it to the consistency of thick pea soup. A vertical shaft, having revolving arms attached to keep the contents of the pan constantly stirred, works in the caldron. The arms are fitted with carbon shoes, which form the anode through which the electric durrent passes through the saline liquor to the bottom of the pan, which, with a dish of quicks |ver in the middle, forms the cathode. ommore salt or other chloride is added to the water: the salt being decomposed by the electric current, the seedium passes to the mercury, and the ald give roung through the mass of pulp dissolves the fine gold it meets with and forms a chloride of zold. As the pulp circulates in the pan this chloride comes under the operation of the electric current and is decomposed in turn, the chlorine being liberated to seek more gold, while the gold passes to the mercury cathode, thus producing ainalgain. In the meantime any coarser particles of gold that are too large to be

dissolved by the chlorine gravitate to the bottom and are also taken hold of by the mercury, In the process of Dr. Gaze, of New Zealand, in which chloride of bromine is adopted as the solvent for gold, caustic soda is used to recover the chlorine and bromine, and the gold is recovered from the solution by electrolysis instead of by chemical precipitants; an important part is the method employed for making the solvent The process is a continual splitting up and reforming of the salts used.

Remarkable results in the percentage of gold extracted have been obtained by the Sulman process, in which a mixture of potassium eyanide and cyanogen bromide is used as the solvent. It is indicated by some experiments by Mr. J. S. C. Wells that in certain cases the new solvent is more powerful than cyanide alone. In a process by C. A. Mulholland, free bromine

Mr. J. Christmas, of Australia, claims to have overcome the difficulty of using lead as an amalgamating metal and a means of obtaining gold from ores. In his method the oxidation of the lead is prevented by passing the finely ground ore, previously mixed with a small quantity of kerosene or similar compound of carbon and hydrogen, through a bath of the molten metal. The lead alloys with the gold and silver, while the dry, powdered ore, being much lighter than the lead, rises to the surface of that metal, and is carried away as tailings. In the antimony process the native ore, or sulphide of antimony, is melted in large crucibles, and when on the point of cooling a quantity of molten lead is poured into the ore, stirred with an iron rod and poured into molds to cool. When the ingot is turned out of the mold it is found that the lead, which has a greater affinity for gold than for antimony, robs the latter metal of its gold contents, and, having a greater specific gravity, set-tles to the bottom of the mold, from which it is easily removed and the gold recovered.

Copper and Nickel.—The process of Albert E. Lytle for producing hard copper castings, now in use in Chicago, consists in treating the molten copper with a chemical compound whose ingredients are not disclosed, but which the inventor states is not an alloy, and is introduced for its effect in rearranging the molecules of the metal. Fractures of the treated metal exhibit no indication of an alloy, but show all the characteristics of pure copper. The castings are very smooth and free from blowholes. Remarkable specimens are shown of tough castings. Cast bars of the treated metal have been drawn into wire of high quality, and rolled cold into thin strips of great tenacity and perfect surface.

By means of a new sclerometer of very delicate construction and exact action, invented by M. Paul Jannetaz, an interesting fact concerning the relative hardness of zine and copper has been brought to light. Most authors regard zinc as harder than copper. If, however, the metals are examined in a sufficiently pure state, copper appears to be the harder of the two. This removes an exception to the rule that the harder the body the less its atomic volume.

In its ordinary commercial form nickel, as described by Mr. A. G. Charleton, contains 98 or 99 per cent. of metal, consisting of a spongelike

ness of reduced and artificially agglomerated articles. It is not appreciably affected by at-peopheric action or salt water, but oxidizes rapdly at a red heat; and its oxide dissolved in a th of metal makes it brittle. When nickel is rolled, a small quantity of some reducing, ly oxidized metal is added to the crucible a minutes before casting; without this the al is porous and irregular, and has a yellow-gray fracture. Obtained in this way, the metal is easily forged, and possesses similar re metal is easily forged, and possesses similar ysical properties to those of iron and copper, is less malleable and ductile than iron, and a malleable and more ductile than copper, and arder than either iron or copper. Its tenacity itermediate between that of iron and of steel, electric conductivity is almost exactly that con. The impurities it is most liable to conare iron, copper, silica, sulphur, arsenie, tion, and in some cases a kernel of unreduced It is not difficult to east if proper preutions are taken, but is often cold-short. its applications in plating and in nickel it is, in leaves and threads, entering more more into common use. The threads are oyed very largely in passementerie. Lyons, unce, is the center of a special industry of d and silver laces on nickel, which do not hish through use, like those plated on white al or brass. Nickel will alloy with most of meeful metals, adding to their hardness, and ductility. The color of its alloys copper, which are formed in all proportions, ses in lightness with the increased proon of nickel up to 25 per cent., when a perwhite alloy is formed, susceptible of taka beautiful polish. The addition of a small ertion of cobalt gives the perfectly white even though the nickel be in the proporof only 16 per cent. Silverine or argentan has caposition based on this fact. Great confuexists as to the names and composition of ary, ternary, and multiple alloys of nickel, wn under the general designation of white als. Maillichut is an alloy of nickel, copper, d zine, containing a maximum of 15 per cent. skel, with twice as much copper as nickel. iliverine, argentan, and packfong contain other netals—tin, bismuth, or antimony—as well, rhich impart fusibility and a fine color, gener-

ally at the expense of ductility.

Alleys.—The third report of the Alloys Research Committee, by Prof. W. C. Roberts-Austen, begins with a review of the experiments of Prof. R. Warburg and Herr F. Tegetmeier on molecular porosity, in which, when a receptacle was divided by a partition of glass with sodium amalgam on one side and pure mercury on the other, when electric action was set up the sodium from the glass and from the amalgam would pass into the mercury, showing that sodium atoms could be made to go through glass. A similar result was observed when lithium was used in the amalgam. When a metal of superior atomic weight and volume was substituted for sodium—as potassium—no transference was made. The atoms of potassium were too large to pass through the spaces occupied by sodium atoms, and which they could traverse. "We are thus confronted," the report says, "with a molecular porosity which can in a sense be gauged.

and the mechanical influence of the volume of the atom is thus made evident. It wait and to evident that there is a direct connection between the properties of a mass and the volume of its atoms." The investigation was pursued by the committee for the purpose of ascertaining how far the mechanical properties of metals are in accordance with the periodic law of Newlands and Mendeleef. Copper formed the main subject of the investigation, but the evidence obtained in connection with it was conflicting. Bismuth, potassium, and tellurium-all of which have large atomic volumes-lower its tenacity, while amenic, with a larger atomic volume than copper, confers strength upon it. It appeared, however, that the limit of elasticity and the ductility of metals generally are greatly influenced by the presence of such of the elements—which have thus far been studied—as have large atomic Tests were further made on iron volumes. aluminum, copper nickel, copper sinc, and other alloys. It was found that the method of investigation adopted rendered it possible to obtain information as to what is happening in the midst of a mass of metal from the moment it begins to cool until it is solid, and even after it is solid. Although no iron-aluminum alloy of industrial importance was discovered, much insight was afforded as to the general behavior of aluminum when alloyed with other metals. As the amount of iron in the alloy is increased the temperature of the melting point rises.

In one of his lectures on alloys at Mason Sci-

ence College, Birmingham, England, Mr. Mc-Millan considered the losses and difficulties met with in melting them. The cupola, he said, is unsuited to the production of most alloys; the reverberatory furnace can be used for heavy work only; and the crucible is hence usually employed for small or general castings. The chief difficulties to be contended with were divided into 4 classes: The action of the metals on the material has to be considered; the volatility of a few metals, especially sinc, causes loss by vaporization-in view of which there are advantages in working at low temperatures and with a protected surface upon the metal; a third class of difficulties arises from oxidation; and a fourth from absorption of gases. Alloys probably dissolve gases while in the furnaces which they can not retain on solidifying, so that a spongy metal, full of blowholes, may be obtained. Action upon the material of the crucible is strongly exemplified in melting aluminum, which is liable to take up some of the silica in the vessel, with delete-rious results to itself. One of the commonest remedies for exidation is the use of phosphorus, manganese, or aluminum in small quantities. Silica and aluminum probably help increase the solubility of dissolved gases, so that they are not given off on solidification, and tougher and sounder castings are produced.

Aluminum and copper form two series of valuable alloys—aluminum bronze, containing from 2 to 12 per cent. of copper, and copperhardened aluminum, containing from 2 to 15 per cent. of copper. The 5-to-12-per-cent. aluminum bronzes are, according to the "Aluminum World," among the densest, finest-grained, and strongest alloys known. The alloy of between 10 and 11 per cent. of aluminum with copper is

the "true aluminum bronze," and from it the lower bronzes are made by dilution of 10 per cent, bronze with more copper. The 5-to-74per-cent, aluminum bronzes have the characteristics that will probably cause them to be most used, especially in bronze wire and for marine work; and the fact that with proper and easily taken precautions they can be rolled or hammered at a red heat will add greatly to their value. Aluminum in bronzes lowers the melting point of the copper at least 100° or 200°. The melting point of the 10-per-cent. bronze is somewhere in the neighborhood of 1,700° F. This substance is among the hardest of the bronzes, and hardens considerably upon cold working, while the hardness can be lowered by annealing at a red heat and plunging into cold water. Aluminum bronze can be worked in a lathe, giving chips that cut smooth and long and do not clog the tool; it is a remarkably rigid metal under transverse strain; is peculiarly safe under compression strain, and much stronger than any of the other bronzes; and has special antifriction qualities.

A new alloy mentioned in the "Journal de l'Horlogerie" as a substitute for gold consists of 94 parts of copper to 6 parts of antimony. The copper is melted, and the antimony is added. The metals having been sufficiently fused together, magnesium and carbonate of lime are added to increase the density of the material. The product can be drawn, wrought, and soldered like gold, which it resembles on being polished. It preserves its color against the action of am-

moniacal salts and of nitrous vapors.

The principal conclusions drawn from the experiments of Herr C. Heusler, of Bonn, on the strength of manganese bronze having different proportions of manganese at varying temperatures up to 400° C., are that (a) a bronze with 5 to 6 per cent. of manganese is most useful for machine parts in which tenacity is of importance; (b) on the addition of manganese to copper the tenacity of the bronze increases with the percentage of manganese up to a certain limit, then decreases, and with a still further increase of manganese the strength of the bronze again increases.

The experiments of Prof. Goodman in connection with the work of the British Alloys Research Committee have brought out the fact that antifriction alloys must always contain a metal with a high atomic volume. There seems, moreover, to be a direct connection between the efficiency of the antifriction alloy and the atomic volume of one of its constituents.

An alloy of aluminum with tungsten has been recently introduced into the market. It is made

in France, Germany, and England.

New Processes.—The process for electroplating ships' hulls which has been used with success at the Communipaw Basin, Jersey City, consists in applying to the sides of the vessel tanks or baths about 5 feet square, scribed out on the edges to conform with the curvature of the ship's sides, firmly braced and shoved in position, and calked around the edges till they are water-tight. The first bath applied by means of these tanks is of strong acid solution, which cleans the iron plates of the vessel's sides and leaves them ready for the next process. The cleaned spot having been

washed, the bath is next filled with a solution of cyanide of copper and the electric current is turned on. The cyanide solution completes more perfectly the cleansing of the side of the ver and in addition acts as a sort of flux, causing the film of copper next to be deposited to be more firmly adherent. The cyanide solution having been drawn off, a solution of sulphate of copp takes its place. Large plates of copper are pended in the bath and are connected with t positive pole of the dynamo, while the negation pole is attached to the side of the ship. The de osition of copper begins immediately. At end of the process the entire side of the ve within the limits of the bath is found thoroug and evenly coated with copper about is inchick, with a closely adherent coating that ca not be removed except with a cold chisel, wh a part of the iron comes off with it. Each i position of the bath is so arranged that it she lap a little over the edges of the section alread done, whereby when the work is finished the sel is copper plated all over, with a coating inch thick, without crack, seams, or joints, or posure of any kind through which galvanic tion can set in.

In C. Hoepfnes's electrolytic process for the production of nickel, solutions of nickel are purified from cobalt and other metals more electrolytic and the production of nickel. Then they are electrolytic in a neutral state or acidulated by weak acids of small electrolytical conductivity. The electrolytic is takes place by means of insoluble anodes immersed in a solution of metal or metals more electro-positive than nickel and separated from the cathodes by a membrane strong enough to resist chemical and mechanical actions. At the anodes chlorine is produced, which may be made use of in any known way. On the cathodes nicked is deposited; it is most useful to keep the cathodes in motion. Anodes of zine may be used, or other metal more electro-positive than that to be deposited. In the same way cobalt can be produced from cobalt solutions, zine from solution of zine, lead from solution of lead, tin and cop-

per from their protochloride solutions. G. W. Burton has discovered in electric smell ing, where the ore is of a rebellious charac that by placing the proper flux in the solution the metals will separate and run from the according to the different degrees of heat a quired to melt them severally. In treating of containing lead, copper, gold, and silver, the lea will separate first and be found in the bottom the tank in globules. As the heat increases the silver will follow, then the copper, and then the gold, the rock being finally consumed or reduc to an ash. Each metal thus separated will found in the bottom of the tank in separate peticles of its own kind. Mr. Burton's invariab experience has been that the chemical properti contained in the ore have much to do with rapid heating, and that the more rebellious 1 ore the less current required to treat it, the R bellious substance itself tending to increase create the heat necessary. Remarkable succ has been achieved in Canada in the treatment of nickel ores by this system.

The method of silvering mirrors recently patented by Hans Boas, of Kiel, is based upon the fact that when one of the heavy metals forms the

cathode of a vacuum tube containing a trace of hydrogen the metal is volatilized by the current. and is deposited as a firmly adherent and highly polished layer on the walls of the tube. The mirror thus produced is said to be of much greater brilliancy than can be obtained by ordi-

nary methods.

Ruthenium is, along with osmium, one of the most refractory metals of the platinum group. Besides the intensely high temperature required for melting it, the operator is incommoded by the oxidizability of the substance, which tends to be transformed into the volatile oxide, RuO. By raising the temperature of the metal in the electric are suddenly much above its melting point A. Joly found that the fusion was effected in a few moments, while the loss by volatilization was hardly sensible, and the characteristic odor of the peroxide was hardly perceived; but while cooling the metal became covered with the blue dioxide. When laid bare it by its gray color approximates to iron rather than platinum, structure is crystalline, and hence it is brittle in the cold. If heated to redness in the oxyhydrocen blowpipe, it may be flattened out and then breaks. The metal spurts strongly at the moment of solidification, and the globules are almost always full of cavities. In the same apparatus and under the same conditions of temperature the fusion of ruthenium is more difficult than that of rhodium, which, in turn, is melted with rather more difficulty than platinum. It is much harder to melt than iridium. In the conditions at which it melts osmium is merely agglomerated and fretted. Iridium osmide, which can not be melted with the oxyhydrogen blowpipe, is melted with great difficulty in the electric furnace into a white crystalline mass, which the best-tempered tools do not cut. The exact melting point of ruthenium is under investigation by M. Violle.

The objectionable impurities in copper pre-pared from "white metal"—such as iron, tin, bismuth, arsenic, antimony, tellurium, nickel, etc. -are not thoroughly removed by the blistering process, but enough of them remain in the metal to injure its properties. They may be removed, according to Mr. E. D. Peters, Jr., by taking advantage of the fact that they have a greater affinity for metallic copper than for the white metal in which they are dissolved. They are therefore removed from the white metal by melting it together with a certain proportion of metallic cop-per. As the amount of sulphur present in the white metal, Mr. Peters says, is already the least possible quantity that can hold the copper in chemical combination, it follows that for each pound of sulphur that is thus burned out of the white metal 4 pounds of copper are set free in a metallic condition (copper and sulphur combining as a subsulphide in about the ratio of 4 to 1. by weight), and that when a sufficient amount of metallic copper has thus been liberated and the entire contents of the furnace are tapped into molds certain of the pigs nearest the taphole will be underlaid by slabs of the heavy metallic or pper containing most of the impurities that were in the charge, and incidentally, about all the gold and quite a portion of the silver. The process is less used in America than in England.

on account of differences in the ores.

Studying the best conditions for the property tion of lithium M. Guntz has found that the tar of metal is so much the higher as the telegram ture of the electridasis is lower. An in pare sail. containing potassium and welium the roles gives when electrolyzed at its melting point now here ter results than pure lithium chloride. The melting point of the lithium chloride was therefore lowered by the addition of p-darson chloride. Chloride of lithium melting at about 600 C., a mixture of chloride of lithium and chloride of potassium in equal weights melts at about 450, and to the most favorable mixture for the electrolysis. To obtain large quantities of lithium the inixture is melted, and then exposed to the electric current. The metal obtained in this way to free from iron and silicon, but contains I per cent, of pelassium by weight. which corresponds with I atom of palamium to 273 atoms of hthium. For most uses the metal is sufficiently pure.

Miscellaneous,-With his electric furnace, by means of which he has obtained sufficiently high temperatures to preduce the diamond, crystallize metallic oxides, reduce those which have hitherto been refractory, melt metals heretofore infusible, distill lime, silves, sirvonia, and carbon, cause an abundant volatilization of such metals as platinum, copper, gold, iron, manganese, aluminum, and grantum, and convert magnesia. uranium, tungsten, and molybelenum into the gaseous state, M. Moissan has been able to agproach the study of a whole serves of simple bodies which have till now been mere laboratory curiosities on account of the want of adequate means of preducing them. Among these are many of the "rarer" metals, the nature and properties of which were almost unknown. Chromium, thus procured by reducing the wequioxide, can be filed like in a takes a fine polish, and, more infusible than carten, is available for preparing allow without the peed of the intervention of ferro-chromium, which has the disadvantage of containing up to 10 per cent of carbon. This preparation opens the way for the effective study of the allow of chromoum, which M. Moissan has begun with the aluminum and

copper alloys.

Molyhdenum, previously unfused, perstucist from a mixture of the oxide and charcoal and melted has a fine grain and a brilliant surface. Solid, it can be filed and forged at a red heat on the anvil; and with iron it furnishes a steel that can be tempered. These are all new properties.

Tungsten has been berets fore known to chemists only as a powder. I nder the action of the electric are its oxide is reduced by means of carbun, and gives in a few minutes a well-melted button, cornered with a fine layer of the blue oxide of tungsten. It is more infusible than chromium and molitelenum, but can be liquefied here with great facility. It does not seem to have a strong affinity for carbon, and is obtained without special precautions as one of the purest metals the author has prepared.

I rantum, reduced from a mixture of the sequiciside and carbon, when evoled presence a brilliant fracture and great hardness. When elightly carburetted it presents the property of striking fire in contact with flint. The particles thrown off burn with an intensity and an energy

far superior to those exhibited by a piece of iron.

Vanadium, previously known only as a gray powder including hydrogen, oxygen, and a little of some alkali metal as impurities, has been cast into pieces having a crystalline and brilliant

fracture, and is very difficult to melt.

Titanium, produced with currents of from 100 to 300 horse power from a mixture of charcoal and titanic acid, first as a crystallized carbide, and then as the real metal, exhibits different properties from those formerly attributed to the gray powders that bore its name. It takes fire in fluorine; decomposes water only at a brightred heat; burns in nitrogen at a high temperature, yielding nitride of titanium; and readily combines with carbon and silicon, but does not unite with argon. It resembles carbon in having a very high melting point, but differs from it in the fact that while carbon under the ordinary pressure and at a great elevation of temperature passes from a solid to a gas without becoming liquid, titanium can, in the electric furnace, be liquefied and then volatilized. "Most of these simple bodies furnish, with carbon, well-defined combinations, crystallized and stable at a high temperature, which are destined to furnish a new chapter to mineral chemistry. All these simple bodies which we have obtained in the electric furnace form also borides and silicides finely crystallized, and so hard that What some of them easily cut the diamond. part they are to have in the manufacture of steel, and whether they are destined, like chrominm, to give new properties to iron are questions for the future to answer. But a new chemistry of high temperatures is forming from which industry will most likely draw numerous applications."

It has been pointed out by Spring that many metals exhibit properties characteristic of the liquid state, even when at temperatures much below their melting points. In his experiments, the metals were in the form of cylinders with perfectly plane ends, placed end to end in an iron holder, and forced together by means of a screw while heated in an air bath or in a bath of an indifferent gas. The metals used were aluminum, bismuth, cadmium, copper, tin, gold, lead, zinc, antimony, and platinum. In the earlier experiments both cylinders were of the same metal, and the temperature was kept at from 200° to 400° for from four to eight hours. It was then found that, with the exception of the platinum and antimony, the cylinders were welded so perfectly that when one end was fixed in a lathe the entire cylinder could be turned, and when broken in a vise the fracture was not through the line of separation. When different metals were employed, as copper or lead with certain others, an alloy of considerable thickness was produced, 18 millimetres in the case of zinc and copper, and 15 millimetres in that of cadmium and copper. When lead and tin were used a cavity was made at one end of the cylinder and when filled with mica, in order that contact should take place only at the edge, the alloy formed had a thickness of 15 millimetres, 9 millimetres being in the tin and 6 in the lead. With cylinders of copper and zinc having a central cavity at the ends in contact, the surface of the copper next to the cavity was colored yellow, resembling the alloy formed when copper is exposed to zine vapor. These results are explained on the assumption that the molecules of solids, like those of fluids, have not all the same

velocity.

In a lecture describing rusts, Prof. Skidmore of Philadelphia, observed that it is not possible to define exactly what a metal is, yet there is little liability to mistake in identifying one. The metallic properties of luster, toughner fusibility, opaqueness, conductivity, and rust may be possessed separately by nonmetals, but they are not associated as they are in metals Most metals may be bent, twisted, drawn, and hammered to an extent far beyond what any mineral not a metal can endure. Sodium, potassium, lithium, and, in a lesser degree, calcium, strontium, and barium, rust instantly when exposed to moist air, and their white ruste quickly dissolve in water and form alkalies. Another group-including zinc, lead, magne sium, and antimony—have white rusts that are not soluble in water, but form a thin adherent coating, which only half conceals the metal, and gives it a dull, tarnished appearance. At high temperature than the ordinary, and especially if the metals are finely divided, the chemical energy of rusting is so great that the metals burn with a vivid light and emit a dense white smoke. The permanency of these rusts and their protective character are utilized in paints. A third group of metals—among which are cop-per, iron, and silver—have dark or colored rusts. A fourth group, including gold and platinum, never rust; they are found as metals in the earth, and not as ores from which the metal must be manufactured. It is an advantage in the case of the other metals that they are found in the rust or ore condition, for they can be manufactured more easily than they could be cut from ledges of the pure metal.

M. Henri Moissan has found, in his studies of the solubility of carbon in different metals, or in the same metal at temperatures more and more elevated, that boron and silicon distinctly displace carbon in cast iron and in melted iron carbide. These substances, when maintained at a sufficient temperature, behave exactly like aqueous solutions of certain compounds in which we can precipitate or displace this or that substance present in solution or combination.

Writing, in the "Iron Age," of the fatigue of metals, P. Kreuzpointner mentions the factor of the ability of a beam, axle, tire, or stamp stem to conduct vibrations speedily away from the point of impact and distribute the motions thus caused uniformly and uninterruptedly from point to point-a very important element in the strength and durability of a structure-as too often ignored or passed over hastily. Given a metal a known good conductor of heat, we know that, other things being equal, its conductivity can be impaired in various ways by flaws, impurities, hollow spaces, irregularities in outline want of uniform density, and others. The heat impinging against the metal not beng readily conducted away on account of one of these impediments, the metal at or near the point of contact with the fire becomes hotter than it would if conductivity was unimpaired. The

greater the impairment, the greater the overheating at one point, and the more frequently the heating is repeated, the moner the metal thus abused will fail. On the other hand, supposing a metal to be an ideal conductor, " in the course of time a period will ensue when the parthe less are not as responsive, as ready for work as they used to be." The metal is worn out, and liable to break at its weakest point. The same effects and changes are produced when the metal is attacked by vibrations from other sources. When that point of deterioration in a piece of metal subjected to repeated vibrations is reached when, even in the soundest piece of metal, the motion wave is not carried along as freely from particle to particle as originally, then we may conceive the metal to be what is called fatigued. What the actual condition and nature of a piece of metal is when it is fatigued probably no metallurgist is able to describe or knows. We may, however, attempt an explanation of its structural condition by assuming that fracture of a metal in ordinary service must be preceded by an initial separation of the particles and their points of contact, and this initial separation must be preceded likewise by a loosening of the particles-a relaxation of the force of cohosino, as it were.

METEOROLOGY. Temperature,-The following general propositions are put forward in a paper by Prof. von Bezold on the thermal exchanges of the atmosphere : 1. The total radiant heat received by the whole earth in a year is equal to the total amount given off by radiation in the same period. 2. The total heat received by any portion of the earth or the atmosphere is on the average equal to that given off by the same portion. S. The total heat received and given off in the course of a year is not the same for different portions of the earth or atmosphere; in some parts the amount received is greater than that given off, and vice versa. 4. The heat received by given portions of the earth or atmosphere during any given period of the year is in general not equal to that passed off during the same period. 5. The total amount of heat taken in at the surface of the whole atmosphere during a given portion of the year is not necessarily equal to that given out at the same surface dur-

ing the same period. From observations made at Ekaterinburg during three winters at every hour on the temperatures of different layers of snow, from the surface to the ground, M. Abels has found that the conductibility of snow is proportional to the square of its density. The conducting power of snow having a mean specific gravity of 0.2 is 20 times less than that of ice or frozen ground. But the transmission of variations of the temperature of the air through snow and frozen ground depends also on the calorific capacity of these bodies. The heat of the sun penetrates primite softened snow, both because of its conductibility and directly. Its rays traverse the snow layer as they do the glass of a window. It is neverally in determining the conductibility of snow or of any other pulverized body, to take account of ile density.

In his experiments on the influence of the sering of the soil on its temperature, Prof. F. Flore mayer considered and observed lands the cover-

ings of which consisted 1 of fee-bile con a la right rearould 2 of platite of epocies and also old, dout a layer 5 or 6 pertinetres that I have these, and 4 of meadow grave and as a face of compations, he also closes ed the hore grand He found that I in the bare great the also we maxima and minima and the samulate or of te perature are larger than in a correct will be the surface of lare wall the absolute was on a reach hearly the same height as in the art wille the alsolute million are very metably aftermated for the soil 2 A will envered with misses that meatly approaches a bare field in its aptitude for lettig heated. The absolute maxima are marle as high as in the bare ground. On the other hand, in winter the moon overing imposes the radiation of heat and the higher lavers of will beneath it do not coul ac rapidly as in fallow lands. 3. Meadow grasses in summer admit almost as much heat to the greated as the revering of more, while in winter they assure a truch inferior protection against radiation, and comsequently a will under grass tools much been rapully than under a covering of these 4 Forest plants of dense growth and think for age in summer hinder the heating of the ground is a much higher degree than all other movement. In a compact mass, particularly the species they protest the ground against great losses of heat in as satisfactory a way as the processing of more. 5. The most expederable constlation of temperature corresponding to the almoute extremes reach much higher values in the externe air than in the interior of the surface laver of and These differences diminish in going deeper into the arable laver, and are less in a concered than it an uncovered seil. 6 The most of a leval to a le lations of temperature are determined in the higher layers of the wil. This to be ever fee ble in the deeper layers. The processed out ering of the wal on the attendance of the extremes of temperature and on its sect at one are felt chiefly in the upper beds to also it for walls metres of depth. The properties of the aid being the same, a grassy surface in the tellar a toward heat, is very much like a face surface. The earth under grass to in sure er 1 to maker and in winter only a few tenths of a degree warmer than an universel grad Frees plants diminish the activity of the early and the reactions of the woldling the sames. They render the heating of the soll race Me ... Is a April till September in the fall and winter they cointribute to preserve to beat. The court got dead move on the other hand anguista timetirity of the rate and the react of the and in a complete of a more men live beat & of the will at all time of the year. Further, this processing Leets the will fresher and processes it from bankening and from baking at the ourface. tomorpently, in the cultivation of gardena, it should be of convolutable advantage to cover the surface bederate with mon leaves, peal, or other suitable substance.

If I Clarron, who has studied the subject of period tree for several years, has found a straining regularity between the intervals of many of the temperature maxima of the Blue Bill Mass.) description, and that almost all the maxima could be arranged in such a way that they follow each other at intervals of six or seven days.

He thinks that for a large part of the year forecasts of temperature, on the assumption of regular rhythmic oscillations and a knowledge of the time of their beginning and ending, may be made for a week or two in advance with nearly as much accuracy as they are now made by the Weather

Bureau for thirty-six hours.

In the discussion of a table of mean monthly and annual temperatures for London and vicinity for one hundred and thirty years, 1763–1892, Dr. A. Buchan says that much labor has been spent in searching for evidence of cycles, but it can not be said that the results show more than highly interesting resemblances and contrasts among the months, and that in whatever way the periods are viewed they suggest no appearance of cycles. But a tendency is shown of types of high and low temperature to prolong themselves

during months, seasons, and years.

have been expected a priori.

Some interesting results have been obtained in Berlin by means of meteorographs set up in the "Urania" pillars. Each pillar contained a thermograph, a barograph, and a hygrograph, placed side by side in a metal case through which a rapid current of air was kept up. The observations showed that the temperatures recorded on 2 closely adjacent pillars may differ by one degree or more both on a warm summer day and in the coldest weather. In one case the air was found to be warmed by the adjacent row of houses exposed to direct sunlight. In another the radiation was observed to be greater opposite a gateway than in the street. The very considerable local differences of air temperature recorded on closely neighboring pillars could hardly

For determining temperature and humidity near a surface of snow Dr. Süring placed a thermometer on the snow and another at the usual height above the surface, either exposed or protected, while an aspiration thermometer, placed 1 centimetre above the snow, recorded the temperature of the air. The temperature recorded by the thermometer proved to be considerably influenced by its size, shape, and position, as well as by the condition of the snow surface, etc. The observations were therefore restricted to the determination of the difference between the temperature of the snow and that of the air above it, as related to clouds and the motion and temperature of the atmosphere. The difference was lessened as the sky became more clouded, and when the clouding was complete, during a fall of snow, the temperature of the snow's surface was higher than that of the air. The difference became greater as the temperature fell, but was lessened as the motion of the air became more rapid. As to the influence of the snow surface on the humidity of the air, the author has arrived at the result that evaporation from the snow is much more frequent than condensation

The thermophone, an instrument for measuring temperatures at distant or inaccessible places, was devised by H. E. Warren and G. C. Whipple for the purpose of obtaining the temperature of the water at the bottom of a pond. It is also suitable for obtaining the temperature of the soil at various depths. The apparatus resembles Siemens's resistance thermometer; advantage

from the air, but that they are about equal in

amount

is taken of the fact that different metals have different electrical temperature coefficients.

Having compared the beet-root crops in the provinces of Saxony and Silesia with the temperatures, rainfall, and intensity of rain during fifteen years, Dr. Kassner found that the curves of temperature corresponded with those of the crops in both provinces except in 1887, while the curves of rainfall showed no such correspondence in Silesia, although they were in somewhat greater harmony in Saxony. The curves of intensity of rain were in somewhat closer accordance with those of the crops than were those of rainfall. The author's final conclusion is that the relationship of weather to crops requires a much more thorough investigation than is possible with the scanty data as yet available.

Clouds.—Discussing the question whether clouds are composed of hollow vesicles or full globules, M. Van der Mensbrugghe cites an experiment performed by Joseph Plateau in 1852 in which a column of water nearly three quarters of an inch in diameter was supported in a glass tube closed at the top but open at the bottom. Beneath the open surface of the liquid was a vessel of boiling water, from which a current of visible vapor rose continually. The sus pended liquid never lost its complete transparency under these conditions, notwithstanding the number of spherules of vapor that rose, provided the outside of the tube was kept dry. This seemed to prove that the vapor was not composed of spherules filled with air, but of full globules, and constitutes a strong argument against the theory that the clouds are constituted of vesicles. Other considerations bearing in the same direction are theoretical. If the spherules are very small, they will be more easily sustained in the air if they are surrounded by a very thin layer, the density of which diminishes toward the exterior, and which, according to Lord Kelvin's principle, they will evaporate the more rapidly the more minute they are. If, on the other hand, the globules of the cloud are relatively large, they will obey their weight; but in falling will traverse strata of air, becoming constantly warmer, and will consequently evapo rate more and more rapidly, till their diameter is reduced to a measure at which their further fall is opposed by the resistance of the air. It is therefore not necessary to suppose larger of smaller spherules filled with air to explain the suspension of clouds in the atmosphere; further more, this suspension is only relative, for the clouds are almost constantly changing formfact which proves either that evaporation is go ing on, or that some of the parts of which they are constituted are falling.

In a lecture on the "Physical Phenomena of the Upper Regions of the Atmosphere," Prof. Alfred Cornu compared the atmosphere to an immens thermo-dynamic engine, in which the sun is the source of heat and interplanetary space is the condenser. The most interesting phenoment take place in the more inaccessible parts of the atmosphere, and though the difficulties of getting information about these elevated regions are great, the physicist is beginning to know much of the real explanation of natural phenomena, and is even able to reproduce them in his laboratory. Among the unexpected static

ena discovered in ballooning and in entain observations are the facts that many ids which have been generally regarded as sisting of vapor are composed of minute stals of ice; that the direction of the wind is erent at different heights; and that the tems more distant, but alternate layers and last all air are encountered. The first and last ore distant, but alternate lavers of hot a facts might have been ascertained by s means from consideration of certain opnomena; the presence of ice crystals in clouds might have been inferred from the halo; and the alternations of heat and in the atmosphere from the various forms alrage, which depend on the reflection of from the surface of the different layers. solar energy was described by M. Cornu as g of three kinds-mechanical energy, apg as winds, cyclones, etc.; calorific energy, by the change of the state of matter, as into vapor; and electrical energy. The is the most simple mechanical manifestad has its origin in the differences of atheric pressure in two distant places. It blows in the direction of the line joining points of greatest and least pressure, but al-a obliquely to the isobarometric lines, and ally with a circular movement round the s of highest and lowest pressure. When by cause the equilibrium of the atmosbroken down, circular movements of ous force, such as tornadoes and evelones,

e careful determinations of Profs. A. Bar-and R. Stracciati go to show that cirrus which are composed of particles of ice, apable of intercepting 30 per cent, of the rays, while from 58 per cent, to 92 per cent, rays may be absorbed by a fog of uni-

density in all directions.

ing the question how far the apparent cousing the question how far the apparent on of a cloud is a satisfactory indication of motion of the air in which the cloud is ad, Mr. W. N. Shaw cited the mountain d cap as an instance of a stationary cloud ring in air moving sometimes very rapidly.

s are formed by the mixing of masses of ir at different temperatures, or by the dynami-al cooling of air through the reduction of its reserve without supplying heat from outside. ads formed by the mixing of air may be caralong with the air after they are formed, ile when a cloud is formed by expansion cir-pelances connected with the formation of of water on the nuclei to be found in the and the maintenance of the particles in a cof suspension make it probable that the apost motion of such a cloud is a bad indicator he motion of the air.

Freelpitation.—An experimental contribu-tion to the study of dew has been made by Herr Wollny, who used plants in glazed pots with earth of varying moisture, some of the plants beng allowed to radiate freely on favorable nights, file others were screened. The author contains that dew depends partly on evaporation from the ground, partly on transpiration. It is at present doubtful whether precipitates from the air share in it or not. A cloudy sky weakens a cooling process without stopping it wholly.

With copious radiation, the temperature missimum is at the surface of the plant covering of the ground), and here the aqueous vapor meing from the ground is partly precipatated. With increase of the ground heat downward there is increase of the water brought up by the plants, which is given up as vapor and condensed. The more moisture there is in the ground, the more water is evaporated from the ground and the plants. Dow formation is usually favored by the larger number of stomata on the under ourface of leaves than on the upper. On a given surface of ground the dew is more plentiful the stronger the plant organs alove ground, and the closer the plant growth. The temperature of still air increases from the surface to a certain limit (at about 5 feet over gram it was sometimes 4' or 5' C. warmer than on the ground). In experiments with blotting paper, cotten wood, feathers, and asbeston, the first was much moistened, while the others showed dew in drops. Bodies of organic origin attract more moisture than those of mineral (a case of hygroscopic absorption). For vegetation the author considers

the benefit of dew but trifling.

From his observations of the conditions of atmospheric humidity on the summit of the Sonnblick mountain, Dr. J. Hann finds that the yearly range of humidity there is the reverse of what it is on the plains; the minimum, or greatest dryness, occurs in winter and the maximum in spring and summer. This much was known from observations at alpine stations, but there were circumstances that cast doubt on their accuracy. Temperature and vapor pressure on Sonnblick run in nearly parallel curves, and each degree of difference in temperature correspends to a change of tension of vapor in the same direction. The daily range exhibits in all except the three winter months a low relative humidity in the morning, and a great humidity during the evening and night. But in winder the relative humidity remains below the mean from 6 P. M. to 7. A. M., and above it from 9 A. M. to 5 r. w. The daily range of absolute humidity (vapor tension) is nearly the same in all seasons of the year. The minimum occurs early in the morning, and the maximum in the afternoon. The most remarkable feature in the daily range of relative humidity is that on very clear and warm days long before the rise of the sun has any effect the humidity falls below the mean value on the Sonnblick, and by about six o'clock in the morning it has fallen nearly ? per cent. below the daily mean. This important fact seems to show that the relative dryness of the forenoon on mountains is due to a descruding movement of the atmosphere, caused by the winds blowing from the mountains to the valleys during nighttime, and thus cooling the sides of the mountains.

Following a suggestion of the Prench Government, M. J. R. Plumadon, of the Meteorological Observatory of the Puy de Dôme, instituted an inquiry throughout the department of that name with regard to the influence of forests and accidents of the surface-mountains and valleve—on the formation and propagation of hal-storms. A large proportion of the answers re-ceived attributed influence to these features, but the greatest disagreement was revealed as to the

character of the influence. In many places forests, mountains, or valleys were supposed to favor the outburst of severe storms, while in a smaller number of places they were thought to diminish the liability to them. The author could only conclude for the circle under observation that they have no direct influence on the propaga-tion of harlstorms. The prevalence of belief in such influence is attributed to the production by local features of minor phenomena of dark and imposing-looking clouds which, while having no real connection with it, are associated with whatever storm may occur at the time. It can not be denied, however, that the production and progress of storms are affected by the features of the earth's surface, but the influence such features exert is only indirect, and consists essentially in changes that are caused in the atmos-Thus the differences in the temperature and moisture between the Alps and the Lombard plains south of them lead to the production of vast atmospheric eddies and depressions which have considerable effect on the climate of southern Europe and Africa. Similar disturbances, but differing in intensity according to the proportions, may be produced by other lesser accidents. The course of the storm, when it has arisen, likewise does not appear to be governed to any great extent by the mountain ranges, valleys, and forests, but rather by the ordinary laws of the direction of atmospheric currents. If the pressure is even in a large area, the storm will follow the usual course, from southwest to northeast; if the pressure is uneven, the storm will follow the general direction of the wind as determined by that circumstance.

Attempts of Mr. Keuchler, of Indianola, Texas, to ascertain whether there was a connection between the extent of the year's growth of trees as shown by the formation of rings and the season's rainfall showed that while there were very great variations in the annual growth of the trees, they did not correspond with the seasonal rainfall. The conclusion is drawn from the observations that not rainfall alone or any single factor governs the amount of the growth of the tree during the season, but a combination of factors. including, besides the amount of the supply of moisture, evaporation, insolation, temperature, and the character of the rainfall, whether it

comes in showers or continuously.

It has been shown by long-continued observations made by J. E. Codman that the size of rain gauges (automatic) makes no practical difference in the depth of rainfall collected by them. The largest gauge experimented with was 22 inches, and the smallest one 2 inches in diameter. When the gauges were placed at different heights, up to 50 feet, the same amounts were collected by the higher ones as those on the ground, provaled no counter-currents of air came in to affect the result. This result agrees with that found by Prof. Wellmann in his experiments in Berlin.

The following generalized results as to the distribution of rainfall in the United States are deduced by W. Köppen from an investigation of the rainfall charts published by the Government. These are: 1, a district of continental summer rams, inclosed on both sides by littoral rains, which, corresponding to the contrast of the yearly oscillation of temperature, are much more marked in the West than in the East; 2, a district of isobaric rains in the Southeast, with equatorial sea winds in summer and with antieyclonic weather in winter; 3, transition districts, in which both rainfall maxima occur near each other, while the minima occur in spring and autumn. Maxima after the equinoxes are nowhere very well marked, but the April and May rains of Colorado and Kansas and the autumn rains on Lake Superior are indications of them. With regard to the seasonal distribution in the tropical zone, the differences in temperature play only a small part compared with that played in extra-tropical regions; this result naturally follows from the small variation of temperature in the tropics.

Winds.-From the studies of the relations of the diurnal rise and fall of the wind in the United States, by Mr. Frank Waldo, the general results are derived that for January the rise of the wind toward the midday maximum is followed by a more rapid fall over nearly the whole of the United States. For July the same law holds, except in the Western States, where the morning rise is more rapid. The rise in the Mississippi valley continues during about seven On the Atlantic coast the duration decreases from ten hours in the North to five hours on the coast of Florida. The rate of increase during the rise varies from 0.4 mile to 0.6 mile

per hour.

A peculiar climatic feature of the region of the United States between the ninety-fifth and one hundred and second meridians is the occurrence in summer of hot winds, or currents of air with higher temperature than that of the general winds. They attracted notice in ten out of the twenty-three years ending in 1894, and caused considerable damage to crops in three or four of those years. Even when severe, their destructiveness, according to Mr. Isaac Monroe Cline, is confined to narrow limits. They are likely to occur between the middle of May and the middle of September, but are most frequent during July and August. The length of time during which they are likely to prevail varies from a few hours to three days. They are extremely dry. Their direction is usually that of the atmospheric movement near the earth's surface prevailing at the time over the district in which they occur, and their velocity varies considerably. It is noticed as one of their most striking features that, while the atmosphere is heated generally and shows an excess of temper ature over the territory affected, abnormally heated narrow currents are often observed, be tween which the air is much cooler. While these winds are always noted as causing vegetation to wilt and droop, the more intense hot ones burn tender vegetation to a crisp in a few minutes, without reference to the amount of moisture present in the soil or the general at-mosphere; and some of the most destructive of them have been known to occur when both were saturated with moisture. In studying the distribution of pressure in connection with these winds, it is found, Mr. Cline says, that they occur mostly with low-pressure areas which have moved slowly from the north of Montana southeasterly along the eastern slope for three or four

days before they take up a decided movement generic character as the warm wave or heated term of the Eastern States, and the belief that their dryness and heat are caused by drought and insolation of the earth's surface, and that they simply bring northward the heat of the climate in which they are supposed to have their origin, are not supported by the evidence, but are contradicted by some of the circumstances; while the opinion that they are a special class and their heat and dryness are of dynamic origin like that of the forha and chinook is, in Mr Cline's view, confirmed by the present study of all the observations and correlated facts that can be found relating to the subject. Such origin seems to be found when the southeasterly winds of Oregon and Washington cross the great continental divide, where they rise to a height of from 10,000 to 15,000 feet, and are deprived of their moisture. Then, descending rapidly, they gain warmth, and reach the surface with their initial dryness. These winds are a permanent feature of the climate of the region where they occur, and the only palliative against them that Mr. Cline suggests is by the plantation of tracts of timber, which will furnish them moisture and tend to reduce their temperature, thereby serv-ing as a partial protection to the farms beyond the woods.

In speaking in the Meteorological Society of that city on the, as yet, uninvestigated velocity of the wind in Berlin, Prof. Hellmann based his remarks on the indications during ten years of a wif-registering anemometer placed at a height of 33'5 metres above the ground in the tower of a house which was originally quite isolated. In later years this house was surrounded by others, but this fact did not affect the working of the anemometer. Taking a year as a whole, the maximum rate was observed in March and the minimum in September, and during these months the variations were least. The average for the year was 5:1 metres per second. The same periods of maximum and minimum have been observed at other stations, as Paris, Mu-nich, Prague, Vienna, and Cracow. Winds with a velocity less than the average are more frequent than those with more than the average velocity. The frequency of storms as measured in hours is greatest in January and March; it increases in October and sinks rapidly in April. The daily period of greatest velocity lies between 1 and 2 o'clock r. M.

The movements of the air at all heights, in eyelones and anticyclones, as shown by cloud observations, have been investigated at Blue Hill Observatory, Massachusetts. A record was made of the kind of each cloud visible, the direction of its motion, and its relative velocity. and the observations were plotted and classified into 5 levels. The increased velocity of the wind near the center of the cyclone and the decreased velocity near the center of the anticlone are distinctly shown. The arrows of the plat also show that the inclination of the wind to the centers of the two is not the same on all In the cyclone the winds blow met nearly tangential southeast of the center and most nearly inward north or northcast of the center, while in the anticyclone the winds are most tangential northwest of the soler almost nearly outward worth or so theast of the center. In the compute regain the content of the computer of the computer of the content of the con

Having pletted in tabular form, as defuned from the Signal-service charts for also it three years, the number of storm centers passing every each quadrangular degree between latit dee 20° and 40° north, and lengitudes 90° and 61° west. Prof. Cleveland Abbe finds it clearly indicated that the storm tracks, which more from A berta and Assimboine southeastward over the United States and then northeastward over the United States and then northeastward toward the Gulf of St. Lawrence, describe a system of parable curves, the tendency of which is to have a common point of intersection, as a therefore a region of maximum storm frequency, in a near the northwest of Nebraska.

The suggestion was made in a discussion to the French Melecrological Secretarian actions and vertical currents of the air epherocondens and vertical currents of the air epherocondens emeter, that the vertical currents may have been due to deviations of the air epherocourrents by obstacles in his as the tower on which the recording instruments were placed to tupwardly. These vertical currents are discussed to Prof. Anget, do not rise very high as passers thrown into these in the Pic du Milliance die is a few yards, and then fall dies at his feed the observer. These experiments were to the middulo on the value of observations of assecting currents made under the conditions of assecting currents made under the conditions of assecting currents made under the conditions as sections.

In a discussion of the upper or is of air over the Arabian Sea, W. I. Palian, f. U. I. dian Meteorological (Office of well at a regular arrangement exists in the vist, at a recession of the upper currents at I that it. It is regular, and rist the graph of a really the dividing line between the arrangement of the morthern and evident opposes.

Two thereins of the name of cyclones in the temperate latitudes have forth angest, vil. the community of the er, kn wn as Ferre to that they are laused by the conventional assembled a current of warm air in the central parts, the heat necessary to modern the current being supplied. at least its part by the latest heat set free by the multimeter of aquious vapor; and the their proposed to Dr. Hann, that the stores are all a front to the granta caster's drift of the atmosphere in temperate latitudes just as small which are formed in rivers. found that the temperature at high mountain stall co in the Alpa is higher during anticychoic ordition than during the passage ! Mr. W. H. Dines, who has reviewed the of oction. extract in the American Meteorological Justial,

thinks that the evidence is in favor of Ferrell's theory. Mathematical laws show that it is a possible one, and that the latent heat set free by the condensation of moisture will, if it take the form of kinetic energy, be sufficient to produce a very violent storm.

Experiments reported by Mr. G. Symons as having been made in England in December, 1894, show that the wind in storms is capable of carrying sea spray to a distance of about 65

miles from the coast.

Thunderstorms.-In his studies of the annual distribution of thunderstorms over the surface of the globe, Mr. A. Klossersky, Director of the Meteorological Service of Southwestern Russia, mentions a high temperature, a certain degree of moisture, and a considerable quantity of atmospheric precipitation as the factors most favorable to the development of electrical activity, and which combined contribute to the production of the maximum of storms; so that we could, by comparing the maps of precipitation and temperature, obtain a priori a chart of the general distribution of thunderstorms. Such a chart would, however, only be of a relative character, because we are not able to estimate the comparative influence of the several factors. A zone of electrical activity of great intensity extends on both sides of the equator. In its general repartition this area expands from the northwest to the southeast over each continent which it traverses—America, Africa, and Asia with Oceanica, forming thus three electrical The first equatorial zone—that of Asia and Oceanica-extends from the beginning of the Himalayas and across Indo-China and the Sunda Islands to New Guinea. The whole number of storms annually is from 90 to 100 and more. It may be remarked that all points in it are within the area of abundant precipitations. The second continental zone of great intensity passes across equatorial Africa, with an average number of storms varying from nearly 200 a year at Bismarcksburg to 46 at Zanzibar. On both sides of the continent the southern coasts are much richer in thunderstorms than the northern. The third continental center of atmospheric electricity is in the tropical regions of America. The yearly average of thunder-storms is 100, or more between 20° and 22° north. This zone, with a few considerable diversions, extends southeastwardly, including the West India islands, to 25° south. In the higher southern latitudes a marked difference is observed in the amount of precipitation and the distribution of electrical activity between the eastern and western coasts; and a minimum 14 reached in the warm region of the western coast, as at Lima, where the annual average of thunderstorms is null. North of this electrical equator the activity of thunderstorms may be said to decrease. We enter the region of continental deserts, extending in the Old World from southwest to northeast, and marked by inferior precipitations and weaker electrical activity. North of this zone of deserts electrical activity rises again, though it appears to be easilv affected by temperature and local conditions. The average of thunderstorms in Europe between the Atlantic coast and the Ural mountains is from 15 to 20 a year.

Miscellaneous.—Urging that more attention be given to instruction in general meteorology as a university course, Robert Dele Ward advis the consideration of the various subjects in the following order: Evolution, composition, and offices of the atmosphere and its relations to plants and animals; relations of earth and sun; the variations of the seasons and the distribution of temperature over the earth's surface for the year, January and July, together with the year, January and odry, construction of isanomalous and of equal annual range study of isanomalous and of pressure for the charts; the distribution of pressure for t year, January and July, and the resulting winds; classification of the winds; moisture of the atmosphere and precipitation; storms, including cyclones, thunderstorms, and tornadoes; distribution of rainfall over the world, by sons and for the year; weather; climate, including sanitary climatology, secular changes in climate, and the relation of climate to history. As lines of work for persons who have com pleted such a course, the author suggests the study of the climates of the different States, ! effects of their topography on their rainfall their winds, and the courses of their local storms; the local effects of forests and of cultivation on rainfall; the distribution of rainfall by seasons, months, and districts; its bearing upon the times of planting and harvesting; and changes in the depth of the level of the groun water, and its variations with the weather and the season.

It has been long known that cascades com municate a negative electrical charge to the air around them. The subject has been specially studied by Herr Lenard at the waterfalls of Switzerland and in laboratory experiments. It is found that even cataracts only a few feet high send into the air considerable charges of electricity, provided they bring down a large amount of rapidly dashing water. The intensity of the phenomenon is, however, reduced by very slight amounts of impurity in the water. Herr Lenard's experiments accord with the demonstration by Lord Kelvin and Messra. Maclean and Goto that air even absolutely dust free can be electrified by a jet of water. general principle Herr Lenard concludes that drops of water falling on the surface of water or on a moist body disengage electricity, the water being charged positively, and the air passing away negatively charged. When the experiment is tried in a closed chamber the difference in potential may be so great as to pro voke sparks. The negative electrization of the air has also been observed by Herren Elster and Geitel to be produced by subterranean cascades. Jets of water that drip down the rock sides, and roaring streamlets have a like effect. Prince Kropotkin remarks of the importance of the results of this property, that by it "the supply of electricity in the air is constantly renewe The waterfalls in the valley, the splashing of the waves on the shores of lakes and rivers, and the splash of drops of rain on the ground send masses of negative electricity into the air; even the watering of our streets and of our plants in the orchards has the same effect on a limited scale. On the other side, the waves of the s as they break against the rocks and fall back in millions of droplets on the beach, supply the

with masses of electricity, the amount of

sh rapidly increases after each storm."

r. A. Lawrence Roche mentions, in a paper
High Level Meteorological Stations," as one greatest drawbacks to a full understandteorological phenomena from observanade near the general level of the ground diffeations and interference which aërial ats suffer at the surface, under the opof which they are made to differ from vements in the higher state and are to represent incorrectly what is going on atmosphere at large. The more strongly upper strata react on the lower in many a knowledge of the moderately high ric layers is of great importance for the of the general circulation of the atmosand practically for our weather forecasts, observations, to be complete, should be from elevated points, lifted up above the acc of surrounding lands. Such points are lated mountain summits, and a number of ological observatories have been estab-on these in America and Europe. Mr. gins his account of the principal mounhervatories by mentioning that which sablished in 1870 on Mount Washington, summit station in the world, but which disused. "Probably nowhere else in the west temperature being here often accom-l by the highest winds, unlike the calms prevail with intense cold at low levels."

Jovernment meteorological station on Peak, at an elevation of 14,134 feet, was ny years the highest in the world. This is now closed, so that there seem at to be only two summit stations in the d States where meteorological observa-are made throughout the year—the Lick vatory, Mount Hamilton, California, and Blue Hill Meteorological Observatory in etts, situated at a very moderate ele-Prof. S. As observers t remain here, the station is supplied with remain here, the station is supplied with lording instruments, and visits are made eriodically. France has the stations of y de Dôme, 4,800 feet high; Pie du Midi, leet high; Mount Ventoux, 6,250 feet and the Algoual, 5,150 feet high. Stater established on and near Mont Blanc 0, of which the one at the Rocher des (14,220 feet) is supplied with self-record-truments, and is looked after every two Mr. Janssen has recently successfully sed a station in the snow of the summit natain, 15,780 feet above the sea. Ins have been placed on the Eiffel Tower. at 180 feet above the ground, which give nearly the conditions prevailing in the than do any others fixed permanently elevation. The observations are taken connection with those at the Central Meteoretical Office near the ground. The observa-ry of the Sonnblick, Austrian Alps, 10,170 feet,

has furnished very valuable results. The ware observatory on the Santie, 8,200 feet to the of the best located and equipped summit staticate in the world. In Italy an observatory has re-cently been completed on Mount Cimone At Ben Nevis, Scotland, the highest mountain in Great Britain, an unbroken series of hourly observations has been carried on for ten years. association with the observations at the time station, or sea level, these have been very useful. As among the results gained from high-level observations, Mr. Roche enumerates determination of normal decrease of temperature and humidity with elevation; abnormal changes with elevation in cyclones (or areas of low pressure near the ground) and in anticyclones (or areas of high pressure near the ground); height to which these cyclones and anticyclones persist; and the circulation of the air around each at various levels.

The chief features of the climate of Colorado are summarized by Dr. C. T. Williams, President of the Royal Meteorological Society, as being: Diminished barometric pressure, owing to altitude, which, throughout the greater part of the State, does not fall much below 2,000 feet; great atmospheric dryness, especially in winter and autumn, as shown by the small rainfall and low percentage of relative humidity; clearness of atmosphere and absence of fog and cloud; abundant sunshine all the year round, but sepecially in winter and autumn; marked disthermancy of atmosphere, producing a difference between sun and shade temperatures, varying with the elevation in the proportion of 1' for every rise of 235 feet; considerable air movement, even in the middle of summer, promoting evaporation and tempering the solar heat; and the presence of a large amount of atmospheric electricity. Thus the climate is dry and sunny, with bracing and energizing qualities, permitting outdoor exercise all the year round, the favorable results of which may be seen in the large number of consumptives whom it has rescued from a life of invalidism and converted into healthy, active workers.

The studies of H. A. Hagen, based on observations regularly made since 1859 and extending back in an irregular and fragmentary way to 1832, show that Lake Michigan has a great influence on the climate of Chicago. winds a maximum prevails from the southwest, and a secondary maximum from the morthwast. Land winds predominate during the cold months, and lake winds to a little less degree during the warm. The mean temperature deduced from twenty years' observations is 48.6°, and occurs about the third week in April and October. The highest temperature occurs about the middle of July, and the lowest about the third week in January; the temperature is rising for one hundred and seventy-four days and falling during one hundred and ninety-one days. cold spell about the middle of May is well marked in the five-day means. The highest temperature observed was 996", on July 17, 1887. and the lowest - 23', on Dec. 24, 1872. maximum temperature was 90" or more on one hundred and twenty-one days during twenty years, and a minimum temperature of -15 was reached only 16 times. The annual rainwas reached only 16 times.

fall, since accurate observations were begun in 1867, is 34'4 inches, and is fairly well spread over each month. A fall of 2'5 inches in a day

occurred only 15 times in twenty years.

In the "Annales" of the French Meteorological Office for 1890 M. Angot discusses the observations taken simultaneously during that year at the Central Meteorological Office and on the Eiffel Tower for the study of the variation with height of the several meteorological elements. The reduced barometric pressure was lower every month on the tower than on the ground, the probable cause being the great difference in the velocity of the wind at the two stations. The observations made at the three stations on the tower allow the variations of temperature with altitude to be studied with great detail, and it was found that the rate of diminution was far from being proportional to the height above the ground. In all months, at the middle of the nighttime, the temperature increased with altitude, the maximum difference occurring at a mean height of about 500 feet; it then decreased, at first slowly, and afterward more rapidly. At about 1,000 feet the mean rate of decrease amounted to 1.4° C. per 100 metres (328 feet). During the middle of the daytime the decrease of temperature with height above 500 feet is nearly uniform in all months, being about 16° C. for each 100 metres. Between 500 feet and the ground, however, the decrease showed a marked annual variation. During the cold season the difference was less than that observed at the higher level, while in the hot season it was much greater. The diurnal variation of vapor tension at the summit of the tower exhibited entirely different characteristics from those near the ground. Generally speaking, there was only one maximum near noon, and one minimum between the evening and midnight. During all months the vapor tension was less at the top of the tower than near the ground. The diurnal variation of the wind exhibited a marked minimum at the top of the tower during the daytime and a maximum at night, being the reverse of what is observed at ground stations.

METHODISTS. The summarized statistics for 1895 of the several branches of the Methodist Church in the United States are as follow:

1. Methodist Episcopal Church.—The statistics of this Church, published in the "Methodist Yearbook" for 1896, give the following to-

tals: Number of annual conferences, mission conferences, and missions, 140; of itinerant ministers in full connection and on trial, 17,026; of local preachers, 14,896; of members in full, 2,454. 645; of probationers (for membership), 312.011; total of members and probationers, 2,766.656; of Sunday schools, 30,264, with 347,844 officers and year, 98,121 of children and 139,256 of adults Of the ministers, 12,024 are recorded as "effective," 1,044 as "supernumerary," 2,057 as "super-annuated," and 1,901 as on trial. The increase of members and probationers during the year was 76,596. The benevolent contributions were: For the parent Missionary Society (including legacies and sundries), \$1,174.554; for Church Extension, \$130,781; for the Sunday school, \$23,-065; for the Tract Society, \$20,350; for the Freedmen's Aid and Southern Education S ciety, \$98,104; for education, \$166,384; for the American Bible Society, \$29,937; for the Woman's Foreign Missionary Society, \$240,489; for the Woman's Home Missionary Society, \$21,356. Total benevolent contributions, as reported from the conferences, \$2,105,020. Amount of contributions for ministerial support (including bishops and presiding elders), \$10,385,948; for conference claimants, \$278,158; for building and improvements, \$4,379,307; for old indebtedness on church property, \$1,243,093, leaving, as the present indebtedness, \$10,894,156; for current expenses, \$3,680,698.

The Tract Society returned its receipts for the year, including the balance from the previous year, as having been \$20,554, and its expenditures as \$19,022. The society furnishes the various missions of the Church with funds for printing religious literature, supplies tracts to the Annual Conferences for use in the home missions, and distributes them to immigrants, inmates of hospitals, prisons, and asylums, to soldiers and sailors, and to pastors for their regular work. One million forty-four thousand two hundred English and 200,000 German tracts

were printed during the year.

The year's receipts of the Sunday-school Union, as returned in its last published report, were \$22,-543; and its disbursements, \$24,400. The number of Sunday schools under its care was 29,802—of which, besides those in the United States, 899 were in Europe, 2,358 in Asia, 36 in Africa, 120 in Mexico and South America, and 1,267 among immigrants—with 348,365 officers and

teachers, and 2,510,539 pupils.

The receipts of the Board of Education for the year ending Nov. 30, 1895, were \$89,061. The amount of loans made for the fiscal year ending in July, 1895, was \$70,597. The total amount loaned from the beginning in July, 1873, to July, 1895, was \$603,580; average amount loaned each beneficiary, \$91.54. Six thousand five hundred and ninety-three students were aided from the beginning in 1873 to the close of the school year in 1895; the whole number of students aided during the last school year was 1,540, of 24 different nationalities, in 134 different schools.

The 57 colleges and universities, 7 colleges and seminaries for young women, 56 classical seminaries, 76 foreign mission schools, 4 missionary

titutes and Bible training schools, and 19 the-rical institutions return 2,657 professors and rs, 42,349 students, grounds and buildings at \$14,644,525, \$13,621,894 of endowment and indebtedness of \$1,699,266.

annual meeting of the Church Extension nitice was held in Chicago, Ill., Nov. 7. The pis for the year on the general fund, avail-er donations, had been \$171,237; on the loan or loans only, \$74,201. Three hundred and arches had been aided, making the whole r from the beginning of the work of the so-,767. Applications for aid from 85 churches for donations of \$22,230, and loans of \$35,been declined on account of lack of funds r financial considerations. The board the new year with conditional grants to tas new year with conditional grants to barches amounting to \$40,350 in donations 118,800 in loans; and had applications on one 9 other churches, for \$3,700 in dona-and \$3,700 in loans. The amount needed ork on hand was \$62,550. Apportionments made among the several conferences for \$315,350, and the same amount was asked atributions.

annual meeting of the Freedmen's Aid athern Education Society was held in a Ill., Nov. 11 and 12. The society had during the year ending June 30, \$367,-had expended \$358,500. Reports were t its work, of which the following is a ry: Number of schools among colored 23; including 1 theological seminary, 11 of collegiate grade, and 10 academies, 18 teachers, 4,845 students, and property at \$1,281,000. Schools among whites, 22. 18, colleges, 3; academies, 19. Total value 22 achools, \$648,800; teachers, 144; stu-30. Grand total of teachers (including etice teachers" in colored schools, and white schools), 473; students, 8,425. Of preparing for ministry, 219; in medical ; in dental course, 12; in pharmasal course, 12; law students, 6; in manual and trade schools, 1,549 colored stu-

nanual meeting of the General Missionary alttee was held in Denver, Col., Nov. 14 to The receipts of the society for the year Cot. 31 had been \$1,174,554, and the ry was in debt \$306,243. The reports from n fields were not yet completed for The reports for 1894 give, in the foreign s. 200 foreign missionaries and 221 as-148 missionaries and 853 native workthe Woman's Foreign Missionary Society; n teachers; 576 native ordained preach-1,019 native unordained preachers; 1,155 etachers; 1,555 local preachers and other rs; 76,415 members; 59,418 probationers; adherents: 12,710 adults and 9,338 chiladherents: 13,710 adults and 9,338 chil-ptized during the year: 150,824 children day schools: 390 theological students: spile in high schools: and 34,590 pupils y schools. printions were made for 1896 as follows: ign Missions: In Africa, \$5,601; South

America, \$53,475; China, \$115,761; German, \$25,222; Switzerland, \$7,812; Norway, \$12,516 Sweden, \$17,420; Denmark, \$7,965; Finland and St. Petersburg, \$4,220; India, \$1,00,000 Malaysia, \$8,370; Bulgaria, \$15,485; Italy, \$40 866; Mexico, \$49,642; Japan, \$50,600; Korea. \$14,880; total, \$563,629. For Immedic Missions, including those to Welsh, Swedish, Netwegian and Danish, German, French, Scanish Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese, and Hebrew populations in the United States, for each class of which specific appropriations were made, American Indians, and English-speaking populations, \$456, 329; miscellaneous appropriations, \$119,000; for the debt of the society, \$239,055; total ap-

propriations, \$1,378,013.

The total receipts of the Woman's Home Missionary Society for the year ending in July, 1866. including \$113,216 as the estimated value of "supplies" contributed, were \$236,457. The receipts for the fifteen years of the society's existence, from July, 1880, to July, 1866, were \$1,601, 490, of which \$637,840 were in the form of supplies. The society has 55 distinct missions, including missions for the Indians in Oklahoma California, New Mexico, Washington, Utah, and Alaska; missions in behalf of immigrants in Boston, New York, Philadelphia, and New Orleans; city missions in Cincinnati and Chicago; 16 industrial homes and schools in the South, in which more than 1,200 girls are annually in-structed in industries and morals; 3 industrial schools for Spanish Americans in New Mexico; the Mothers' Jewels' Home at York, Neb.; the Watts de Peyster Home at Tivoli, N. Y.; and 21 deaconesses' homes. It has 87 missionaries in the field, besides deaconesses and city missionaries and helpers. For the accommodation of its various missions it has invested the sum of \$450,000, of which \$225,000 is in city missions and deaconesses' homes. Seventy-five annual conference organizations, with 2,600 auxiliary societies, numbering 68,000 members, co-correcte with it.

The Woman's Foreign Missionary Society received for the year ending Oct, I, 1865, \$200,-227, of which \$18,000 were by bequest, and \$271,227 by collections of "2 cents a week" contributed by the several members. One hundred and fifty-two missionaries are supported by the society, 14 of whom are medical missionaries. with 750 Bible readers; and 400 day schools, 40 boarding schools, 11 orphanages, 10 training schools, 13 hospitals and dispensaries, 3 homes for homeless women are maintained, 14,000 pmpile are taught and cared for, and 60,000 patients receive medical attention annually. Representatives of the secrety are laboring in Japan, Korea, China, Malaysia, India, Burmah, Bulgaria, Italy, South America, Mexico, and Peru, Twenty missionaries were sent out during the swar, 8 of whom went to India, 10 to China, 1 to Japan, and I to South America. Six of the number were graduates in medicine. One was a Chinese woman who had been prepared in the United States for medical missionary work, and was the only Chinese woman in the empire bearing a Western world degree. Three periodicals—one for adults, one for children, and a German magasine-are published by the society. It has 4,600 auxiliaries, 780 young women's societies, and 771 children's bands, with, in all, 151,163 members. The Wesleyan Home for children and mission-

aries is sustained at Newton, Mass.

II. Methodist Episcopal Church, South.—The Church Extension Board reported at its meeting in May that the collections for the year had amounted to \$53,503, and that \$2,795 had been received from legacies and special donations. Two hundred and eighty-four churches had been aided, or, including those which had been assisted by the Conference Board, 348 in all. The whole number aided since 1882 was 2,986. Since the organization of the Church Extension Society, \$839,566 had been raised for its purposes, nearly 3,000 churches aided, and more than \$3,500,000 in church property added.

The Board of Missions met in Louisville, Ky., May 3 and 4, and made appropriations of \$214,-543 for sustaining the work during the ensuing vear. Of this amount \$31,400 were appropriated to the missions in Brazil, \$31,947 to those in China, \$30,251 to the Japanese missions, \$26,-660 to the Central Mexican, \$15,307 to those on the Mexican border, \$12,393 to those of Northwest Mexico, \$17,500 to the Indian missions, and the rest to the conference missions. The conferences were asked to contribute \$350,000 to the support of the next year's work. Salaries were fixed at \$1,000 a year for married and \$550 for single missionaries in China, Japan, and Mexico, and \$1,100 and \$650 in Brazil; and it was provided that after ten years of service, \$100 should be added to the salary of married and \$50 to that of single missionaries, and that the allowance of \$100 for each child should be increased to \$150 when the child is five years old. An effort was determined upon to establish a new mission sanitary station in North China, where missionaries in the South may resort for rest and recuperation.

The seventeenth annual meeting of the Woman's Board of Missions was held in Meridian, The receipts of the society for Miss., May 10. the year had been \$143,677, and the expenditures \$96,923, leaving a credit balance of \$46,-754, against which there were drafts, etc., pavable, reducing the actual balance to \$22,360, Thirty-eight missionaries were supported in the foreign field, 15 of whom were working in China, 14 in Mexico, 8 in Brazil, and 1 in the Indian Mission. Nine missionary candidates had been accepted, and were awaiting appointments. missions further returned 109 teachers and helpers, 12 boarding schools, 40 day schools, 1 hospatal, 11 Bible women, and 4,379 women and haldren under instruction. A new center of werk had been opened in Guadalajara, Mexico, and Centenary College. Rio de Janeiro, was to le removed to Petropolis, where a large estate

hallern bought.

The Woman's Parsonage and Home Mission Board's ported as its most important single act during the year the determination to establish a school in the mountains of Kentucky. The people of L n but had offered a site and \$15,000 on condition that \$20,000 additional be raised as an endowment; and the affiliated society of the Kentucky conference had \$5,000 in hand for the building fund. An agent was appointed to canvass for the endowment.

The separate existence of this Church having begun May 1, 1845, in the city of Louisville, Ky., a jubilce celebration of the event was held during the first week in May, 1895, under the auspices of the Church Extension Board in the same place; and the College of Bishops and Board of Missions were invited to hold their meetings there and participate. The opening address of the jubilee was made by Bishop Hendrix, and related largely to the history of the organization of the Church and of the men most instrumental in effecting it. Addresses were delivered on "Woman's Work in the Church," by Bishop Hargrove; "Missions," by Dr. H. C. Morrison, Missionary Secretary; "The Church Press," by Dr. E. E. Hoss, editor of the "Christian Advocate" (Nashville); "Education in the Church," by Dr. W. W. Smith, Secretary of Education; "Sunday Schools," by Dr. W. D. Kirkland; "The Epworth League," by Prof. Collins Denny; and "Church Extension," by Dr. Morton, Secretary of the Board, Bishop Granberry, and Bishop Galloway. The sum of \$18,768 was subscribed during the meetings for Church Extension.

III. Colored Methodist Episcopal Church. -A congress representing this Church was held in Atlanta, Ga., Nov. 14 and 15, at which papers were read by the bishops and others, discussing the interests of the Church and various questions relative to the welfare of the colored race. Among the subjects of the papers were "The Relations of Methodism to Society, its Influence on the Moral and Civil Status of the Negro Race"; "The Papacy and the Negro Race"; "The Debt of Methodism to Woman"; The Cause of the Origin and Growth of the Colored Methodist Episcopal Church in America"; "Methodism as a Factor in Education and the Influence of its Literature"; "The Itinerant Sys tem": "The Relation the Colored Church should sustain to the Temperance Cause"; "The Character and Influence of the Negro Pulpit"; "Africa as a Missionary Field for the Colored Church": "Religious Proclivities and Possibilities of the Negro Race"; "What the Bible has wrought for the Negro Race": "The Moral, Social, Material, and Intellectual Development of the Negro Race," and others more general.

IV. American Wesleyan Church.—The fourteenth quadrennial session of the General Conference of the American Wesleyan Church was held at Fairmount, Ind., beginning Oct. 16. The Rev. N. Warder presided. Nineteen annual conferences were represented by delegates The Pacific Conference had become defunct but a new conference had been organized on the Pacific coast, known as the Willamette Conference; its delegates, however, were not present An overture was sent down to the annual conferences, making it unlawful to receive into the Church persons who used tobacco. A paper favoring such a change in the Book of Discipline as, modifying the prohibition against membership in secret societies, would admit members of "minor" bodies of that class to communion in the Church, was pronounced unfavor ably upon by the committee to which it was referred; but there being a general desire in the conference that it should commit itself again or the subject, the paper was reported, whereupon it was rejected, and the conference expressed its determination that the prohibition should stand. A report was made concerning the introduction of the work of the Church into the State of South

Carolina and its progress there, V. Methodist Church of Canada. — This embraces eleven annual conferences, viz, the Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick and Prince Edward Island, Newfoundland, Manitobs and Northwest, British Columbia, and pan Mission Conferences. They record to the part of the presence of the part of the presence of the part of the pa Mission Conferences. They return in all ial (or probationers), 3,312 Sunday schools, ith 32,039 officers and teachers and 255,887 is, and 66,774 members of young people's pupils, and 60,774 members of the Church accieties. The number of members of the Church d probationers (267,740) shows a gain of 6,787

during the year.

Three thousand three hundred and twelve day schools are returned, with 32,039 officers d teachers, 255,887 pupils, and an average at-sdance of 174,107.

VI. The Wesleyan Connection (British),e following is the general summary of the tistics of the British and affiliated conferences of this denomination :

MELDS	Mem- bers.	the brief.	Minio ters.	On trial.	Super- troner- artes.
Great Britain	487,799	80,000	1,648	159	300
freind and Irish missions	25,441	7179	176	77	33
French Conference	1.450	87	27	6	9
South African Conference	41,755	17,142	1,042	25	20
West Indian Conference.	45,443	2,792	77	29	8
Funda missions	40,979	9,569	267	97	14
Totals	504,781	50,500	2.742	871	858

These returns do not include the ministers members of the Australasian Wesleyan Methodist Church or the Methodist Church of la, which are not under the jurisdiction of

the British Conference.

The fifty-fifth report of the Committee on nation showed while the educational work s usually maintained with an expenditure of £35,000 a year raised by voluntary contribu-tions, the special requirements of the departnt in the past year in the way of structural alterations and improvements had necessitated the expenditure of £62,656. The official returns showed that the number of day-school departments under the direction of the committee was 800, the whole number of pupils 173,176, and the income of the schools £253,190.

Committee of the Fund for the Extension of Methodism in Great Britain reported that grants and loans to the extent of £4,706 had en made during the year, and that it had received from various sources £1.370. The fund was formed to promote the building of 1,000 chapels. This number has been exceeded. The annual meeting of the Wesleyan Mis-

sionary Society was held in London, April 29. The total income of the society amounted to £125,900, while the debt-accumulated during several years—stood at £30,478, toward the removal of which £1,546 had been received. An increase was reported of 2,002 members in the mission fields, with 9,105 persons on tran " .

membership.

The receipts for home missions were let at the as having been £36,363. Encouraging top etwere presented from the missions in lacidic Hirmingham, Manchester and balford, Lave

pool, Hull, Leeds, etc.

The Wesleyan Conference met at Plannight July 23. The Rev. David J. Waller, 1 11, was chosen president. A revised Covenant between submitted by the committee which had been atpointed to consider that subject, was remitted to the district syncels at their meeting in May for consideration. On the question of the extension of the term for which a minister can be appointed to the same station, the conference declared its adhesion to the three years' limit as a general rule, but recognized that there were cases when an extension of the term of service, "under careful regulations and restrictions, might be advisable. It found, however, that the present method of extending the time was very inconvenient. It therefore appointed a special committee to consider whether a natiofactory solution of the difficulty can be reached without an appeal to l'arliament, and, secondly, if such an appeal to Parliament be deemed necessary or desirable, to suggest the form in which it should be made, and prepare, for the information of the people of the Church, a statement of the nature of the proposed change and the reasons why it was proposed. A report of a committee favoring the admission of woman representatives to the conference was laid upon the table after considerable debate. The following minute was adopted as expressing the sentiment of the conference concerning educational policy:

1. The conference repeats its declaration that the primary object of Methodist policy in the master of elementary education is the establishment of ordinal boards everywhere, acting in districts of sufficient area, and the planing of a t briefian unsertarian actional within reasonable distance of every fame. of special importance in the sural districts, where our people have no alternative to the compulator attendance of their children at Anglican wheels.

2. There should be no increased grants of public funds, either from the local rates of from the importal taxes, in deponinational whomis, unless that increased grant is accompanied by adequate and representative

public management

That the rate mail evetem of education which shall exclude from the day without the Biline and religious instruction therefore he the teachers ruled to the capacities of the lifes will meet the nonmolities of the COMPLET

4 true t concer cal transcop colleges about the maintained in the vigor and officerancy

h. With respect to over a manufarmal day arthreds the resisterence represents to other declared series of the great services they have rendered to Methendism and to the earrest career of national Christian education, and it emphasizes their special importance in these walten where it is impressible to establish actional to gride a ting in districts of sufficient area and having under their courted Christian unsectarian schools.

The Educational Committee were authorized. if they should think fit, to co-operate with represcriptures of other nonconformist churches in giving effect to the policy of the conference, and to such resolutions as might be agreed upon in the special committee. To resolutions respect ing church membership submitted by the South

African Conference the conference replied adversely to recognition in relation to church membership of any diversity of administration as between persons of different races or color.

A committee appointed by the conference of 1894 to consider the steps that should be taken in order to retain larger numbers of youths in the Church recommended a scheme for the formation of the "Wesley Guild." The report was referred to the district synods. The Privileges Committee reporting that they had waited without result upon the Prime Minister and the leaders of the House of Commons in the previous Parliament with representations of the inconveniences nonconformists were suffering with respect to burials, marriages, and other matters, another deputation was appointed to continue and press the representations. A report on concerted action among the Methodist churches of Great Britain affirmed its desirability, and recommended for submission to the several conferences-

That a united committee be annually constituted by the appointment of representatives by the several conferences for the purposes of mutual defense in the conterences for the purposes of minim deries in the following proportions, viz.: Wesleyan Methodists, 16; Primitive Methodists, 8; United Methodist Free Churches, 6; Methodist New Connection, 4; Bible Christians, 4; Wesleyan Reform Union, 1; Independent Methodists, 1. That it is desirable that a Methodist yearbook be regularly published, and it is re-ferred to the united committee to consider if this be practicable; that wherever practicable a united meeting of the ministers and an equal number of the representative members of the various Methodist churches be held once a year for devotion, fellowship, and counsel; that wherever practicable a united Methodist love feast be held annually on a Sunday after-neon; and that Whitsunday, when other arrange-ments will allow, be chosen for the purpose as com-memorative of the Pentecostal descent of the Holy The committee express the belief and hope that the better understanding which now prevails between the different Methodist churches will issue in the avoidance of the unnecessary multiplication of chapels, especially in small places, and recommends the several conferences to direct their respective chapel committees to correspond with one another to promote this result in the case of local difficulty and disagreement that may arise.

A resolution was adopted favoring union of all parties and denomination to promote new, unpolitical legislation relative to the drink traffic.

VII. Colonial Wesleyan Methodist Churches,—The statistical reports of the South African Conference give it 200 traveling preachres, 2,394 local preachers, 58,897 members, 428 Sunday schools, with 2,169 teachers and 28,500 pupals, 562 churches, and 1,611 other preaching places.

The West Indian Conference returns 111 traveling preachers and 51,125 members.

The Australasian Wesleyan Methodist Church returns 630 traveling preachers and 94,407 mem-

VIII. Primitive Methodist Church.—The statistical reports of this Church, presented to the conference in June, showed that the present number of members was 196,324, an increase for the year of 593; of class leaders, 10,595; of local preachers, 16,728; of connectional chaples, 4,622; of adherents, 604,100; value of connectional

property, £3,708,143, against which stood an indebtedness of £1,077,826.

The Sunday schools numbered 4,379, with 62,066 teachers and 462,856 pupils, or 6,525 more

nan in 1894.

The annual meeting of the Primitive Methodist Missionary Society was held in London, May 28. Mr. Edwin Robson, of Hull, presided. The total revenue for missionary work had been £32,778, the total ordinary receipts having been £16,383; the receipts on account of the African fund, £3,731; money raised by the home missions and appropriated locally, £10,953; and money raised by the African missions and appropriated locally, £1,710. Nine home mission stations had become independent stations, reporting 1,357 members. The society had 6 missions in London, 31 in the provinces, 4 in Wales, 2 in Scotland, and 3 in Ireland, with an aggregate membership of 5,625, showing an increase during the year of 221. The African mission included 6 principal stations and 20 out stations, 8 European ministers, 3 native ministers, 6 native assistants, 40 native local preachers, 48 class leaders, and 1,040 church members, all total abstainers. An increase for the year of 76 members was shown.

The conference met in Edinburgh, June 13. The Rev. John Watson was chosen president. The Joint Committee on Union of the Primitive Methodists and the Bible Christians reported as the conclusion arrived at in the two meetings that had been held during the year, that there were so many features in which the two churches were alike that in the event of union neither would be required to make any perceptible change, while in other respects slight differences existed which could easily be adjusted. serious differences were very few. As the name of the Church, in case union was carried out, the committee suggested "Presbyterian Methodist Church" or "Methodist Union Church." Resolutions were adopted approving of organic union as an ulterior object to be sought among all the "minor" Methodist bodies. Arrange ments were made for enlarging Manchester College.

IX. United Methodist Free Churches.—
The summary of the statistical returns of this body, as presented to the annual assembly in July, is as follows: Number of itinerant ministers, 435; of local preachers, 3,371; of leaders, 3,378; of members, 80,149; of persons on trial for membership, 9,304; of chapels, 1,401; of preaching rooms, 246; of Sunday schools, 1,376, with 25,800 teachers and 206,783 pupils. An increase for the year of 1,236 was shown in the number of members. During the year 8,500 persons had been admitted to membership.

Reports were made in the assembly concerning the operations of the book room, the Chapel Relief and Loan funds, Ashville College, and the Theological Institute. Promises of £15,000 had been obtained toward £20,000 to build and endow a theological college.

The report of the deaconesses work showed that it had grown in the confidence of the Connection, and was well and universally supported.

The expenditures had been £979.

The thirty-eighth annual meeting in behalf of the home and foreign missions was held in

London, April 23. The report mentioned a slight increase in the membership of the home sions, on which £2,320 had been spent during the year. The question of Methodist union in the Australian colonies had again engaged the attention of recent conferences, and resolutions had been adopted showing its urgency and sugresting methods for bringing it about. The bome assembly would give its hearty sanction to colonial union on liberal lines of policy. The mission in Jamaica had been affected by ommercial depression, that in Central America veivil disorder. The prospect in Sierra Leone res encouraging, and the local income included number of subscriptions from local chiefs. The year had been one of great peril to the mission on the Tana, East Africa. In China, the work at Wenchow had been eminently satisfac-tory. The mission staff at the foreign and col-onial stations consisted of 72 missionaries and 41 local preachers and native helpers, with 512 leaders, 10,806 church members, 2,483 on trial, 307 chapels and preaching places, and 11.684 pupils in the Sunday schools. The whole numr of home and foreign members was 78,913, The total income had been £21,004, and the exditure £21,172.

The Annual Assembly met at Norwich, July 9, The Rev. W. R. Sunman was chosen president. A scheme for the religious and denominational instruction of the young people of the churches, was adopted. It provides for the object mentioned, together with the oversight of Christian Endeavor Society junior classes and Christian Bands, establishes a system of regular instruction and examination, and contemplates competitive essays on given subjects. Counsel to whom the question had been referred whether estead of the nomination of the district members of the connectional and assembly commites in open assembly, as was now the practice, selections could not be made at the district meetings in May, subject to approval by the assembly, decided that under the "foundation "the assembly could not relegate its right of appointment to any other meeting. This, however, did not affect the validity of first nomination by the district meeting. It was decided that the district meetings should in future nom-

X. Methodist New Connection.-The statistical returns of this body, presented to the conference in June, give the totals of chapels, 544; ministers, 203; local preachers, 1,193; members, 32,073 (year's increase, 5); members on trial, 4,834 (increase, 90): teachers in Sunday chools, 11,000, with 84,500 pupils. While a large number of the circuits returned an ine in membership, it was neutralized by a falling off in others, chiefly in the Irish and

inate, while the final decision and the right to add to the list should be reserved to the assem-

sch to uniformity in usage, was approved.

A code of circuit rules, for a nearer ap-

foreign missions. The income for Foreign Missions, £4,694, fell hort by £100 of meeting the expenditure. Of the Centenary fund, to which £48,282 had been promised, more than £17,000 had been raised and paid in the circuits for local objects, and the treasurer had received £1,322 for Connec-

tional funds.

bly.

The conference met in Halifax, June 10. The Rev. George Packer was chosen president. A revision of the rules, appointed to be made every seven years, was acted upon. All protomals to change the title of the Connection were rejected. Provision was made for the visitation of alesentee members; the principle of representation in leaders' meetings in propertion to the num-ber of members was affirmed, and women were declared not barred from becoming members of such meetings; it was ordered that the absolute time limit of a minister's stay in a circuit five vears) be so modified that a minister in special cases of need and by special sanction of the conference may remain longer, year by year, indefinitely. Some new regulations were made concerning the relations of the Christian Endeavor societies and the class meetings.

XI. Bible Christians,-The statistical reports of this connection for 1885 give it 294 traveling preachers, 34,037 members, 541 Sunday schools (in England) with 9,295 teachers and 56,200 pupils, and 900 churches and other preach-

ing places.

The total expenditures of the Rible Christian missions for the year had been between £7,000 and £8,000. Good progress was reported at the annual meeting for the home stations. In the Australian missions a total increase of 500 members had been realized. In China, 8 brethren and sisters were working in Hunan, who reported

encouraging progress.

The Bible Christian Conference met at Barnstaple July 31. The Rev. John Thorne, of South Australia, was chosen president. An increase during the year of 600 members was returned. The new missions at home and the vigorous prosecution of the mission in China had compelled greater expenditure, in consequence of which a balance deficit of £763 was returned. The report of the chapel secretary represented that £31,713 had been raised during the year for church building purposes, while £3,000 had been borrowed; but £6,108 of debt had been paid off, Since the death of James Thorne, in 1871, £536,-226 had been raised for this work. Reports were made of Shebbear College for town and Edgehill College for girls. A report was pre-sented by a Committee on Union with other "minor" Methodist churches, which, as adopted, approved of union, as a oght by a resolution passed by the Primitive Methodist Conference (see " Primitive Methodist Church "), but suggested that it would have been better if a basis of union had been first agreed open between the Rible Christian and the Primitive Methodist Churches, seconded the recommendation of a policy of neutral intercourse for making the two proples better acquainted with each other; and provided for the appointment of a committee to deal with the whole question. The evenent of the conference was given to projected movement for the union of the Australasian Methodist churches, to which the colonial Bible Christian Church will be a party. The resolutions adopted by the Committee of Methodist Churches which met in London, April 16, contemplating concerted action on certain public questions affecting the interests of these churches were approved, and representatives of the Bible Christian Church were appointed to the committee. A whole day

of the conference session was devoted to the celebration of the one hundredth year since the birth of James Thorne, one of the founders of the denomination, Sept. 1, 1795. The General Committee was instructed to prepare regulations for admission of women into Church courts, and to lay them before the next conference.

XII. The Wesleyan Reform Union reports 349 traveling preachers, 579 local preachers, 7,992 members, 175 Sunday schools with 2,908 teachers and 21,183 pupils, and 202 churches and

other preaching places.

XIII. The Independent Methodist and Free Gospel Churches have 349 traveling preachers, 7.534 members, 124 Sunday schools with 2.470 teachers and 22,489 pupils, and 131

churches and other preaching places.

MEXICO, a federal republic in North Amer-The Senate consists of 56 members, 2 from each State, elected indirectly for four years, and the House of Representatives of 227 members, 1 to 40,000 inhabitants, elected for two years by direct suffrage. The President is elected by an electoral college for four years. The President for the term ending Nov. 30, 1896, is Gen. D. Porfirio Diaz. The President's Cabinet, consisting of secretaries of state whom he may appoint and remove at will, was composed in 1895 as follows: Foreign Affairs, I. Mariscal; Interior, Gen. Gonzalez Cosio; Justice and Public Instruction, J. Baranda; Fomento, Fernandez Leal; Finance and Commerce, J. I. Limantour; Communications and Public Works, Gonzalez Cosio; War and Marine, Gen. P. Hinojosa; Treasurer, F. Espinosa.

Commerce and Production.—The chief products of Mexico are silver, lead, gold, copper, cinnabar, iron, tin, onyx, and other metals, ores, and minerals; heniquen and other fiber plants; coffee; cotton; tobacco; oranges and other fruits; wheat and corn; mahogany, ebony, rosewood, orchil, sarsaparilla, and other woods and forest products; and cattle and horses and animal products. The commerce with different countries for the year ending June 30, 1894, was

as follows, in Mexican dollars:

COUNTRIES.	Imports.	Exporta.
United States Great Britain France Germany Belgium Spain Other countries	\$14,852,000 5,755,000 4,859,000 2,656,000 830,000 1,949,000 556,000	\$60,660,000 11,596,000 2,437,000 2,839,000 401,000 554,000 856,000
Total	\$80,257,000	\$79,843,000

The values of the principal exports were: Precious metals, \$46,484,000; coffee, \$11,766,000; hengthen, \$6,719,000; hides, \$2,256,000; timber, \$2,073,000; copper, \$1,980,000; tobacco, \$1,755,000; vanilla, \$1,184,000; ixtle, \$942,000; guin.s, \$802,000.

During the fiscal year 1893-'94 there were 8,958 vessels entered at Mexican ports, of an aggregate burden of 2,937,996 tons, of which 3,628 were steamers, of 2,589,768 tons. The total number of vessels cleared was 8,919, of 2,889,588 tons, of which 3,547 were steamers, of 2,540,043 tons. The merchant navy numbers 260 vessels, of which 47 are steamers.

Communications. — There were 6,284 miles of railroads in operation in 1895. All the principal lines are now completed, but branch lines are in progress. The bridges and other permanent works on the Tehuantepec line, built by the Federal Government, are about completed. The length of new railroads under construction is 6,914 miles.

The number of domestic letters and postal cards that passed through the post office in 1894-'95 was 126,211,715; the number handled in the international service, 24,612,803. The postal receipts were \$1,358,348, and expenses \$1,268,354. Internal postage rates have been reduced, and the money-order and parcels-post services

are being extended.

The telegraphs in June, 1895, had a total length of 39,193 miles, of which 26,152 miles belonged to the Federal Government and the rest

to individual States.

The Army and Navy.—The military forces consist of the active army, its reserve, and the general reserve. The strength of the active army on the peace footing in 1895 was as follows: Infantry, comprising 30 battalions and as many cadres, 3 auxiliary battalions, 1 battalion of pioneers, and the invalid corps, 1,293 officers and 22,437 men; artillery, comprising 4 battalions of 6 batteries each, 1 battalion of fortress artillery, and 1 squadron of train, 184 officers and 2,120 men; cavalry, comprising 13 regiments, 1 corps of gendarmes, 6 auxiliary troops, and 9 divisions of rural guards, 793 officers and 10,276 men; total effectives, 2,270 officers and 34,833 men. The peace effective, including the reserves, is 60 general officers, 3,600 field officers, and 45,000 men, with 7,000 horses and 3,000 mules. The war effective is about 165,000 men.

The fleet consists of 2 avisos, 2 old gunboats, and 1 school ship. There are building 5 first-

class torpedo boats.

Finances.—The revenue of the Federal Government is chiefly derived from import duties, internal-revenue duties, stamp duties, and the Federal contribution, which is an additional duty levied on all taxes collected by the States. The States levy excise duties and direct taxes. The budget of the Federal Government for 1895-'96 estimates the total revenue at \$44,747,000, of which customs produce \$20,475,000; the Federal contribution, \$1,650,000; direct taxation, \$1,460,-000; posts and telegraphs, \$1,775,000; the mint, \$1,100,000; stamps, \$15,624,000; tax on public salaries, \$1,050,000; and other sources, \$1,613,-000. The total expenditures are estimated at \$44,947,522, of which \$1,005,638 are for the Legislature, \$50,977 for the Executive, \$478,171 for the Supreme Court, \$493,994 for foreign relations, \$2,607,391 for the Interior Department, \$1,552,828 for justice and education, \$5,527,536 for financial administration, \$13,513,000 for the external debt, \$4,227,844 for the internal debt, \$4,605,639 for communications and public works, and \$10,268,334 for the army and navy.

The public debt on June 30, 1894, consisted of \$103,438,000 of foreign loans (bearing 6-per-cent. interest mostly), and \$65,821,470 of interest-bearing internal obligations and \$18,144,051 bearing no interest. The burden of the foreign debt has doubled since the decline in silver, the cost of exchange amounting to as much as the former

inual interest. The low price of silver has timulated production and imports and the ex-portation of other things besides Mexican dolortation of other things besides Mexican dol-are. The export demand for ores has caused a evival in the mining industry, while the culure of coffee and tobacco and manufacturing dustries have gained an impetus. Owing to causes, the financial embarrassments of he Government have been nearly overcome, and he prospect of an equilibrium in the budget is o near that reforms in the octroi system and he removal of the special tax on Government

s are contemplated.

egislation.—The Congress has under contion changes in the Federal Constitution chibiting coinage of money and issuance of r money or stamps by the separate States, also putting an end to tariff discriminabetween the States and conferring on e Federal Government the exclusive right to r or prohibit the transportation of goods, oreign or domestic. A copyright treaty has en concluded with Spain, and a treaty of com-cree and navigation with Belgium. The Mexin Government has proposed amendments to extradition treaty with the United States, siring to have the legal proceedings necessary or extradition simplified and shortened, and to ind each of the contracting parties to deliver pits own citizens when guilty of crimes against e peace of the neighboring republic. Atten-on has been given lately to sanitary legislation. utions have been taken especially against introduction of cholera and yellow fever, and he States have been urged to establish hospitals or the isolation of patients suffering from con-agious diseases. As a result of recently adopted reventive measures the public health is under-coing a marked improvement. The benefits acemplished by the national pawnshop are so rent that its action will be extended.

Indian War .- In the southern part of Yucaas, bordering on British Honduras, is a district d by the Maya Indians, on which white bave settled. The Mexican Government s confirmed their rights and defended them minst the aborigines. In 1895 the Mayas equired a large quantity of arms with the in-ntion of forcibly regaining their hereditary ossessions. In August 500 of them left Bacar to invade the disputed district. Several ly skirmishes occurred between them and Mexican soldiery, and the Minister of War stened to dispatch troops enough to the spot

k the threatened outbreak.

Colonization of American Negroes.—A lored citizen of the United States, W. P. Ellis, ontracted with a company owning a large tract ar Tlahualila to import 1,000 negroes to farm land. In 1894 he brought 60 colonists with telr families, and all these proved to be exet-cotton planters and industrious agriculturta. In the winter the rest of the colony was cruited in Alabama and Georgia, but no care ras taken by the agents who sent the emigrants get competent persons. When they arrived hey could earn but little and were disappointed nd miserable. A strange disease that broke out lied them with dread. In July 50 of the coloists set out to tramp to their old homes, but ot lost in the Mapimi desert. They were overtaken, but fought their resource before their would return to the plantation. The contracts furnished rations to this band and to others that followed, and shipped them tack to the I tilted States until none were left but the carlicet act tlers-too few to pick the 65,000 acres of cottee,

that had been planted.

The United States Boundary .- An International Boundary Commission that has been engaged in resurveying the boundars from El Paso, Texas, to San Diego, Cal., since July, 1852. finished its work in 1895. The Mexican commissioners were Schor Blanco and Itolores Sanchez, while Col. J. W. Barlow, A. T. Mosman, and Lieut. D. D. Gaillard acted for the United States, Of the stone monuments erected by Col. Emery's commission in 1849-'53 some had disappeared and some that still stood were found to be out of place. In the agreement for a new survey made by the two governments in 1888, it was stipulated that property titles should not be affected by any corrections in the line. An error was found in New Mexico that transfers 40 square miles from Mexico to the United States in New Mexico, Another gives to Mexico 60 square miles in the lower part of the Colorado desert. The new boundary runs through the main business street of the town of Nogales. The commission replaced the 52 early boundary monuments and erected 256 more. A second commission began early in 1865 the survey of the boundary line along the Rio Grande, from El Paso down to the fiulf of Mexico.

MICHIGAN, a Western State, selmitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,367 in 1840; 397,654 in 1850; 749,113 in 1860; 1.184. 059 in 1870; 1,696,937 in 1880; and 2,093,889 in 1890. By the State census of 1894 it was 2,241,-

454. Capital, Lansing.

Government.-The following were the State officers during the year; Governor, John T. Rich; Lieutenant Governor, Alfred Milnes, who resigned May 31, having been elected to Comgress in April to succeed United States Senatorelect J. C. Burrows; J. R. McLaughten is the acting Lieutenant Governor, Secretary of State, Washington Gardner, Treasurer, James M. Wilkinson; Auditor, Stanley W. Turner; Adjutant General, Charles L. Faton, Superintendent of Instruction, Henry R. Pattengill, Attorney-General, Frederick A Maynard—all Republicans; Railroad Commissioner, Simeon R. Billings; Food Commissioner, C. E. Sterre; Insurance Commissioner, Theron R. Giddings, Land Statistician, Victor C. De Land; Labor Commissioner, C. II, Morse; Fish and Game Commissioner, H. W. Davie; Hank Commissioner, T. C. Sherweed; Chief Justice of the Supreme Court, Charles D. Long, Associate Justices, Claudius B. Grant, Robert M. Montgomery, Frank H. Howker, Joseph B. Moore.

Finances.-Following is a summary of the operations of the Treasury Department : Balance on hand Dec. 31, 1894, \$66,894.24; received during 1895, \$4,075,575,39, Distaired, \$4,079. 850, 76; balance Dec. 31, 1895, \$62,578.87

The Legislature appropriated \$1,500,000 for general expenses of the State Government for

1800 and \$1,171,000 for 1896. Deficiencies left from the appropriations of 1893, which were to be provided for, amounted to \$760,509,39. The total apportionment for taxes for 1895 was

83 013,919.52

Several countres having held back taxes alleged to have been collected and due the State. the State petitioned as a test for a mandamus to compel Bay County to pay its claim, amounting to \$111,549.54. The county alleged that a large sum was due it from the State, and that in 1884 its treasurer erroneously accepted \$95 in settlement, when the full amount due the county was very much larger. The case was settled in favor of the State by the Supreme Court.

Census Returns.-Besides the statistics of population given by the census of 1894, summarized in the "Annual Cyclopædia" for that year, it has afforded other details, showing the growth of industries and production given in bulletins issued by the Secretary of State in 1895.

Under the census law every establishment of productive industry, including mines and fisheries in which the value of the products amounted to \$200 or over, was to be reported. The total number of industrial establishments of all kinds reported is 8,812; capital invested. \$251,356,205; value of materials used, \$125,743,-139; value of productions, \$237,857,772. The average number employed is: Adult males, 146,-153; adult females, 15,659; boys, 3,482; girls, The total wages paid during the year is reported at \$60,188,142; the average daily wages paid to skilled mechanics, \$1.99; to ordinary laborers, \$1.20. Compared with the census re-turns for 1884, there is an increase of 88 in the number of establishments, of \$72,514,481 in the capital, of 17,226 in the number of males, and of 7.374 in the number of females employed, and of \$9,434,365 in the wages paid. The number of children employed as returned for this census 1s 2,489 fewer than in 1884.

No farm of less than 3 acres was reported in the census unless \$200 worth of produce was actually sold from it during the census year. The number of acres of farms in the State is 15,296,078, or 42 per cent, of the total land area. In the upper peninsula they constitute 5 per The number of farms reported is 178,051. The average size is about 8:46 acres less than in 1884. An average of 67:86 per cent. of the total area in farms is improved. The area in farms the trased in the four years from 1880 to 1884 1 1144 test serve, or more than 21 times the inthe ten years from 1884 to 1894. The \$528,249,503, compared reas entire line 1, 1894, are as follow: Total man ; ... local in farms, 212,070,373 gallons; value ! all and cream sold from farms. (297) 255 to the made on farms, 48,951,378 For decision and on farms, 206,660 pounds.
The number of larkens in the State June 1, 1*24, **aa 7 102,007, turkeys 273,578; geese, 75,-146, docks, 125,510

The menter of a result haver moved was 911. 600, and of mead we other than clover, 1,351,477. The yield of closer has was 1,225,185 tons, and of meadows other than clover, 1.717.672 tons. The number of silos June 1, 1894, was 501, with a capacity of 52,846 tons. The number of acres of corn raised for silage in 1893 was 7,259.

The number of births in the year ending June 1, 1894, is returned at 59,889, an increase of 11.37 per cent, compared with the number in the year ending June 1, 1884. The number of births was 26.7 to each 1,000 inhabitants. To each 100 female children the number of male children was 108.

The proportion of the native population who

become parents is about one fourth less, and of the foreign born one ninth more, in the cities

than in the country.

The total number of illiterate persons ten vears old and over is returned at 95,037, of whom 70,772 can neither read nor write, and 24,265 can read but can not write. By the State census of 1884 the total was 111,213. The proportion of native-born illiterates is 21 in each 1,000, and of foreign born 84 in each 1,000.

The total male population aged twenty-one years and over (voting ages) in the State is 651,-920, of whom 34,545 can not read or write.

State Institutions.—A large appropriation was made this year for the new insane asylum at Newberry. It is desired to erect 8 more buildings within the next two years. On the recommendation of the Board of Corrections and Charities, the law under which private asylums are authorized to maintain certain inmates as State patients was so amended as to require State inspection as to the treatment and care of such patients before bills for their maintenance are allowed.

The number of criminal insane at Ionia was 196 at the close of the biennial period, and the average population for the term 184. During that time 102 were admitted, of whom 9 were

women.

Since the opening of the State public school, in 1874, nearly 3,700 children have been received. There are now about 200 at the school, and 1,350 boarded or placed in families and under its supervision.

The State Home for the Feeble-minded and Epileptic, at Lapeer, was declared ready for the

reception of patients in August.

There were 570 inmates at the Ionia prison in May. From July 1, 1894, to March 1, 1895, the furniture factory at the institution yielded a profit of \$17,600.

Education,-An abstract of the report of the President of the University of Michigan to the Legislature gives the following figures: For the year ending June 30, 1893, the receipts were \$348,753.08, and the disbursements \$375,986.68. For the year ending June 30, 1894, the receipts were \$445,801.01, and the disbursements \$387, 789.11; which, after covering the deficiency of 1893, left a balance of \$44,731.34.

In the literary department 990 Michigan students have paid \$28,015 in fees this year, and 521 nonresidents \$22,738. In the medical and surgical department 191 Michigan students paid \$6,240, and 183 nonresidents \$8,770. In the law department 215 students of Michigan paid \$7,270, and 443 nonresidents paid \$22,340. In the pharmacy department 35 Michigan students paid \$1,205, and 42 nonresidents paid \$2,295. In the homoeopathic school 10 Michigan students paid \$400, and 7 nonresidents \$340. In the dental department 102 Michigan students paid \$3,520, and 80 nonresidents paid \$3,905.

The university graduated 692 students.

The State Board of Agriculture took action in June on the subject of student labor at the Agricultural College, declaring that the system of labor provided for in the organic law of the institution includes all students enrolled, whether regular or special, summer or winter; and that in the assignment of labor no special line of work done for any attaché of the college or for any department of the college shall be allowed to be substituted for manual labor in the regular course, unless such labor shall be considered by vote of the faculty of the college equally valuable with the regular required labor in subserving the cardinal purpose of the institution.

The Legislature of 1895 provided for farmers institutes in every county desiring them.

State Lands.—The Land Commissioner's re-

State Lands.—The Land Commissioner's report shows that the State holds 429,889-23 acres. The department disposed of 9,939-24 acres the past year for a consideration of \$24,790.96. The report says: "During the year there has been collected \$6,153.07 on account of trespass on State lands."

Insurance.—The total amount of premiums received in Michigan during 1894 was \$4,530,-273,91. The losses incurred were \$2,035,112.87. The amount of premiums received was \$215,000 less than in 1893, and the losses were \$1,371,-

304.55 less.

One company has been ordered to discontinue business, and 4 have been authorized to do business in the State, and many mutual companies to do business throughout the entire State.

The report of the life companies shows that the total number of regular or level premium life companies doing business in the State during the year was 39, being 2 in excess of the number for the year previous. The business transacted by these companies was as follows: Policies issued, \$31,775,353: policies in force at the end of the year, \$124,363,286; premiums received, \$4,296,070: losses incurred, \$1,146,367.

The question of a physician's obligation to testify came up in a suit at Battle Creek to annul a large policy on the ground that the applicant had misrepresented his physical condition. The physician who treated him refused to testify or answer any questions, on the ground that a physician's relations to his patient are sacred, and that he could not be compelled to testify in regard to the ailments with which his patient is afflicted. The attorney held that this was true so far as related to personal matters, but that under the new State law physicians could be compelled to testify in regard to any question relating to public matters or that affected other persons. The judge ruled that the physician must give his testimony.

Savings Banks.—The savings deposits in the State Dec. 19, 1894, were \$35,939,957,25, an increase of more than \$3,500,000 over those of the year preceding. Of the Central Michigan Commercial and Savings Bank, which failed in 1893, the Commissioner says: "The total assets turned over to the receiver May S, 1893, as \$862,683,95. Of this amount the receiver has collected \$422,818.89, and from this amount.

under the direction of the Commissance Lee Lee as declared 5 dividends. The cashier of the talk charged with making a false statement in the report, was acquitted in February 1882.

Labor Interests. The twelfth antical re-

covers the year 1894. It save:

The conditions surrounding the industrial propertion of Michigan have been entirinally changing through the year 1894. A very large properties of laborers have found employment quint editin at vague reduced from those of two years ago. The reduced cost of most of the necessaries of life has so far jurily compensated for reduction in wages. Statistics of the treatment of the percentage of farms worked by owners in decreasing and the percentage of farms worked by renders in increasing. The bureau has detected factory inspection in Michigan since Sept 1, 1892. Nearly bits of factories have been inspected. Over 101 factories have been ordered on factories more than two atories high, and a very large proporties of them have been constructed. A large number of "blowers" for dust-creating machines have been preceded.

A great strike was on at Ishpeming and Negaunce in the summer, about 5,000 miners having quit work. By early September the situation had become so serious that troops were called for, several companies were sent by the Governor, and the works were started again under protection of the militia. By the end of the month as many as 2,000 of the strikers were taken back to work, the leaders, who were well known, being discriminated against.

Legislative Session.—This began Jan 8 and ended May 31. On joint ballet there were 99 Republicans and 1 Democrat. The candidates for the office of United States Senator, made vacant by the death of F ft. Stockbridge, and temporarily filled by John Patten, Jr., were Julius C. Burrows, Schuyler S. Olds, John Patten, Jr., Jay Hubbell, and S. M. Stephenson. Mr. Burrows was elected, receiving 70 votes on the second ballot in the caucus. Senator Mc-Millan was re-elected.

The Legislature passed 260 general acts. The Governor vetoed 22 bills, among them one providing for an interchangeable mileage book, passed at the solicitation of the commercial travelers of the State. It was to compel all railway companies to sell such tickets and to receive them, except such as have in their charters provisions conflicting therewith. Among bills passed was one providing a blanket charter for cities of the fourth class, each of which has the privilege of voting on the question of excepting it.

Several laws were made in reference to schools, among them the following:

Qualified viters at school meetings must be citizens of the United States. Prevens qualified to vote on questions involving the raising of memey by a tax must own property that is assessed for school taxes. The minimum length of the school year increased from three is five months. In addition to the qualifications formed very who are not the positions for warm of age and over who are not cultimate can legally be granted to persons twents out avers of age and over who are not cultimated the first of the States. The State Board may indoorse out of a commission of the limited States. The State Board may indoorse continuous able discourse are spread, and the messas of provision. Trustees must provide United States flags for school buildings. Attendance at school is mode

compulsory between the ages of seven and sixteen in cities, and eight and fourteen in the country, for four menths in the year. Habitual and incorrigible truante may be committed to the public school at Adrian or at Lansing. Tuition is not to exceed the average and per capita more than 15 per cent.

A number of amendments were made to the general tax law, one forbidding the recording of a deed until a certificate is presented showing that there are no tax liens or titles held by the State or by any individual, and that all taxes have been paid for the five years preceding the

date of the instrument.

An important act was one relating to lobby-It provides that every person, or private or ing. public corporation, employing agents or counsel shall cause them to be registered in a docket, kept by the sergeants at arms for such purpose, with his or her address, and the bill he is interested in, and no person shall be allowed to appear before any committee unless his name appears on the docket.

Within thirty days after the adjournment of the Legislature a detailed statement of all expenses paid or incurred in connection with the employment of legislative counsel or agents must be filed with the Secretary of State.

Petitions were sent in asking that an amendment authorizing prohibition be submitted to the voters, and a resolution to that effect was introduced. Amendments of the liquor law were proposed-one to provide for the recovery of actual and exemplary damages, and one by the friends of the liquor interests for a uniform \$400 tax law, instead of the existing law of \$300 for sale of malt and \$500 for that of spirituous liquors. A uniform tax of \$500 was imposed.

Among the laws affecting elections was the "antifusion" law, forbidding the name of a candidate nominated by two or more parties from appearing more than once on the official The constitutionality of this law was ballot. questioned, and a test case was brought before the Supreme Court, which decided in favor of the law. The candidate may choose the ticket he prefers; in default of notice from him, he is to be entered as the candidate of the party first making the nomination.

The temporary office of State tax statistician was created, extending to March 1, 1897. The bill was so modified as to make the continuance of the office depend upon the next Legislature.

The newspapers of the State asked for changes in the libel laws, and changes were made, though but to the extent desired.
A "gure-food" law was enacted.

A new factory-in-spection law retains the imterrant parts of the law of 1893 and includes warm new features. The employment of childeep up he forteen is forbidden.

Hele affecting the prisons were introduced, and the light conviction, as practiced in some edder states was adopted. If a convict has were all a f has been or the minimum sentence for his offer with Governor may release him on pands, on recommendation of the prison authorities, to go to a place of employment engaged in advance, where he is to stay till his sentence expires, unless ordered back to prison.

A fall providing for capital punishment on conviction of murder in the first degree by means of poison or in perpetrating or attempting to perpetrate rape, arson, robbery, or burglary, passed the Senate, but failed in the House by a vote of 47 to 47.

A bill for free text-books was voted down,

was also a proposition to submit a constitutional amendment giving suffrage to women. One requiring voters to be able to read the State Constitution in the English language passed both

The statute relative to divorce was amended so that no decree shall be granted unless th parties have lived in Michigan at least one year preceding the date of the application, or unle the parties were married in the State and had lived there since. If married in another State, they must live in Michigan two years before decree is granted. No testimony is to be taken in the case until four months after complaint has been made, except in case of desertion. provides that as soon as a divorce is granted the parties may marry again.

Manitou County was divided, part of the islands being added to Grand Traverse County

and part to Leelenaw County.

Acts were passed for the better protection of

the estates of minors.

A joint resolution was passed urging the Michigan members of Congress to do all in their power to have Congress give the island of Mackinae to Michigan for a public park. It was so given, and commissioners were appointed by the Governor to take charge of the park.

A joint resolution was passed requiring the Board of Auditors to determine the amount due on account of salaries paid to State officers who obtained office as the result of the election frauds of 1891 and 1893, and to bring suit to recover.

Other acts of the session were:

Authorizing the Michigan Dairymen's Association to hold a State institute, and making an appropriation therefor.

Enabling the regents of the university to take and hold in its perpetual trust land or other property.

Defining what shall constitute fraternal beneficiary

societies.

Permitting townships, cities, and villages to use the Myers automatic ballot machine at elections.

For regulation of the sale of goods marked "ster-ling," "sterling silver," "coin," or "coin silver." Providing for reorganization of fire and marine in-

surance companies. For a further geographical survey of the State.

Making it unlawful for any corporation or company to abandon any factory or manufacturing establishment in any town, which town has given such com-

pany or corporation a bonus.

Raising the age at which women may marry without the consent of parents or guardians from sixteen

to eighteen years.

Establishing a law uniform with that of other States relative to the acknowledgment of written instruments.

Making it unlawful for delegates to any political convention to be represented by proxy

Providing a per capita tax of one eighth of a cent for the support of the naval reserve.

Directing that in suits for libel the jury shall set arate its verdict as between damages for injuries to feelings and actual damages. Providing for a recompilation of the statutes

Providing for the removal of the homeopathic department of the university to Detroit.

Amending an act relative to the killing of deer making the close season from Nov. 1 to Nov. 15, and

prescribing under what conditions nonresidents may come in.

Providing for the protection of fish.

Making it a misdemeanor for any person to buy, arter, or sell any quall, partridge, or woodcock in Michigan at any season.

Providing a more severe penalty for cheating, ob-

Establishing a State normal school at Mount Pleas-

Placing building and loan associations under the supervision of the Secretary of State.

Providing that all the assets of any insolvent per-

on except the \$250 reserved against execution shall

be considered attachable.

Reincorporating Bay City and Muskegon, and in-corporating the city of North Muskegon. Regulring foreign corporations doing business in

Michigan to pay a franchise fee. Establishing a permanent weather service.

Many of the acts were not signed by the Governor until after the adjournment; and it was the opinion of the Attorney-General that those so signed which had passed previously to the last five days of the session were, according to the Constitution, void. If sustained, this would have overthrown many laws which had been signed under similar circumstances by other governors and had been accepted as valid. The question came before the Supreme Court in a case brought by the city of Detroit to compel action under one of the doubtful laws. The court decided that the laws were valid.

Political.-A State election was held April 1, to choose a justice of the Supreme Court and 2 regents of the university. The candidates The candidates for the office of justice were Joseph B. Moore, Republican; John W. McGrath, Democrat; Robbins B. Taylor, Populist; and Myron H. Walker, Prohibitionist. The vote stood: Moore, 189,294; McGrath, 108,807; Taylor, 25,943; Walker, 18,116. The Republican candidates for the office of regents of the university— Roger W. Butterfield and Charles H. Hackley received, respectively, 187,672 and 186,693 votes, and were elected. The other candidates were Charles J. Pailthorp and Stratton D. Brooks, Democrats; George B. Smith and Varnum J. Bowers, Populists; and Noah W. Cheever and Delevan B. Reed, Prohibitionists.

Two proposed constitutional amendments were voted upon. On one, to increase the salaries of State officers, the vote stood : Yes, 50,-063; no, 13,903. On the other, relative to the jurisdiction of circuit courts: Yes, 60,567; no, 97,278. These amendments were voted upon in 1893, but it was found (see "Annual Cyclopædia" for 1894, page 486) that the returns had been

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,936 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State

officers during the year: Governor, Knute Nelson, who resigned after his election to the United States Senate, when the Lieutenant Governor, D. M. Clough, became Acting Governor and Frank A. Day Lieutenant Governor; Secretary of State, Albert Berg; Treasurer, A. T. Koerner; Auditor. R. C. Dunn; Attorney General, H. W. C. 1913. Adjutant General, H. Muchiberg, al. 1842. Beans; Superintendent of Education W. W. Prendergast; Commissioner of Insurance 1 11 Smith; Railroad and Warehouse Commissioner, George L. Becker; Librarian C. A. Collinari Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, William Mitchell Daniel Buck, Thomas Canty, L. W. Calling. Justices Start and Collins are Republicans, the other 3 are Demograts.

State Census,-The census this year was limited to an enumeration of the inhabitante on June 1, 1895, classified as to sex, age, color, nativity, occupation, nationality of parents, length of time in which persons over twenty-ene years of age have resided in the State and have been employed at their regular occupations during the year ending June 1, 1895; and also an enumeration of the soldiers and sailors of the civil was. The result shows that the State has gained 271, 524 inhabitants in five years. The greatest percentage of gain is shown by these counties in the pine forests of the northern part of the State and in the Sixth Congressional District generally, comprising 20 counties in the northeastern part of the State, that district showing a gain of 44 per cent. The agricultural section, embracing the western half of the State and comprising the Second and Seventh Districts, shows a gain of 25 per cent. Following are the results by coun-

The population of Minneapedie by this census 18 197 381, and that of St. Paul 140,292.

Finances.-The report of the Treasurer for the year ending July 21, 1895, shows the receipts to have been \$5,426,985.96, which, with the baance on hand at the beginning of the year.

\$2,085,924,95, gives a total of \$7,522,860.91.
The disbursements amounted to \$5,478,751.55, leaving a balance of \$2,044,109,36. The permanent school fund, invested in bonds, amounts to \$4,918,588,09, and the permanent university fund to \$577,800. The receipts from railroad companies amounted to \$851,394.25; from stumpage on State lands, \$227,712.19; for mineral leases on State lands, \$137,075.60. The receivers or bondsmen of the banks that had State money on deposit when they failed during the financial panic are gradually paying their indebtedness to the treasury, though there was still outstanding in May about \$125,500.

Education.—The school population in 1893-94 was estimated at 450,000. The number enrolled was 337,861, and the average daily attendance 209,307. The number of teachers was

Railroads.-The Bureau of Labor has published figures showing the changes in the relative burden of taxation borne by the railroads in Minnesota from 1870 to 1894. By this it appears that the relative percentage of taxation increased from 1870 to 1885, since which time it has been decreasing. This decrease in the relative amount of taxation took place, notwithstanding the fact that the taxes paid per mile of road in operation increased continuously from 1870 to 1893.

The table includes these figures of taxes per mile: 1870, 41:13; 1875, 54:60; 1880, 71: 1885, 159:32; 1890, 139:85; and 1894, 138:30.

The Duluth-Mesaba Railroad Company was incorporated in September with a capital stock of \$240,000. The object is to build a railroad from Cloquet to the northern boundary.

An important case affecting freight charges was decided in October. Elias Steenerson, of Polk County, began proceedings in 1894 before the Railroad and Warehouse Commission, alleging that the freight charges of the Great Northern on grain from East Grand Forks, Fisher, and Crookston, respectively, to Minneapolis and Duluth were excessive and unreasonable. The commission heard the case and fixed the rate. The commission's rate applied to the entire State, and was: For 5 miles and under, 4 cents per 100 pounds; over 5 miles and not excoveling 10 miles, 4:25 cents; over 10 miles and not exceeding 15 miles, 45 cents; and so on up to 400 miles. The railroad company appealed to the district court.

The court found that the rates fixed by the community were too low to afford a reasonable the in the present value of the railroad that should be

Immigration.—A Northwestern Immigration Convention was held in St. Paul in November. A resolution was adopted to the effect that there be organized a permanent Northwestern immigration board, to be composed of representative men of all the Northwestern States, whose purpose it shall be to awaken interest in immigra-The State association organized with Theodore L. Schurmeier as president.

West Superior.—The mayor of West Superior, Charles S. Starkweather, was impeached. and at the end of a trial that lasted a month was removed from office by a vote of 17 to 1 in the Board of Aldermen. The charges were that gambling houses were permitted to be kept open and saloons to sell on Sundays; that a theater had been allowed to sell liquor without a license; that the mayor received bribes for neglecting to perform his duty; and that money was extorted from appointees on the fire department and police force.

Public Lands.—A dispatch from Duluth,

July 16, says:

Four new towns were opened for entry at the United States Land Office to-day, and there was the liveliest time that has been seen there for many months. The towns are in the valley of the upper Mississippi. In some of them only fractional parts were opened, and in many cases the entries conflict with Indian allot-ments. Most of those who made entries were from St. Paul and Minneapolis. The crush was terrific, and some of the men who went through it were well worn out. One fellow almost fainted, and had to be assisted into one of the offices and given water in order to revive him. Another staggered through the door when his turn came, and leaned against the wall a moment to get strength enough to walk to the desk. Even then he was unable to say a word.

The State still has 220,000 acres to come to it from the General Government. There are still 230 unsurveyed townships in the State.

The school fund is to receive from the Government sections 16 and 36 in the agricultural part

of the Red Lake reservation.

More pine-timber frauds (see "Annual Cyclopædia" for 1894, page 489) have come to light since the change in the office of the State Auditor. They come under 75 permits, covering 608 sections of pine land, on which it is computed there are 304,000,000 feet of pine timber. This land was sold under the pretense that it was in danger of being destroyed by fire, under that section of the law which permits the Auditor to sell the timber on pine lands "when it is liable to waste, and not otherwise." The examiners sent out by the present Auditor report that the timber embraced in these sections is young, green, growing, thrifty pine in no danger from fire. In suits arising out of these frauds, the decision on one in July settles important points in favor of the State.

Legislative Session .- The twenty-ninth ses sion of the Legislature began Jan. 8 and ended late in April. S. R. Van Sant was chosen Speaker

of the House.

The election of a United States Senator to succeed W. D. Washburn was effected after a long contest among the supporters of 4 Republican candidates—Mr. Washburn, Gov. Nelson, and Messrs. Comstock and McCleary. The candi-date of the Democrats was Judge Mitchell, and of the Populists Ignatius Donnelly. Knute Nel-

n was elected Jan. 30, receiving 102 of the 168 ballots cast.

The insurance and banking laws were revised and codified. Important changes were made in the methods to be used by insurance companies. The coinsurance clause is prohibited, and a valued policy—that is, the payment of the face of the policy on a building in case of total loss—is pro-rided for. A clause in the law provides for the acorporation of boards of underwriters and the rganization of salvage corps.

The new banking law adds stringent safe-

uards to those of previous statutes in the manepositors and for the enforcement of strict busi-

methods.

The laws regulating the sale of liquor were nded. The law forbidding sale to minor hildren has been evaded under judicial decins holding that such children might be sent to buy liquor for their parents or other older persons. The new enactment forbids the sale to inors either for their own use or for that of thers, or to a pupil of any institution of learnng. Another amendment is intended to reach the commonly attempted evasion of opening a be quantity, to be left in possession of the merhant, the purchaser removing it a drink at a The granting of a license to sell liquor cutside an incorporated city, village, or borough within 300 feet of a schoolhouse is prohibited.

A large number of laws was made for the bene-It of farmers, and \$50,000 was appropriated to aid in the execution of a stringent measure for the eradication of the Russian thistle. Two addi-tional experimental farms were provided for, and or their maintenance \$12,000 was appropriated. In the same interest was the appropriation of 5,000 for a hard-fiber twine plant at the prison at Stillwater. To maintain an entomological department at the State University and enable it to ropagate the destructive parasites of the chinch aug \$6,000 was appropriated, and to reseed the # \$6,000 was appropriated, and to record woods wlows destroyed by fire in our northern woods 115,000. The most important of the local measin aid of agriculture was the appropriation \$50,000 to continue the work of drainage of he wet lands of the Red river valley. Some casures looking to road improvement became

The unsold lands of the defunct Hastings and Dakota Railroad corporation, amounting to 55,-OO acres, were declared forfeited—an act which will be of benefit to the farmers along the west-on part of the line. A bill was passed offering bounty of 1 cent a pound on sugar made from sorghum or beet roots. The amount of wheat mempt from taxation was raised from 50 to 100 ushels.

The most important law in the interest of labor that which does away with contract labor in be prisons, and provides that the number of risoners engaged in any productive occupation shall not exceed 10 per cent, of the free labor so employed. Children under fourteen years of age are not to be employed in any factory, workshop, or mine. Nor shall any such child be employed outside of the family where he resides before six clock in the morning nor after seven o'clock in the evening. If under the compulsory school age he can not be employed anywhere durity a liehours

For cities, a general municipal law was can't ed framed on the general principle of concentra tion of power and responsibility.

It was enacted that either party in an action that may be tried by a jury may have a special jury at his pleasure, the party demanding the jury to be charged with the expense,

The laws for preserving game and fish were

made more stringent.

Some changes in the election laws were made in order more effectually to prevent corrupt prac-

The State tax was reduced by 2 mills-from 017 to 015.

Abraham Lincoln's birthday was made a legal holiday.

A fine of \$50, or imprisonment for not more than thirty days, was made the penalty for selling eigarettes, eigars, or tobacco to pupils of the public schools or of any school supported wholly or in part by taxation.

Among constitutional amendments proposed and to be submitted is one giving every city in the State the right to frame its own charter. provides for the appointment of 15 men by the district judges, who shall frame a charter to be submitted to the people of the city.

Another provides for taxation of unused rail-

road lands.

A third makes a radical change in the qualifications for voting by foreign-born residents. It requires the voter to be a naturalized citizen and a resident of the State for five years.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles, . The population, according to each decennial census since admission, was 75,445 in 1820: 136,621 in 1830: 375,651 in 1840, 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,-597 in 1880; and 1,289,600 in 1860. Capital, Jackson.

Government.-The following were the State officers during the year: Governor, John M. Stone; Lieutenant Governor, M. M. Evans; Secretary of State, George M. Govan; Treasurer, J. J. Evans; Auditor, W. W. Stone; Atternev-General, Frank Johnston; Superintendent of Education, J. R. Preston | Adjutant General, William Henry; Land Commissioner, Edgar S. Wilson-all Democrate; Railroad Commissions ers, J. F. Sessions, Walter McLaurin, and J. II. Askew: Librarian, Helen D. Hell; Chief Justice of the Supreme Court, Timothy E. Cooper; Associates, Thomas H. Words, A. H. Whitheld,

Finances.—The receipts from all sources for the year cuiding Sept. 10, 1894, amounted to \$1,210.651 72, and the disbursements were \$1,-299,605,52, being \$88,953,80 in excess of receipts. The receipts for the year ending Sept. 30, 1895. were \$1,277,142.69, and disbursements were \$1,-369,954 19, or \$92,811,50 in excess of receipts. The excess of disbursements over receipts for the biennial term ending Sept. 30, 1895, is therefore \$181,765.30. The total indebtedness of the State is \$3,241,354.55. Of this amount \$517,-646,46 stands charged against the treasure on account of the common-school fund, which is not now a debt against the State. The Chickssaw School fund and the Seminary fund.

amounting to \$1,394,707.96, is held in trust, and the interest only is payable. There are \$500,000 6-per-cent, bonds, due in 1997, and \$100,000 4-per-cent, bonds with twenty years to run. The Swamp Land fund is borne as a debit to the State, amounting to \$160,960.

The last Legislature, at its special session in 1854, authorized the issuance of special warrants by the Auditor of Public Accounts in lieu of eash warrants upon the treasury to an amount not exceeding \$200,000 outstanding at any one time, the warrants to bear interest at the rate of a per cent, per annum. These warrants were made receivable for all dues to the State, but without interest when so paid in. The necessity anticipated for the use of these warrants arose in June, 1894, and again in June, 1895, recourse was had to the special warrant act, and the limit was again reached.

The issuing of these special warrants was held by the Treasury Department of the United States Government to be a violation of the Federal laws that prohibit the issuance of such obligations in similitude of the obligations of the United States. and the secret service division of that department caused the arrest of the Governor, Auditor, and Treasurer for an alleged violation of the Federal statute that denounces counterfeiting, and imposes a penalty of twenty years' imprison-

failed to indict.

Education .- A summary of the biennial report of the State Superintendent makes the following showing: Educable children (enumeration of 1894), 542,531; enrolled in public schools, 350,615; average daily attendance, 202,683; total value of school property, \$1,636,055; amount expended for public schools, \$1,276,501.

ment for such violation. But the grand jury

Of the total enrolled, 209,126 are white and 274.614 are colored. Total white teachers, 4,591;

total colored, 3,264.

The enrollment at the State University for the fall term was about 250, the largest number since the abolition of the preparatory department, twelve years ago. The institution has a regular income of about \$32,000 from the Seminary fund. By an act of Congress ap-proved June 20, 1894, a township of land was given to Mississippi for the use of the university. Subsequently the lands that had been reserved for naval purposes, chiefly in Jackson and Harrison Counties, were restored to the pub is domain, and were selected, or enough of them to make up the township to which the and the proceeds held in trust by the State for the university.

The Agricultural and Mechanical College, at Staras We, had 256 students for the session endfor an ione, 1894, and 336 for that ending in 140 146 A class of 15 was graduated.

Vide Industrial Institute and College for rest coulding is in privess of erection, which wall a commelate about 100 additional pupils.

The confident at the Alcorn Agricultural and Mechan at tonick for colored boys was 221 at the class of 1805. Of this number, 36 were learning printing, 17 farming, 54 carpentry, 40 blacksmithing, 46 shoemaking, and 3 dairying.

The agricultural colleges, like the State University, receive a township, or 23,040 acres each.

The State Normal School, at Holly Springs, had an enrollment of 202 for the spring term of 1895, and 167 for the fall term. This is for colored students, and has been supported on a

yearly appropriation of \$2,000.

Millsaps College, near Jackson, is the joint property of the Mississippi and North Mississippi Conferences of the Methodist Episcopal Church, South. In February 210 students were in attendance. Five departments have been organized. The college has an endowment of about \$107,000.

Bellhaven College for girls, at Jackson, was burned in February. It is to be rebuilt. A few days earlier the Mary Holmes Seminary for colored girls, 2 miles northwest of Jackson, was destroyed by fire. It was built by the colored

people of the capital.

Charities.—The State Lunatic Asylum had 632 patients at the beginning of 1894, and 751 at the end; average number, 707. In 1895 new inmates to the number of 258 were received, and 155 discharged; average, 774. There were 142 deaths during the two years. The appropriations for the support of the asylum for the two years amounted to \$190,000.

At the East Mississippi Insane Asylum during the year closing Sept. 30, 1894, there were 303 patients, 42 were discharged, 19 died, and 242 remained. In the year ending Sept. 30, 1895, 304 were treated, 41 discharged, 20 died, and 243 remained. Arrangements have been

made to accommodate 300 patients.

During 1894 the patients treated at the State Charity Hospital at Vicksburg numbered 4,524, and in 1895 to Dec. 1 5,762. The Institute for and in 1895 to Dec. 1 5,762.

the Blind has about 40 pupils.

The report of the Deaf and Dumb Institution at Jackson gives these details: Total enrollment for the session of 1894-'95-white males, 31; white females, 43; colored males, 14; colored females, 13; total both races, 101.

Penitentiary.—The value of the farm prod-

ucts for 1895 amounted to about \$155,000, while the expenses, aside from the cost of farm ing implements and animals, reached \$95,000. The number of convicts is more than 1,000.

Banks.—The Auditor's report of 63 State banks doing business Nov. 3, 1894, shows the aggregate of resources and liabilities to be \$10,-284,318.77, and of capital paid in \$3,278,775. In March reports from 72 banks were summarized, showing a total capital of \$4,133,725, and deposits amounting to \$8,441,259.15.

Railroads. - Work was begun this year on the Gulf and Ship Island Railroad; the contract requires that it shall be finished to Hattiesburg by August, 1896. The line under construction is 72 miles long. It will open up a large tract

of pine land.

Surveys are made for the Mobile, Jackson, and Kansas City road, which will be built as soon as \$250,000 can be raised by subscription in the

towns to be benefited.

Water Ways.—A water ways convention was called to meet at Vicksburg, Oct. 22-23, with the object of arousing interest and calling the attention of Congress to the necessity of continning the work of protecting the lands in the lower

Mississippi valley and improving the navigation of the river. All the funds so far allotted will

have been expended by the end of June, 1896. Cotton.—The cotton crop of the State in 1894-35 was given as 1,200,000 bales. A Cotton-growers' Convention was held at Jackson in January, at which it was agreed that measures should be taken to reduce the cotton acreage by 25 per cent, each member being bound by the articles of association not to cultivate more than three quarters the number of acres of cotton that he anted and cultivated in 1894, the agreement to be binding when signed by owners of three fourths of the cotton acreage in 80 per cent, of ecotton-growing counties

State Pensions,-In 1888 \$21,000 was appropriated and expended on Confederate veterans ad their widows. In 1894 it was found that 167,000 was needed to pay the demands on the tale. In 1888 the pensioners were an even thousand. In 1894 they had increased to 2,500, In 1893 there were 1,038 applications, of which 60 had been rejected at the close of the year. Forty of the old pensioners had died. At the most, the fund would not afford a pro rata of

much more than \$20.

Levee Board Accounts,-A question of the indebtedness of the Auditor to the Levee Board, growing out of the defalcation of its treasurer. was considered by the board at its July meeting. The finding was that of the \$12,777 which had appeared to be due from the Auditor, \$8,225,27 d been paid, most of it to the former treasurer of the board, and this was ordered refunded, the balance to be held and to be subject to credit for such payments as he should be able to establish.

Local Option.—The progress of prohibition through the operation of local option is summarised as follows: "There are 75 counties in the State, and until the last very few years saloons were in full blast in most of them, but one county after another has arrayed itself on the side of the cold-water advocates, until in 1894 only 14 remained friendly to whisky. The total amount paid into the State treasury by these saloons in 1894 was \$107,600. In 1895 several of the 14 counties voted for prohibition. The State license in even the smallest town or village is \$600, and the municipality has the right to donble or quadruple that sum at pleasure.

Political.-The Democrats were somewhat divided on the silver question, the Administration adherents being in possession of the State offices, and a large and powerful faction in favor of free silver. There was a movement for a "State primary"—a general vote to select candidates for States offices-and a large number announced their candidacy for the various places on the ticket. The proposition met with general favor, the mass of the people being wrought up on the silver question, which, the Administration Democrats maintained, should not be brought into State politics at all, as it is one for national settlement. As the next Legislature was to have the choice of a United States Senator. however, and the Representatives were expected to obey the will of the people as expressed in the election, the silver question became the great issue in the canvass. A letter from Gov. Stone to the President, apparently charging Federal

officials in the State with taking the size I four silver, and the President's abover, what was widely published, played a prominent part of the campaign. Some newspapers, which had been for free silver or not actively against it. came out for the single gold standard after the publication of the letter, and "mound money leagues" were formed throughout the State and public debates were held.

The county conventions declared in favor of free silver. free silver. The State convention, which met at Jackson Aug. 7, was very large and was overwhelmingly for silver. More than 1,200 delegates had been appointed, though only 266 were entitled to seats. Senator J. Z. George was made permanent chairman, and the following candidates were nominated; For Governor, Anselm J. McLaurin; Lieutenant Governor, J 11. Jones; Secretary of State, J. L. Power; Auditor, W. D. Holder; Treasurer, Albert Q. May; Attorney-General, Wiley N. Nash; Superintendent of Education, A. A. Kincannon; Revenue Agent, Wirt Adams; Land Commissioner, J. M. Simonton; Clerk of the Supreme Court, E. W. Brown. Railroad Commissioners, J. D. McInnis, M. M. Evans, and J. J. Evans.

The resolutions reaffirmed the platform of the Missouri convention, held the preceding day, which was unequivocally in favor of the free coinage of silver and opposed to the issue of interest-bearing bonds. On State matters, the

resolutions declared:

We firmly believe that the Democratic parts of Mississippi and of the Union affects the only occurrity for the maintenance of white supercount v in the State, and that all political movements which tend to di vide or weaken our party are in direct conflict with the true interests of the State and dangerous to the welfare and happiness of both races. We therefore deplore the movement new afeed for the organ ration of a third party, to be known as the People's party. and we conjure all good men and true patrice to stand by the Denseratic party

Further, they commended the tariff law in force as the best one since 1846, demanded national legislation to suppress dealings in fetures, and such a change in the organic law of the mation as to allow of an income tax. A residutate was adopted commending the course of ties. Stone in the matter of the monarce of State

warrants.

The People's party held its State convention at Jackson July ill. J. A. Bailey was permanent chairman, and a ticket was named as follows: For Governor Frank Burkitt, Lieutenant Governor, S. W. Rebinson, Secretary of State, R. R. Buntin; Anditor, R. T. Love, Pressurer, C. W. Bolton; Attorner-General, J. J. Dennis, Sojerintendent of Education, A. Trotter, Revenue Agent, R. E. Mitchell; Land Commissioner, N. West, Clerk of the Supreme Court, L. R. Collins, Railroad Commissioners, G. W. Dyer. N. M. Hellingsworth, and T. N. Jackson.

The platform declared in favor of "the free and unlimited comage of both gold and effect at the ratio of 16 to 1, without the grace of foreign powers and principalities"; for the abolition of national banks and the issue and coinage of all money by the General Government; for an icrease of the currency to at least \$50 per capa's by the comage of silver and the more of falegal-tender notes, and for payment of the public debt in either silver or gold or both; it condemned the issuance of interest-bearing bonds in time of peace, and declared that public expenses should be reduced, especially fees, salaries, and perquisites of officials, that dealing in futures should be prohibited and trusts and monopolies discouraged; and it favored an income tax, a himit to the term of Federal judges, and "an American Government for American citizens". On State matters these resolutions were included:

Believing the ballot box to be the palladium of liberty, we favor the enactment of laws to guarantee fatheses and honesty in elections. We arraign the former and present Democratic administrations for squar lering 2,700,000 acres of public-school lands, and we favor, first, the abolition of the office of Land commissioner and, second, the enactment of laws to probably the acquisition of land in this State by a noresident alien and requiring the dispossession of lands how held by such aliens within a given time. We favor a reduction of at least 20 per cent, in the

saiaries and fees of all public officials.

A legislative committee in 1892, composed of Democrate, ordered by that body to investigate the Auditor's office, reported that it had not had time to make more than a "cursory examination of the office, and that they had not been able to do anything. To make such therough examinations of the books, vouchers, and warrants as would warrant an exhaustive report would, in your committee's opinion, require several months of diligent work," and the same committee at the session of 1844 "asked leave to say that owing to the limited time and other duties more urgent on the floor of the Legislature, they are not prepared to say they have been able to give that strict examination which alone can make this report accurate." It is inconceivable how a public office could be so conducted as not to show whether or not it was indebted to the Leves Board more than \$12,000, or has to be given until Sept. I to prove whether or not it owed the money, keeping up its forfeit in the meantime.

The Herning way and Ferguson defalcation, together with those of numerous sheriffs and county treasurers, is the logical result of ring rule and life tenure.

Debates between the candidates for the office of Governor and others were held through the State. At the election the entire Democratic ticket was successful. The total vote polled was 64,239, of which the Democrats cast 46,873, and

the l'eople's party 17,466.

MISSOURI, a Western State, admitted to the Umon Aug. 10, 1821; area, 69,415 square males. The population, according to each decentual census since admission, was 140,455 in 1820; 381,702 in 1840; 682,044 in 1850; 1,182,-612 of 1820; 1,721,295 in 1870; 2,168,380 in 1880; a 1,2 670,184 in 1890. Capital, Jefferson City.

Government, The following were the State of the year: Governor, William J. State of State Alexander A. Lee M. Subert: Treasurer, Lon V. Subert: Governor, John R. Governor, Blackmore: Chief Governor, Governor, Brace; John C. Sherwood, Shepart Governor, John D. Burgess, Governor, B. M. Kobinson, John M. Robinson,

Finances, Le Volter David for the year ending De of Section 2 Language on Jan.

1, 1895, \$719,725,43; receipts from all sources. \$3,805,977.49; disbursements for all purposes, \$4,191,666.77; balance, Dec. 31, 1895, \$334,014.15. Of the \$2,746,478.50 appropriated from the revenue fund for the general expenses of the State in 1895-'96, \$1,687,279.60 was drawn in 1895, leaving \$1,061,198,93 to be paid out in 1896, The principal items of appropriations were: Pay of General Assembly, \$121,744, and contingent expenses of the same, \$92,310.52; civil officers, \$232,884.65; costs of criminal cases, \$466,351.50; assessing and collecting revenue, \$171,746.60; and payments on debt, \$527,000. The bonded debt on Jan. 1, 1895, aggregated \$6,016,000, and on Dec. 31, \$5,489,000, comprising \$5,086,000 in 3½-per-cent. bonds, redeemable at the pleasure of the State at any time before 1907, and of \$403,000 in 6-per-cent. bonds. Of the last class of bonds, \$55,000 was payable on Jan. 1, 1896, and \$337,000 on July 1 following, leaving only \$11,000 to be paid in 1897.

Valuations.-The State Board of Equalization fixed the values of real and personal property for taxation in 1895 as follow: Acreage property, returned by assessors, \$337,676,032; net decrease by the board, \$30,952,498; value as fixed by the board, \$306,923,534; town lots, returned by assessors, \$410,693,363; net decrease, \$3,493,697; value as fixed, \$407,199,666; and personal property, returned by assessors, \$218,-048,473; net decrease, \$1,513,448; value as fixed. \$216.535.025. The items summarized show: Aggregate returned by assessors, \$966,617,868; net decrease by the board, \$35,959,543; and aggregate as fixed by the board, \$930,658,225. board reported fully on the results of the assessors' convention of 1894, called by the Governor at the request of the board to remedy the inequalities in the assessment of property. convention adopted resolutions recommending the assessment of property at its true value. The expectations of the board were not realized, as efforts to assess according to the statute were made in 15 counties only, thus creating greater discrepancies than before. The board was therefore compelled to equalize the aggregate returns by reducing those in the 15 counties and increasing those in others where the valuations were

manifestly too low.

Banks.—The State banks, on April 3, 1895 numbered 482, and had a combined capital of \$20,070,040; loans and discounts, \$60,913,434 total resources, \$102,867,688; deposits, \$68,312,358; surplus, \$8,722,890. The loan-and-trust companies numbered 7, and had aggregate capital of \$6,150,000; loans and discounts, \$4,164,011; total resources, \$16,367,807; deposits, \$6,687,974; and surplus and undivided profits \$1,413,766. There were also 94 private bank with reported capital of \$1,191,860; resources \$8,258,390; deposits, \$6,053,389; loans and discounts, \$4,591,729; and surplus, \$418,056. The State had an aggregate banking capital of \$46,526,900, and the banks had deposits of \$127,935,200, loans and discounts of \$122,043,328, and sur

Education.—The annual statement of the United States Commissioner of Education, Sept 1, 1895, reported an enrollment of 657,505 pupil in the public schools, an average daily attendance of 469,846 pupils, and an expenditure fo

plus of \$13,689,797.

public education, exclusive of payments on debts, of \$5.816,634. There were 5,567 male teachers and 8,954 female teachers—total, 14,521. For superior education there were 30 universities and colleges of liberal arts, with 528 professors and instructors; 7,219 students (4,968 males and 2,251 females); and 147,551 volumes in the libraries. The value of grounds and buildings was \$4,203,200, of scientific apparatus and libraries, \$201,050. The institutions had productive funds aggregating \$2,955,958, and a

total income in 1893-'94 of \$542,472,

Taxable Manufactures,-In the fiscal year ending June 30, 1895, the collections of internal revenue in the two districts into which the State is divided aggregated \$7,830,900.70. There were 878 cigar factories, which in the calendar year 1894 used 1,196,040 pounds of tobacco in the manufacture of cigars and 3,880 pounds in that of eigarettes, and had an output of 65,420,772 cigars and 1,194,800 cigarettes; and 92 other factories, which used 45,253,659 pounds of leaf tobacco, 2,236,759 pounds of scraps, and 1,587,-739 pounds of stems, 11,967,951 pounds of licorice, 6,999,406 pounds of sugar, and 2,605,570 pounds of other materials, and had an output of 31,948,338 pounds of plug tobacco, 85,057 pounds of fine cut, 5,569,077 pounds of smoking tobacco, and 26,012 pounds of snuff. The revenue stamps required for the sale of the different kinds of manufactured tobacco cost \$3,461,653,14. During the year 53 out of 76 grain distilleries and 16 out of 18 fruit distilleries were in operation. The production of fruit brandy was 5,606 gallons from apples and 192 gallons from grapes, and of fermented liquors, 2,132,743 barrels. The amount of spirits rectified was 2,760,364:16 gallons, and amount of distilled spirits gauged, 8,338,080 gallons. Oleomargarine was manufactured to the amount of 1,013,544 pounds.

Agriculture.—The United States Department of Agriculture reported as follows on the principal crops of the calendar year 1895; Corn, 6,613,118 acres, 238,072,248 bushels, value \$47,614,450; wheat, 1,541,664 acres, 18,499,968 bushels, value \$9,434,984; oats, 1,102,805 acres, 30,547,699 bushels, value \$5,498,586; rye, 20,183 acres, 246,233 bushels, value \$96,031; potatoes, 98,764 acres, 10,765,276 bushels, value \$2,691,319; and hay, 2,329,731 acres, 2,725,785 tons, value \$18,535,338; total value, \$83,870,708. The department's estimate of the average farm price of the principal products, on Dec. 1, 1895, was as follows; Corn, 20 cents per bushel; wheat, 51; rye, 39; oats, 18; barley, 48; buckwheat, 58; Irish potatoes, 25; sweet potatoes, 42; hay, \$6.80 per ton; cotton, 74 cents per pound; and

leaf tobacco, 8.7 cents per pound.

Live Stock.—In January, 1895, the United States Department of Agriculture estimated the number and value of farm animals in the State as follows: Horses, 998,277, value \$27,031,442; mules, 249,123, value \$8,096,916; milch cows, 753,447, value \$14,014,114; oxen and other cattle, 1,794,670, value \$28,036,872; sheep, 860,820, value \$1,401,587; and swine, 3,561,136, value \$16,050,041; total value, \$94,630,972.

Mineral Productions.—The eleventh report

Mineral Productions.—The eleventh report of the United States Geological Survey on "Mineral Resources of the United States," which was issued at the close of 1895, covers the calcular

year 1894, and shows a consideral and a amounts and values of many of they are in Missouri, largely caused by the the mepression and local labor trout es of that (a) The most important of these industries is a mining, which had a preduct of 2245 (cb) at as tons, valued at \$2,634,564, a decrease in quantity of 652,400 short tone and its value of \$750 193 from the output and value of 1853 tof the total product, 1,1851,255 tone were haded at the mines for shipment, 242,501 tons were and to local trade and used by employees, and 47,283 tons were used at the mines for steam and lead The average number of men employed was 7,223, and the average price per ton at the mine was \$1.17, a decrease of 6 cents from 1888. There were 3 coking establishments in the State, overated exclusively for the sincenelling works, which had 10 ovens, used 3,442 short toes of coal, and produced 2,250 tone of coke, valued at \$3,563. The quarry products were granite for. 757, a decrease from \$1988,863 in 1863 percental. ly taken from Iron, Wayne, St. Frances, and Madison Counties; sandstone, \$131 607, an increase from \$75,701 in 1853; and imeeting, \$578,802, a decrease from \$861,563 in 1863 and \$1,859,960 in 1890. Of manufactures of clay products, reports from 242 cotablishments showed an output of 258,922,000 common and present brick, valued at \$1,541,553, ornamental took to the value of \$47,963; fire brick, \$202,722, vitrified and paving brick, \$190,220, drain tile, \$172,220; sewer pape, \$150,000; tile other than drain, \$24,679; and miscellaneous articles \$20%. 026; total value, \$2,615,57%, Irvs mines var led 64,601 long tons of red bematite and 17,225 of brown-total, 81,926; and the production of pig iron declined from 32,260 long tone in 1862 to 6,522 tons. Of other there was a product of 1,800 short tons; value, \$22,160.

Commerce.—During the fiscal year colling June 30, 1895, the receipts of imported merchandise at the interior ports of delivers of Kansas City, St. Joseph, and St. Lemm aggregated in value \$3,358,148, an increase of \$1091, 187 over the total of the previous year.

Defense of the Ballot, In April the Sopreme Court of the State rendered an important decision in connection with the new ball 4 law At the elections in November, 1894 grow frauls were alleged to have been committed in hazans City and in Jackson tourity and the grand jury called on the rearrier of action to preduce the ballet bears for importion. The receiver demurred, and the case went to the Supreme Court, which denied the right of the erim and court to compel the receiver to preduce the bullet bears, and held that to give the grand jury the right to mepect the ballet bears would he a si-lation of the secrees of the ballet, as well as an infrit gement of the Constitution. In summing up the court and "The comoderations which induced the States of this I nion to adopt the so ret ballet not only continue to exist, but The timid vider tochery have been added. day it not only protected from his opulent emplayer, but from the aggressive spirit of his own follows and the dominations of brotherhoods and unions.

monuments, 2 commemorating the Bledsoe and Barrett batteries of the Confederate Army, and 2 in honor of the Second and Fifteenth Regiments of Missouri Infantry that served in Lai-

hald's Brigade of the National Army.

Immigration.-During 1895 a large number of wagon trains of settlers passed through Ozark. going southward. Douglas and Taney Counties have attracted most of the immigrants, and the Government lands in the White river country have become popular with people of limited means from the more crowded States. the new settlers are many experienced farmers. anxious to escape the cold winters of Nebraska,

Iowa, Minnesota, and the Dakotas.

Political. - The Free-silver Democratic members of the Legislature held conferences in Jefferson City, May 1 and 2, and adopted resolutions declaring that the vital question before the country was the money question, and that the Demogratic party from its organization had always been a party of bimetallism, claiming that the redemption money of the country and the basis of all currency and paper credits should be both gold and silver, and that these metals should be coined at the ratio of 16 to 1. The resolutions also asked the Democratic State Committee to call a convention for the purpose of enabling the Democratic party of Missouri to declare its views on the subject. A convention was held at Pertle Springs, Aug. 6, and Congressman R. P. Bland was chosen chairman. The convention decided to reorganize the State Democratic Central Committee by adding 19 new members, I from each congressional district and 4 from the State at large, and authorized calls for a State convention to elect delegates to the National Convention not later than April 15, 1896, and for another to nominate candidates for State offices, to be held after the National Convention. A platform was adopted which contained the following resolutions:

That we, the Democratic party of Missouri, in convention assembled, demand the free and unlimited to nage of silver and gold into primary or redempto money at the ratio of 16 to 1, without waiting for the action or approval of any other nation; and

That we are irrevesably opposed to the substitu-tion for metallic money of a panic-breeding corporathis credit currency based on a single metal, the supany time by a few banking institutions in Europe and

That we are opposed to the policy and practice of the let us to the holders of the obligations of the letter states the option, reserved by the law of the (- mer desired re-leening such obligations in either

Steere; Adjutant General, C. F. Lloyd -all Republicans; Game and Fish Warden, C. S. Taylor; State Examiner, D. D. Bogart; Register of the Land Office, S. A. Swiggett; Chief Justice of the Supreme Court, William Y. Pemberton, Populist-Democrat; Associate Justices, W. H. De Witt and W. H. Hunt, Republicans,

Finances.-The assessed valuation of all the counties is \$124,076,585.50, and the total indebt-edness is \$2,798,030.82. The tax levy in the counties varies from 14½ mills in Lewis and Clarke County to 27½ in Custer. The railroads are assessed at \$10,522,354, which is included in the above total. In 1894 they were assessed at \$10,-062,457. The live-stock assessments were increased in all the counties by the State board. In providing for the bounties to be paid for wolves, covotes, or other stock-destroying animals, the legislative act named two sources of supply for the fund—one the State and county licenses, of which 5 per cent, is devoted to the purpose, and the other a tax of 14 mill on the assessed value of live stock throughout the State, It is estimated that the percentage of licenses will amount to about \$20,000, and \$30,000 more will be raised by the tax. The assessed value of horses in the State is \$3,391,571; of cattle, \$11,-446,888; of sheep, \$4,135,987.

The balances on hand in the following funds, Nov. 3, 1895, were: Escheated estates, \$5,773. 20; permanent school fund, \$156,498.04; school income fund, \$47,972.47; University fund, \$9,850.10; Normal School bond fund, \$2,321.00; State Capitol building fund, \$4.745.22; Reform school building fund, \$1.546.58; Agricultural College bond fund, \$176.97; general fund, \$32. 415.95; stock inspection and detective fund, \$353.55; stock indemnity fund, \$2,481.94; sheep inspection and indemnity fund, \$5,676.41; State bounty fund, \$2.53; beautifying State Capitol

grounds, \$3,220; total, \$273,034.86.

Education.-Under the new law the State school fund was established, and \$51,044.50 received from the sale and lease of school lands was in the treasury at the end of the year, to be divided among the counties at \$1.30 per capita. The number of children between the ages of six and twenty-one is 39,265.

The State University, at Missoula, was opened for the first time in September, with Oscar J. Craig as president. Missoula gives the use of a new school building for the university until the

State shall have erected one.

The Agricultural College, at Bozeman, had an enrollment of 120 the first term of the year. It has a farm of 160 acres, and a building site of 20 acres. Contracts have been let for buildings. A building has been finished for the experiment station, and several farm buildings. Temporary accommodations are provided for the classes.

Contracts have also been let for building the

State Normal School at Dillon.

State Institutions.—The report of the State Prison, at Deer Lodge, for the year ending Nov. 30, 1895, shows a total of 321 convicts. 2 of whom are sentenced for forty years, and 18 for The current expense for the year was

846.726.20. The prisoners have built a massive tone wall around the grounds, and assisted in the work on the new building, the cost of which \$19,427.51 in addition to their labor, which, the rate of \$1 a day, amounted to \$39,623. The completion of the building, which has taken two years, was celebrated Dec. 5 and 6 by musical and dramatic entertainments, the performers sing inmates of the prison. A school was pened in the prison Dec. 12. Both instructors ad pupils are convicts.

The legislative committee appointed to in-pact the Insane Asylum at Warm Springs com-ended the management in every particular.

be plant is not owned by the State.

e first annual report of the State Orphans' ne, at Twin Bridges, shows that the instituon is in good running order. There are 5 cmses, including the superintendent, and 21 hildren. The average cost of each for one week \$5.29.

The Asylum for Deaf, Dumb, and Blind Chilren, at Boulder, had only 13 in attendance in obveary—all that could be accommodated thie there were 40 applications for admission. The Legislature of 1895 made provision for suit-ble buildings.

The Reform School, near Miles City, had in bruary 37 inmates, of whom 6 were girls, of ces from eight to twenty. Of the land given the school by Miles City, 35 acres were put under cultivation in 1894, and 5 left for pasture. The crop raised was worth about \$2,200.

Rallroads. - A suit of one railway corporation inst another, involving the right of the one condemn lands already condemned by the er, but not in use by them, was decided by the epreme Court in favor of the new road, the court coding that the land could be recondemned if ot in actual use.

The Montana Railroad Company has bought

Montana Midland. The articles of incor-cration state that the line of the road is to be tended through Lewis and Clarke, Jefferson, cacher, and Gallatin Counties. The capital

anks.-The following summaries show the surces and liabilities of the 2 savings banks Oct. 7, 1895: Loans and discounts, \$662,-12; overdrafts, \$66,059,90; stocks and 1s, \$515,273,80; due from other banks, 572,640.88; banking houses, furniture, etc., \$89,525.61; curmt expenses and taxes, \$4,250.26; cash and the items, \$331,319.21; total, \$2,021,392.63.

The liabilities are: Capital stock, \$200,000;

riplus, \$55,000; undivided profits, \$57,360.-13; deposits subject to check, \$528,955.26; in-dividual deposit on interest, \$887,374.90; denand certificates on deposit, \$94.831.07; time crificates of deposit, \$185.600.02; cashiers becks, \$9.919.76; due other banks, \$2,342.50; otal, \$2,021,392.63.

Irrigation. - Work has been going on during year on the Tongue river irrigating canal in ter County; but two or more seasons in ada will be required to finish it. A canal in Park County was completed in July after three years work. It taps the Yellowstone about a mile above Fridley and is 12 feet wide on the ottom. It winds around on the bench land

and has a length of 13 miles. The cars line capacity for carrying water sufficient to her and about 2,500 acres.

State Lands, - The office of State Land Hegis ter was created by the last Legislature. This if fleer has charge of all lands in which the State is interested. The Government gave 72 serious to the Territory in 1881, amounting to 46 080 acres; and in 1889 it gave 622 1000 acres for pullie institutions. Sections of land aggregating 235,510,06 have been selected. When land is sold outright it is sold at its appraised value, provided it brings \$10 an acre. No land is sold for less than that sum. When property is soid the money derived from the sale goes into the permanent school fund, while the interest and rentals go into the general school fund,

Industries and Products, - The wood clip of 1894 was 6,527,469 pounds, and the quantity in 1895 was estimated as considerably larger. A State Wool-growers' Association was organized in November. The chief inspector for the Meastana Stock-growers' Association, reported the number of Montana cattle received at Chicago this season as 215,534. During the season be forwarded \$135,358,31 to the secretary of the

association for estrays,

The dry season was unfavorable not only to the farmers and stock men, but also to those engaged in placer mining. Many rich strikes and valuable finds have been reported from the mining districts during the year. One of these is the finding of valuable ore in a "belt lead" running east and west through Helena, which had been theoretically located by Prof. F. Carr. Lump Gulch is a silver camp which has been largely developed in the past year. A strike of very rich gold ore at Whitehall, in the Pipestone district, was reported in June. A rich gold strike is said to have been made on I wer creek above De Borgia, and the Monitor Gulch distriet, beyond Rimini, has been attracting attention this season, also the Ontario district west of Helena, while the Marvaville distract morth of Helena, one of the oldest in the State, has been brought into fresh notice, and valuable properties have been opened up. Other localities where rich deposits of gold have been reported are St. Louis, Rirch creek, in Meagher County, Belt creek, near Nethart, and the Lattle Books. Beaver creek, Curlew, and Prockly Pear day

A rich strike of copper was made at Meaderville in May, a ledge of copper glance 16 feet in width. The copper works at Amscenda have a capacity for turning out 50 tons of refined

Copper a day.
The discovery of a large deposit of ashetm 12 miles from Dillon was reported early in the year. It was traced 2,500 feet and is over 100 feet wile. A company has been formed to work the groum deposits at Kilby.

A new discovery of valuable lead ore, showing an average of nearly \$60 a ton, has been made

in Park County.

According to the figures given out from the tiovernment assay office at Helena, the values of metals produced in the State in 1894 are as fellow; Gold, fine, \$3,868,428.87; silver, fine, \$15,-614,219.78; copper, \$17,233,718.66; lead, \$730.-551.82; total, \$39,466,919.13. The silver is estimated at the coinage value of

\$1 29 an conce.

Fort Harrison.-The new military post was established at Helena in September, when 2 companies of infantry arrived from Fort Assinilaune to garrison the fort. The site comprises 1.040 acres, of which 200 acres are hilly and will in time be used for bomb-proof cellars. When all the buildings are up they will form almost a complete circle. Appropriations amounting to \$300,000 have been expended upon them.

The Cree Indians.-Several hundreds of these Indians formerly living in British territory, but expatriated in the Riel rebellion, are roaming about the State, perfectly lawless and a terror to the people in the sparsely settled districts. The Legislature adopted a memorial to Congress asking that they might be returned to their own country or settled on some of the reserved land. This was vetoed by the Governor on the ground that the only proper course was to insist upon the removal of these foreign Indians from the State. The veto was sustained.

Legislative Session .- The Legislature convened Jan. 7, and adjourned March 7. On joint ballot, the Republicans had 56 members, the Democrats 7, the Populists 15, the Fusion and Populists 3, the Independent Republicans and Populists 1. Representative Swett was Speaker

of the House.

Two United States Senators were to be chosen, one for the regular term beginning March 4, 1895, and one to fill a vacancy caused by the failure of the third Legislative Assembly to elect. The Republicans nominated Lee Mantle for the vacancy and Thomas II, Carter for the full term. Before the vote was taken a communication was sent into the House from the A. P. A. headquarters in Butte, protesting against the election of Mr. Carter, who is a Catholic. When the reading had proceeded far enough to show the tenor of the remonstrance its reading was interrupted, and by unanimous vote the House directed that it be returned as unopened. All the Republican members voted for the nominees.

The radical work of the session was the adoption of the new code, which had been prepared by the Code Commission. It was not merely a codification of existing laws of the State, but involved some changes, especially in the code of call precedure, where the code prepared for New York by David Dudley Field was mainly the House committee to which were referred the 4 codes-viz., the code of civil pro-The the penal code, the civil code, and the a colo-reported that they should be

Hills mayer . 1 / + 11 creation of 4 new countries, but the property and the Aver Sweet Grass, were formed.

A bill was passed authorizing the construction of a Capitol at Helena, to cost \$1,000,000. One previously passed provided for a commission to buy a site. The money is to come from the sale of lands given to Montana by the Government

for such purpose.

A law was made forbidding all forms of gambling. Heretofore games of chance have been licensed; the revenue from this source in 1894 was \$34,894.44, of which the State treasury received one fourth. The new law, placing Montana in line with most of the other States in this respect, was to go into operation July 1, and at that time gambling places were closed. But it was claimed that the law was not properly passed, owing to an erroneous title, which made it an amendment to a section in the code which contained no reference to gambling. Test cases were brought before two district judges, who decided that the law was void, and their decision was affirmed by the Supreme Court.

The game laws were amended. Fishing is allowed throughout the year, but can be done only with a pole, hook and line, or a spear, Bison, buffalo, quail and Chinese pheasant, female moose and elk are protected indefinitely. The open season for bull moose and elk is from Sept. 1 to Dec. 15. The open season for deer, mountain sheep, Rocky Mountain goats, and antelope is from Sept. 15 to Jan. 1. During that time no person is allowed to kill more than 8 animals of each kind. Prairie chicken, grouse, fool hen, pheasant, or partridge can be killed between Aug. 15 and Jan. 1, and during the open season no more than 100 birds of each kind may be killed. Ducks, brant, and geese may be hunted between Aug. 15 and May 15. All kinds of singing birds are protected forever. A Board of Fish and Game Commissioners was created.

Later in the year the Attorney-General decided that the law of 1893, which was not re-pealed or amended, is still in force. That law makes it illegal to kill any elk or moose for six

Several bills were introduced providing for the establishment and maintenance of a soldiers' home, each naming a location. They were referred to the Committee on State Institutions, and it reported a substitute which was passed, providing for the location of a soldiers home. but leaving the selection of a site to a committee of 5 veterans, to be appointed by the Governor, no more than 2 to to be from the same Grand Army post. Appropriations of \$10,000 for a building and \$13,000 for support for two years were made. The committee decided upon a site at Columbia Falls, 50 feet above Flathead river. and about half a mile from the Great Northern Railway. Other acts of the session were:

Providing for a State examiner.

Creating a free State employment agency in connection with the Bureau of Agriculture, Labor, and Industry

Providing for the payment of bounties on certain stock-destroying animals and to create a bounty

To provide a floral emblem for Montana.

To protect associations and unions of workingmen and persons in their labels, trade-marks, and forms of advertising. Providing for the erection of buildings for the State

Normal School.

NATIONAL ACADEMY OF SCIENCES.

Regulating the sale of oleomargarine and butterine. Prohibiting the sale of eigarettes or tobacco to

Requiring the American flag to be displayed over achoolhouses.

Changing Arbor Day from April to May.

Providing for the incorporation of co-operative menciations.

To prevent the alteration and defacements of brands and marks on animals, and to provide compensation for animals whose brands or marks have been altered or defaced.

Changing the conditions under which foreign corperations may do business in the State.

For the suppression of the Scotch bull and the

Resslan thistle. Providing for circulating libraries in the State.

Making the age of consent sixteen years.

Providing for the erection of buildings for the

School of Mines.

Providing for the organization, government, and control of building, loan, and savings associations.

Appropriating money for the completion of the

tern State Prison. To encourage beet culture and the manufacture of

estable.

It was enacted that an amendment to section 2, chapter ix, of the Constitution, relative to the rights of suffrage and qualifications for holding office shall be submitted to the people.

The State Constitution calls for a census of Montana in 1895, but the Legislature failed to pass a bill that was introduced providing for it

MORAYLANS. The following is a summary of the statistics of the Moravian Church in the United States, as given in the latest published report for the year ending Dec. 31, 1894;

Northern American Province. - Number of congregations, 80; of communicants, 10,593; of noncommunicants, 1,075; of children, 4,658; total membership, 16,329; of members of Sunday schools (teachers and children), 10,040; amount of contributions for church support, \$111,276; of contributions for Church enterprises and other Christian objects, \$23,343. The objects for which these latter contributions are taken include retired ministers, the Bohemian mission, foreign missions, the Alaska mission, home missions, the Theological Seminary, and other Moravian causes and general Christian objects.

Southern American Province,-Number of communicants, 2,330: of noncommunicants, 187; of children, 1,031; total membership, 3.548; of members of Sunday schools, 3,514. Total for the United States, 12,923 communicants, 1,262 noncommunicants, 5,689 children. 19,577 members in all and 12,554 members of Sunday schools. The net increase of communicants during the year was 388; of members, 360; and of members of Sunday schools, 846.

The year's contributates for her in the Northern American Pr 467, in addition to which the United Conference appropriated \$ " " to making a fund for the district of \$11.007 | Ite A area mission, in which the American provinces have a operial interest, includes 9 statutes, and to at a 12 missionaries, 14 native helpers, 180 communication canta, 87 noncommunicante, 134 children, 1.5 " new people" (who attend the services and are brought under the care of the missistance, at 1 29 candidates for admission. The in rease of members during the year was he 25 alu to all 33 children were baptized, 2 adults and 3 children were received, 28 candulates were renfirmed, 22 couples were married, and 11 members were excluded and dropped.

The general intenonary work of the Church is under the care of the Unity's Elders to eference, at Berthelsdorf, Saxony, and extends are red the world, reaching from Alaska to Australia, and from Greenland to the Cape of these Hope. It embraces, according to the report for 1864, 21 missions, 130 stations, 24 preaching places, 174 brethren and 174 sisters miss carpes, 43 native missionaries, 1,494 native assistants, 22. 363 communicant members, 17 50 lagozed adults, 37,641 haptized children, 6 1% car filates, etc., 251 day schools, with 566 teachers and ansistants and 24,002 pupils, 111 Sumlar weeks, with 1,244 teachers and assistants and 16,774 pupils, and a total membership of \$3.645, or 200 more than in 1893.

A new "Atlas of the Missions," published by the Mission Department of the Unity . Libers' Conference to take the place of the one published twenty-five years before, consists of 16 maps, with descriptive letterpress, and all was the growth of the missions during a quarter of a century. An effort was made during the year to pay off the debt existing against the F or on Mission fund of \$27,871. In January 1996. a sufficient amount having been contributed, the debt was canceled.

The annual "Text-book" of the Maraylan Church is substantially the same through at the world, with only such changes as are necessary to adapt it to the different national ties by which it is to be used. It is translated into 9 languages, and about 100,000 copies are penated in German, 16,000 in French, and 6,000 in English. The American edition includes 2.185 copies in English and 2,121 in German. Editares are also printed, some of them without the human, in Bohemian, Dutch, Spanish, Negro-English for Surmano, and Eskines. In Europe it is much used by others than Morasiana. It is originally prepared by the Unity's Elders' Conference at Berthelsliff.

NATIONAL ACADEMY OF SCIENCES. The officers of the Academy in 1895 were: President, Wolcott Gibbs; Vice-President, Francis Walker; Foreign Secretary, Alexander Agnasis; Home Secretary, Asaph Hall: Treasurer, John & Billings. Two meetings were held in 1895. The first or stated meeting was held in Washington on April 16-19. On that occasion the following papers were read:

" N tee on the Florida Reef" and " The Propriet f the Publications on the Expedition (14) United States Fish Commission Strainer & Commission

Locat Commander Z. L. Tanner, commanding," by Alexander Agassiz, "On Some Variations in the trems Energy," by Alexander Agassiz and W. McM. Wischwerff, "On the Composition of Expired Air, and its Effect upon Animal Life," by John S. Billings, "On a New Determination of the Nutation Constant and Some Albed Topics," by Seth C. Chandler, "The Extinct Cetaces of North America," by Eligant D. Cope, "Systematic Catalogue of Euro-

pean Fishes," by Theodore Gill; "On the Application of a Percentage Method in the Study of the Distribution of Oceanic Fishes: A. Definition of Eleven Fastins and Two Subfaunas of Deep-sea Fishes. It The Relationships and Origin of the Carribeo-Meascan and Mediterranean Subfaunas," by G. Brown Coesle; "On the Color Relations of Atoms, Ions, and Molecules," by M. Carey Lea; "A. Linkage showing the Laws of the Refraction of Light," by Alfred M. Mayer; "Relation of Jupiter's Orbit to the Mean Plane of Four Hundred and One Minor Planet Orbits" and "Orbit of Miss Mitchell's Comet, 1847 VI," by Hubert A. Newton; "On the Two Isomeric Chlorides of Ortho-sulpho-benzoic Acid" and "On Some Compounds containing Two Halogen Atoms in Combination with Nitrogen," by Ira Reinsen.

The following papers were read by gentlemen not members of the Academy:

"On the Secular Motion of a Free Magnetic Needle," by Louis A. Bauer; "Mechanical Interpretation of the Variations of Latitude," by Robert S. Woodward; and "On Soil Bacteria," by M. P. Ravenel; also a "Biographical Memor of Dr. Lewis M. Rutherfurd" was presented by Benjamin A. Gould.

One of the conspicuous events of this gathering was the presentation of the Watson medal to Sch C. Chandler, of Cambridge, for his "researchies on the variation of latitudes, on variation stars, and for his other works in astronomy."

With the meeting the following new members with the William L. Elkin, of the astrotorratory of Yale University; Charles of the batanical department of Harwilliam H. Welch, of Johns of the University department of the University department of the University department of the University department of the University of States of Edipping Rudolph Lenckart, of States you Sachs, of the business session of the changes made of the changes made of the changes made of the changes to the charge of the changes to the changes to the charge of the changes to the charge of the charge of the changes to the charge of the ch

In accordance with the requirements of the will of President Barnard, of Columbia College, the Academy selected the name of Lord Rayleigh for presentation to the trustees of Columbia College as that of the scientist most worthy of the Barnard medal, which is awarded every five years to the person who shall have most distinguished himself by a discovery in physical or astronomical science. The deaths of James Edward Oliver and James Dwight Dana were announced, and the preparation of biographical memoirs of the deceased academicians assigned respectively to George W. Hill and Edward S. Dana. The death of John Newton occurred later. Sketches of these members will be found elsewhere in this volume.

The scientific session was held in Philadelphia, Oct, 29-30, when the following papers were read:

"On Borings through the Coral Reef in Florida," by Alexander Agassiz; "The Filar Anemometer," and "The Countertwisted Curl Aneroid," by Carl Barus; "The Olindiade" and "New Campanularian Medusse," by William K. Brooks; "On a New Variable of Peculiar Character," by Seth C. Chandler; "On a Bone Cave at Port Kennedy, Pu.," and "On the Palezoic Reptilian Order of the Cotylosauria," by Edward D. Cope; "On the Alkali Uranates," by Wolcott Gibbs; "On the Persistence of Fresh-water Types," by Theodore Gill; "On the Asteroids," by Asaph Hall: and "On the Broadening of Spectral Lines by Temperature and Pressure," by Albert A. Michelson.

Dr. Gibbs presided for the first time at this session, and delivered an address in which he described the functions of the Academy. Besides the adoption of certain rules governing the meeting of the Academy two important resolutions were passed. The first, of congratulation to J. Peter Lesley on the successful termination of the second and great geological survey of Pennsylvania, the results of which have been given to the public in over 150 octavo volumes. The second, likewise congratulatory, was to Dr. John S. Billings. It was in appreciation of the completion of his "Catalogue of the Army Medical Library" and the issue of the sixteenth and final volume of that unequaled gift to the physician and medical scholar of the world.

NATIONAL GUARD. The aggregate strength of the National Guard of the several States, ascertained from Federal and State reports, together with data supplied direct by State and Territorial authorities, bringing results as nearly as possible up to date is 114,397.

Independent Force.—In addition to the aggregate given above there is a considerable independent force scattered throughout the States, yet not attached or responsible directly to the local or Federal military or administrative authorities. No reliable data can be secured to show the aggregate strength of these independent organizations; but in an emergency several thousands would be added to the rolls from this source.

Total of Each Arm.—The National Guard proper consists of about 1,500 general and staff officers, and a regimental strength in officers and men of 97,900 infantry, 5,088 cavalry, 5,079 artillery, 1,438 cadets, and 3,392 naval militia.

Infantry Armament,-All the infantry in every State except New York, 3 regiments in Connectiont, and a portion of the National fluard in Florida, Virginia, and Wyoming, are armed with the Springfield rifle, caliber 45, of all models from that of 1873 to the latest. The New York infantry carry the Remington, cali-ber 50; the three Connecticut regiments mentioned use the Peabody, 45, and some of the infantry in Florida, Virginia, and Wyoming use the same rifle as those of New York. The Federal report pronounces the general condition of rifles as fair to good, "but many arms are unserviceable from neglect.

Cavalry Armament,-The arms of the cavalry are of the same kind as those used by United States troops, with exceptions in New York, Pennsylvania, Georgia, Oregon, and New M-vice, where non-regulation carbines are carried. In Alabama, Arkansas, California, New Jersey, Ohio, Wisconsin, the District of Columbia, and Utah the cavalry armament includes the saber, carbine, and revolver, and the armament in the several States ranges from that condation of efficiency to the carbine as the only weapon, as in Colorado, North Dakota, and New Mexico. New Hampshire cavalry depend entirely on the saber as a means of defence,

Artillery Armament,-The total artillery armament, according to the latest and most rehable reports, comprises 252 ordinary fieldpieces (not all serviceable), 102 Gatling guns, and It howitzers. The men in this branch generally carry a saber. Some have a revolver in addithen, and in a small number of batteries the men

are armed with rifles or carbines.

Camp Equipage. - The number of tents available for the force of State militia, including square, common, and hospital tents, is 19,614.

Arrangement by Groups,-For ready reference in making comparisons of sectional strength and availability, the synopsis of State reports which follows is given by geographical groups, the first being that of the North Atlan-tic States, including Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsyl-

North Atlantic Division,-The aggregate force in the North Atlantic division, including the nine States above mentioned, shows an authorized strength of 48,351. The total of infantry actually organized is \$3,853; cavalry, \$61; artillery, 1,375; cadets, etc., 1,438; naval militia, 1,498. The number of adults liable to serve in this division is reported to be 2,572,205. The artillery armament of the organized militia in the division consists of 96 ordinary field pieces. Catling guns, and 8 howitzers. The number of tents available, as reported, is 8,655

South Atlantic Division .- The South Atlantic division embraces Delaware, Maryland, District of Columbia, Virginia, West Virginia. North Carolina, South Carolina, Georgia, and Florida. The authorized strength of the State militia aggregated for this group is 36,373. actually organized force includes 15,500 infalls try, 2,452 cavalry, 409 artillery, and 782 naval militia. The number of adults hable to serve is recorded as 1,083,144. The artillery armare us available consists of 30 ordinary field pieces, it compy ten days.

a brigade, with headquarters at Forrest City. It consists of 2 infantry regiments or battalions, I troop of cavalry, and I light battery of artillery. The number of adults in the State liable to serve is 214,708. There is an ambulance corps in the brigade. Regimental encampments occupy seven days.

There is no State appropriation.

The Federal appropriation, 1894, was \$6,900.90. Cavalry are armed with carbines, Colt's revolvers, and sabers. The battery carries 2 3-inch muzzle-loading pieces and 2 Gatling guns. The infantry arm is the Springfield rifle. The brigade possesses 296 tents, including 41 with walls and 5 for hospital use. Companies drill once a week. One infantry company, at Little Rock, owns an armory; other armories are hired. There are no arsenals in the State.

Within twenty-four hours the whole organized force can be concentrated at any point on the main lines of railroad. About 70 per cent. of the

force would turn out for sixty days.

California.—The authorized strength of the National Guard of California is 8,172. The actually organized force includes 161 general and staff officers, 215 other officers, 4,083 infantry, 261 cavalry, 586 artillery, and 315 naval militia. This force is formed into a division of 6 brigades, comprising 8 regiments and a battalion of infantry, a regiment of artillery armed as in-fantry, 2 light batteries of artillery, a troop of cavalry, and 4 signal corps. The naval battalion, of 4 companies, is not included in the division, but acts under the Adjutant General of the State. The divisional headquarters are at San Francisco. Headquarters of brigades are at Los Angeles, San Francisco, Fresno, Sacramento, Chico, and Eureka respectively. The companies of the several regiments and battalions are distributed in cities and towns throughout the State. Ambulance corps and hospital corps are attached to each brigade. Signal corps have also been organized for several brigades. The number of adults in the State liable to serve is 139,-343. Encampments occupy seven to nine days. There is an annual State appropriation of

There is an annual State appropriation of \$180,000. The Federal appropriation, 1894, was \$7,844.58.

Cavalry troops are armed with Springfield carbines and sabers. Colt's revolvers are allowed for one half of each troop. The 2 batteries of artillery carry 7 Parrott rifled guns, 6 Napoleons, 6 Gatlings, 2 Hotchkiss guns, and 1 3-inch B. L. rifle. Infantry carry the Springfield rifle. The average camp equipage for each regiment includes 12 wall tents. Each company is called upon to attend 3 drills a month except in December. Cavalry must have mounted drill twice a year. Armories are not State properties, Most of them are rented. There are no arsenals in the State. There are several independent companies, in addition to the State troops.

Organizations in the larger cities could assemble at from eight to twelve hours' notice. The whole organized force except 2 companies could assemble within three days at San Francisco Sacramento, or Los Angeles. About 75 per cent.

would serve for sixty days.

Colorado.—The authorized strength of the National Guard of Colorado is 2,847. The actually organized force includes 38 general and

staff officers, 45 other officers, 836 infantry, 65 cavalry, and 47 artillery. This force is formed into a brigade, with headquarters at Denver. It consists of 2 regiments of infantry, I troop of cavalry, a battery of light artillery, and a signal corps. Bicycles form part of the signal-corps equipment. The number of adults in the State liable to serve is 85,000. Encampments occupy about eight days.

The State appropriation is secured from the military poll tax. The average for 1893 and 1804 was \$30,645. The Federal appropriation is

not officially reported.

Cavalry troops have earlines and sabers. The battery earlies 2 Napoleons and 2 Gatlings. Infantry and signal corps use the Springfield rifle, The camp equipage, recently received from the Federal Government, includes 118 wall tents and 3 for hospital use. Each company drills once a week. Armories are hired by the State for each company. There are no arsenals.

The organized force can be concentrated at Denver or any other important point in from forty-eight to sixty hours, without railroad right of way; with right of way, within twenty-four From 80 to 90 per cent, would turn out

for sixty days for State service.

Connecticut .- The authorized strength of the National Guard of Connecticut is 4,383, The actually organized force consists of 25 general and staff officers, 183 other officers, 2,720 infantry, 114 artillery, 81 naval militia, and 36 members of a signal corps. The troops are formed into a brigade, with headquarters at Hartford. It consists of 4 regiments of infantry, a light battery, a machine-gun battery, 2 separate companies, a battalion of naval militia, and a signal corps. Each regiment is assigned to two counties. There is an ambulance corps and hospital corps. The number of adults in the State liable to serve is 92,230. Brigade encampments occupy eight days.

There is no fixed State appropriation. Funds secured on requisition. The Federal appro-

are secured on requisition. The printion for 1894 was \$5,175.67.

Artillery carry 4 3-inch rifles and 4 Gatlings. Three regiments of infantry use Peabody rifles, and one possesses Springfields. The campequipage includes 1,298 tents. There are 22 armories. A number of these belong to the State. The arsenal is at Hartford. Independent companies include 2 companies known as the Governor's Horse Guards, 2 companies of foot guards, and an organization known as the Putnam Phalanx.

The organized force can be concentrated in

any of the largest towns in from eight to twelve hours. Seventy-five per cent, would turn out

for sixty days,

Delaware.-The authorized strength of the Delaware National Guard is 600. The actually organized force consists of 15 general and staff officers, 35 other officers, 323 infantry, and 54 cavalry. The number of adults in the State liable to serve is estimated at 42,123. This force is formed into a brigade, consisting of a regul ment of infantry and a troop of envalry, with headquarters at Wilmington. There is an ambulance, hospital, and signal corps.

Brigade headquarters are at Brattleboro'. The companies are distributed throughout the State. Special arrangements are made for hospital and ambulance service. The number of adults in the State liable to serve is 44,164. Encampments occupy six days.

There is no specific State appropriation. The annual amount is usually about \$15,000. The Federal appropriation in 1893 amounted to

\$3,486.48.

Artillery carry 4 new 3'2-inch steel B. L. rifled guns, also sabers. Infantry use the Springfield rifle. The camp equipage is adequate. Companies drill once a week. Rooms are hired for drill purposes. There is an arsenal at Montpelier.

The infantry force can concentrate in about twelve hours at any of the principal cities; artillery within seven hours. About 95 per cent.

would turn out for sixty days.

Virginia.—The authorized strength of the State militia, known as the Virginia Volunteers, is 5,176. The actually organized force includes 10 general and staff officers, 336 other officers, 2,391 infantry, 191 cavalry, 167 artillery, and 204 naval militia. This force is formed into a brigade of infantry, with headquarters at Richmond, a regiment of cavalry, consisting of 5

troops, and a battalion of artillery. The infantry brigade consists of 4 regiments. There are 4 unattached infantry battalions. The number of adults in the State liable to serve is 220,000. Encampments occupy ten days.

The State appropriation, 1894, was \$11,242.57.
The Federal appropriation, July, 1894, amounted

to \$10,351,35.

The cavalry arm is the Springfield carbine. Sabers are also carried. For artillery use there are 4 12-pounder and 4 6-pounder brass guns, also 12 3-meb iron rifled pieces. Artillery carry sabers. Infantry use the Springfield rifle. Campequipage consists of 65 wall and 30 common tents. Companies drill once a week. There are 4-armories at Richmond and 5 in other cities set apart for volunteer use. There is an arsenal at Lexington, and a bell house at Richmond is used for store purposes.

About 60 per cent, of the force can be concen-

About 60 per cent, of the force can be concentrated at Richmond in twelve hours, and about 25 per cent, additional within eighteen hours. From 80 to 95 per cent, would turn out for sixty

days.

Washington.—The authorized strength of the Washington National Guard is 2,343. The actually organized force includes 27 general and staff officers, 82 other officers, 80s infantry, 120 cavalry, and 42 artillery. This force is formed into a brigade, with headquarters at Spokane. The brigade consists of 1 regiment and 1 battalion of infantry, 1 cavalry battalion of 4 troops, and 1 battery of light artillery. Men in infantry regiments are detached for signal duty. The number of adults in the State liable to serve is 86,156. Encampments occupy nine days.

The annual State appropriation is \$40,000. The Federal appropriation, 1894, amounted to

#3 450 45

The cavalry arm is the Springfield carbine, with saber and pistol. Infantry use the Springfield rifle. Camp equipage is ample. Companies drill once a week. All drill balls are rented. There are no arsenals in the State.

The whole force can be concentrated within fifty hours. The infantry regiment and cavalry troops can be assembled within twenty-four hours. Between 65 and 70 per cent, would turn

out for sixty days,

West Virginia.—The authorized strength of the West Virginia National Guard is 1,438. The actually organized force includes 21 general and staff officers, 81 other officers, and 789 infantry. This force is formed into a brigade, consisting of 2 regiments of infantry, with headquarters at Parkersburg. The number of adults in the State liable to serve is not officially reported. Encampments occupy six days.

The annual State appropriation is \$15,000. The Federal appropriation, 1894, amounted to

\$5,175,67.

Springfield rifles are in use. Camp equipage consists of 287 tents of all kinds, including 6 for hospital use. Companies drill once a week Rooms are rented by companies for drill purposes. There are no arsenals in the State.

The whole force can be concentrated within twenty-four hours at Charleston or Grafton. About 80 per cent, would turn out for sixty days

Wisconsin.—The authorized strength of the Wisconsin National Guard is 3,081. The actual-

ly organized force includes its annual officers, 165 other officers, 2,523 infamily alry, and 54 light artiflery. There is a large organization. The force consists of 4 represents of infantry, I troop of cavalry, and I light but tery. The headquarters of one infantry regiment, the troop of cavalry and the batters of artiflery are at Milwauker. A few men of 16 fantry regiments are trained for eight purposees. The number of adults in the State habe to serve is 375,601. Encampments occupy server days

ist Regiment Illinois S to

The amount disbursed for State military puroposes, 1894, was about \$100,000. The Federal appropriation is \$10.251.25 per appropri

appropriation is \$10,351.35 per annum.

Cavalry carry the Springfield cartice, revolver, and saler. Artiflery armament includes 2 3-inch rifles and 2 Gating guns. Camp equipage includes 227 wall tents, 3 common, 3 miscellaneous, and 13 hospital tents. Companion drill three times a month. There are 32 company armories. They are all rented. There are no arsenals in the State. Surplus stores are hegd in the Capitol at Madison.

The entire force can be concentrated at West Superior or Marinette within fifteen house, at other prominent points within twelve house. Ninety per cent would turn out for exits days.

Wyoming. The authorized strength of the Wyoming National Guard is not limited by law. The actually organized force is 480. This force consists of a regiment of infantri, with head-quarters at Evanston. The number of actults in the State Indie to serve is 12,000. The State appropriation for two years ending March 31, 1805, was \$7,200. The Vederal appropriation, 1804 amounted to \$2,87,83. Two disuch steel guins are available for artiflers service. Infantry use the Springfield rifle. No official report on camp espaipage is available. Companies drill once a week. There are no armoraes; drill halls are rented. There are no armoraes; drill halls are rented. There are no armoraes in the State.

The force can be expecutivated within a fewbours. About 73 per cent, would turn out firsixty days.

Summary. Strength. - The authorized strength, which represents the force available

if every officer and enlisted man allowed by law were commissioned or enlisted, varies from 15,000 in New York to 450 in Idaho. In 5 States and Territories there is no fixed limit to the strength. These States and Territories include Temessee, Oklahoma, Arkansas, Wyoming, and Nevada.

col. ALONZO R. COIT, 14th Regiment, Ohio N. G.

Infantry.—The 3 States having the largest infantry force available at the present time for active service are New York, with 12,159; Pennsylvania, with 7,638; and Ohio, with 5,125. The remainder of the States having over 3,000 infantry ready for the field are Massachusetts, 4,302; New Jersey, 3,369; South Carolina, 3,069; Georgia, 3,515; Illinois, 4,957; and California, 4,178.

Cavalry.—Six of the 9 States in the North Atlantic division have cavalry militia. The same is true of the South Atlantic division. Of the 12 States comprising the North Central division, 5 only include cavalry. Among the troops available at this time 4 of the 8 States and Territories in the South Central division and 6 of the 11 States and Territories in the Western division have this arm of the service represented. The 3 States having the largest cavalry force are South Carolina, with 1,519, white and colored: Georgia, with 589; and Texas with 290. The States having more than 200 a salry in addition to the 3 States already and Massachusetts, 285, and California, second other States, including New York, and the States including New York, and the States including New York, and the States and distributed force of cavalry.

Union rolling - the of the

adults liable to serve are Illinois, 852,635; Pennsylvania, 860,230; and New York, 750,000. The only other State able to furnish more than 500,000 fighting men under a special call to arms is Ohio, with 645,000.

The States able to furnish from 250,000 to 500,000 are Massachusetts, 389,529; New Jersey, 284,887; Georgia, 264,021; Indiana, 481,192; Wisconsin, 375,601; Iowa, 269,510; Missouri, 400,000; Kentucky, 361,137; and Texas, 300,000. Figures are not available under this heading for South Carolina and Oklahoma.

Organization.—The organized militia force in New Jersey, Pennsylvania, Mississippi, Texas, and California is formed into a division of several brigades. The force in nearly every State and Territory is brigaded. The exceptions are Maine, Georgia, Ohio, Wisconsin, South Dakota, Kentucky, Alabama, Oklahoma, Montana, Wyoming, New Mexico, Arizona, and Nevada.

ming, New Mexico, Arizona, and Nevada.

Hospital or Ambulance Corps.—Of the 49
States and Territories, from 15 to 20 are lacking
in provision for hospital and ambulance force
and equipment in connection with the State
militia. Those included in the last Federal report as being most serviceable are Maine, Massachusetts, Connecticut, New York, New Jersey,
and Pennsylvania—being 6 of the 9 States in
the North Atlantic division; the District of
Columbia, Ohio, Illinois, and Oregon.

Signal Corps.—Corps for signaling purposes have been organized in Massachusetts, Rhole Island, Connecticut, New York, Georgia, Montana, Colorado, Utah, and California. In 14 other States and Territories there are trained detachments ready to serve. In California one signal corps is mounted and equipped as cavalry. In Connecticut, Iowa, Colorado, and Utah the signal corps are mounted on bieyeles. This last form of equipment is also used in connection with an Ohio regiment. Homing pigeons are utilized for signaling in the District of Columbia. The latest Federal report credits Massachusetts, Connecticut, and Montana with having attained the greatest proficiency in this branch of the militia service.

Encampments.—In 1894 officially ordered encampments of State troops took place for practice drills and other exercises in 30 States. In some of the other States companies and battalions went into camp of their own volition. According to the latest reports, 15 States have ground set apart as State property for camp exercises. During recent encampments in Vermont, New York, Pennsylvania, Wisconsin, Minnesota, and Texas regular troops were present.

Mobilization.—The time required for concentrating the entire command ranges, approximately, from three days in Oregon and California to twelve hours in Connecticut. This excludes the District of Columbia, where, for local service, the force could be mustered within three hours.

The percentage of the entire force that could probably be counted on to turn out for sixty days' active service, as given in the various State summaries preceding, is based on estimates furnished by commanding officers, and varies from 95 per cent. in New York, Pennsylvania, and North Dakota to 50 per cent. in Minnesota and South Dakota. The States and Territories reported as having well-developed plans prepared

to meet emergencies are the District of Columbia, North Carolina, Illinois, South Dakota, and In numerous other States plans have Alabama.

been partially prepared.

Armed Resistance. - One reason why the synopsis of State summaries at the beginning of this article has been arranged by geographical groups is that some idea may be gained of the possibilities with reference to armed resistance on land in the event of threatened invasion.

For convenience of illustration, let it be supposed that New York city and vicinity required protection. From the statistics furnished in the introductory part of the article the aggregate strength of the National Guard within each geographical division can be easily noted. The first nart of the entire force to reach threatened points in New York State would be, of course, that located within the North Atlantic division. ing it for granted that the railroads give right of way to troops, and that no obstacles would be encountered in the matter of equipment or transportation to railroad rendezvous, and allowing twenty-four hours clear for the troops in each State to assemble at their selected points of concentration, within State boundaries, it would seem safe to say that fully 20,000 infantry, 300 cavalry, and 700 artillery, with at least 50 ordinary field pieces, 20 Gatling guns, and 8 howitzers, would be in position for immediate action within forty-eight hours of the first alarm. Of these, a large number would be ready for action within twelve hours, and more than one half within twenty-four hours. This force, equipped with at least 5,000 tents and supplemented by about 700 naval militia, would within another twenty-four hours or thereabouts be reenforced by quite two thirds of the organized militia of the South Atlantic group.

Each day thereafter, regiments, troops, and batteries of fully equipped officers and men with an ample supply of armament and ammunition, would reach their appointed rendezvous for attack or defense, those of the South Atlantic division being closely followed by the forces comprised in the North and South Central divisions and the Western division, with the net result that in less than six days, in round numbers, from 80,000 to 90,000 infantry, from 4,000 to 5,000 cavalry, from 4,000 to 5,000 artillery, and from 2,000 to 3,000 naval militia, fully officered. armed, and equipped, would stand at the points threatened, fully prepared to support the Federal troops and engage the enemy. The difference between the organized force and the total authorized strength being over 50,000, such an emergency as the one just referred to would bring into service a sufficient number of adults in each State and Territory to protect State interests during the absence of the organized mi-

litia troops.

Appropriations,-The largest regular annual State appropriation (\$400,000) is made by New York. This sum does not include a number of allotments for special purposes. In 1894, other States appropriating \$100,000 or more were Massachusetts, Rhode Island, Pennsylvania, Illinois. Wisconsin, and California. The amount appropriated by Congress annually (\$400,000) is divided among the States according to the representation to which each is entitled in Congress.

and to the Territories at I the Illa lumbia in such proportions as the Pres direct. The largest Festeral abstract

granted to New York

Ammunition. - All States and Territory . . . cept North Dakota, Arizona, Oregin and tafornia have on hand, ready to be deficered promptly to trueps on arrival at points of communition ranging from 6000000 rounds in York to 10,000 each in Florida, Miss ari Wash ington, and the District of Columbia. In addition to these amounts nearly every resultant throughout the United States keeps a fairly large stock at its armory or within easy reach. batteries of artillers are usually kept fairly well supplied with artiflers ammunition, the largest quantity being for Gailing-gun purposes.

Camp Equipage, Nineteen States are reported as having sufficient tentage for the perent force. A similar number of States are to t sufficiently well equipped. Some of these are sufficiently wen equipped taking steps to supply the deficiency. The above 28 States own their tent equipage. The balance of the States and Territories are not yet satisfactorily arranged for in this matter trails a few

States have complete mess outfits.

Drills.-The drilling capabilities of the State troops are continually improving The interest taken in their efficiency by the Federal Guarra ment, as represented by specially detailed army officers, is producing excellent results.

In the Federal summary, 1894, it is noted that the degree of proficience in drill attained by large builtes of troups in reported as ranging from excellent in some organizations in Massa chusetts, New York, Ohio, and Pennss Ivanua, to poor, "The best-executed drills seem to be those of the company in close order, but little attention seems, as a rule, to have been part to company extended order in most States. The drill of the cavalry is generally rejected as to ing good; in some cases, excellent The attillers drill is generally very good and operal section is made of the proficiency of Battery A. Massarri National Guard, and of the Vermont batters. much time is given to the coremoties that their are generally better performed than the regular deilla

NEBRASKA, a Western State, a limited to the Union March 1, 1867, area, 77,510 square miles. The population, according to each decesmal census since admission was 122 260 in 1870. 452,402 in 1880, and 10% 910 in 1860. Capital,

Government. The following were the State officers during the year to vernice, Slav A Holcomb, Licutement towermer, Robert E. Moore; Scretary of State, Josef & Piper, Treasurer, Joseph & Bartley, Auditor Eugene Missire, Attorney General, Arthur & Churchill, Superintendent of Public Instruction, Henry R. Corlect, Commissioner of Public Lands and Buildings, Henry C. Russell-all Republicans except the Governor, who is a Depuliet, as is also the Adjutant General, P. H. Barry; Chief Justice of the Supreme Court, T. L. Norval Justice of the Supreme Court, T. L. Associate Justices, A. M. Post and T. O. C. Har man all Republicana

Finances. - The State valuation in 1995 v \$171,468,207.48, a falling off from 1854, v

was \$183,717,498.78. The decrease is in personal property. Improved lands have increased in acreage from 17,558,533 to 18,091,963, and in value from \$61,411,598 in 1894 to \$61,817,884 in 1895. The value of rathroad property and sleeping cars is placed at \$25,492,513,08. Horses are valued at \$5,012,253, and cattle at \$4,132,794. It is estimated that the taxes will be too small at 5 mills on this valuation to meet the expenses of the general fund for the coming two years, and that the floating debt at the end of that time will amount to at least \$1,400,000. The total tax for all purposes is about 74 mills.

The Bureau of Labor, in the report of mortgage indebtedness for the year ending May 31, 1895, shows that the amount of incumbrances

is decreasing.

The inspector of oils reports that the total received for inspection of illuminating oils in 1894 was \$10,106,40, and the salaries and expenses amounts to \$11,274,31. The gasoline fees, amounting to over \$10,000, the inspector refused to pay into the treasury, lest they might some time be demanded of him on the ground that they were illegally taken. The State then brought suit against the inspector's bondsmen. The question whether gasoline was contemplated as coming under the law had been settled in the affirmative at a former term.

The case of the State against ex-Treasurer Hill (see "Annual Cyclopadia" for 1893, page 504) and his bondsmen was tried in the spring, and the jury failed to agree. The State appealed

to the Supreme Court.

Education.—The December apportionment of State school funds disposed of \$216,336,33, and the rate for each pupil was 61 cents. The whole number of children was 352,028. The amount apportioned in May, 1895, was \$256, 996,42, and the rate per pupil was 70 cents. At that time 362,729 children of school age were listed, fully 10,000 more than the number after-

ward reported.

The regents of the State University, in their report to the Legislature, said that to make it adequate to the accommodation of the young men and women of the State who are flocking to it additional buildings, to cost over \$400,000, will be required. The State has appropriated only about \$25,000 toward the erection of the present buildings, which have cost between \$150,000 and \$400,000. A short course in agriculture was established, the Legislature having the first over the Morrill fund received from Nama Covernment. A class of 95 was appliance, the largest in the history of

Wesleyan University graduated on seement. The original debt

value of his unexpired lease, was appraised at \$33,400. The Board of Public Lands and Buildings appointed ex-Warden Beemer as superintendent and steward, with the power to lease convict labor. But the Governor disputed the right of the board to make the appointment. claiming that all business and the making of contracts ought to be through the warden, and that in the appointment of Beemer the board exceeded its authority by creating a new office. The matter was complicated by an application for an injunction distraining the Auditor from issuing the warrant to the contractor in payment for his plant. The board could not annul his lease until the payment was made, and appealed to the Governor to eject him, which the Governor declined to do. When this difficulty was over, the board directed ex-Warden Beemer to take control at the Penitentiary as the new contractor, but the warden, supported by the Governor, refused to admit him and would receive no supplies from him. The prisoners were kept idle while this controversy was pending. It was taken to the courts and was undecided at the end of the year.

Charities.—The Governor appointed a new superintendent, Dr. Abbott, for the Lincoln Hospital for the Insane, and the appointment was confirmed by the Senate and was to take effect March 10. But the superintendent in charge, Dr. Hay, refused to retire, claiming that by the statutes he is appointed for six years, and hence there was no vacancy. The Governor declared that he would install his appointee by force, if necessary, and the superintendent applied for an injunction to prevent it. In April the Governor asked Dr. Hay to resign, and intimated that in case he did not, charges would be preferred against him and he would be removed for cause. Charges were brought and the super-intendent's counsel laid them before the Board of Public Lands and Buildings with a request that the board grant a hearing on them. charges-which were for extravagant management, negligence, and the permitting of abuse of patients by subordinates—were, however. heard by the Governor under protest from Dr. Hay. Dr. Hay presented statements to refute the charge of extravagance, showing that the Lincoln Hospital for the Insane is maintained at less per capita than 16 asylums in other States, but one, the Colorado institution at Colorado Springs, costing less. The Governor also made an appointment of a new assistant physician, and this was resisted on the same grounds as the other. The Attorney-General asked the courts to settle the controversy. There was similar trouble about the control of other State in-

Agriculture.—The cultivation of beets for sugar was greatly stimulated in 1895 by the action of the Legislature, and will be still further increased by the introduction of improved processes of manufacture. Since and including the year 1891 the sugar factory at Grand Island has paid for beets an aggregate of \$485,303. Of that sum the beet growers in the autumn of 1895 received \$180,000, though much of the crop failed to bring the maximum price; but numerous instances were reported where beet growers realized over \$45 an acre net profit. A

much larger acreage was devoted to the purpose than formerly, and it was estimated that the factories in the State would have turned out 4,500,000 pounds in the season. Local organizations for promoting the culture of beets have been formed, and a convention was appointed to be held in Lincoln Feb. 5 and 6, 1896,

The cultivation of alfalfa has been highly suc-

sful in parts of the State.

The corn crop for the year was estimated at

18 bushels to the acre.

The work of irrigation has made good prog-Many private plants are established with wells and windmills. The extent of irrigating canals is summarized by the State engineer as follows: There are 372 canals either constructed or under construction, having a total length of 1.908 miles, of which 1,156 are completed. canals, when finished, will have cost \$2,015,336, of which amount \$1,271,808 has already been expended. The number of acres under ditch will be 866,180.

A law for dividing the State into irrigation districts and creating a State Board of Irrigation was passed, and all persons who have built ditches are required to describe them in detail in an application to the board, and state how

much water they want.

A large irrigation convention was held in Sid-

nev in December,

Omaha.-The bill for a new board of fire and police commissioners, passed by the Legis-lature, and applicable to Omaha, was resisted as invalid. The Governor vetoed the bill, which vas passed over the veto; and he refused to act on the appointing board, of which he was exection a member. The question came before the Supreme Court, and the law was declared valid.

The Relief Commission .- The report of the commission appointed to distribute the char-ity contributed for the relief of destitute citiens, finished its work and made its report in August. Following are extracts from it.

It was found on taking up the work of investigate the less and destruction of crops and the destituion of citizens from the hot winds of July last, that tion of citizens from the hot winds of July last, that of the 91 counties of the State, 61 have been affected by the calamity, and that in 26 the crops had been stally destroyed. An imaginary line from Furnas County, on the southern border of the State, northeasterly to Knox County, on the Missouri river, comprehends on the west of it the counties referred to. It is believed that the agricultural loss to this section was equal to \$100,000,000. In July, 1894, all crops promised an abundant harvest, and not less than \$200,000.000 bushels of corn were to be considered as prombed an abundant harvest, and my the entitled product, of which there were gathered more than 13,000,000 in the entire State. Valvarious localities on the Ohio river in the East, from rmpathizing sections of the South, particularly Geor-era and Louisiana, and especially from Illinois and from Iewa, from the New England States, California. The most weighty obligation which rests on the commissioners is that due to the officers of the rallway lines throughout the State for free transportation and remitted rates of freight. The telegraph and telephone companies contributed on hits service. The citizens of Omaha and Lincoln provided storage for all supplies delivered and awalting transportation there. The Senators and Representatives to Congress and the Commissioner of Agriculture at Washington supplied 22,000 packages of carden seeds. The Merchants' Exchange at St. Louis and

the Board of Trade at Chicago comme large importance extended there is a compatition in literal cach contribute in

The financial statement stocks fees its ! \$79,449.63.

The Committee on Appropriations of the tar necticut Legislature proposed to send \$3.000 from the State treasury, and other Males Served assistance in the same way, but these proposals were declined by the Governor, and the work was left to voluntary contribution and the and of the Nebraska Legislature.

The Barrett Scutt Case, - Several men were arrested on anapteion of being contracted with the horrible lynching of the defaulting treasurer of Holt County (see "Annual Cycloperica" for 1894, page 505), and 3 were held for trial The case was carried to Bond County in order to remove it from the scene of excitement Some of the accused were identified by the murdered man's little daughter and a young lady, both of whom were with Mr. and Mrs. Scott in the carringe when he was taken from it; and they were shown to have been members of a vigilance evenmittee and to have been away from home at the time, and together; but they swore alike for themselves and for one another, and the jury failed to convict.

Legislative Session.-The regular technial session began Jan. I and ended April 5. The members were divided among parties as follow: Senate-25 Republicans, 7 Pepulists, and 1 Pegulist-Democrat; House-4 Democrate, 72 Hepublicans, 4 Populists, and 19 Populist-Demo-

crats.

John M. Thurston was elected United States Senator to succeed Charles F. Manderson.

Of 130 bills that were passed, 9 were vet sed by the Governor, and 3 of these were passed over the veto.

An appropriation of \$1,375,479.21 was made for the current expenses of the government for the two following years, and one of \$26,722.51 for the payment of miscellaneous claims against the State, and another for the same purpose of \$80,833.02. For salaries of officers of the State government, State institutions and depart-ments \$808,075 was appropriated. For detending in the Federal court the maximum rate law (see "Annual Cyclopavha" for 1863, page 1813, and for 1894, page 3th, an appropriation of #21,-648.75 was made. For payment of the Legisla-ture \$85,000 was set apart, and an additional \$40,000 for incidental expenses. An appropriation of \$50,000 was made for relief of the sufferers by the drought, and an act was passed to give \$200,000 to pravide seed and feed and fee its distribution

The registration law was amended, making it apply only to cities of over 7,000 population, and providing for three days instead of five for

general registration.

Amendments to the election laws prescribed the mariner of voting for amendments to the Constitution, of designating newspapers to publish proposed amendments, and of placing on the official ballot names of candidates nominated les reclition.

The State banking law was amended as as to require all State banks to be chartered as tethe scal of the State by the State land :

Four public statements are required attitudy. Two directors are required to be present when a bank is examined. Bank exammers' bends are raised from \$10,000 to \$25,000. Instead of uniform fee for examination, fees are graded according to capital of banks. must keep 15 per cent, of deposits on hand, and in cities of 20,000 population or over 20 per cent. Incorporated banks are prohibited from buying or holding any part of their stock. All banks are required to set apart one tenth of their net proceeds until they have a surplus of at least 20 per cent. No bank can hold any real estate, except bank building and fixtures, to exceed one third of its capital, unless taken to satisfy a debt, and it must then be sold within five years. Notes by any bank or banker or partnership can not be carried as an asset. dividend can be made where any bad debt or loss is carried as an asset.

It was made unlawful for any railway to use any car or engine not equipped with automatic couplers after Jan. 1, 1898, and to run any train not having enough automatic brakes so that the engineer can control the train without requiring

brakemen to go between the cars.

Corporations working under the mutual assessment and other similar plans for life and accident insurance must give bonds and show applications for at least 250 lives, for at least \$1,000 each, and must be licensed by the Auditor. and make annual statements to him. Accumulations shall be invested in United States bonds, State or municipal bonds, or in notes secured by real-estate mortgage or in district irrigation bonds not to exceed 40 per cent, of the value thereof, and deposited with the Auditor.

The statute relating to the formation of new counties was so amended as to make 450 square miles the minimum territory, and the votes necessary to the establishment of a new county a

majority instead of a three-fifths vote.

A bounty of a of 1 cent a pound was ordered for the manufacture of sugar by established factories and \$ to those hereafter established, and the same for chicory. The sugar beets must have been paid for to the grower at a rate not less than \$5 a ton, and the chicory at not less than \$10.50. The sugar must contain not less than 90 per cent, of crystallized sugar, and the choory must be 99 per cent, pure. This law is to be in force for three years.

It was charted that any "person making or berning for sale any imitation butter or cheese ... to Shel not less than \$10 nor more than the manufacture of substitute butter - total not be prohibited. Each pack-

cities, and empowering cities to issue bonds for park

Regulating the practice of dentistry.

Raising the age of consent from fifteen to eighteen VCRDs. Imposing a penalty of one to ten years' imprisonment for cattle stealing, buying stolen cattle, or har-

boring eattle thieves. Imposing a fine of \$10 to \$50 for the manufacture,

sale, or giving away of eigarettes or eigarette materials.

To protect Mongolian pheasants.

Making daylight burglary a felony. Imposing heavy fines on landowners who allow the Russian thistle to grow upon their lands.

Providing for the establishment of a branch sol-

diers' home at Milford.

Twelve constitutional amendments were proposed, the principal of which were:

Providing that all votes shall be by ballot, or such other method (voting machine) as may be prescribed by law, the secreey of voting to be retained.

Providing for the investment of the permanent school fund in registered school district bonds.

Authorizing the Legislature to provide that in civil actions five sixths of the jury may render a verdict.

Authorizing three fifths of both houses to change salaries of State officers.

Adding 8 railroad commissioners to the list of

State officers. Authorizing the Legislature to increase the num-

ber of supreme and district judges.

Limiting the number of State officers, except or concurrence of three fourths of each House.

Authorizing the Legislature to create an appellate court.

Among joint resolutions were the following:

That Nebraska shall hereafter, in a popular sense be known and referred to as the Tree-planter

Authorizing the Governor to appoint 8 commissioners to act in conjunction with a like commission of the State of South Dakota in ascertaining the true and correct boundary line between Nebraska and South Dakota as far as the same may be the boundary between the counties of Clay in South Dakota and Dixon in Nebraska.

Asking Congress to provide for payment to al Union soldiers who were confined in rebel prison during the war a pension of \$2 a day during the time so confined and \$12 a month for the remainder of

their lives.

That the Legislature of Nebraska hereby declar the flower commonly known as "golden rod" to b the floral emblem of the State.

Political.—A justice of the Supreme Cour was to be chosen this year, and 2 regents of th State University. At the Democratic State Convention, Aug 22, in Omaha, the free-silver ele ment was in control, and the resolutions declared in favor of free and unlimited coinage of gold and silver at the ratio of 16 to 1. The candi dates named were: For Justice, Charles J Phelps; for Regents, A. T. Blackburn and Robert Kittle. A delegate attempted to plac the following before the convention as a mi nority report:

We recommend the administration of Presider Cleveland, as being able, patriotic, and honest, an reathern the platform adopted by the Democrati National Convention at Chicago in 1892.

Scarcely had the first word been uttered whe the whole convention was protesting. There wa such a roar that order was not established fo ten minutes, when the offending resolution was

tabled without comment.

The second Democratic State Convention, called by the "bolters," and made up of the Administration, antisflyer Democrats, met in Linculn, Sept. 5, with 631 delegates. The resolutions. which approved the Administration and de-clared for "sound money," were unanimously adopted. The following nominations were made: For Supreme Judge, T. J. Mahoney; for Regents of the State University, W. S. Ashby and John

II. Ames.

The Republican Convention, in Lincoln, Oct. 3, nominated for Justice T. L. Norval; and for Regents C. H. Morrill and H. L. Goold, The platform denounced the Wilson tariff law and saked the enactment of another "McKinley bill ": favored the use of both gold and silver as money, and demanded a national currency of equal debt-paying power; denounced the Democratic administration's supine neglect of American interests in foreign lands; expressed sympathy with the Cuban revolutionists; pledged the support of the party to irrigation interests; and congratulated the people on the re-enactment of the sugar-bounty law.

The Populist State Convention opened in Lincoln Aug. 28. The platform reaffirmed the by a resolution in reference to the A. P. A., and the matter was finally settled by the adoption of a resolution deprecating the bringing of religious issues into politics. Samuel Maxwell was nominated for Justice, and Ella W. Peattie and

James H. Bayston for Regents,

The Prohibitionists nominated A. G. Wolfenbarger for Justice, and J. J. Bryant and Anna R. Woodbey for Regents.

The Republicans elected their candidates, Following were the returns for Justice of the Supreme Court: Norval, Republican, 79,516; Maxwell, Populist, 70,578; Mahoney, Administration Democrat, 18,638; Phelps, Free-silver Democrat, 10,214; Wolfenbarger, Prohibitionist, 4.344. Messrs, Goold and Morrill, Republican, were elected by votes of 81,847 and 80,962 respectively. Of the district judges elected at the same time, 20 were Republicans, 2 Democrats, 3

Populists, and 3 Populist-Democrats.

SETHERLANDS, a constitutional monarchy western Europe. The First Chamber of the in western Europe. States General has 50 members, elected for nine years by the provincial councils, one third of them retiring every three years. The Second Chamber is composed of 100 members, elected directly for four years by popular suffrage, every Dutch male citizen being entitled to a vote if he pays 10 guilders in direct taxes above the limit of partial exemption or has a separate lodging. One half of the members are elected every two years. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1880, whose mother, Queen Emma, widow of the late Willem III, acts as regent during the daughter's minority. The ministry constituted May 7, 1894, was compresed as follows: President of the Council and Minis ter of Foreign Affairs, Dr. J. Roell: Minister of the Interior, Dr. S. van Houten; Minister of Finance, Dr. J. P. Sprenger van Eyk; Minister of Justice, Dr. W. van der Knay: Minister of the Colonies, J. H. Bergsma; Minister of Marine. Jonkheer H. M. van der Wyck M. ... Lieut-Gen, C. O. H. Schneder M. n. ... terstaat, Commerce, and Industry, P. & der Slevden.

Area and Population. The area of kingdom is 12,645 square inites The je post of on Dec. 31, 1893, was computed to be 4072 911 consisting of 2,341,484 males and 2 391 427 for males. The number of marrages in 1850 was 34,311; of births, 159,005; of deaths, 90,372, eacess of births, 68,641 The number of entire to in 1896 was 1,820, all destined for the United States, comprising 2,262 adult males 1,248 w. ... en, and 1,310 children. Of the total population 324 per cent, is found in the cities and large The population of Amsterdam at the end of 1893 was 446,657; of Rettenlar, 729,397; of the Hague, 174,790; of Utree ht, 91,070.

Finances. - The budget for 1865 makes the total revenue 128,311,870 guilden, of which the 910,000 guilders come from the land tax 11 -712,000 guilders from the personal tax, 6.870/000 guilders from the tax on incomes from thecetments, 4,523,000 from the tax on professional incomes, 26,400,000 guilders from the tax on alcoholic drinks, 15,995,000 guilders from other excise taxes, 19,815,000 from stamps, registration, and succession duties, 5 all, 20 gu blers from customs, 7,895,000 guilders from the good office, 1,336,500 guilders from telegraphs 2 225. 000 guilders from domains, 661 400 from the Latery, 130,000 from absorting and fishing because, 214,820 guilders from the assay tax on gold and silver articles, 1,400,000 guilders from plat does, 5,175 guilders from mining revalues, and 7,227 625 guilders from other sources. The total expenditures are estimated at 135,742,280 guilders. of which \$21,000 guilders are for the royal becase hold, 667,860 guilders for the state authorities, 5,287,063 guilders for justice, 13 446 550 gm blees for the interior, 15,412,305 guilders for the many, 21,402,187 guilders for the army 35 190 200 ders for the national debt, 19,134,535 guilders for finance and worship and payments to come see-1,377,023 for central administration of the calonies, 22,125 728 guilders for commerce police try, railroads, and canals, and 50 000 guilders for unforeseen expenses. The ladget f e 1996 est mates the expenditures at 1 > 2000 gallders, and antiquates a deficit of Therefore allere

Army and Navy. The peace effective of the permanent army is 1 800 officers and 28.90 men. with 5, 14's herece. The arms to recruited partly by voluntary encountered fie are or eight sours, one third of the trans being raised in that was, while the rest are drawn from the militia leaner, of which the annual centingent is 10,400. The land willin were ween years and the naval mill a fire years. The Chamber, on March 14, 1901, passed a till for supplying the army with the Mann leter rifle of 63 millimetres calibre

The Land force consists of 9 armored wage to rear of 2000 to 5,400 tone displacement " Kic. mg der Nederlanden," "Koniningin Wilhe mina" Prins Hendrik, "Evertwen, "Kietenaur "Piet Hein," "Guinea," Scherpisch in Stier", with 44 to Sinches of armer as Speary guns, the largest having a caliber of 28 centraletres; 3 other squadron vessels incomplete "Holland," "Zeeland," and "Friesland"); 14 monitors having 54 inches of armor and 1 er 2 28-dentimetre guns; 22 gunboats, besides 5 river gunboats; and 6 frigates and 2 corvettes.

Commerce.—The imports and exports in 1894 were divided between different countries as folloa, values being given in guilders (1 guilder

40 cents):

OHNTRIKS	Imports.	Esporta.
t.rest Britain	246,100,000	260,800,000
(seemah)	257,400,000	556,500,000
Heigium	161,100,000	155,200,000
France	21,500,000	11,900,000
warden and Norway	21,800,000	9,400,000
	175,800,000	5,200,000
Russis	83,604,000	100,000
Loamabia .	11,500,000	8,300,600
Eurkey	5,500,000	5,100,000
Italy	29,000,000	1,000,000
The B	225,000,000	53,800,000
Patch East Indies	43,500,000	700,000
British East Indies	5,200,000	15,700,600
Africa	132,100,000	22,200,000
I asted States		
Ilrazil	5,500,000	
Peru and Boltvia	14,500,000	14,000,000
Other countries	89,100,000	14,000,000
Total	1,460,800,000	1,114,700,000

Of the total value of the imports, 440,200,000 guilders represent articles of food and drink, 526,200,000 guilders raw materials, 239,000,000 guilders manufactured articles, and 240,900,000 guilders miscellaneous articles. Among the exports alimentary substances amounted to 384,-400,000 guilders, raw materials to 366,000,000 guilders, manufactures to 236,500,000 guilders, and miscellaneous merchandise to 125,100,000 guilders. The imports of precious metals were 14,400,000 guilders and exports 2,700,000 guilders. Iron and steel and their manufactures were imported in 1893 to the amount of 122,-219,000 guilders and exported to the amount of 75,547,000 guilders; imports of textile fabrics and materials were valued at 130,513,000 and exports at 161,332,000 guilders; cereal imports at 213,648,000 and exports at 116,383,000 guilders; imports of coal at 44,418,000 guilders and of petroleum at 9,162,000 guilders; imports of rice at 46,240,000 and exports at 12,089,000 guilders; imports of coffee at 35,013,000 and exports at 19,932,000 guilders; imports of butter at 1.917.0 0 and of margarine at 23.923.000 guillers and exports of butter at 13,003,000 and of margarine at 43,842,000 guilders; exports of at 10.541.00) guilders; imports of drugs 5 (5) 55 (100) and exports at 145,926,000 guild-- r'- of wood at 28,470,000 and exports Daniel vierts at 19,738,000 guilders; im-- r at 48,562,000 and exports at here, experts of flax at 16,796,000

cubic metres. Of the sailing vessels entered 1,138 and of those cleared 1,162 carried cargoes, and of the steamers 7,910 were entered and 5,501 were cleared with cargoes. Of the vessels entered 625 sailing vessels, of 309,480 cubic metres, and 2,192 steamers, of 5,042,252 cubic metres, were of Dutch nationality.

Communications,—The railroads in operation on Jan. 1, 1894, had a total length of 1,815 miles, over half of which belong to the Government. The total length of the canals is 1,907,-170 miles and of other navigable waters 3,000,

The State telegraphs in 1894 had a total length of 3,465 miles, with 12,395 miles of wire. The number of dispatches sent in 1894 was 4,423,739, of which 2,247,192 were internal, 2,137,818 international, and 38,729 official. The receipts were 2,951,079 francs; the expenditures, 4,459,380 francs for ordinary and 258,959 francs for extraordinary purposes.

The number of letters sent through the post office in 1894 was 61,236,000 in the internal and 21,198,000 in the foreign service; of postal cards, 31,907,000 internal and 5,243,000 foreign; of printed inclosures, 105,220,000 internal and 514,000 external; of registered letters and postal orders, 3,019,000 internal, remitting 304,321,000 francs, and 514,000 external, remitting 110,357,

000 francs.

Legislation,-The bill for the reform of the franchise, framed by Minister of the Interior Van Houten, goes almost as far as the more radical measure of Tak van Portvliet, which was rejected in 1892. That bill proposed to increase the number of electors to 800,000, more than double the existing number, by conferring the franchise on every Dutchman twenty-three years of age who can show that he is not a burden on the community. The bill of a minister must be submitted to the Council of State before it is offered in the Second Chamber; but a bill may be proposed in the Second Chamber by any one of its members, and, like a ministerial measure, it must first be discussed in committee before it comes up for public debate. First Chamber must either adopt in its entirety a measure that has gone through the Second Chamber or reject it, but can not amend its provisions. The electoral law of 1850 fixed the maximum electoral impost at 112 guilders for the capital and 20 guilders for the rural communes, but the amount could be decreased according to local conditions. By the partial revision of the Constitution in 1887 the electoral tax was lowered and made invariable, increasing the electorate from 140,000 to 300,000. This measure was admitted to be provisional only, and the Clerical ministry that came into power in 1888 promised an extension of the suffrage: but it failed to keep the promise. It was overthrown and Tak van Portvliet, the Radical reformer, entered the ministry three years later with a scheme to confer the right to vote upon every true-born Dutchman twenty-three years of age, who could furnish external evidences of capacity and well-being. Owing to the vagueness of this condition a long and exciting controversy followed, and Mr. van Houten, who drew up the bill, adopted the views of the Moderate Liberals, who combined with the Conservatives and under the name of the Anti-Revolutionary party insisted that the evidences of well-being should consist in the payment of certain specified taxes, not the fact that a citizen is self-supporting. The Anti-Revolutionaries pictured the country as falling a prey to the Socialists and Anarchists in the event of the admission of 500,000 new electors. Mr. Tak accepted various amendments to meet the wishes of the Moderates, but resigned when the Chamber was on the point of deciding that a lodging or habitation that qualifies for the franchise must consist of not less than two rooms, thus shutting out a large proportion of the compe-tent workingmen. The Anti-Revolutionists mined the victory at the polls in 1894, and their nterpretation of the Constitution was therefore embodied by Mr. van Houten in the new elec-toral bill. The bill fixes the electoral age at twenty-five; reduces the property qualification to the payment of a land tax of 1 guilder; and admits a new category of voters, consisting of souscholders or lodgers who pay a certain rent, citizens who own or rent boats of 30 tons burden. men whose earnings are at least 275 guilders a year or who have 50 guilders in the savings tank, and those who follow certain specified professions or occupations. The same condi-tions qualify electors for the provincial states and the communal councils,

The Socialists were left almost unrepresented in the new Dutch Chamber by the defeat of their leader, Domela Nieuwenhuis; but some of their principles are inscribed in the programme of the Radicals that follow the guidance of Tak van Portvliet, who proclaim it to be the duty of the state to institute social reforms and to protect the workingman. To appease this element the Government in August, 1895, appointed a commission composed of 25 members representing all shades of political opinion, to report on the best system of state pensions for old and infirm members of the working class. The immediate subjects presented to the States General by the speech from the throne opening its session on Sept. 17 are the reform of the personal tax and the new electoral bill.

The Amsterdam Exhibition.—An international exhibition was held in the summer of 1895 on the grounds originally prepared for the exhibition of 1883. The plan at first was to collect exhibits of hotel equipments and facilities of travel, and thus the designing and furnishing of hotels and cafés and the equipment of railroads and ships came to be the prominent features of the exhibition, though electrical inventions and various industries were also well represented. One striking exhibit was a restaurant in which the guests were served by means of electrical contrivances without the help of waiters. Another feature was a reproduction of the life and scenes of old Holland.

The Dutch East Indies.—The Asiatic persons of the Netherlands comprise the populous Island of Java and other large and small Malaysian Islands, having an aggregate area of 719,674 square miles and 33,121,300 inhabitants Java and Madura, with an area of 50,848 square miles, had in 1893 a population of 24,642,985. Batavia, the capital, had 110,669 inhabitants; Surabaya, 147,389; Surakarta, 99,258. The European population of Java and Madura was

48,649, and there were 24%4%4 contents and the second of Sumaira is outposts, are the island of Sumaira is Borneo, Riouw, Banka, Billiton, Celebra M. a do, Ambotte, western New Guinea Timer and Bali and Lombok, having an aggregate per liction of 8,478,300. The Governor General of the East Indice is assisted by a council of five members. Jonkheer C. H. A. van der Wick was appointed Governor General in July, 1863.

The budget for 1895 makes the total revenue 128,041,045 guilders, of which 21,825,883 guilders are derived from sales of coffee 143,550 guilders from sales of quinne, 5,225,137 guilders from sales of tin, 17,668,000 guilders from the epsum monopoly, 15,235,000 guilders from the land tax or tithes, 8,557,000 guilders from the salt duty, 1,792,000 guilders from posts and telegraphs, 9,573,000 guilders from railroads, and 20,737,245 guilders from various sources. The total expenditure was estimated at 138,431,354 guilders.

The army of Netherlands India on Jan 1, 1895, was made up of 15,867 European and 20,738 native soldiers. There were 427 staff and specially detailed officers, with 2,128 men, 731 officers of infantry and 29,608 men, 31 cavalry officers and 883 men; 129 officers of artiflery and 3,287 men; and 64 engineer officers and 650 men; total, 1,382 officers and 25,603 sub-ficers and privates.

The naval force consists of 1 modern protected cruiser ("Sumatra"), 1 old translad of 5.460 tons displacement, 14 gunbeats, 3 paddle-wheel steamers, and 1 torpedo beat. The number of cannon is 141. The crews number 2.169 men.

The value of the imports in 1883 was 17 358,000 guilders, of which 159,474 000 guilders represent merchandise imported on private account and 6,586,000 guilders stores imported ! ? the Government, making the total merchandise imports 166,060,000 guilders, while the specie imports were 11,298,000 guilders, 10,356,000 guilders for individuals and town on golders for the Government. The total value of the exports was 192,431,000 guilders, 171 0g2 000 guilders representing private expects of store chandise, 20,377,000 guilders expects of mer-chandise for the Government, and 1021,000 guilders exports of specie. The merchandrie imports of Java and Madura sere 115,200,000 guilders in value, and the exports 125,800,000 guilders; the imports of merchandine from the exterior providers were valued at 44.244.000 guilders, and the experts at 41,217 (00) guilders. The values of the principal expects from Nethe erlands India in 1890 were Sugar 11,049,000 guilders; offer, 31,6,0 100 guilders, telacen, 30,226,000 guilders, Im. 12,043,000 guilders; pepper, 3,218,000 guilders, noc. 3,002,000 guilders copra 2,415 (00) guilders ; rattam, 2662.000 guilders, skins, 1,223,000 guilders, indige, 2,225 (set guilders , nutmegs, 1,921,000 guilders,

The number of vessels that susted the ports in 18th was 2.946 steamers, measuring 2.240.000 cubic metres, and 1.401 sailing vessels, of 4.34%, one cubic metres capacity.

The railroads of Java had a total length in 1895 of 879 miles, and there were 184 miles tuilding, while in Sumatra there were 174 miles working and 20 miles under construction.

The telegraph lines, which belong to the Goverrowent, had a total length in 1893 of 4,274 miles, with 6,547 miles of wire. The number of dispatches in 1893 was 564,334, of which 367,572 were paid inland and 165,730 paid international dispatches. The postal traffic in the same year tional letters. The receipts of the post office were 2,090,000, and expenses 3,516,000 guilders.

The expedition sent in 1894 to subjugate the Balinese Rajah of Lombok was successful, and the rajah, who had bought rifles to fight the Dutch instead of paying the regular tribute, and had entered into intrigues with British and other foreigners and brought the fertile island and its industrious Sassak population to a deplorable condition by his misrule, was taken to llatavia for trial and deposed. One of the constantly recurring seditious conspiracies was discovered early in 1895 in the residency of Buitensorg, Java, and 50 chiefs and their followers, who were supposed to be plotting a general massacre of Europeans and Chinese, were arrested.

NEVADA, a Pacific coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; and 45,761 in 1890. Capi-

tal, Carson City.

Government.-The following were the State officers during the year : Governor, John E. Jones: Lieutenant Governor, Reinhold Sadler: Secretary of State, Eugene Howell; Treasurer, W. J. Werterfield; Comptroller, C. A. La Grave; Superintendent of Public Instruction, H. C. Cutting; Attorney-General, R. M. Beaty-all Silver party; Adjutant General, C. H. Galusha, Republican; Chief Justice of the Supreme Court. R. R. Bigelow, Republican; Associate Justices, Charles H. Belknap, Democrat, and M. S. Bloom-

field, Silver party. Finances.-The report of the Comptroller, rendered in January, gives the following de-tails: On Dec. 31, 1894, the debt of the State amounted to \$157,628,91, and there were \$146,-065 18 in the treasury applicable to its payment. The Territorial indebtedness is represented by a \$380,000 5-per-cent, irredeemable State bond belonging to the school fund. The cash in the treasury Jan. 1, 1894, was \$384,546.45; received during the year, \$453,461.23; transfer from library for 1, \$13.50; total, \$838,021.18. Disbursements luring the year, \$522,174.56; cash in treasury, 11 31, 1894, \$315,846.62. The actual expenses 15) 101 way \$505,386,23. The revenue col-

The school population in 1894 was 9,454; the number enrolled, 7,298; the average number belonging, 5,839; the average attendance, 5,190; average duration of school, 7.8 months; average salary of teachers monthly, \$70.16; total number of schools, 294.

There were about 223 students enrolled at the State University at the beginning of 1895. The mechanical building and machinery were destroved by fire in November, causing a loss of

about \$8,000.

State Institutions,-Following are reports of the cost of these and the number of inmates

for the bicnnial period 1893-'94:

State Prison—appropriation, \$65,000; total cost, \$62,994.18; receipts for board of United States and county prisoners and sales, \$18,-993.89; net cost, \$44,000.29; average number of prisoners, 881; average daily expense for each, 68 cents.

State Insane Asylum-appropriation, \$80,000: amount expended, \$70,908.62; receipts, \$2,165,-16; net cost, \$68,743.46; average number of patients, 187, 70; average daily expense, including

improvements, transportation, etc., 50,% cents. State Orphans' Home—appropriation, \$28,000; expense, \$27,975.17; receipts, \$279.50; net cost, \$27,695.67; average number of children,

80; average daily cost, 4710 cents.

For the Deaf, Dumb, and Blind-appropriation, \$2,000; cost, \$2,357.47; deficit, \$357.47. There is no State institution. Children are sent to the California Institution for the Deaf, Dumb, and Blind at Berkeley. The cost is \$300 a year.

Farming .- A report on the crops says: " Nearly everything in the way of crops and fruit has yielded far better than was expected at the beginning of the season. While the rainfall was below the normal, the supply of water for irrigation held out very well, except in central Elko County, along the upper portion of Humboldt river. The tame hav crop is fair, although wild hav cut less than usual. All small fruits yielded better than for years in Humboldt, Lyon, Storey, Douglas, Ormsby, and the extreme southern portions of Washoe County.

Mining.—Considerable activity was reported in the mining districts during the year. Gold is said to have been taken out in many places. The De Lamar district, in southern Nevada, especially, where the mines have been in operation only about three years, has had a great influx of gold seekers. The activity there is said to have been unequaled in the State since its palmiest days. Most of the large mines are controlled by the De Lamar company, which was reported in August to be shipping about \$100,000 in gold

every month.

The men have been paid in checks and small aluminum coins issued by the company, of different face values, which have been in general circulation in that section as well as portions of Utah. This was held by United States officials to be contrary to the law, making it punishable to make or utter any coins. The company to make or utter any coins. The company claimed as their reason for using these instead of Government coins that it was unsafe for them to transport gold and silver back into the camp, and that as the money was not intended for gen eral circulation they were violating no law. The United States District Attorney, however, believed differently, and arrested the superintendent. An examination was had and the superintendent was held, but allowed to go on his own recognizance. Later, the attorneys of the company in New York were consulted, and they directed that the aluminum coins should be with-

drawn from circulation.

The Mount Como group of mines was bonded in August to an English company for \$40,000 for six months. A tunnel is to be run from the mill in Palmyra cañon to the North Rapidan mine. This tunnel will run through 2 claims of the group now bonded, and drain all the mines in that section so that they can be prospected

and worked to a greater depth.

Vigorous work has been begun on the Brunswick lode. The plan is given as follows: "The wick lode. The plan is given as follows: "The Comstock companies to purchase 5,000 feet of the Brunswick lode at \$12.50 per foot. This ground to be prospected from the Sutro Tunnel, and the expense to borne pro rata by the companies interested. The Sutro Tunnel to be extended west through the west formations. A branch tunnel to be started from the vicinity of the Alta shaft and extended into the American Flat country. The expense of this tunnel to be borne by 12 of the south-end mines. The drift run from the Alta will be in a country which has proved to be mineral-bearing, but which is so wet that it can not be worked. The new tunnel will drain it at a depth of between 1,300 and 1,400 feet.

Legislative Session.—The seventeenth session of the Legislature began Jan. 21 and ended March 23. Lem Allen was elected Speaker of the Assembly. The political character of the two Houses was: Senate-3 Republicans, 3 Independents, and 9 Silver party; Assembly-9 Republicans, 1 Populist, and 20 Silver party.

The Assembly passed a bill repealing the law of the last Legislature limiting the session to fifty days. The Senate adopted a substitute for this bill, passing it unanimously, that this Legislature might sit to the full constitutional limit of sixty days, but should draw pay for only fifty days. The session continued sixty days.

The State University received an appropriation of \$38,000 for land and a building for dor-

mitories and \$1,000 for a library.

Bills were introduced providing for consolidating certain counties. A bill was passed in-corporating Storey County, doing away with the city of Virginia and the town of Gold Hill, and vesting their property in the county, providing for one county general fund instead of the three city and county funds, and for a tax levy for county purposes of \$3.50 instead of \$3.60.

The validity of this law was questioned. was claimed that if put into operation it would do away with the saloon license by the act of

setting aside the city organization.

A law was passed requiring that owners of sheep pastured in the State must pay a license or must have legal title to or have made the first payment upon a certain amount of land for each sheep. The question came before the courts whether lands leased from the overland railroad are to be included under the above description. Judge Cheney, in the district court. decided in the affirmative.

Another bill provided that live stock driven

into the State from other States and to the same tax as stock that have will Nevada, not withstanding the tax to may have been paid in other States. Lace store driven in for commercial purposes are how . exempt from this rule. It also extended the time for assessing live stock by giving the asamour authority to make the assessment to a s calendar day of the year. The occasion for the law as given is that it has been the custom for California sheep owners to drive their flicks into Nevada and summer them there. They fatten on the grasses and damage the reads in Nevada, vet do not contribute to support the Mate or county governments.

A bill making changes in the election laws, so as to secure the purity of the ballot, was one of

the important measures of the session,

The game law was amended, extending the senson for killing teal, mallard, and the like, to April 1. The close season for grouse, quail, woodcock, and similar game to from March 15 to

Sept. 15.

An act was passed to protect public ranges from wild horses. This is made necessary by the great numbers of these horses estimated as high as 200,000-that are roaming over the State, enting off the grass so that sheep and eattle are deprived, and also in many instances leading off domestic horses from the ranches

The statutes were ordered compiled by the Attorney-General and F. H. Harman and published

at \$5 a copy.

The following joint resolution passed:

That we demand the collection of the laste tanks are of the l'acific Railway companies to the I a tel " ates. as it matures upon the same penticiple that missed as demands are enforced, and we instruct our secution and Representatives in Congress to a de for such a bill as will dispose of the important question to the best interests of the people of the State 4 News a such the whole people of the United States and asserts ance with the law and justice to all

And be it further resolved that we desired the enforcement of the Interstate the meric act every-

Another joint resolution, after a preamble in reference to the restoration of elect and the services of Senator Jones, continued :

That the people of Nevada fulls approvate this trainscendent intellectual ty that has characterized the zeal ustress of Senate Jacob in the National Senate and at Belgium's rapital in her a full Neural as interests, and trust that he may be seared to putter were in the good were until a develop he are me and wood

A concurrent resolution declared opposition to national banks and in favor of free and unlim-

ited comage of other.

Another resolution that passed both houses no used the President, " aided by the Democrain of high critics and misdemention in the financial policy of the Administration, especially relative to the silver question, and declared that he was the serving of impeachment," etc.

In reference to the address of the Rimetalla-

I cagur, it was

A . Ired. That we had with out efact, on the actft Vi toun Bimetallie League, n calling on the In the fitted in ted States to make all the paret co or if the restoration of alver and the case in tary reform.

I bet the people of Nevada fully approve and inhers the declaration of principles and addresses for meater by the Bimetallie League at its session at Washington on Tuesday, March 5, and will encourage at 1 section the work of Nevada's friends by pledging the cost ral vote of the State to Hon, George C. Sibles for President, or any true friend of the people, in perference to the candidate of any party whose interests are irrespectively connected with the single stati fant.

An act providing for a portrait of ex-Gov-Colcord was amended by the Assembly with a provision that the work be done by a Nevada

A bill providing for the submission of an amendment allowing woman suffrage was lost in the Assembly by a vote of 12 to 17.

Other acts of the session were:

Making it the duty of county commissioners of any county in which public arms, accounterments, or militara stores are now had or shall hereafter be received for the use of any volunteer organized militia company to provide a suitable and safe armory for organused militia companies within said county, and providing that the expense should be paid from the State general fund, but not making an appropriation. The Constitution forbids payment of money from the treasury except in consequence of an appropriation. Providing that after May, 1896, commissioned officers will be elected for two-year terms, and not less than 44 members will constitute a military company, instead of 40, as at present.

Regulating appeals to the Supreme Court.

Changing the name of the State insane asylum to Hestalal for Mental Diseases.

Appropriating \$15,000 for an annex to the State in-

eanc nevium.

Declaring the willful intention of any person to prevent another person from securing employment a mi-lemeanur

Providing for the establishment of high schools in various counties.

To prevent the spread of contagious diseases.

Regulating the practice of dentistry. Providing for Typographical Union labels on pub-

monthly and in lawful money.

he printing. Requiring corporations to pay their employees

NEW BRUNSWICK, an eastern province of the Dominion of Canada. Capital, Frederic-

Government.-The Executive Council, or ministry, consists of the Hon. A. G. Blair, Premier and Attorney-General; Hon. J. Mitchell, Provincial Secretary; Hon. A. J. Tweedie, Surveyor General; Hon, H. R. Emmerson, Commissioner of Public Works; Hon. A. S. White, Hart H. Labrilois, members of Council with-Mr. Blair is a Liberal in is a sel has been Premier of the province - i-s' As in Nova Scotia and Ontario, it · and see to seemment of a different political of the same with the province supports in 6 Ho Mr. Bair has had Conservastell stons roment and at times it ha - a solution and at times it be a local for the flowing for the and the flowing for the flowing flo J. r. for the Premier.

Legislation. The second of the Twen-1. cot Jew J volton 1 has r. Jan. 31, 1895, in Freiend r. The most must hand paragraphs

of his specy to war the

The liberal provision which the Legislature has made in the past few years for the encouragement of the dairy interests of the province and the cordial cooperation of the Dominion authorities with my co-ernment in this important work have produced very gratifying results. Three years only have clapsed since the province was obliged to depend very largely operation of the Dominion authorities with my Govupon outside production for its cheese supply. Last year, not only was the home demand fully supplied by the home production, but there remained a considerable surplus for export.

The importance of providing for a more equitable representation in Parliament of those counties whose wealth, population, and relative importance have increased in recent years, has engaged the serious attention of my Government. The measure which my Government will submit to you will be found, it is hoped, to some extent at least, to redress the inequali-

ties which in these respects now exists.

An active interest is being awakened among the enterprising business men of St. John in favor of holding a provincial exhibition in that city during the current year. Should the plans of the association provide for a suitable display of agricultural products, my Government believes it would be desirable to assist the undertaking in a substantial manner.

The principal legislation of the session—which was prorogued on March 5-consisted in the following acts:

To secure to wives and children the benefit of life insurance.

In aid of an exhibition at St. John.

To provide for the inspection of butter and cheese intended for export.

Respecting the property of married women.
Relating to the issue of provincial debentures.
To amend further the New Brunswick medical act

of 1881. Respecting assignments and preferences by insolv-

ent persons. To amend "the New Brunswick Elections act of 1889."

To provide for the cost of certain international bridges.

Finances.-Mr. Mitchell delivered his budget speech Feb. 6. At the end of the fiscal year the bonded indebtedness was \$2,628,000; at the time of speaking it was \$2,675,000. During the year \$30,000 of bonds bearing 6 per cent. interest had been replaced at 4 per cent. The same policy would be pursued in 1895 with \$109,000 debentures. The floating debt was \$146,483. During the year a large number of steel bridges had been built. The total estimated expenditure was \$669,372, the actual outlay \$661,521. estimated receipts for 1895 were \$670,560, the chief items being \$483,560 from the Dominion Government subsidy, \$145,000 from territorial revenue (mainly timber lands), and \$24,000 from taxes on incorporated companies. The estimated expenditure for 1895 was \$669,194, the chief items being \$14,160 upon the administration of justice, \$21,650 upon agriculture, \$183,914 upon education, \$27,600 upon executive government, \$114,000 upon interest, \$19,295 on legislation, \$40,000 upon the lunatic asylum, \$11,000 upon public printing, and \$192,150 upon public works.

Education.—The Provincial Board of Educa tion consists of the Lieutenant Governor, the members of the Executive Council, the President of the University of New Brunswick, and the Chief Superintendent of Education. schools are by statute free and unsectarian. Since 1890 there has been an increase of 136 in

the number of schools, 132 in the number of teachers, and 1,125 in the number of pupils. During the first term of 1894 there were 1,653 schools in the province, 1,749 teachers, and 61,-280 pupils. The average attendance during the year was 69,648. The expenditure for the year ending June 30, 1894, included \$150,882 from provincial grants, \$92,281 from county funds, and \$183,166 from district assessments, a total

average cost of \$6.13 per pupil.

Agriculture.- The report of the Commissioner of Agriculture, presented in January, 1895, claimed a very prosperous season in dairying and great success for the governmental importation of thoroughbred stock. The crops, on the whole, do not seem to have been good, but the cultivation of apples and small fruits was greatly increased and very successful. Dairying was the chief new resource of agriculturists during the year. There were 45 factories in the province in 1894, against 9 three years before. number of patrons had increased from 200 to 1,200, the value of the product from \$18,000 to \$100,000, the export of cheese from nothing to \$20,000, and of butter from nothing to \$8,000. The official report speaks of meetings averaging 100 a year, which have been addressed on this subject and attended by 25,000 people. On Aug. 16, 1894, an agricultural conference was held at Fredericton, attended by 4,000 persons, and addressed by the Governor General, Lord Aberdeen, ex-Gov. W. D. Hoard, of Wisconsin, Lieut,-Gov. Fraser, of New Brunswick, Premier Blair, and others.

Fisheries.—During 1894 the province had 819 fishermen in vessels and 10,831 in boats. The value of these boats, traps, nets, wharves, etc., was placed at \$1,680,912, and the value of the yield was \$4,351,527—an increase of \$600,000 over 1893 and of \$1,150,000 over 1892. Its export of fish was \$715,619. The distribution of the catch in 1894 will be seen from the following figures: Salmon, \$454,974; hake, \$81,-940; mackerel, \$152,184; pollock, \$46,787; herring, \$1,127,197; halibut, \$23,748; cod, \$492,493; smelts, \$336,400; haddock, \$89,983;

Shipping .- The registered tonnage carrying cargo into and out of the province during 1894 ployed in the provincial coasting trade was in 1804 \$1,118,787.

NEWFOUNDLAND. Several important acts were passed by the Legislature during the ses-sion of 1895, some of which were rendered necessary by the financial crisis that followed the failure of the only two banks in the island on Dec. 10, 1894. Their notes constituted almost the entire currency of the country, and when these became worthless people found themselves without any medium of exchange. To meet this serious emergency the Legislature passed an act providing for the registration of notes of both banks then in circulation, and for a guarantee thereupon by the Government of 80 per cent, of their value in the case of Union Bank notes, and of 20 per cent, in the case of the Commercial Bank. Notes thus guaranteed were not to be presented for payment till July 1, 1897; and no notes were to be redeemed before Jan. 1. 1897, nor after Dec. 31, 1897 The ball at funded a slight temperary reset but a was the distruct that the guaranteed to account ceased to circulate, and it was not tall it a a dian banks had opened branches in M. J. L. that a satisfactory currency was established

Two acts followed, providing for laquidatives of the 2 banks. Trustees were appearated who were empowered to realize and distribute the avsets and to make compromises with the detters

and creditors of the banks.

Another act was passed regarding the currency, which is in dollars and cents. It orders that the sovereign shall be worth \$4.864, and British silver be taken at propertiseiste rates. The gold eagle of the United States, weighing 10 pennyweight 18 grains troy, shall pass for \$10, and multiples or parts thereof in propertion, Coins struck for circulation in the colony shall be legal tender for the rates assigned them. No other coins shall be legal tender,

Another act provides for the raising of a loan of £550,000, and the appropriation annually of £27,700 for payment of interest and creation of a sinking fund. Interest on the whole publie debt is to be a first charge on the revenue of the colony. The loan is to be applied to the payment of the floating debt of the colery and

other services.

Another act provided for the establishment of a fire department for the city of St. John's, which is to be in connection with the Newfoundland constabulary. Toward its support the Municipal Council contributes \$7,000 per annum and the insurance companies \$2,000.

The act to amend the law relating to slauder provides that words spoken or published which impute immorality are actionable, and the plaintiff is entitled to damages without proof of spe-

cial damage.

The act to continue for a further person the Newfoundland French Treaty act provided for the continuance of this act to Dec. 31, 1997

The act respecting reduction of salaries of public officials gives power to the Governor in Council to reduce all salaries according to a fixed

scale, which is laid down.

The act to remove certain disabilities under the election act of 1889, after reciting facts in connection with the election petitions and trials of 1894, by which certain members of the House of Assembly were disqualified for alleged everupt and illegal acts and practices, declares that nothing in the corrupt practices act of 1887; shall be construct to render any one unwated incapable of being a candidate for, or sitting or voting in the existing General Assembly, or of holding any office under the treen.

Events - Dec. 10, 1804, Newfoundland's Black Monday, will long be remembered in the annals of the country. On that day, without any warming, the people found themselves without a currency, and all business was suspended. Factories and workshops had to dismiss their employ-ses. The failure of the banks was speedily followed by the collapse of 7 large mercantile firms and a number of the smaller trading establishments. Want of employment created widespread destatution among the working people. The revenue declined rapidly, as it depended on the duties or importations, now considerably reduced.

The people courageously faced their difficulties, confident that they were able to overcome them, and that better days were in store. The establishment of branches of 3 Canadian banks of high standing in St. John's was attended with the best results, and helped greatly in restoring confidence. Speedily business began to revive. The Bank of Montreal extended a helping hand to the Government, and by a loan enabled it to meet all habilities on Jan. 1 and April 1. Money became more plentiful, and shops and stores resumed their former busy aspect. The destitute poor were temporarily provided for by generous contributions from abroad. Factories and workshops resumed operations, and employment became more plentiful as the year advanced, About 2,500 men found employment on the railway.

Still more important was the success of the seal fishery, which proved to be the best for many years, and in value exceeded \$600,000. This was followed by one of the best summer cod fisheries experienced in recent years. Not only was the catch large, but, owing to favorable weather and greater care, the cure was superior to that of recent years. The cash trade proved

to be the best for many years.

Meantime a floating debt of \$2,500,000 remained, and the condition of the revenue created much anxiety as to the ability of the colony to meet its liabilities. This had a depressing effect at home and exercised an injurious influence on credit abroad. If a loan could be obtained sufficient to wipe out the floating public debt, and if a retrenchment policy were adopted, then all might go well. The Hon. Robert Bond, Colonial Secretary, obtained in the London moneymarket a lean of \$2,500,000 at 4 per cent., to be repaid in forty years. He also negotiated a loan of \$1,000,000 for the savings bank at 31 per cent., rendering this institution absolutely safe in any emergency. As soon as the success of the loan was announced, the Government formulated a stringent retrenchment policy, which was adopted by the Legislature, and at the same time a slight increase of taxation was made. The retrenchments announce aggregate \$494,000. All official salaries are reduced, and reductions are also made in the grants to various public services. The expenditure for the fiscal year is estimated to reach \$1,331,000, while the estimated resenue for the year is \$1,725,022.

The revenue, which had suffered severely by the crash, has rallied to a wonderful extent, and as business improved and imports increased, it fully shared in the general prosperity. Before the end of 1895 it regained its normal condition. The revenue for October and November exceeded that of the same months in 1894; and as quarter day approached, Jan. 1, 1896, the Government was ablest reput to London the money required for particulated interest on the public debt and to be the london the laborate of the revenue for

the seas

The old "track" or credit system, on which the flat rice had been carried in for generations, has revived its deathblow; and in future these industries white conducted on a cash basis. The effect of the track "system was to undermine and destroy the industry and honesty of the fishing classes, to render them reckless and indolent,

and to involve them hopelessly in debt. At the same time the system worked disastrously for the merchant class, and ultimately ruined them.

A general election took place at the close of 1893, resulting in a decided victory for the party headed by Sir William Whiteway. The numbers stood: 24 Whitewayites, and 12 Opposition. When the new Legislature met in February. 1894, it was found that 19 members of the White way party, including the Premier himself and all the members of his Cabinet, had been peti-tioned against on the ground that they had been guilty of bribery and corruption. When the cases came up for hearing before the judges of the Supreme Court, the first three tried were found guilty, and were unseated and disqualified for standing again as candidates during the term of the present Parliament, Finding that the others were likely to share the same fate, Sir William Whiteway advised the Governor to dissolve the present Parliament and order a new election. Had this been done it would have ended the prosecutions for bribery and left all open to re-election. But the Gov ernor refused to act on the advice of his ministers, on the ground that it would amount to his using the royal prerogative for the purpose of interfering with the ordinary course of justice, and shielding men who were accused of corrupt practices. In this course he was sustained by the imperial authorities. In consequence, Sir William Whiteway resigned, and the Hon. D. Morrison, leader of the Opposition, was called on to form a Government. Not having a majority in the House of Assembly, the new Government could not carry any measure; and the Legislature was prorogued from time to time, so as to permit the accused members to be tried. The trials proceeded, and, one after another, 17 members of the Whiteway party were unseated till only 7 were left. The new Government had then a majority; the House met and passed the necessary bills, and the session closed.

When the new elections were ordered, to fill the vacancies caused by the unseating of members, the great majority went against the Morrison. Government, and a large majority of Whitewayite candidates were returned. This finally led to the resignation of the Government, and Mr. Green was called upon to form a Government, which he did, and soon afterward an act was passed removing the disabilities of the condemned members; so that Sir William Whiteway and the other disqualified members were re-

elected, and he again became Premier.

While these political events were in progress there was much excitement, and party animosity ran high. Much friction was experienced in carrying on the Government under such anomalous conditions, and especially in the collection of the revenue. But when the Legislature assembled, in the spring of 1895, these political turnoils were hushed in presence of the financial calamity; and the Legislature devoted itself to devising remedial measures and saving the colony from bankruptcy.

In April, 1895, the Government sent a deputation to Canada to endeavor to negotiate terms for the admission of Newfoundland into the Dominion; but, after protracted discussions, the attempt at union proved a failure, the terms fored by Canada not being such as Newfound-

nd could accept. In October, 1895, discoveries were made of exive smuggling operations from St. Pierre to foundland, causing serious losses to the rev-Ramifications of this smuggling system ere found to extend to St. John's and the prin-I ports of the island. Several seizures were and about 20 of the smugglers were tried eavily fined. It is estimated that the anlos to the revenue by smuggling is not less an \$100,000. The French at St. Pierre afford ry facility for the illicit traffic, and refuse to

The French shore treaty question is still un-settled, and the modus vivends has been extended till the end of 1897. Under this arrangement tters have of late been going on rather pothly.

Trade.-The value of imports in 1894 was 7,164,738; exports, \$5,811,169. The revenue in \$1,641,035. The public debt amounted \$9,116,535.

allways.—The new line from Placentia unction to Port-au-Basque, 500 miles, is makrapid progress and is admirably built. Durcoast, 356 miles from the Junction and 406 alles from St. John's, leaving 144 miles to be allt. By the close of 1806 it will be completed operated to Port-au-Basque. A short run (100 miles by swift steamers across the Gulf 88. Lawrence to Cape Breton island will travelers in connection with the contisetal railway system, and Newfoundland will st cease to be an island. On the complen of the present line the colony will have miles of railway.

Mining.-Two important discoveries have made during the past year. One is of a area, 12 miles long and 6 broad, on the new ne of railway, near the eastern end of Grand the, 40 miles by rail from Bay of Islands. One is estimated to contain 11,000,000 tons, there are 6 smaller seams. The coal is of sellent quality. In St. George's Bay, at no tel distance from the railway iron ore is rescovery of a deposit of iron ore on Belle Isle, exception Bay, a dozen miles from St. John's. here are 2 beds of ore on the island, which have an area of 2 square miles. A mining expert ites that these contain 50,000,000 tons of It is all surface mining. The ore tests 55 r cent. The property has been leased to a va Scotia company, who have already shipped wal large cargoes to be smelted at New Glas-

Copper mining, in the north of the island, ontinues to be prosecuted successfully. In 1894 3,894 tons of copper ore and regulus were ex-orted, the value being \$235,179. In addition, Use tons of Iron pyrites were exported from a

risheries.—The total value of the exports of the products in 1894 was \$5,144,589. The ask fishery employed 58 vessels and 785 men. The average catch per man was 69 quintals.
The scal fishery of 1895 employed 20 large steamers, carrying 4,680 men. The number of scals taken was 270,058. The export of lobsters in 1894 was 48,056 cases; value \$312.64 export of herrings in the same year was landered barrels; value, \$244,789.

Education. - Under the retrem himen! 1000) the education grant is fixed at \$124.539 system is denominational, and the whole grant is divided denominationally, according to the population, and the expenditure is controlled to

denominational beards.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Comstatus tion June 21, 1788; area, 9,305 square miles. The population, according to each devenual census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 326.073 in 1860; 318. 300 in 1870; 346,991 in 1880; and 376,530 in

1890. Capital, Concord.

Government .- The following were the State officers during the year: Governor, Charles A. Busiel; Secretary of State, Erra S. Steams, Treasurer, Solon A. Carter; Attorney-General, Edwin J. Eastman; Adjutant General, Augustus D. Ayling—all Republicans; Commissioner of Insurance, John C. Linehan; Bank Commissioners, James O. Lyford, Alpheus W. Baker, John Hatch; Mr. Lyford was succeeded Dec. 1 by Thomas J. Walker; Superintendent of Publie Instruction, Frederic Gowing; Railroad Commissioners, Henry M. Putney, Benjamin W. Prescott, Thomas Cogswell; Labor Commissioner, John W. Bourlet; Chief Justice of the Supreme Court, Charles Doc; Associate Jus-tices, William M. Chase, Alonzo P. Carpenter, R. M. Wallace, L. N. Blodgett, L. W. Clark, and Isaac W. Smith, who retired in May, and was succeeded by Frank N. Parsons.

Finances -The transactions of the treasury for the year were: Cash, June 1, 1894, \$259, 027.44; receipts to June 1, 1895, \$1,792,904.47. total, \$2,051,931,91; expenditures, \$1,908,739,10; balance, \$143,192.81. The net debt, June 1, 1895, was \$2,026,300.65; reduction during the

year, \$10,241.58.

Among the extraordinary appropriations were \$94,604.76 for the State Library building . \$16. 430.59 for the asylum special appropriation; \$13,025,22 for the balance of current expenses at the State Prison, and \$2,722.96 for repairs there; \$14,729.90 for carrying out legislative resolves; \$8,814.81 for White mountain roads; \$8,397.45 for the Soldiers' Home, \$7,500 for Dartmouth College; and \$6,847.42 for the Webster and Stark statues. Blonds to the amount of \$146,000 were redeemed during the year.

The State treasury was robbed about noon

June 3, of \$3,385.50 belonging to the State and valuable securities belonging to the Treasurer.

Valuations. - The equalized valuation of the State, which is to form the basis of apportionment of the State taxes for five years beginning with 1505, and covering the inventories of cities and towns, savings-bank deposits, railroad property, and insurance capital subject to taxatico. aggregates \$286,736,618. In 1800 the amount was \$262,378,917. Since 1879, the date of the formation of the Board of Equalization, the increase has been \$79,791,601. "The increase has arisen very largely," says the report of the leard, "from savings-bank deposits (\$45,000,000; railroad properties (\$11,000,000), and insurance cupa-

tal (\$1,275,000). In the same time there has been a decrease in 'money on hand, at interest, or on deposit from nearly \$20,000,000 in 1879, when the law requiring sworn inventories went into effect and was universally enforced, to about \$6,000,000 in 1894, when in a large portion of cities and towns it has practically become a dead letter. In the past four years the equalized valuation in the 10 cities of the State has advanced \$15,238,854, or more than three fifths of vanced \$15,238,804, or more shown. The de-the entire increase previously shown. The de-preciation of agricultural properties in the State preciation of agricultural properties. The becoming year by year more apparent. number of ratable polls has risen from 86,827 in 1879 to 100,017 in 1894. With a State tax of \$501,000, which has been the regular annual levy since 1888, the amount required on each \$1,000,000 of valuation, under the new apportionment, will be \$1,750; with the last apportionment (1890) it was slightly in excess of \$1,900.

Education.-The forty-eighth annual report of the schools of the State, issued in October, 1894, gives the number of schools as 2,222; the average length of school sessions in weeks, 24:95; the average attendance, 42,030; the average to each school, 1891; the percentage of average attendance to the whole number, 67.3; the numwhole number of male teachers, 280; female teachers, 2,907; average wages of the former, \$49.78 a month; of the latter, \$27.36. There are reported 52 public high schools and 22 private schools of similar grade. The State Normal School at Plymouth has about 75 students.

The Legislature passed an act establishing a two-years' course in practical and theoretical agriculture, a department of horticulture, and a system of practical instruction and manual training at the College of Agriculture, to which students shall be admitted who can pass a fair and reasonable examination in reading, spelling, writing, arithmetic, English grammar, and the geography and history of the United States. This act was the result of the agitation in reference to the college which has been going on for some time. It was claimed that the trus-tees and instructors were devoting their efforts mainly to building up a classical, scientific, and The Legislature appolytechnic institution. propriated \$2,500 a year for two years, for the purpose of carrying the act into effect.

The class from Dartmouth Medical College, numbering 38, was the largest ever graduated

r. that department.

The term at Dartmouth College opened in " cinter with a freshman class of 130, while lityer classmen from other colleges were a Line The Sandard for admission has been ra set it all departments and also the rank for State aid to the amount of \$ 7 % a year was dentinued to the college by

State Institutions.—The report of the Board Lates v for the year ending Sept. 30, 1894, ob we that ther were then in the State asylum 401 par it's that I there were 402. The new building for descrives sents was opened in November 1865, it is designed to accommodate 26 patients. The cest was nearly \$19,000, exclusive of plumbing and heating. The old buildings are being refitted. The mortality in

1894 was a little over 6 per cent. The percentage of recoveries was 28:23, a slight increase

over that of the previous year.

The report of the Orphans' Home at Franklin for the year ending May 31, shows that 55 were received during the year and 4 returned from on trial, making a total of 135. The receipts were \$11,644.73, and the expenditures \$10,-736.65. The profit from the farm was \$1,035.
The Soldiers' Home received an appropria-The profit from the farm was \$1,035.

tion of \$15,000 for two years, in addition to such sums as the State may be entitled to receive from the General Government in aid of the support of disabled soldiers and sailors for that period, and \$10,000 was appropriated for

building and furnishing a hospital.

The report of the State Prison for the year ending Nov. 30, 1894, shows that there were then 172 inmates, of whom 4 were women. The earnings from all sources were \$11,412.11, the expenditures \$24,597.20. This includes \$3,250 for the purchase of a shop. While the expenses of the prison were more than \$1,000 less than in 1893, there was a large deficit caused by the loss of earnings during the months from January to May, and to the lower price received for convict labor since that time. In December, 1895, it was decided to continue the contract with the chair manufacturers, but they are to pay an increase of 10 cents a day.

Insurance.—The commissioner's report, pub-

lished in July, gives statistics as follows:
Domestic fire companies: Risks written, \$42,243,566.44; premiums received, \$494,840.94; losses paid, \$283,580.08. These figures show a decrease of risks written, \$12,976,373,96; in premiums received, \$88,244.12; and an increase in losses paid of \$37,328.57. The New Hampshire business of companies of other States and countries was: Risks written, \$33,828,209.10; premiums received, \$492,936.33; losses paid, \$289,496.33.

The number of authorized life insurance companies May 1, 1895, was 22, an increase of 1 over the previous year. The principal items are: Number of policies issued, 2,514; amount, \$3,945,677; policies in force Dec. 31, 1894, 14,-606; amount, \$24,800,011; amount of premiums received, \$884,442; losses and claims,

\$371,806.

The business of the casualty and surety companies within the State for the year ending Dec. 31, 1894, was: Risks written, \$9,927,930.47; premiums received, \$64,432.91; losses paid, \$31,-611.99.

Savings Banks,-In January the largest of the Concord banks announced a reduction of dividends from 4 to 3 per cent., and was followed by the others. The reason given was the withdrawal of deposits consequent on the operation of the income-tax law. Two of the Concord banks lost in 1894 over \$100,000 each in deposits. The Nashua Savings Bank, the fifth largest in the State, closed its doors March 5, an injunction having been issued against injunction having been issued against it on application of the bank commission. The with-drawals were very heavy after the reduction. Eight savings banks were under injunction at the close of the year. The net decrease of deposits in the savings banks for the year was \$3,870,240.79. The guarantee fund and surplus

of the savings banks decreased for the same period \$582,887.52 by reason of losses, reduction of book values of assets, and charges incident to the protection of Western real-estate holdings.

There are 7 trust companies that are now conducting savings bank departments, and 2 that are closing out that branch. The savings de-

posits of the 7 aggregate \$1,680,760,30.

The Legislature of 1895 reduced the rate of taxation on deposits from 1 per cent, to three quarters of 1 per cent. This made the total of savings-bank tax for the year \$484,000, against \$705,000 in 1894. Many of the banks then in-

creased their dividends to 31 per cent.

Railroads.-The great railroad event of the year in the State was the lease of the Concord and Montreal to the Boston and Maine, which was decided upon in a meeting of the stock-holders June 29. The vote stood 34,538; shares in favor to 10,047 against the lease. At the same meeting it was voted that the capital stock be increased \$1,200,000, making it in all \$7,200,-000. This practically removes the control of the railroads of the State to owners outside, and

does away with competition.

Manufactures.—A comparison of the establishments reporting to the Labor Bureau in 1893 and 1894 shows a decrease in every respect. The capital invested in 1893 was \$14,968,161; in 1894, \$14,488,890; wages paid declined from \$4,879,606 to \$4,397,607; and value of product,

from \$18,936,633 to \$16,312,963.

Farming .- On Jan. 1, 1890, the selectmen of the towns reported 1,342 abandoned farms in the State, with vacant buildings suitable for occupancy. During 1895 the selectmen were requested to make a canvass of this class of farms, and reported 750. Letters of inquiry about these farms, received by every mail, come mainly from residents of cities desiring farms for permanent homes or summer residences.

Fish and Game. - There are 11 hatcheries in the State, the largest number in any State of the Union. Two were built last season. The strict enforcement of the game laws has increased the number of deer in all parts of the State, especially the northern section, where it is estimated they outnumber the sheep 2 to 1, while moose and caribou have been seen there for the first

Forests.—The report of the Forestry Commission says that the area of forests in the State comprises practically 60 per cent, of the entire surface, and has not greatly changed since the publication of the report of the first temporary Forestry Commission in 1895.

The acreage of virgin spruce is about 525,000, of which about 300,000 is in the White-mountain district. The annual product from this is for lumber about 240,000,000 feet, and for pulp about 40,000,000 feet. The amount used for pulp is increasing about 15 per cent. a year.

The State Library.—The new building for the library at Concord was dedicated Jan. 8. The library now numbers 35,000 to 40,000 volumes. The act providing for the new building was passed by the Legislature of 1891 with an appropriation of \$175,000, Land was bought the same year for \$28,500, and contracts let.

The further sum of \$75,000 was apprepriated in order that the plans might be enlarged.

The architecture of the building in House in or Italian Renameance. The structure into a dishigh, except for the square tower that rises for it wouthwest corner. The externer is I New Hampshire granite, the leady being of red elecfrom the forway quarries, while the cortises belts, pilasters, buttresses, balustrades and entrance steps are of Concord granite. The " polished columns of the main entrance are if green granite from Conway.

The Law and Order League. - The first atnual circular of this league, issued in May, says that more than 400 liquor sellers were presecuted and scores were driven out of the business during the year, Between June 1 and Sept. 12, 1895, the league is reported to have had 309 more cases of illegal selling. The fight on the enforcement of the laws has been very hot in the cities. The Ministers' Association, of Manchester, filed charges with the Governor against the police commissioners, accusing them of neglecting to enforce the liquor law.

Legislative Session,-The ninth biennial session began Jan. 2 and ended March 29. There were 283 Republicans in leath Houses and 104 Democrats. Frank W. Rollins was chosen President of the Senate and Stephen S. Jewett Speaker of the House. William E. Chandler was re-elected United States Senator by a vote

of 261 to 79.

The commission appointed by the Legislature of 1893 to revise and amend the militia laws made its report, and a revised code for government of the State troops was adopted.

Many bills relating to the liquer trase were brought in, and the House appointed a special committee to which to refer them. The bills providing for greater restriction of the traffic were lost.

Several acts were passed in reference to sav-

ings banks.

An act to establish a new apportionment for the assessment of public taxes was passed, and another, amending the law on taxation, specy-fying as personal estate liable to be taxed. Stocks in public funds and corporations, the surplus capital on hand of banking institutions, money on hand or at interest more than the owner pays interest for; stock in trade; carriages over \$50 in value; becses, asses, makes, oxen, cows, and other next stock over three years old; sheep and bego over one year old (but two such hogs to each family shall be exempt); and fowls of every description exceeding \$50 in value

An act to aid in the reorganization of corporations provides that when a mortgage of a curperation has been foreclosed the purchasers may obtain all the rights, powers, and pristleges

of the original corporation.

Amendments were made to the statutes relating to charter fees, public funds liable to be taxed, provedings in insolveney, discharge from arrest, grade cromings, foreign insurance companies and their agents, teachers, and school boards, and fish and game.

Other acts were:

I'm hibiting the giving of eigerettee, said, e " to to minera

Authorizing the Governor to institute a training or in equity in the name of the State abetiever in \$ course shall be necessary to prevent the diversion of water that would naturally flow into New Hampshire. Providing for strict examination of supposed insane

persons before committal to an asylum.

Providing that scats shall be provided for women

employed in factories and stores.

Prohibiting the display of foreign flags on public

For the protection of associations and unions of working men and persons in their labels, trade-marks, and forms of advertising, and the owners of literary. dramatic, and musical compositions and works of art

in their property

Allowing trustees and guardians to invest funds in their hands in the bonds of any city, town, or district whose net debt does not exceed 5 per cent. of the last assessment for purposes of taxation. Net debt is to be understood as excluding indebtedness for water supply as well as the amount of sinking funds.

doves before Aug. 1, 1898.

Amending the law relating to the sale of adulter-

attsl butter and cheese, providing that such butter and cheese shall be plainly labeled.

Imposing a fine of \$20 for every billiard or pool table and every bowling alley kept for hire without

Prohibiting the taking of fish through the ice from the waters of certain specified ponds and lakes.

Requiring selectmen in each town to assess taxes for establishing and maintaining free public libraries. Appropriating \$500 for the introduction of foreign game birds.

Requiring school boards to prescribe and enforce scientific temperance instruction.

Among the joint resolutions passed were the following:

Providing for permanent headquarters for the State Grand Army of the Republic in the Statehouse. Appropriating \$11,500 for the repair of highways

in the State. Providing for taking the sense of the qualified voters of the State as to the expediency of calling a constitutional convention.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles; population in 1890, 1,444,933; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.-The following were the State officers during the year; Governor, George T. Werts, Democrat; Secretary of State, Henry C. Kelsey; Treasurer, George B. Swain; Comptroller, William S. Hancock; Commissioner of Banking and Insurance, George S. Duryee; Attorney-General, John P. Stockton: Adjutant General, William S. Stryker: Superintendent of Public Instruction, Addison B. Poland; Chanceller, Alexander T. McGill; Vice-Chancellors, John, T. Bird, who, July 30, was appointed Vice-Orthory of the Prerogative Court to fill the vaand a percent by the death. Dec. 25, 1894, of Vost Cate offer and Vice-Ordinary Abraham V. Variable C. Pitney, John R. Emery, R. Lee S. Green, who died May 7, and Alfred He was appointed June 4: Chief Justice The ascapping of the state of t made vacant by the regulation of Vice-Chancoller Read . Clerk of the Supreme Court, Benparnin F. Lee.

Finances.-The reports of the Comptroller and the Treasurer show the following: The receipts of the State fund during the year ended Oct. 31, 1895, were: From tax on railroad corporations, \$1,103,956.98; from tax on miscellaneous corporations, \$698,342.36; from collateral inheritance tax, \$121,339.35; from official fees, \$102,751.09; from State Prison receipts, \$52. 702.64; from judicial fees, \$31,548.45; from dividends, \$18,870; from loans to sinking fund, \$40,000: from other sources, \$6,420.96; total re-\$2,120,346.59. The ordinary disbursements amounted to \$1,638,893.43; the extraordinary disbursements were \$527,692.70; the special appropriations were \$46,868.49. The balance on hand Oct. 31, 1895, was \$893,747.88, as against \$986,855.91. Among the extraordinary disburse ments were \$139,590.23 for the Paterson armor and \$75,295.26 for the Jersey City armory. The estimated resources for 1895 are \$2,965,117.88; the estimated disbursements, \$1,993,529.32; the estimated balance, \$971,588.56.

The war debt (the only debt of the State) has been reduced to \$660,400 by the payment dur-ing the year of \$71,000. Of this amount \$44,000 was loaned from the State fund to the sinking fund, which returned \$40,000 to the State fund. The sinking fund at the close of the fiscal year 1894 owed the State fund \$134,819; at the clo of 1895 the sum owed was \$138,819. The available assets of the sinking fund are \$413,711.40.

The condition of the school fund is as follows: Total amount of securities Oct. 31, 1895, \$3,508,-725.80; securities Oct, 31, 1894, \$3,498,490.77; decrease in school fund securities, \$10,235.03. The cash balance Nov. 1, 1894, was \$218,207.90; gross receipts during the year, \$280,113.21; total \$498,321.11; gross disbursements during the year. \$332,701.48; balance Oct. 31, 1895, \$165, 619.63, out of which sum there must be reinvested in school fund securities \$83,130.11, leaving available for payments required to be made from the income of the school fund \$82,489.52; decrease in cash balance from 1894, \$52,588.27; net decrease in property of the fund, \$62,823.30. The total property of the fund Oct. 31, 1895, was \$3,664,110.40, in addition to which there was due \$66,171.51.

The returns of the taxable property in the several counties as valued in 1895 for taxation in 1896 by the county boards of assessors for school and local purposes give a total of \$786, 998,070, an increase over 1894 of \$12,599,738.

The State Board of Assessors this year valued the railroad and canal property at \$221,576,221; and on this amount the tax levied for State purposes is \$1,107,881.10; for local use, \$412,682.02. Property exempt from taxation was valued at \$90,864,564, making the total valuation of property in the State \$1,099,438,855, an increase during the year of \$30,194,640.

Banks.—The abstract of the condition of the national banks of New Jersey on Sept. 28, 1895. shows the average reserve to have been 30.46 per cent., against 30.55 per cent. on July 11. Loans and discounts increased from \$48,903,104 to \$61. 321,840. Stocks and securities from \$9,222,336 to \$9,272,999. Gold coin decreased from \$1,811,143 to \$1,783,738. Total specie from \$3,356,259 to \$3,076,586. Lawful money reserve from 25.819.639 to \$5,211,343. Individual deposits increased from \$53,206,397 to \$56,292,660,

The total resources of the 26 savings banks of the State Jan. 1, 1895, amounted to \$39,995,752. an increase for the year of \$2,266,650. The gain in the number of depositors was 6,263, the total number of open accounts being 144,160.

The number of State banks is 21. The State banking exhibit shows: Loans and discounts. \$7,471,096.76; overdrafts, \$14,441.15; due from banks, \$1,123,012.66; cash on hand, \$505,415.13; stocks and bonds, \$320,069.79; furniture and fixtures, \$33,040.30; bonds and mortgages, \$124,-635.11; current expenses and taxes paid, \$41,-294.57; checks and other cash items, \$31,601.76; other assets, \$17,606.53; total, \$10,635,113.66.

Trust Companies .- The resources of the trust companies were as follow: Bonds and mortgages, \$3.802.392.32; stocks and bonds, \$3,415,056,24; leans secured by collateral, \$4,255,062.38; loans on personal security, including bills purchased, \$2,163,327.32; loans to cities and towns, \$179,-000; overdrafts, \$1,782.56; due from banks, \$493,309.89; real estate, \$787,303.85; cash in tanks and deposit companies, \$1,779,850,70; cash on hand, \$483,035.21; cash items, \$1,251,269.27; other assets, \$365,538.51; total, \$17,940,729.19. Legislative Session.—The Legislature met

Jan. 8, and continued in session until March 22. when a recess to June 4 was taken, and it adjourned June 13. William J. Sewell, Republicn, was chosen United States Senator to succeed

John R. McPherson.

An act was passed, going into effect March 25, reconstituting the Board of Arbitration, naming 5 persons to constitute the board, each arbitrator to receive an annual salary of \$1,200 a year.

One of the provisions of an act regulating surety companies doing business in the State requires each company to keep on deposit with the Comptroller at least \$50,000 in good securities

By other acts the organization of the Naval

Reserve was provided for.

The Legislature appointed 4 commissions, of 3 persons each, who are to report to the Legislature of 1896. One commission is to revise and codify the corporation laws; a second is to examine the subjects of marriage and divorce, of insolvency, insurance, the form of notorial certificates, and other subjects with a view to securing uniformity of legislation in the several States; the third commission was to investigate the penal laws of the State; and the fourth was to confer with like representatives of New York for the acquisition of the Palisades of the Hudson river by the United States. A commission of 5 persons was appointed to make investigation as to the number and condition of the eptleptics in the State.

A concurrent resolution was adopted unanimously by each House that the Comptroller of the State be and he is hereby requested to confer with the Attorney-General, and with his assistants, as law officer of the State, to institute at once legal proceedings to recover for the use of the State all sums of money due the State or illegally withheld by public officers, or custo-

dians of public moneys.

Ninety-seven witnesses were examined by the committee; investigation of the acts of past and

present State officials and of State learns was made, and of business corporatories a district individuals as well, and, on the transcribing of the Legislature, a majority report eignes to it. 4 Republican members of the committee prescrited, as was also a minerally reject free the I Democratic member, which, in the mail, agreed with the conclusions and recemends tions of the majority report. The report made sweeping general charges, among them the following:

In the furnishing of real, lumber and other supplice for the Match use there was del turste eje tematic switching Quantities and prices were falme; rusered, genule being believed to the blate and pred for that were never furnished; large percentages were added to bills, conetimes undertails for the benefit of State officers, at other times, possibly, for the benefit of the dealer

We think that from 1802 to 1854 there was great waste, and, in not a few cases, correspond and bribery of officials in the recomstruct on furnish agreed supplying of the Statehouse Where grow overtharpen and false charges occur, the evidence warrants the belief that it was always by the red orom or progume

cetice of some State officer or employee

The prices were exceptions, being over double the usual retail price of the goals. Hells were fainful in quantities and prices. Large because and communities were paid to the State off-ers. Furniture and carpets paid for by the State were sent to personne holding offices under the State for their private use.

Much remedial legislation was recommended Among the bills passed by the Legislature in accordance with these recommendations of the committee, vetoed by the Governor, and passed over his veto, were the following:

Repealing the 17 acts relative to the printing of the laws, proceedings of the Legislature and positive deces-

menta.

Providing that the current printing and the print ing of the Senate and House perral's marker of joint meeting and executive sees an shall be awarded to the lowest bidder, the work to be done in the

Appropriating \$325,000 for the improvement of Marris Plains Asylum.

Making a married woman liable on her "promise to pay," providing she has herself received some-

Making a married woman, living with her husband, equally liable with him for goods supplied for the use

Authorizing boards of education in all municipalitice of over 10,000 population to provide free lectures to be given at night for the benefit of the laboring people. Providing that Lincoln's birthday (Feb. 12) shall

be a legal holiday.

As a result of the work done by the Senate Investigating Committee, the grand jury found indictments against John T. Van Cleef, secretary of the State Board of Assessors, as implicated in excessive charges for maps; against Bernard Ford, formerly superintendent of the State Capitol, and John Mullins, from whom he purchased large bills of furniture; against Mrs. Benedict Prieth, proprietress, and John L. Kuser, formerly manager and agent for the Newark " Freie Zeitung. for acts in securing contracts for printing; and, in the same connection, against Otto Heinz, a printer, and against Emil Kraentler, of the New-ark "Deutsche Zeitung," and Charles S. Robin-son, publisher of the "Princeton Press." Kuser. Robinson, Heinz, and Kraentler were indicted jointly, were tried for conspiracy to defraud the State, and were acquitted. Van Cleef also, who was tried for obtaining money under false pretenses, was acquitted. Bernard Ford during the summer was a fugitive from justice. Mullins was tried for conspiring with him to defraud the State, and was acquitted. On Dec. 24 Ford volunianly appeared in court and was charged unile: 4 delictments for obtaining money under faire i tetenses, under 2 for official misconduct, and under 2 for conspiracy to defraud the State. Halso as fixed at \$1,000 and the date of trial band. For 10, 1896.
Education. The shool census of 1894 gave builten of school age as 423,872.

Site whool tax for 1894, levied 1 - n led in 1895, was \$2,119,360. The public schools was the schools was the school \$42,493.76 \$1.50 fr fr heart Preparatory School, \$1.50 fr fr heart with \$4.730; for the school coness, \$2.000 to Tre cardinent of the normal school was 537, the number of graduates 134. The model school is self-sustaining; its carnings during the year were \$23,349.59, and its enrollment 605.

The annual appropriation for the Agricultural

Experiment Station is \$15,000.

The School for Deaf Mutes received for maintenance and tuition, \$37,164; for repairs, \$4,501,-74; and \$13,474.15 for its new building. number of pupils was 126, of whom 65 are boys and 61 girls.

For the blind and feeble-minded the State paid to the 2 institutions at Vineland and to other States \$93,932.57; 381 pupils were cared for, an increase over 1894 of 23 pupils, and of

\$6,227.16 in expenditure.

Hospitals.—The amount disbursed this year for this account was \$214,958.01, as follows: To State Hospital for the Insane at Trenton, \$68. 654.04; to State Hospital at Morris Plains, \$157,-306.51; for additional land and buildings at Morris Plains, \$57,651.50. By the last quarterly report the number of county patients in the Trenton hospital was 903; at Morris Plains, 954; insane convicts at Trenton, 21; at Morris Plains, 54. The number of patients at Trenton hospital, Oct. 31, was 1,001; at Morris Plains, 1,116. The number of patients in the county asylums was 3,140, and to these asylums \$114,887.05 was paid. An act of 1895 authorized the expenditure of not more than \$125,000 for buildings at Morris Plains. The foundations have been laid of a new building having a frontage of 530 feet and a total depth of 300 feet. At the Trenton hospital an infirmary, to cost \$35,000, is in process of building.

Soldiers' Home .- During the year the average number of beneficiaries was 520; last year it was 509. The expenditures were \$62,698.01; the average cost of ration per day being about 18.5 cents. The total receipts of the year were \$68,166.01; the balance, \$5,467.48. The Legislature of 1895 reduced the annual appropriation \$36,000 to \$30,000, and also converted into the State Treasury a balance to the credit of the home of \$78,619.17. In 1895 the United States Government paid to the home \$32,955.23.

Penal Institutions.—For the State Prison \$175,812,08 was disbursed. The receipts from convict labor and other sources were \$52,702.64. The number of convicts Oct. 31 was 977, a decrease of 43 since the report of 1894. The Legislature of 1895 appropriated \$150,000 to enlarge the State Prison. A wing is being added, and a

new hospital is under construction.

The Legislature of 1895 appropriated \$100,-000 for the purchase of land at or near Rahway, and the erection of a building to be used as a place of confinement for male criminals between the ages of sixteen and thirty who are under sentence for the first time. The land has been secured, and work on one wing is begun, which will accommodate 255 prisoners. The disbursements for this institution amounted to \$81.-928.28, of which the State contributed \$60,769.60. Of the special appropriation for water supply and hospital, \$8,936.18 also was paid over. The and hospital, \$8,936.18 also was paid over. The hospital is in course of erection. The number of inmates at the close of the fiscal year was 376. 86 had been released on their recognizance and 42 indentured.

At the Industrial School for Girls the per capita allowance for maintenance and repairs tail by the State amounted to \$20,116.95; the lalance of the special appropriation of \$17,000 in 1894 for building an addition to the school, which was \$7,539.77, also was transferred. The expenses for maintenance and general repairs were \$15,385.39. There remained in the school Oct. 31, 119 inmates; 16 were indentured dur-

ing the year, and 16 previously.

State Census.—The fifth State census, among other statistics, gives the following: Total population, 1,672,942; white males, 621,111; white females, 635,649; colored males, 28,714; colored females, 30,296; males, Irish, 41,814; females, Irish, 51,619; males, German, 62,885; females, German, 55,938; males, other nationalities, 80,513; females, other nationalities, 64,403; males under twenty years of age, 335,572; males over twenty, 499,465. The number of dwelling houses is 279,755; the number of families, 357,373.

Read Building.—The Road Commissioner reports, as work done under the commission, that 46:11 miles of highway have been completed, that 49:12 miles have been approved, and that applications have been filed for 130

miles of stone road.

An act of the last Legislature makes an annual appropriation of \$100,000 for road building. It makes the State pay 33\(\frac{1}{2}\) per cent, of the cost of construction, the property owners 10 per cent, and the county the remainder.

Electric Roads.—The first rails of the troller system that is to connect New York and Philadelphia were laid in February at Raritan. The plan of laying the rails along one side of the highway will be generally enforced by the county and township officials as a means of lessening the danger of the trolley and preventing the obstruction of public travel. The electric line between Burlington and Mount Holly was completed in July, and at first was operated by steam power, as the electric motors were not ready.

The Palisades.—The commissioners from New Jersey and New York agreed on a report to be presented to the Legislature of each State. This report states that the commissioners are of opinion that a portion of the Palisades, including the cliffs, should be preserved and held by the United States in order that it may remain open and unobstructed, and they recommend the passage of an act by Congress to provide for the purchase of the lands, and to establish a military and national park. They also propose that New York and New Jersey cede jurisdiction of certain lands to the United States for specified purposes and under conditions.

specified purposes and under conditions.

Memorial Tablets.—Two stone tablets to mark the place at which Gen, Washington and the Continental army crossed the Delaware river on Christmas night, 1776, preceding the battle of Trenton, were dedicated at Taylorsville, Pa., and Washington's Crossing, N. J., Oct, 15. The Pennsylvania monument was creeted by the Buck's County Historical Society, and the New Jersey monument by the Society of the Cincin-

nati in the State of New Jersey.

Decisions.—By the last Legislature a naturalization act, making fraud more difficult, was passed, the Attorney-General having previously declared it unconstitutional. The actions, which of the State courts shall have pure over the subject of naturalization chances of therefrom the courts of common pleas. The question of its constitutionality was brought to fore the Supreme Court on an application for mandamus, and on Aug. 31 Justice Van Syckel delivered an opinion by which the constitution-

ality of the act was upheld.

On March 14 an elective-judiciary act was passed over the Governor's veto, the effect of which was to give the people the power to select their own county judges. On Sept. 9 Justice Van Syckel, Justice Lippincott concurring, rendered a decision declaring the law invalid, because it merely changed the name of the county courts, while it sought to deprive the Governor of his constitutional right of appointing the judiciary. On Sept. 15 Justice Magic filed an opinion dissenting from the opinion of the other members of the court.

On March 5 Justice Van Syckel filed a memorandum declaring unconstitutional the Short law, under which Montelair and other Essex

municipalities were incorporated.

On Feb. 26 Justice Reed filed an opinion in the Cranbury School case, argued at the November term, 1894. At a special meeting calling the legal voters of the township tegether to cast their votes authorizing certain expenditures, many women voted. Objections were raised, but the court decided, regarding the votes cast by women, that the act of 1887 allowed it, and in view of this the assessments made by the township authorities were affirmed.

A suit was brought to test the legality of the act passed March 20, 1889. This act fixed a minimum license fee in respect to population. In the township of Stafferd the minimum fee was fixed at \$2,000. The population of the township is only 1,000. Justice Van Syckel

pronounced the act unconstitutional

Political.—The convention of the Prohibstom party was held June 14. The platform declares for public ownership of all State and municipal monopolies, for woman suffrage, for a more equal distribution of the products of labor, for a free and untrammeled press. The last Legislature is arraigned for "truckling to the interest of the liquor and monopoly power". Heavy W. Wilbur was nominated for truckling to the interest.

On Sept. 19 a Republican convention was held in Trenton. The essential portions of the plat-

form were as follow:

We reaffirm our opposition to any attempt to impose upon this country a debased or depressated currency and our firm belief in the wisdom and beneficence of a tax upon imports which will affect protection to American industries and adequate resence. We reaffirm our purpose of resiliering to New Jersey a clean and howest greenment.

We pledge curselves to oppose any attempt to mopose upon the people a tax for the support of the State government, any attempt to impair or diverfrom its proper use the fund for the support of the free public schools. We pledge outselves to the absolet of unrecessary offices and the reduction of ex-

CANAL CONTRACTOR

John W. Griggs was nominated for Governor. The Democratic convention was held in Tremton, Sept. 26. Among the declarations of the platform are the following:

We reaffirm the national Democratic platform ad pted at t ficago in 1892, and cordially indorse the

administration of President Cleveland.

We estigratulate the people upon the revival of properity everywhere evident in our land, and we mount that the industrial depression with which we have been afflicted during the past three years is chargeable to the national legislation enacted by the Repulsion party. The purchase of silver to be at red in the Treasury and the enactment of unjust tor if any to chrich a few favorites by the oppression of millions of consumers were the main causes of paraly sation of our markets.

college up as maliciously false the statements of the Republican State platform that the government of New Jersey has been conducted by the Democrat party in a dishonest or extravagant manner.

We favor the adoption of a constitutional amendment that will render impossible any law for the le-

gal ration of gambling in any form.

We pledge the Democratic party to the enactment of laws that will secure to the people of New Jersey control of the potable waters of the State.

We condemn the action of the late Republican

Legislature, which rediculed every request made for legislation in the interest of organized labor and rescaled acts passed by Democratic Legislatures for the protection of the wage workers of New Jersey.

Alexander T. McGill was nominated for Governor.

At the election in November 5 candidates were voted for. In addition to those above named the People's party, by petition, nomi-nated William B. Ellis, and the Socialist-Labor party, by petition, nominated Joseph B. Keim. The result was the success of the Republican

party, the Republican candidate for Governor and the 7 Republican State Senators being elected. The vote for Governor was as follows: Griggs, Republican, 162,900; McGill, Democrat, 136,000; Ellis, Populist, 1,901; Wilbur, Prohilutionist, 6,661; Keim, Labor, 4,147. The total vote was 311,600; in 1892 it was 336,871. Legislature in 1895 was composed of 18 Republicans in the Senate and 43 in the House, and 3 Democrats in the Senate and 17 in the House.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,-516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government .- The following were the Terratorial officers during the year; Governor, William T. Thornton, Democrat; Secretary, Lorion M.der; Treasurer, S. Eldodt; Auditor, Marceli-ta Garcia; Adjutant General, G. W. Knable; Superintendent Superintendent of Public Instruction, Amado Chavez: Chief Justice of the Supreme Court, Thomas Smith; Figure of the Supreme Court, Thomas Smith; Marke Justices, N. C. Collier, N. B. Laugh-ice D. Bantz, H. B. Hamilton; Clerk, Wiley, L. Wyllys, Finances, The receipts for the last two for the forty-fifth fiscal year were grossical the extraditures, \$134,455,96. The

\$50,000; current expense bonds, 6 per cent. \$150,000; provisional indebtedness bonds, 6 per cent., \$200,000; Insane Asylum bonds, 6 per cent., \$25,000; casual deficit bonds, 5 per cent., \$100,800; refunding bonds, 6 per cent., \$101,000; Penitentiary refunding bonds, 6 per cent., \$81,000; total bonded indebtedness, \$907,800.

Valuation and Taxation.-From the Governor's report to June 25, 1895, the following figures are taken: Valuation of lands in 1894, \$12. 780,909.77; of houses and improvements, \$5,969,-048.16; of 63,623 horses, \$1,263,613.65; of 3,724 mules, \$140,732.88. Upon the foregoing property the rate of assessment for 1894 was as follows: For Territorial purposes, 6 mills on the dollar; for casual deficit bonds, interest, 025 mills; for Territorial institutions, 1.50 mill; total rate of 7.75 mills. To the above rate is added one half of a mill on the assessed value of cattle. The total assessed value of all kinds of property was \$41,128,620.95; the exemptions of all kinds were \$2,038,119.31; balance subject to taxation, \$39,090,501.64. On this amount the arithmetical product of taxes for the forty-sixth fiscal year is: For Territorial purposes, \$233.683.61; for casual deficit, bond interest, \$10. 288,98; for Territorial institutions, \$58,435.28; for cattle indemnity, \$2,227.69; total, \$304,-636.56. The receipts in the treasury during the first three quarters of the forty-fifth fiscal year amounted to \$186,281.06.

A new tax law provides that after Jan. 1, 1895, "city councils and boards of trustees of incorporated towns shall have power and authority to levy taxes upon the same classes of property, 'real, personal, and mixed, within the limits of such city or town, as are subject to taxation for territory and country purposes for city or town purposes, provided that only 1 per cent. shall be levied or collected upon the value of said property as assessed by such city

or town."

Education.—The receipts during the school vear, including balance due Dec. 1, 1894, were \$118,771.20. Expenditures: Teachers' wages, \$56,229.07; rent, fuel. etc., \$10,055.23; school-houses and grounds, \$6,935.75; on hand, \$26. 929.09; total, \$115,820.94. The number of teachers was 403; and of schools 310, with an enrollment of 14,507 pupils. The School of Mines, which had been closed for a year, was reopened in September, with a fair attendance. The nor mal school at Silver City opened with about 100 students. The last Legislature appropriated \$10,000 for enlarging its buildings, and the same amount for the normal school at Las Vegas, which has not yet been opened. For the enlargement of the Agricultural College, where 85 students were entered in September, \$15,000 was voted, and for the Military Institute at Roswell a bond issue of \$15,000 was authorized. During the year the United States Government assumed control of the Ramona Indian school for girls, at Santa Fé.

The Asylum for the Deaf, Dumb, and Blind had under instruction during the year 10 deaf

and 9 blind pupils.

Charities.—The 4 hospitals receiving Territorial aid are in good condition, and not hainpered by lack of necessary funds. The number of patients received at the St. Vincent Hospital,

at Santa Fé, during the year ended March 4. 1895, was 131; the number treated was 15N. The expenditures were \$7,119.67, and the legishative appropriation was \$6,000. To the Or-phans' Home and Industrial School, for girls only, the expenses of which were \$5,872, for the care of 67 pupils during the year \$5,000 was appropriated.

which is very much crowded, an issue of bonds to the amount of \$35,000 was authorized.

Penitentiary.-There remained in the Penitentlary June 30, 1895, 191 prisoners, 264 being the total number in confinement during the year, a daily average of 166. The cost of mainenance has been reduced from 43 cents a day to 28-84 cents.

Legislative Session.—The Legislature or-anized Jan. 3 and adjourned Feb. 28. About 60 bills passed the two houses, but several of them failed to reach the Governor in time. With the exception of the appropriation bills and one or two other measures, very few general laws were enacted. Among them are the fol-

Regulating cattle brands, Prohibiting the sale of tobacco or giving it, in any

form, to persons under eighteen years of age.

Amending chapter II of the laws of the twentyeighth Assembly, so that no property shall be sold under decree until ninety days after the date of such

Repealing certain sections of the Compiled Laws, so that a married woman is not now compelled to live with her husband irrespective of his treatment

Providing for the probating of foreign wills.

Regulating the practice of medicine and establishing a beard of health.

Authorizing the funding of outstanding indebted-

Allowing the funding of school warrants.

Providing that half of the delinquent Territorial taxes, amounting to about \$400,000, shall, when col-lected, be utilized for court purposes, the rest to go to the payment of interest on county bonded debts.

oviding for service of process in suits against

Giving the Cattle Sanitary Board jurisdiction over sed cattle.

Providing for the appointment of sheep inspectors.

Among bills carrying appropriations, in addition to the general biennial appropriation bill, were these:

Providing a bond issue of \$75,000 for the erection of the Capitol at Santa Fé; and one of \$15,000 for the New Maxico Institute, at Roswell.

Establishing a weather and crop service for collection of crop statistics and climatological data.

Court of Private Land Claims,-In this court there were tried between Aug. 13, 1894, and June 26, 1895, 37 suits, involving the owner-ship of 15, 731, 818 acres, the grant of 589,096 acres being confirmed. A claim for 10,000,000 acres in Arizona and 2,000,000 acres in New Mexicoknown as the Peralta-Reavis grant-was brought before the New Mexico court and proved to be fraudulent. A rectangular tract was involved measuring 75 miles from north to south and Arizona, the State capital, Phoenix, and the towns of Florence, Maricopa, Clifton, and others,

and supporting a population of me and a 000 people. On March 27, 1883 James Reavis filed in Aritona a petition setting town that, by purchase from the heirs of the of g of grantee, he had become the owner of a track of New Spain granted by Ferdinand VI of Main to Miguel de l'eralta de la Cordeba in 1745 be cated in 1758; the grant and location to g confirmed by Carles III. Upon this showing, sustained by pretended original documents in an the Government archives of the city of Mexico, duly attested transcripts of the record in the city of Guadalajara, etc., Reavis petitioned the Surveyor General to recommend the confirmation of the alleged grant to him by the United States. After thorough investigation the prayer of the petitioner was denied, forgery and fraud being asserted. But while the claim was pending, on Sept. 2, 1887, Reavis filed an amended claim to the property under the title of his alleged wife, Doña Sofia Loreto Micaela de Peralta Reavis, née Maso y Silva de l'eralta de Cordola, alleged granddaughter of the original Miguel de l'eralta de la Cordoba, and signed himself thereto as James Addison Peralta Rearis This claim called for a still larger tract, and the suggestions of the Surveyor General in his adverse report were used to strengthen and perfect it. The pretended grant claim was filed for cumfirmation in the United States Court of Private Land Claims in Santa Fe, Feb. 18, 1863. Matthew G. Reynolds began the investigation on the part of the Government; experts were sent on investigating missions to Mexico and Seaso and to California, and even judges of the court went to California, to Mexico, and to Spain to take testimony, with the final result of preving, in 1895, that the whole structure was a forgery. that no Miguel de l'eralta ever existed, that so such grant as alleged was ever made and that the wife of Reavis was really the daughter of

one John Treadway and a Digger-Indian square Supreme Court Decisions. A decrees of this court given in October ends the sait of the Bent heirs against the Maxwell Land toract Company, involving the title to a twelfile interest in the Maxwell grant, a case that has been before the courts for thirty five years. The decision was a complete victory for the Maxwell Company,

The Capitol. In 1884 the Territory issued \$200,000 of bonds at 7 per cent, and in 1887. \$50,000 at 6 per cent, to creet and furnish a Capitol building. In 1982, ween after its completion, it was burned, but figures given by the Capital Custodian Committee show that the value of the uninjured person of the building is not less than \$45,000. The last Legislature authorless than \$15,000 ized the muc of to pale to the amount of \$75000 at 5 per cent to restore the building, and work was at other begun,

Irrigation,-The fourth annual Irrigation Congress met at Albuquerque, Sept. 16, delegates from Kansas, Nebraska, Texas, Colorado, California, Arizona, Utab, Oklaboma, and New Mexico, as well as Mexico and Canada, being present. It was asserted that the reclaiming of and lands made additional legislation necrosary. and the control by the General Government of the various irrigating systems was strong vavocated. Following is an account, under date

of Aug. 16, 1895, of what has been accomplished within a year in the Bluewater valley, Valencia

County, through irrigation :

The Binewater valley was nine months ago an arth dry sandy, and wind swept waste. On Aug. 74, 1894, we placed our first scraperful of earth upon our proposed dam, since which time we have conatrocted a dam 150 feet base, 260 feet long, and 42 Capacity, 6,000 acre-feet of water. feet logh way out through the solid rock mountain at south end of dam 170 feet long, 100 feet mouth, 50 feet threat, 20 feet width, with perpendicular full of 6 feet at threat, and 4 feet fall from there to lower end. We have constructed 31 miles of canals and laterals 20 feet wale, I foot deep; 12 feet wide, 2 feet deep;

and a feet wide, 3 feet deep, much of the work being d ne around rocky points and stony hillsides. Have cleared and plowed 2,600 acres sage-brush land, and have planted 2,880 acres. We have magnificent have planted 2000 acres. We have magnificent stands of grain in all our fields. Sugar and mangel

beets have proved a great success.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2.428.921 in 1840; 3.097,394 in 1850; 3,880,735 in 1860; 4.382,759 in 1870; 5.082,871 in 1880; and 5.997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344.

Capital, Albany.

Government.-The following were the State officers during the year: Governor, Levi P. Morton, Republican; Lieutenant Governor, Charles T. Saxton: Secretary of State, John Palmer; Comptroller, James A. Roberts: Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; Superintendent of Public In-struction, James F. Crooker, who was succeeded on April 6 by Charles R. Skinner; Superintendent of Insurance, James F. Pierce; Superintendent of Banking Department, Charles M. Preston: Superintendent of State Prisons, Austin Lathrop: Superintendent of Public Works, George W. Aldridge: Commissioner of Statisties of Labor, Thomas J. Dowling; Railroad Commissioners, Michael Rickard, S. A. Beards-ley, and Alfred C. Chapin; Chief Judge of the Court of Appeals, Charles Andrews; Associate Judges, Albert Haight, John C. Gray, Rufus W. I'm kham (who resigned in December to become an Associate Justice of the Supreme Court of the United States, and was succeeded, Dec. 31, by leving G. Vaun), Denis O'Brien, Francis M. Fine b. Edward T. Bartlett, Robert Earl.

Finances,-The balance in the treasury on 1 1-16, was \$811.762.98, as compared with \$1.56-2-6.77 ~ pt. 30, 1894. The receipts were \$1.00.121 ~ 3, as compared with \$18,537.948.03 m 1821 | fle expenditures were \$20,366,646.42, # 1 1 va ... I' the beginning of the year of w . # 65-4 com than the expenditures, but of the heart of the ding, there was a balance \$1176275 to a tour the food off in the col-

lateral-inheritance tax, the abolition of the poolselling tax, and increased expenditures for the

The Comptroller reports that the receipts from the corporations for 1895 were as follow: Insurance companies on premiums, \$132,588.04: insurance companies on capital, \$15,061.45; transportation companies on earnings, \$403,992.54; telephone and telegraph companies on earnings, \$30,460.26; transportation companies on capital, \$615,457,63; telephone and telegraph companies on capital, \$34,865.31; gas, electric, and miscellaneous corporations, \$589,243.65; foreign banks, \$34,306.47; total, \$1,855,975.35.

There was collected in 1895 \$1,367.90 from foreign corporations as license fees, making the total amount received from corporations \$1.857. 343.25, an increase of \$211,464.37 over 1894. The Comptroller's department collected \$95. 980.54 from the racing societies of the State. which was distributed among agricultural societies. Since this sum was distributed \$16,546.57 has been collected, making the total \$112,527.11. The State tax rate is 3.24 mills. Last year it was 2.18. The tax is to be distributed as follows: For schools, 0.94 mill; for canals, 0.36 mill; for general purposes, 0.94 mill: for State care of insane, 1 mill. This tax of 3.24 mills on the present valuation, \$4,292,082,167, will yield \$13,906,-346.23, distributed as follows: General tax, \$4,034,557.24; schools, \$4,034,557.24; canals, \$1,545,149.58; State care of insane, \$4,292,082.17; total, \$13,906,346.23. The amount received from the corporation and organization tax for the year ending Sept. 30, 1895, was \$2,115,807.85.

Wealth of the State.—The total amount of

property in the State in 1894, as assessed by the local assessors, was \$4,433,776,127. It was divided as follows: Real estate, \$3,841,582,748; personal property, \$592,193,379. Of the personal property so assessed, \$111,693,960 was corporate property not subject to taxation locally for State purposes. The amount of property, both real and personal, subject to taxation locally for all purposes was \$4,292,082,167. The total increase in the taxable property locally for all purposes was \$92,200,109, divided as follows: Real, \$79,903,364; personal, \$12,296,745.

Legislative Session.—The one hundred and eighteenth regular session of the Legislature began on Jan. 2, 1895, and continued until May 16. As elected, the Senate consisted of 18 Republicans, 13 Democrats, and 1 Independent Democrat; and the Assembly of 105 Republicans and 23 Democrats. The organization being in the hands of the Republicans, Edmund O'Connor was chosen President pro tem. of the Senate and Hamilton Fish, Jr., Speaker of the Assembly. During the session 1,045 bills were signed, the largest number in any one year in the history of the State.

On the last day of the session a special Senate committee, appointed to investigate the bribery charges against Senators Coggeshall, Robertson. and Raines, in connection with the passage of the New York City Firemen's Salary bill, and in connection with an amendment increasing the salary of the officers of the New York City Fire Department, submitted a report exonerating the Senators mentioned. Also at the close of the session Assemblyman Vacheron was called be-

re the Court of Oyer and Terminer and ded not guilty to the indictment for bribery a connection with the legislative bill regulat-ing the cutting of ice on fludson river. Among the most important measures adopted are the following:

Concerning New York city: A bill giving the sayor power of removal; abolishing the police justices and creating a bench of city magistrates; creating a tenement-house commission's bill; providing the separation of the Rureau of Charities and the separation of the Bureau of Charities and rection; four tenement-house reform bills; a lifer the consolidation of the Astor, Lenox, and then libraries; establishing a great zoological gara; a rapid-transit bill; providing for two addinal assistant district attorneys in New York city \$7,500 a year each. Requiring the display of the United States flag on say schoolhouse.

Amending the foreign corporation tax law, which rill add at least \$100,000 annually to the income of

blanket-ballot bill.

The constitutional requirement that all bills lecting cities must be approved by the mayors and common councils, caused a large amount of unnecessary legislation. At the close of the see sion there was sent to the various mande of cities 272 bills. Of these, 68 went to the city of New York, 74 to Brooklyn, 11 to Buffalo, 25 to the cities of the second class, and 90 to the cities of the third class. Of these, 170 were approved, 19 were rejected, and 83 remained in the hands of the city authorities,

The appropriation was \$4,300,000 higher than in 1894. Of this, \$500,000 was left from 1894.

Among the State commissions created by act of Legislature, are the following: The most important one, the Capitol Commission excepted, is that consisting of 8 persons, I residing in each judicial district, who shall constitute a State Commission of Prisons. This commission is to visit all penal institutions for same convicts and institutions used for witnesses or debtors, to aid in securing just, humane, and economic administration.

Another commission, composed of 5 persons, has for its object an investigation in relation to the organization and government of the Legislature, the introduction and progression of bills, and generally in relation to legislative business

and methods.

For the proper maintenance and efficiency of the military and naval forces of the State within 1895, a commission was named of 3 citizens as a board of examiners to test improved arms,

Another commission consisted of 3 members of the bar, who are to examine the Code of Procedure of the State and the codes of procedure and practice acts in force in other States and countries, and the rules of court,

A commission was named to formulate legislation for government of cities of the second

Also a commission to prepare general city laws relating to cities of the third class.

The State Board of Health was empowered to appoint 2 of its members a commission to carry out the law relating to tuberculosis in cattle.

Banking .- During 1895 the depositors' organization of the Commercial Bank of Brocklyn preferred charges against Superintendent. Charles M. Preston, alleging that he was incompetent and that the banking department has been conducted for years in the interest of spaceulators. Similar charges were filed with Gov. Flower, and were dismissed by him, Dec. 12, 1895, and after examination Gov. Morton issued an order dismissing the charges.

The annual statements of the 27 New York city and Brooklyn trust companies filed with the State Superintendent of Hanking, shows in the aggregate: Resources, \$373,901,333; profits,

\$15,652,863; dividends, \$3,770,000.

Corporations.—There were 1,423 corporawhich past taxes amounting to \$250,464.60.

The telephone, railroad, and land companies to a large extent made up the great total of the corporations for 1895. The 1,423 corporations formed during the calendar year paid taxes in the aggregate of \$492,445.05, on aggregate capitalizations of \$390,956,000. The combined caretal of 1894 (calendar year) was \$106,250,460. The business of 1895 shows that more than 60 new railroad companies were incorporated, and that 27 of the new corporations have each a

capital of \$1,000,000 or over.

Law.—An important case was decided in the State's favor by the United States Supreme Court, that against the United States, involving the sum of \$131.188 for enrolling, subsisting, elething, etc., of treeps furnished in the war of the rebellion. In the Court of Appeals, of the cases with a pecuniary interest and principle involved, the most important was that of the People ex rel. Roberts, as State Comptroller, against Fitch, as Comptroller of New York city. By the court's decision the defendant will pay ever to the State \$714,568, with interest, as its share of the tax of 1893 levied for the care of the State's insane. The number of cases in which the State is party on appeal pending in the Court of Appeals is 24 against 31 a year ago.

Insurance.—The aggregate receipts of New

Insurance.—The aggregate receipts of New York State companies in 1894 were \$161,714,-961; other States companies, \$94,909,514; making the gross receipts \$256,624,477. The net caces of receipts over disbursements for 1894 was \$78,761,144. The total premium receipts for 1894 were \$205,132,043.86. The disbursements were \$177,863,333, of which \$116,054,725 was paid to policyholders, while the cost of management, including dividends to stockholders,

Was \$618.08.608.

There was an increase in the number of policies of 102,219, and of insurance \$147,880,810. At the close of 1894 the companies doing business in the State had 1,780,307 policies in force, msuring \$4,657,583,046.

The co-operative organizations received \$47-786,347 from members last year, against \$42,-937,992 the preceding year. The claims paid by them last year aggregated \$38,921,664, against

\$35,191,664 the preceding year.

Claims.—The annual report of the Board of Claims for 1895 shows that since its creation in 1883 it has heard and decided 2,382 claims against the State, claiming in the aggregate \$5,397,070, exclusive of interest, and has awarded thereon \$1,316,328. This number of decisions is exclusive of those made from 1884 to 1891 in appeals from the Board of Canal Appraisers to the Canal Board, 273 of which, in May, 1884, were transferred to the board by chapter ceexxix of the Laws of 1884.

Education.—The biennial school census, taken during 1895 in all of the cities and villages of the State exceeding 10,000 in population, revealed the necessities for additional school faculties. In it occurred the one hundredth annihistrate of the inauguration of the free-school section in the United States, under the administrate of Glav. George Clinton. The first act, have lay layer of 1795, provided that the conference of the first act, have layer five years, "for the purpose of the first and maintaining schools in the several layers in this State."

The state of the state. The state of the second state of the state of

tal increase in school population during the year was 39,937. The total attendance at school—cities, 589,363; country, 535,635; increase, 41,770. The total number of teachers, 32,929, of whom 5,096 were men and 27,833 were women. The total amount of teachers' salaries was; Cities, \$7,264,613.25, an increase of \$117,920,20; and in country districts, \$4,788,404.01, an increase of \$52,002.12.

Tuberculosis.—The State Commission on Tuberculosis in Cattle made its first annual report to the Legislature in January, 1895. During the year and a half following the passage of the Tuberculosis act 22,000 cattle were examined and 800 were slaughtered. The Commission on Tuberculosis in Cattle was constituted May 31, 1894, to inquire further into the existence of the disease. This commission has earefully studied, by a system of special inspection, the prevalence, distribution, mode of infection, and general behavior of tuberculosis in cattle, confining part of its work to a given area, which was thought to be comparatively free from general infection from other sources. In this district 947 animals were examined and 66 were condemned.

Prisons.—In the year ended Sept. 30, 1894, the prison population had increased to 3,624.

The deficiency for care and maintenance was \$111,195 less than in 1893. More money was carned by the prisoners, and less was spent for maintenance. The expenditures for 1894 were less than those of 1893 by \$38,894.

The earnings of the prisoners show an increase of \$72,300 after deducting two items, namely, for fire loss in Auburn prison, \$27,897, and bills receivable canceled by act of the Legislature on account of the fire of 1893, amounting to \$14,845. The expenditures for the care and maintenance of the three State prisons and their earnings are shown as follow:

Sing Sing—Expenditures, \$150,814; industry, \$68,-952; compensation paid convicts, \$7,670; deficiency, \$94,532.

Auburn—Expenditures, \$157,264; earnings, \$77,-363; loss by fire, \$27,897; account due and canceled by Legislature, \$14,845; compensation paid convicts, \$6,239; deficiency, \$128,883.

Clinton—Expenditures, \$157,191: earnings, \$17,-858: compensation paid convicts, \$3,323; deficiency,

\$142,656.

There were 104 prisoners in the women's

A State Commission of Prisons made at the close of 1895 its first annual report. It shows that the unfair competition caused by contracting out the labor cheaply has disturbed the market, injured some industries, and driven others out entirely. The manufacturing on State account for sale in the open market worked even more disastrously, for the reason that the cry against prison-made goods forced the State to sell below the prices that other manufacturers could afford, and thus had the same effect in disturbing the market, while the large expense of commissions and expenses of sales agents made it even more expensive to the State. The commission called for estimates from all public institutions of the supplies purchased by them of such articles as can be manufactured in the prisons, and finds that it is practicable to have

such estimates each year and upon them base a distribution of the labor of filling the orders among the several penal institutions. All the labor of the convicts in the Blackwell's Island penitentiary is devoted to the use of the public institutions of New York city alone, and can not half supply them. In this way New York city gets the full value of the labor of its convicts.

Canals.—The financial report shows an expenditure out of the ordinary repair fund of \$754,362.70. There was expended for improvement of the canals, under special appropriations, \$551,120.37. The number of tons carried upon the canals during the season of 1895 was 3,500,314, of which 2,327,481 tons were in transit toward tide water and 1,172,835 tons were moved westward. Of these amounts, 1,762,663 tons were through freight and 1,797,651 tons were way freight. The amounts carried by the several canals were as follow: Eric, 2,356,048 tons; Champlain, 966,335; Oswego, 64,691; Black River, 64,154; and Cayuga and Seneca, 49,050; total, 3,500,341.

In 1895 the Legislature passed a law submitting to the people the proposition to issue bonds of the State not to exceed \$9,000,000 for the improvement of the Erie, the Champlain, and the Oswego Canals, by deepening the Eric and Oswego Canals to a depth of not less than 9 feet d the Champlain Canal to 7 feet of water, and also lengthening and improving the locks and strengthening the walls. The act was approved by the people by a majority vote of 243,770. This law requires the Legislature annually to impose a tax of 100 of a mill on each dollar of valuation of real and personal property in the State subject to taxation, the proceeds of which, after paying the interest due upon the bonds, shall be invested by the Comptroller, under the direction of the commissioners of the Canal fund, and together with the interest arising therefrom shall be devoted to the sinking fund created for this purpose.

The experiments with electric motors for canal-boat propulsion made at the western end of the Eric Canal in October were so successful as to lead to the belief that when the system is applied to the entire canal it will increase its

traffic capacity at least 35 per cent.

Labor Troubles .- More than 400 strikes and lockouts occurred during the year ending Oct. 31, 1895. Of these, 80 lasted less than twentyfour hours, while nearly 200 were settled within three or four days. The most disastrous strike began Jan. 14, 1895, when about 4,500 men em-ployed by trolley railroads of Brooklyn quit work. The workmen claimed that the strike was precipitated by the locking out of some of their associates. Agreements fixing the conditions of labor had for several years been entered into between the roads and their employees. The Brooklyn Heights Company controlled the largest system, embracing 26 lines. Its agreement expired in January. Conferences were held before the strike, with a view to renewal of the agreement between the labor organization and the officials of the company. The men demanded an advance in wages of 25 cents a day and the maintaining of the proportion of twothirds "full-day" men to one-third "trippers." or extra men. Just before the tie-up the men

waived the demand for additional particle sisted on the proposed number of trans-This the companies refused to consider and a tie-up was ordered on all the lines in the . . The Board of Arbitration at once the letters ! settle the differences between the companies and the strikers, among whom were included to do t men, conductors, linemen, electricians, and other employees. At two o'clock on the morning of the fourth day of the strike the beard effected a settlement between the officials of the Breakling City and Newtown Company and its striking employees, and the same day the Mil men on that system returned to work liuring the cese month's existence of the strike the leard made repeated efforts, in conjunction with the Mayor of Brooklyn, to adjust the troubles. The officers of the two largest systems declined to artistrate or treat with the strikers, despite the fact that the companies were unable to fill the places of the old men with competent workers, and further, that the city of Brinklyn was an armed camp, the militia of New York city and Breeklyn having been called to assist the police in perserving order, at the request of the mayor. The strike was declared off Feb. 16, and many of the strikers were taken back. A beyentt by organ-ized labor was prosecuted against the reads until Aug. 9, when the board, through one of its members, secured concessions from the new management of the Brooklyn Heights Company by which the old employees were guaranteed situations as rapidly as vacancies occurred and the boycott on that system was removed.

Rallroads,-The report on the financial coerations of the railroads is for the year ended June 30, 1895. The increase of earnings for 1895 was \$1,241,039; decrease in operating ear penses, \$702,970; increase in not carnings from operation, \$1,944,010. The decrease in net earnings for 1894 was \$4,264,171, while the decrease in income from operation that year was \$10.-399,511, showing that \$6.035,340 of the lies was made up by a reduction in operating expenses which have therefore been reduced nearly #7, 000,000 since June 30, 1850. Capital stock shows a decrease this year of \$12.812.614, cost of read and equipment, decrease, \$19,672.129 funded debt, decrease, \$1,264,621, nonfunded dett, increase, \$13,941,656. The percentage of disi-dends declared on capital stock is 2.63, against 2.69 in 1894. The decrease in number of passengers carried during 1865 was 1.262.175. This is accounted for partly by the World . Pair traffic reported for the year ended Jame 30, 1494. The freight business shows an increase of 1.623. 111,099 in the number of tone carried one mile,

Labor Statistics.—In 1894-580 organizations reported 118-628 members. The returns required from 689 unions show that the membership was 155,000. Since their establishment they have gained 108,000 members, an increase of 200 per cent. There has been a falling off in membership in two trades, coopers and machine weesling in two trades, coopers and machine weesling.

workers and turners.

Of the labor organizations, 401 say that they have increased wages, 61 report that wages are less now than they were previous to the formation of the organizations, and the figures presented by 174 unions indicate that there has been no change. As to working time, 400 ganizations report that the hours of labor have been reduced, 6 that they have been increased. and the returns from 246 show no change.

Four hundred and seventy-three organizations, with 122,580 members, state that they expended in benefits \$511,717.59. Of this amount, \$106,801.69 was for out-of-work benefits, \$60,-107.98 for sick benefits, \$93,437.92 for death benefits, \$89,150,04 for strike benefits; \$10,-676.74 was given to other labor organizations, and \$151,543.22 was expended in benefits that are not classified by the organizations.

Factory Inspection .- During 1894 13,866 separate workshops and factories were visited. and 2,600 of these were inspected several times. There were 465,926 persons employed in the places inspected, 150,662 of whom were women and 12,536 children under sixteen years of age. As a result 10,425 notifications were issued requiring changes to be made in or about the places visited or with reference to the individuals employed. The most important were as follow: Factories ordered to stop overworking minors, 188; children under fourteen years ordered discharged, 182; illiterate children under sixteen years ordered discharged, 238; elevators and hoist ways ordered guarded, 587; fire escapes ordered erected, 262; machines ordered protected, 1,320; separate toilet rooms for women ordered, 1,148; factories ordered renovated, 638; buildings condemned as unsafe, 52; ordered to cease making clothing in sweat shops, 718; overcrowding ordered stopped, 53; and better ventilation ordered, 118.

The number of children employed in factories during 1894 showed a decrease from 1893 of about the same ratio as in previous years.

Fish and Game.-During the year ended Sept. 30, 1895, the State planted 196,247,840 fish of various kinds and ages. Calling the brook trout, brown trout, rainbow trout, landlocked salmon, sea salmon, muskellunge, and black bass hook-and-line or "game" fish, there were planted of these species 8,627,908. Of whitefish, pike serch, tomcod, smelts, ciscoes, shad, bullheads, frostfish, etc., the commercial or food fish, there were planted 187,619,392. In 1895 the commission planted 41,205,000 pike-perch frv, 24,080,000 whitefish, and 18,000,000 ciscoes. Reports were received from all but one township in the 12 counties in the Adirondack region, and these show that 5,083 deer were killed during the open

The game law signed on June 7 makes the treat-fishing season uniform throughout the State, the open season being from April 16 to V.z 31. The bill prohibits the pollution of it a leastle taking of fish by drawing off wato the foracinte, or the taking of fish from a the self-up in waters inhabited by a may be fished from May 1 to May 30 to Dec. 31, eight-inch Man 1 and wall-eyed pike from

The state of the form of the Aug. 16 to Oct. 31. limb two states person; for squirrels, harva, and rate of from Sept. 1 to Nov. 30; ferrets produtized.

For web-footed wild fowl the open season is from Sept. 1 to April 30; quail, open season November and December; woodcock and grouse, open season from Aug. 16 to Dec. 31; clover, snipe, and English snipe shall not be shot or possessed during May, June, July, or August: snaring, netting, or trapping of game birds is prohibited.

There is a special provision to regulate the killing of deer on Long Island. No deer may be killed during the next two years. After that period there is to be an open season every other two years, of six days only, from Nov. 10 to Nov. 16. The close season for ducks has been shortened. The new law allows these and other web-footed birds, except brant and geese, to be hunted, except from May 1 to Sept. 1. The open season for trout begins on April 16 and

closes Aug. 31.
State Capitol.—The Legislature passed an act providing for a commission to take steps for the completion of the Capitol by contract. It was estimated in January, 1895, that the value of the material on hand was \$41,243, and the plant for carrying on the work \$65,000. Deducting the value of materials, the commissioner estimated that it would cost \$2,638,112 to complete the building. On Dec. 27 the commissioners approved of the plans and specifications for the completion, by contract, of the Capitol and all its unfinished portions, except the carving on the western staircase and the completion of the eastern approach. It was decided to abandon the tower as originally proposed.

Political.—On Sept. 17 a Republican State convention was held in Saratoga Springs. Charles W. Hackett, chairman of the State committee, called the convention to order, and named J. S. Sherman, of Oneida, as temporary chairman. For the permanent organization Clarence Lexow was made chairman. Concerning national issues

the platform declared:

We denounce the Wilson tariff, with its iniquitous, income-tax attachment—happily declared unconstitutional by the Supreme Court of the United States-as the first step accomplished in the campaign for the annihilation of American industries. This measure is neither a tariff for protection nor a tariff for revenue, but a tariff for deficit, failing by scores of millions a year to raise the amount of revenue necessary for the expenses of our National Government.

We denounce the Democratic Administration for its gross mismanagement of the finances of the nation. It already has added more than \$165,000,000 to the national debt and the burdens of the people.

We denounce the Democratic Administration for its false and misleading statements of the public expenditures and for its failure promptly to pay the nation's honest debts.

Of State issues it said:

The revised Constitution, which went into effect last January, imposed many important duties upon the Legislature, which were fully met and faithfully discharged. Prominent among them was the constitutional requirement of uniform charters for cities of the various classes. Among the acts of the Legisla-ture designed for the amelioration of the condition of the working people of the city of New York, the law providing for the inspection and improvement of tenement houses is entitled to especial commendation.

The most rigid care and economy were exercised by the Republican Legislature of the State in grant-

ing appropriations of the people's money. The tax

was kept down to the lowest figures possible un-the shrinkage of receipts from indirect taxation, to the general business depression which was ght about by Democratic mismanagement in the t about by Democratic mismanagement in and.

The necessity of meeting expenditures which endered obligatory by the new Constitution is extension of the act for State care of the insane to the counties of New York and insane to the counties of New York and ade imperative an increase in the tax rate.

ening New York city it said :

National Administration was approved, as well

following ticket was then nominated: John B. Judson; Treasurer, De Witt C. Attorney-General, Norton Chase; Engined Surveyor, Russell R. Stuart; and As-Judge of the Court of Appeals, John D.

Prohibition party convened in Saratoga p. Sept. 4, and named the following ticket: cretary of State, William W. Smith: Comptroller, Frederick B. Diefendorf, Treasurer W. liam R. Kathbone; Attorney-General, W. Maj. tin Jones; State Engineer and Surveyor, Walter M. Miles; and Judge of the Court of Appeals. Edwin C. English.

The other tickets in the field were: l'esque's party-ForSecretary of State, Thaddeus H. Wake man; Comptroller, David Rousseau; Treasurer, H. L. Case; Attorney-General, Elias Root; Etc. gineer and Surveyor, R. A. Borden; and Judge of the Court of Appeals, Charles Ward. Socia-list-Labor party—For Secretary of State, Erasmus Pellenz; Comptroller, Patrick Murphy; Treasurer, William Steer; Attorney-General, John H. Moore; Engineer and Surveyor, Morris Berman; and Judge of the Court of Appenia, Henry Gray.

A vote upon a proposition to bond the State in the sum of \$9,000,000 for the purpose of improving the Eric, Champlain, and Owego Canals

was also taken.

The election, Nov. 5, resulted in the success of the Republican ticket, the candidate for Secretary of State receiving a plurality of 90,145. To the State Senate 35 Republicans, 14 Democrats, and 1 Independent Republican were returned. Of the justices of the Supreme Court 37 Republicans and 21 Democrats were chosen.

Little Falls, Herkimer County, was incor-porated May 8, 1895, as the thirty-sixth city in the State. It is on the direct line of both the New York Central and the West Shore Hailroads, 75 miles west of Albany, 22 miles cast of Utica, and precisely half way between New York city and Buffalo. The village of Little Falls was in-corporated in 1810. The city, including the former village and a part of what was the town of Manheim, has a population of 11,000. It is, perhaps, the most picturesque of all the inland cities in New York. At this point the Mohawk river breaks through a ledge of rocks closely resembling those of the Thousand Islands in the St. Lawrence. In breaking through the ledge the river falls 50 feet within the limits of the city, and thus affords a power that has been used to advantage ever since the place was settled. In the chief industry, that of anit goods, 9 mills with 2,100 employees produce 3,925 desers daily, 1,197,500 weekly, and a total of 14,370,000 garments annually—the whole product requiring 7,185,000 pounds of material. There are 2 machine shops that make exclusively machinery for knitting mills. There are also factories for the making of bicycles, paper boxes, hammers, axes, lasts, wooden boxes, chairs, and furniture; also woolen and paper mills and furnaces. The total of capital employed in manufactures is \$2,465,500. The city is in the center of a fine agricultural country, and it has long been noted as the largest cheese market in the United States, as many as 59,000 boxes having been shipped in a single day. An abundance of water has been secured from an Adirondeck stream at a cost of \$400,000. The city has electric lights to the extent of over 2,000 candle power. There are 2 banks, 7 churches, a grades school, a free academy, a parochial school, a free library, I daily newspaper, and 2 weeklies.

Johnstown, Fulton County, was incorporated May 8, 1805, as the thirty-seventh city in the State. The incorporation made the limits of the new city

the same as those of the former village of Johnstown, the north line being coincident with the which was incorporated in 1890. Johnstown is 44 miles west of Albany and 50 miles east of Utica. It is on the Cayadutta creek 4 miles north of Fonda, a station on the New York Central Railroad, with which it is connected by a steam and an electric railway. The city has a repulation of 10,000, and is divided into 4 wards. The chief industry is the making of gloves and mittens, there being 63 factories with an aggregate capital of \$1,565,000. The 8 knitting mills have a capital of \$156,000, and the 31 other mills and factories have a capital of \$637,-000. In all, over \$3,000,000 is invested in manufactures. The number of churches is 10; of schools, 5; and of newspapers, 2. The city is in the center of a fine agricultural and grazing country. Among the mineral products of the vicinity are oil and gold, but neither has been found in paying quantities. The settlement of Johnstown began in 1762 under the auspices of Sir William Johnson. In that year, after residing for thirty years near the old fort on the Mohawk, he began the erection of what is now known as "the Hall," which the boundary of the city closely approaches. At the same date the lands were thrown open for settlers. The Hall, sometimes known as the Manor House, is still in a good state of preservation. Within its walls Sir William Johnson became famous for his baronial hospitality. He was in command of a body of regular and provincial troops during the French and Indian War, and on the banks of Lake George, in the battle of that name, he defeated the French under Diskeau and shattered their hope of invading the Mohawk and Cherry valleys. The English Government gave him a grant of what was then Tryon County, from which Montgomery, Fulton, Hamilton, and a part of Saratoga Counties have been formed. He located the county seat at Johnstown, and in 1772 he built the courthouse, and a church and a jail which are When trouble occurred between the still in use. colonies and Great Britain most of his followers joined the colonial side. Johnson was in the employ of the English Government. He died before the active part of the Revolutionary War had begun, but his descendants and relatives fought on the British side. His son, Sir John Julianon, was the leader in the massacre at Charry valley, and his estates were confiscated true act of attainder

Hances. To mitten of the city debt on Decreased by a control of the city debt on Decrease of the city debt on page 547. Decrease in the city debt on the city debt of the city was increased by the city debt of the city was increased by

\$5,806,688,64. The returns as given beyond in the wealth of the city resulted, in August, in the announcement of a tax rate of \$1.91 for each \$100 of assessment as compared with \$1.79 for 1894.

Board of Estimate and Apportionment.— This body, consisting of the Mayor, the President of the Board of Aldermen, the Comptroller (Ashbel P. Fitch), the President of the Department of Taxes and Assessments (Edward P. Barker), and the Counsel to the Corporation (Francis M. Scott), allowed the following amounts for 1896; Mayoralty, \$26,000; Common Council, \$88,000; Finance Department, \$316,-400; interest on city debt, \$5,566,597.88; redemption of principal of city debt, \$2,989,901.60 State taxes and common schools, \$6,402,009.92 rents, \$168,073.77; armories—rents, \$10,250; judgments, \$125,000; Law Department, \$205,-050; Bureau of Public Administrator, \$13,890 Department of Public Works, \$3,270,530.66 Park Department, \$1,219,255; Department of Street Improvements, Twenty-third and Twenty-fourth Wards, \$633,000; Department of Charities, \$1,543,417; Department of Correction, \$475,999.33; Health Department, \$519,508; Police Department, \$5,925,410.30; Bureau of Elections, \$515,294; Department of Street Cleaning, \$3,020,700; Fire Department, \$2,345,355; Building Department, \$265,000; Department of Taxes and Assessments, \$162,520; Board of Educa-tion, \$5,679,302,59; College of the City of New York, \$150,000; Normal College, \$150,000; printing and stationery, \$277,200; Civil-service Board, \$27,500; coroners, \$56,200; commissioners of accounts, \$65,000; sheriff, \$137,232; Reg. ister, \$115,250; armories, wages, etc., \$81,200; jurors' fees, \$85,000; preservation of records, \$40,280; street and park openings, \$250,000; libraries, \$63,500; salaries—city courts, \$338,-000; salaries—judiciary, \$1,427,929.73; charitable institutions, \$1,543,301.68; miscellaneous, \$201,712.85; total, \$46,496,571.31; deduct general fund, \$2,500,000; grand total, \$43,996,-571.31.

This statement shows that the amount allowed for 1896 is \$46,496,571.31, which is reduced by deducting from the general fund made up by receipts from various sources during the year, including the unexpended balance of previous years, amounting to \$2,500,000. The total amount to be raised by taxation is \$43,996,571.31, which represents an increase of \$6,519,611.27. Of this increase, \$4,585,269,41 is mandatory. Excluding the State tax and other mandatory items there is to be charged a net increase in the running expenses of \$1,934,341.86, which is principally distributed as follows: Public works, \$135,050.66; street improvements in Twenty-third and Twenty-fourth Wards, \$206.530; Health Department, \$58,828; police, \$60.588; elections, \$102,394; street cleaning, \$644.700; fire, \$260.934; building, \$60,300; education, \$716,879.45; and accounts, \$32,500.

Wealth of the City.—This department is a county charge, and is cared for by a board of 3 tax commissioners, as follow: Edward P. Barker (president), John Whalen, who was succeeded by Theodore Sutro on June 7, and Joseph Blumenthal, who was succeeded by James L. Wells, each of whom receives a salary of \$7,000 and

the president \$1,000 additional. The office is at 250 Broadway. They report the total valua-tions of real and personal property, as assessed for taxation in 1895, to be \$2,016,947,662, against \$2,003,382,037 for 1894, showing a net increase of \$18,615,625, which is distributed as follows: Increase in real-estate assessments, \$36,978,678; decrease in personal-estate assessments, \$23,363,-053; difference, \$13,615,625. The total taxation was distributed as follows: Insurance companies, \$2,237,746: trust companies, \$4,574,646: hareholders of banks, \$82,343,420: railroad companies, \$23,874,196: resident corporations, \$46,01,818; nonresident corporations, \$18,570,-156; personal, nonresident corporations, \$18,070; 156; personal, nonresident, \$37,955,233; per-sonal, resident, \$250,620,354; shareholders of banks, \$82,343,420; total, \$370,919,007; real state, \$1,646,028,655; total real and personal state, \$2,016,947,662. The decreases are as-ribed to decisions of the courts reducing the sments on railroads and other corporations. and to the hard times. The Gould estate was axed for \$10,000,000. George Gould personally as assessed for \$400,000, and Helen, Edwin, Howard, and Anna Gould for \$100,000 each. Cornelius and William K. Vanderbilt for \$400. on each, and George Vanderbilt for \$200,000.

2,000,000 personal property each.

Public Works.—This department is under he charge of a commissioner appointed by the

Mayor. He holds office for four years, and receives a salary of \$8,000. At the beginning of the year the commissioner was Michael T. Daly, who on Feb. 13 was superseded by William Brookfield, who on Dec. 2 was succeeded by Charles H. T. Collis. The headquarters are at 31 Chambers Street. During 1895 the average daily consumption of Croton water was 200,000. 000 gallons, being an increase of 12,000,000 gallons over 1894. The water in storage on May 1 amounted to 24,000,000,000 gallons, and the drafts on it amounted to 22,540,000,000. The revenue from the water service to Nov. 30 was \$3,232,320, which was an increase of \$117,-646 over last year. During the year 71 miles of new sewers were built, and 7,137 lineal feet of sewers altered and improved. The length of sewers on Manhattan Island on Jan. 1, 1866, was 468 miles. New pavements were laid as follow; Granite on concrete and macadam, 134,000 square vards; granite on sand, 31,500 square yards; as-phalt, 20,000 square yards; also, payable from legislative appropriation, 137,000 square vands of asphalt pavement and 4,000 square yards of asphalt and wood laid under permits, without publie expense; making a total of 224,560 square varils. Some 124,000 square yards of maradam roadways have been repaired and resurfaced. During the year there were 971 new gas lamps and 122 new electric lamps lighted, so that with 25,-379 gas lamps, 2,751 electric lamps, and 233 naphthe lamps, and these with 567 electric lamps and 376 naphtha lamps in the annexed district, give a grand total of 29,306 lamps of all kinds in the city. The proceedings for the widening and extending of Elm Street has progressed rapidly during the year, and a large amount of testimony has been taken.

The widening of College Place, proposed by the Board of Street Openings in 1889, began on Jan. 11, 1895, and the tearing down of buildings and preparing for carrying out the law that was opposed by many of the property owners was accomplished during the year. The plan included the widening of College Place by beginning at Chambers Street and cutting off 25 feet on the west side of Murray Street, making it 90 feet wide, and thence cutting off 25 feet on the west side of Barclay Street, widening it to 80 feet, and so on until the entire street became 125 feet wide. The estimated cost of widening and extension was \$1,400,000, of which the city will pay due half and the persons benefited the other half.

It is interesting to note that all the property in this vicinity belonged originally to Trinity Church, which in 1827 ceded a large part to St. Mark's, Christ, St. Esprit, Grace, Lutheran Episcepal, St. Michael's, St. George's churches, and to the Sesiety for Promoting Religion. Several of the above churches have parted with some of

their property.

Parks.-This department is under the direction of a board of 4 commissioners, of which the president receives a salary of \$5,000. At the beginning of the year the board was composed of Abram B. Tappan, president, Edward Bell, George C. Clausen, and Nathan Strauss. During February this board was succeeded by one consisting of David H. King, Jr., president, A. D. Julhard, George G. Haven, and James A. Roosevelt, and it in turn resigned on Sept. 22. On Nov. 10 the following board—Stephen V. R. Cruger, Smith Elv, Samuel McMillan, and William Stiles—was named by the Mayor, and Col. Cruger became president. The secretary of the Cruger became president. board was Charles De F. Burns, who toward the close of the year resigned to give place to William Leary. The headquarters are at 31 Cham-During the year plans were furbers Street. nished, the contract let, and work begun on the Corlears Hook Park, which is between Corlears and Jackson Streets, from Cherry Street to the East river. The park is ten acres in extent and a perfect square.

New York is to have an immense botanic

New York is to have an immense botanic garden, to cost \$500,000, exclusive of the ground, and an endowment of \$250,000. The incorporators of the New York Botanic Garden met on June 18, and learned that the remainder of the \$250,000 required by the act establishing the garden had been subscribed. The city must issue bonds for \$500,000 to erect the necessary buildings, and must set aside 250 acres for the use of the garden. The ground selected by the scientific directors is on both sides of Bronx river.

New Bridge.—The Central Bridge over Harling regrat Eighth Avenue was formally opened. Man I, although the approaches were not compared by tesk three years to build the bridge, and bridge its construction 3 men were killed by the first of the construction 3 men were killed by the first of the castern approach to the bridge.

buildings at an estimated cost of \$77.979,432 and 1,885 plans for alterations at an estimated cost of \$8,781,694. The other items in the annual report are: Unsafe buildings reported, 2,282; unsafe building notices issued, 4,349; violations reported, 5,178; violation notices issued, 6,375; fire-escape cases reported, 2,054; fire-escape notices issued, 2,961; plans received, 6,361; iron beams, columns, lintels, girders, etc., examined, 92,906; cases forwarded to the department attorney for prosecution, 4,473; and new buildings and alterations

vital Statistics.—The Board of Health consists of the president of the Board of Police, the health officer of the port, and 2 commissioners, 1 of whom must have been for five years a practicing physician. The commissioner that is not a physician is president of the board and receives a salary of \$5,000, while the other member is paid \$4,000. The ex-officio commissioners receive no salary. The officials during 1895 were as follow: President Charles G. Wilson, Dr. Cyrus Edson, who was succeeded on June 30 by Dr. George B. Fowler, Health-Officer William T. Jenkins, who was succeeded by Dr. Alvah H. Doty on Jan. 1, and President of the Board of Police James J. Martin, who was succeeded by Theodore Roosevelt. The secretary of the board is Emmons Clark, and the headquarters are in the Criminal Court building, on Center Street. The vital statistics were as follow:

ITEMS.	1894.	1895.
Deaths under one year	10,822	11,120
Deaths under five years	17.596	18,100
Total deaths	41,212	43,419
Total reported births	55,643	58,781
Total reported marriages	17,888	20,612
Total reported stillbirths	8.571	8,372
Death rate per 1,000 living	28.05	28-15

The principal causes of death were the following: Pneumonia, 5,707; phthisis, 5,182; diarrheal diseases, 3,208—under five years, 2,830; heart disease, 2,286; Bright's disease and nephritis, 2,681; diphtheria, 1,628; bronchitis, 1,616; measles, 766; influenza, 566; whooping cough, 495; scarlet fever, 465; croup, 342; typhoid fever, 321; cerebro-spinal meningitis, 203; malarial fever, 90; and small pox, 10. Among the deaths by violence were the following: Accident, 2,036; snieide, 375; homicide, 76; and sunstroke, 85.

To the introduction of diphtheria antitoxine, its production by the Board of Health, and its use in this city during the year, may be attributed the decrease in the mortality from that disease. This remedy is furnished without charge to the hospitals, to the public and charitable institutions, and to the poor of the city.

In the division of food inspections and offensive trades, the investigations in regard to the character of the milk have been increased, the number of analyses being 3,106; the number of arrests made, 695, against 159 for 1894; and the fines collected, \$12,802, against \$2,708 last year. The number of pounds of fruit, meat, and fish

seized and condemned was 6,766,432.

Street Cleaning.—This department is managed by a single commissioner, who receives a salary of \$6,000 a year. At the beginning of the year William S. Andrews was commissioner,

ut he soon gave place to Col. George E. War-ag, Jr. During 1894 \$2,226,419,49 was spent this department for the pay of workmen, hile in 1805 \$2,369,926,99 was similarly exended. Of this, \$29,227 was due to an increase the rate of hiring dumping boats (from \$23 a 430 a day), making the actual increase in the d of the work of cleaning the streets \$114,-

"and "new stock," because these are acci-stal. During 1894 \$69,155.09 was spent for new and ice" and \$74,987.63 for "new and ice" and \$85,520.51 for "new and ice" and \$85,520.51 for "new sek."

According to the Mayor, "the streets have made and are kept clean, the public health been improved, and the decrease in the morality rate has been greater during 1895 than it

In the last ten years.

ceks.-This department is under the conrol of 8 commissioners, each of whom receives alary of \$5,000 a year. At the beginning of year the board consisted of J. Sergeant m, president, Andrew J. White, and James Phelan. Later Edward Einstein was named successor to Cram, Edward C. O'Brien to te, and John Monks to Phelan. Office, Pier

North River.

During 1895 this department constructed 3 w piers and 245 feet of bulkhead. The gross ome received by the city from this depart-nt for the calendar year 1895 (the month of ember estimated) was \$2,025,527.45. The tal expenditures during the same year were \$3,262.42, of which amount \$246,307.09 went r acquired property, \$453,046.68 in the work construction, \$217,836,19 for the maintenance d repair along the whole water front belong-g to the city, and \$78,073.46 was charged to

annual expense account.

Police.—This department is managed by a ard of 4 commissioners, appointed by the yor for a term of six years. The board at beginning of 1895 consisted of James J. lartin, president, John C. Sheehan, Michael Grwin, and Charles H. Murray. John C. heehan was removed, and on Feb. 13 Avery D. Indrews was appointed to succeed him, and on lay 1 Theodore Roosevelt, Andrew D. Parker, and Frederick D. Grant were appointed to suced the other three. Mr. Roosevelt was chosen wident. The Superintendent of Police was homas F. Byrnes, who was retired during the ar and Inspector Peter Conlin appointed as r successor. The headquarters are at 300 Mulerry Street.

During the year the police made 112,800 ar-sts, an increase of 14,000. The number of narrested was 92,473, and the women 20,327. ere were 64,379 lodgers accommodated in the various stations. The number of complaints made against policemen was 3,969. Sixty-one members of the force died, 78 were dismissed,

d 116 were retired.

There were 2,523 lost children and foundlings aken in by the police. The fines and judgments mposed upon delinquent policemen amounted to er \$21,000.

The property clerk received 3,627 lots of lost

and stolen property. He delicered 1,176 lets valued at \$95,724.

The Lexow Committee. - Notwithstanding the numerous indictments obtained against jolice officials and referred to on page 507 of the "Annual Cyclopassia" for 1894, the fact is that on Jan. 1, 1896, not one man who was acrossed before the Lexow Committee had begun to serve a term of imprisonment. On Dec. 29, 1865, the Supreme Court granted a new trial to Capt. John T. Stephenson, the first man to be convicted on an indictment growing out of the Lexow investigation. The results may be summarized as follows: One conviction, subsequently reversed-that of Stephenson; I conviction after 2 trials with an appeal pending—that of In-spector McLaughlin; 2 disagreements of jury the cases of Doherty and Levy; 40 indictments dismissed; 35 indictments not yet tried. To obtain these results cost the State of New York

Fire.—This department is under the control of a board of 3 commissioners, appeinted by the Mayor for a term of six years, each of whom receives a salary of \$5,000. The board during 1895 consisted of John J. Scannell, president, who was succeeded on March 5 by Oscar H. Lagrange; Anthony Eickhoff, who was successful on March 7 by James R. Sheffield; S. Howland Robbins, who was succeeded on May 1 by Austin E. Ford. The chief of the department is Hugh Bonner, and the beadquarters are at 157 East 67th Street. The force on Jan. 1, 1896, included 1,359 officers and men, 59 engine companies (including 3 fire boats), 22 book-andladder companies, 98 steam fire engines, 4 water towers, 39 hook-and-ladder trucks, and 416 During the year there were 3,540 fires, horses. of which 3,594 were confined to the point of starting, 176 were confined to the building, and 58 extended to other buildings. Of the total number, 112 were not in buildings. The estimated loss by these fires was \$3,115.431, on which the insurance was \$77,261,413. There were 33 buildings destroyed by fire, and 1,770 fires resulted in nominal damages only. For armon, 26 persons were arrested, 4 persons were consisted,

and 15 cases are pending.

Education,—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor and receive no nal-ary. The president of the board at the beginning of the year was Charles H. Knoz, who resigned on July 2 and was succeeded by Robert Maclay. The city superintendent is John Jasper (salary, \$7,500), and the headquarters are at

146 Grand Street.

There are under the jurisdiction of the Board of Education 331 schools and departments-254 grammar and primary, 27 evening, 4 evening high, 1 nautical, and 45 corporate. During 1865 there were organized 10 grammar and primary schools and departments, I evening school, and, by the annexation from Westchester County, 10 grammar and primary schools and departments come within the jurisdiction of the Board of Education, On Nov. 30, 1894, the number of pupils registered was 184,381, with an average attendance of 174,101. There were 10,000 more on the school register at the end of November. 1895, than on the same day in the preceding

year. According to a school census completed on Dec. 31 the total number of children was

The committee appointed to select a site for the College of the City of New York recommended the 4 city blocks, or 80 lots altogether. lying between 138th Street and 140th Street, and Amsterdam Avenue and St. Nicholas Avenue. To the college has been given by an act of the last Legislature \$600,000 for a site and \$575,000 for the buildings. The Legislature authorized in the last session the issue of \$5,000,000 of bonds by the city of New York for schoolhouses, and the sum of \$1,500,000 is available for the same purpage. The city has about \$15,000,000 invested in school property. On Jan. 1, 1895, there were under construction 15 school buildings and an-Since that date contracts for 2 school buildings have been let.

Excise Department.—This bureau is under the control of 3 commissioners, each of whom receives a salary of \$5,000. At the beginning of the year the board consisted of William Dalton, president, Michael C. Murphy, and Eugene L. Bushe, who were removed and a new board appointed on Feb. 20, consisting of Joseph Murray, president, Charles H. Woodman, and Julius

During 1895 12,070 applications were received, 848 were canceled, 281 were rejected, and 52 re-The expenses of the board were: For general administration, \$40,204.66; inspectors' salaries, \$92,020.91; contingencies, \$2,064.70; total, \$134,290.27. There was received \$1,790,-530 for 11,029 licenses, distributed as follows: Liquor saloons, 6,930; transfers and assignments, 1,869; storekeepers, 1,071; saloon, ale, and beer licenses, 448; restaurants, 371; hotels, 283; additional, 42; and drug stores, 15.

Law Department.-The legal interests of the city are intrusted to the counsel of the corporation, who receives \$12,000, and 8 assistants, with salaries from \$4,000 to \$10,000. The counsel at the beginning of the year was William H. Clark, who was removed in February and Francis M.

Seedt appointed to his place.

On Jan. 1, 1896, there were pending against the city 3,895 actions and special proceedings. There were begun 1,030 such proceedings and 1630 were closed; 155 actions were tried, 62 appeals at the General Term argued and 27 in the Court of Appeals; 850 written opinions were delivered. Money was collected and turned into the city treasury by the department as follows: Its the general office, \$40,719.75; by the corparallel attorney, \$15,436.69; by the attorney . con official of arrears of personal taxes, and to the there meanly enough to pay for the which the first of running the department. Judiciary. Victorias session of the Legis-At T .. to c r's and the Court of Special was a second the present Court formal and an interest courts of the Court of Special Service of the court of Jacob, John Haves and William C. Holbrook,

each of whom receives a salary of \$9,000 a year. According to the laws of 1895 there was transferred to the court the unfinished business of the former Court of Special Sessions, together with its records.

Also on June 8 the following city magistrates. with a salary of \$7,000 a year, were appointed: Charles A. Flammer, Robert C. Cornell, John O. Mott, Henry A. Brann, Leroy B. Crane, Joseph M. Deuel, William J. Fanning, Herman G. Kudlich, and Charles E. Simms, Jr. The total number of cases brought before the courts for the year ending Oct. 31 was 112,719, an increase of 11,099 over the preceding year. Of the total number of arrests made, 82,494 cases were disposed of summarily, leaving 30,215 cases which if held, required trial either at General or Special Sessions.

The old Tombs police court, which for more than seventy years had been held at the corner of Franklin and Center Streets, closed forever at

5 o'clock on Nov. 12.

The Court of Common Pleas was adjourned without date on Dec. 30, at 4.35 o'clock. The Court of Over and Terminer and of Jail Delivery, established in 1665, one year after Peter Stuy-vesant's capitulation of New Amsterdam, likewise came to an end on Dec. 30.

Power of Removal.—During the first six months of 1895, under the authority of an act of the Legislature, signed by the Governor Feb. 11. power was given to the Mayor to remove at will

the heads of departments.

Monuments.—The Memorial Arch, at the lower end of Fifth Avenue, in Washington Square, passed into the custody of the city on May 4. Early in the afternoon the committeemen and invited guests gathered on the stand around the arch. The Governor of the State, Levi P. Morton, with his staff, escorted by Troop A and the First Brigade, came down Fifth Avenue from the Hotel Renaissance. The special exercises were begun with a prayer by Bishop Henry C. Potter, and an oration by Gen. Horace Porter followed. Mr. Henry Marquand made a brief address, saying: "The key of the monument will now be handed to you, Mr. Mayor, by the treasurer, Mr. William R. Stewart, whose labors and activity have been so conspicuous,

Mr. William R. Stewart, treasurer of the committee, addressing Mayor Strong, said: "Your Honor: In behalf of the committee on the erection of the Washington Arch, formed in 1889, it is my privilege to transfer to you, in your representative character as the chief magistrate of the city of New York, the beautiful civic monument which Stanford White's genius conceived and the subscriptions of public-spirited fellow-citizens have enabled us to build. The structure, although substantially complete, still lacks for its embellishment two groups of statuary. The pedestals for these stand ready. The committee purposes continuing its organization until it shall have seen them filled."

In his reply, Mayor Strong said: "It is with peculiar pleasure that I pass to-day to the President of the Park Board of the city of New York, the key, knowing well that the interest he took in creating this beautiful arch will ever remind him of his duty, not only to guard carefully this structure, but to see that its surroundings will ever be kept in the purest and most beautiful manner, and in a way appropriate to the character of George Washington, whom it commemo-David H. King, Jr., of the Park Department, received the key with a few words expressive of his pleasure and desire to follow out the Mayor's instructions.

The troops then passed in review before the Governor, and the ceremony was at an end.

A memorial service was held on Dec. 8 in the Brace Memorial Lodging House, 9 Duane Street, to celebrate the unveiling of a tablet, with a medallion portrait of Charles Loring Brace, founder of the Children's Aid Society. tablet is over 6 feet in height, and the medallion is a life-size bust. It was presented to the soci-ety by the late Egisto P. Fabbri, and was unveiled on Dec. 8.

On Dec. 14 a handsome tablet in memory of Charles James Wills, Vice-President of the Brotherhood of St. Andrew, was presented to Bishop Potter, the representative of the corporation of St. John the Divine, in the Episcopal

Pro-Cathedral, 130 Stanton Street.

A granite fountain, erected at the expense of Jacob H, Schiff in the open triangular space known as Rutgers Square, was informally transferred to the Park Department in July. The work is entirely in granite, except the two bronze basins and the finial in bronze. An inscription serves to show that the fountain is presented to the city in 1895. Another inscription is drawn from Exodus xvi, 6: "And there shall come water out of it that the people may drink."

During the year 10 drinking fountains pre-

sented to the city by President John P. Haines, of the Society for the Prevention of Cruelty to Animals, were placed in position. They are for the use of man and beast. Some of the money for them came from friends of the society, and

some from its treasury.

Aqueduct Commission .- This board consists of the Mayor, the Comptroller, the Commissioner of Public Works, and 4 commissioners, each of whom receives \$5,000. The board during the vear consisted of James C. Duane, president, Francis M. Scott, who resigned and was suc-ceeded by George W. Green, John J. Tucker, and Henry W. Cannon. The work of the commission in 1895 was confined mainly to the extension of the storage system. Titicus dam, near Purdy's Station, was completed at a cost, exclusive of the land taken, of \$970,329.11, and 4,000,000,000,000 gallons have been stored in the adjacent reservoir, an addition of more than 20 er cent, of the whole storage available heretofore. The Carmel dams were finished, the main one costing \$403,241.64, and the auxiliary dam costing about \$155,000. The reservoir thus formed by these dams will contain about 10,000. 000,000,000 gallons. In August the contract for the construction of the Jerome Park Reservoir was awarded for \$5,473,060. The excavation necessary for this extensive structure will require seven years for completion. On the construction of the Croton dam, begun at the end of 1802, \$273,000 was expended during 1895. The additional storage expected upon the completion of this dam will be 32,000,000,000,000 gallons, which will make the total storage more than

70,000,000,000,000 gallone. The fide of a ture for the work of construction during year was approximately \$552,000.

The consumption of water in New York during

ing the last five years has been beyond what was estimated, there having been an increase from 110,000,000 gallone a day in 1850 to over 700; 000,000 gallons a day in 1895.

Annexed District. On June 1 new territors covering about 20,000 acres, with a population of 17,000, was added to the city by Schalor Rebertson's Annexation bill. All that part of Westchester County which lies southerly of a straight line drawn from the point where the northerly line of the city of New York meets the central line of the Bronx river to the middle of the channel between Hunter and Glen islands, in Long Island Sound, is a part of New York city, The territory thus annexed includes Throug Neck, Unionport, Westchester, Williamsbridge, Bronxdale, Olinville, Baychester, Eastchester, The city lines of You. Wakefield, and Bartow. kers, Mount Vernon, Pelham, and New Rochelle. now form the northern line of the city,

East River Bridge, - In round numbers, 120,-000 persons cross the East River Bridge on the railroad daily. More than 2,000 vehicles cross the roadways, and the total daily receipts from the traffic on the structure are about \$3,500

Rapid-transit Railroad Commission,-This body consists of Alexander E. Orr, president, Seth Low, John Claffin, John H. Inman, John H. Starin, and William Steinway, lar meetings were held during the year, and the

following routes were decided upon:

A route, the center line beginning at a point under the westerly side of Whitehall Street distant along the same 625 feet north from the mether's line of South Street produced; thence by diverging lines under Whitehall Street and Batters Park and Maste Street, forming a loop line, the tracks converging to paralleliam at a point at or near the westerfy sade of State Street and the southerly sole of Battery Pages, thence under Broadway and I non Square to 198h Street ; thence under the Boules and to a goant at or near 9% Street; thence by a viaduct along the flower and to a point near 135d Street, thence by a randoct along the Boulevard to a point at or near lifes Street, thence under the Boulevard to a point at or near 156th Street; thence by a vasiloct along the Boulevard to a point at or near 15th Street, thence under the Boulevard to 169th Street, thence under Desenth Avenue to a joint at or near 10342 Mirrord

Alm a prute the center line of which shall deverge from the line lwar line at ce near lath Street, and run under tion Square to Fourth Avenue; thence unifer Finisth and Park Avenues to a point at or near 95th Street, thence by stadioct along Fourth or Park Avenue to the Barlem river, thence turning to the right his bridge across the Harlem river; and thence to the left until it to shall comeride with the center line of Walton Avenue produced at or mear its interecction with 134th Street, and thence along the line of Walton Avenue to a point at or near 146th Street.

Political. - The election of 1865 was held on Nov. 5, when the following candidates were voted for:

Democrat (Tammany).—County Clerk, Henry D. Purroy. Register, William Sohmer. Judges of the City Court—full term, Robert A. Van Wyck, John P. Schuchman; two years, Edward F. C'Dwyer. Judges of the Court of General Sessions—full term, Joseph E. Newburger; unexpired term of Randolph B. Martine, Martin T. McMahon. Judges of the Supreme Court (3), Frederick Smyth, Charles F. McLean, and Charles H. Truax. Also for 35 members of Assembly, 12 State Senators, and Amos Cummings as Congressman from Tenth District to fill vacancy caused by death of Andrew J. Campbell.

Fusion (Republican and State Democracy).—
County Clerk, Thomas L. Hamilton. Register,
Thomas L. Keating. Judges of the City Courtfull term, Daniel O'Connell, Henry C. Batty; two
vears, Sherman Evarts. Judges of the Court of
General Sessions—full term, Thomas Allison;
unexpired term, John Fennel. Judges of the
Supreme Court (3), Myer S. Isaacs, Charles C.
Beaman, and Ernest Hail. Also for 35 members
of Assembly, 12 State Senators, and Robert A.
Greacen as Congressmen from Tenth District to

fill vacancy.

The Probibition, Socialist, Labor, and People's

parties also had tickets in the field.

Owing to the rigid enforcement of the law compelling the closing of the saloons on Sunday by the Police Commissioners the German vote was very largely cast against the Fusion ticket, and again Tainmany Hall placed its candidates in office by pluralities of about 20,000 votes. Amos J. Cummings was elected to Congress by a plurality of 5,072 votes. Of the 12 State Senators chosen from the city, 9 were Democrats and 3 Republicans; while of the 35 Assemblymen the Democrats elected 27 and the Republicans 8.

NICARAGUA, a republic in Central America. The Senate consists of 18 and the House of Representatives of 21 members, elected by the people for six years and four years respectively. The President is elected for four years. Gen. José Santos Zelava was proclaimed President in September, 1893, as the result of a revolution, and afterward elected for the term ending in 1898. His Cabinet, as reorganized in April, 1895, was composed as follows: Foreign Affairs, Manuel Caronel Matus; Interior, Gen. Francisco Balladares Feran; War and Marine, Gen. Reuben Alonzo: Finance, Santiago Callejas.

Finances.—The receipts in 1892 were \$1,-764 cut; of which \$532,957 came from customs, \$422,256 from a tax on spirituous liquors, \$271,-621 from a duty on tobacco, and \$338,423 from the expenditures were \$142,928 from the expenditures were \$142,928 from the public debt, \$1,255,727 for the public debt, \$1,255,727 for the public debt, \$1,255,727 for the army; total, \$1,255,739 for t

There are 88 miles of railroads and 1,245 miles of telegraphs. The construction of a railroad to Rama for the Government, 102 miles in length,

has been begun.

British Ultimatum .- After the unsuccessful attempt to restore Chief Clarence in the Mosquito reserve in the summer of 1894, the British vice-consul, Hatch, 9 other British traders, and 2 Americans were arrested and, by order of the Nicaraguan Congress, expelled from the country. After the Mosquito troubles were ended by the establishment of Nicaraguan administration in the territory, Mr. Bayard obtained from Lord Kimberley the positive assurance that Great Britain asserts no right of sovereignty or protection over the territory, but, on the contrary, respects the full and paramount sovereignty of the Government of Nicaragua. The Mosquito nation by its voluntary act in December, 1894, agreed to the incorporation of the reserved territory in Nicaragua, and the Indians formally subjected themselves to be governed by the general laws of the republic instead of by their own customs and regulations, availing themselves of a right secured to them by the treaty of Jan. 28, 1860, concluded be-tween Nicaragua and Great Britain. The British Minister of Foreign Affairs wished to have it understood that any action that the British Government might take in the way of obtaining redress from Nicaragua is wholly unconnected with any political or conventional question concerning the Mosquito reservation, but is simply a proceeding on the grounds of international law to obtain satisfaction for an affront. In matters concerning political control in Central America he had no other wish than to act in full accord and with the approval of the United States. The British Government demanded an explanation for the arrest and banishment without trial of British subjects. The Nicaraguan minister in London, Modesto Barrios, explained that no affront to England was intended, that the men were deported for fomenting disturbances, and that the proconsul, Hatch, was not a consular officer of Great Britain and had no exequatur from the Nicaraguan Government. On Feb. 26, 1895, Lord Kimberley presented a demand that the Nicaraguan Government pay £75,000 for arresting, imprisoning, and expelling those British subjects, and further cancel unconditionally the decree of expulsion and agree to a commission, composed of a British representative, a Nicaraguan representative, and a jurist not a citizen of any American state, to assess the damages that they had sustained: or failing an agreement, that the assessment of damages should be committed to the President of the Swiss republic. For the seizure of a British schooner and the duress of an English engineer an indemnity of £500 was demanded. Nicaragua in her reply, while reiterating her denial of a breach of international law or an intentional affront to Great Britain, proposed that all the questions of payment for personal injury, damage to property, etc., be submitted to arbitration.

On March 19 Lord Kimberley handed to the Nicaraguan minister an ultimatum requiring that the British demand be complied with before April 26. The decree of banishment against the

British subjects implicated in the Mosquito rebellion was revoked before the first communication from Great Britain on the subject was received. The British Government intimated its intention to occupy the port of Corinto, on the Pacific, and receive the customs until sufficient revenue was collected to pay the fine and damages claimed. The United States Government acquiesced, Minister Bayard being assured that no acquisition of territory was intended and satisfied in his mind that England sought only satisfaction for an affront to which no self-respecting Government would submit without exacting redress. The expulsion of Proconsul Hatch was declared to be not a proper case for arbitration. The people of Nicaragua expected the Government of the United States to intervene and forbid the occupation of American territory and the collection of a fine arbitrarily imposed, on the ground that such proceedings would be a violation of the Monroe Doctrine.

British Occupation of Corinto, - A British feet under Rear-Admiral Henry F. Stephenson, consisting of the "Royal Arthur," the "Wild Swan," and the "Satellite," entered the port of Corinto on April 22. The Nicaraguans had made preparations for resistance, sending 800 troops to city under Gen. Rivas, and planting cannon. An officer was sent by the British commander to President Zelaya, at Managua, with a letter announcing that unless full compliance with Lord Kimberley's demands was received within three days he would take military possession of the ort. If he encountered resistance he threatened to bombard the town. In a reply to the British naval commander the Nicaraguan Government rsisted in its refusal to submit to the ultimatum. On the morning of April 27 a force of 400 sailors and blue-jackets was landed from the ships. All soldiers were withdrawn and all arms removed. As no opposition was offered by the Nicaraguans, all except a guard of 50 men were sent back to the ships in the evening. The British flag was boisted over the customhouse, and Capt. Frederick French was appointed governor of the port. President Zelaya issued a proclamation, port. President Zelaya issued a proclamation, declaring Corinto to be a closed port and all goods landed contraband and liable to seizure if duties were paid on them to the British. He also proclaimed martial law throughout the republic, ite published also a protest against the out-rage perpetrated by Great Britain in the seizure of the port in order to seize by force a sum of money that Nicaragua did not owe, in absolute disregard of international law and the dictates of right and justice. In his reply to Rear-Admiral Stephenson's letter he protested against all acts of jurisdiction exercised by the British officers, and any violent means that might be used to force Nicaragua to comply with the ultimatum as being contrary to the sovereignty of the republic and highly offensive to its dignity and independence, declaring that justice bade the Government of Nicaragua to refuse compliance, and that the proposed method of carrying the ultimatum into effect was contrary to sound principles and the rights of persons.

The populace of Managua showed great excitement, calling upon the Government to resent the insult to the nation. People begged to be given

arms that they might go to the state of English. A mobile attempted to tear the coat of arms over the diest of the literation late. Some rioting occurred at countries having no business and no means of communicating with the fatterior, Rear-Admiral Stephenson asked the authorities in London whether he should seem banking the countries of the stephenson asked the authorities in London whether he should seem banking the countries of the stephenson asked the same banking the stephenson asked the same banking the s

Juan del Sur and other porte.

An effort was made in Nicaragua to raise the sum necessary to ransom the pert by private subscriptions, and \$123,000 in silver was subscribed. The governments of Gustomala Salva dor, and Costa Rica urged the Nicaraguan Press dent to submit, and offered to guarantee the payment. The United States tigrerument continued to offer its good offices to both parties, and induced the Nicaraguan Government to promise that if the forces were withdrawn from Corinto Nicaragua would agree to pay the indemnity in fifteen days. The Nicaraguan Government requested the Salvadorvan agent in London to intercede. He was unable to persuade the British Government to recode from the position. The Government of Salvador then of ferred to guarantee the payment of the indeposity, and finally induced President Zelars to per mise that the money would be part if the Bestich forces were withdrawn. Gen Barries on leaving the British capital for Nicaragua had left the interests of his Government in charge of the representative of Salvador.

On April 30 the British at Cerinto further incensed the Nicaraguans by arresting Cel Casimiro Gonzalez on the charge of intimidating people to prevent them from selling people to the ships. The terms offered through the mediation of Chrisanto Medina, the Salvad ceam minister to France and Great Britain, were finally accepted, and after a formal offer to that effect was made to Rear-Admiral Stephenson be embarked the British troops and evanuated the port on May 4. The money was deposited in London and paid over within the time fixed

Nicaraguan Canal Project .- \ a corosse was granted by the Republic of Noralagua to the Nicaragua Canal Association of New York in April, 1887, and a Maritime t and thospass was organized to construct a ship caral across the isthmus, and was incorporated to the Co test States Congress Feb 20, 1889. The evertweet for the execution of the work was taken by a Nicaragua Canal Construction Company period of three years and a half was all wed for the surveys, and a further period of ten sears for the completion of the cara! The week of excavation was begun, and was formalls acknowledged by the Nicaraguan toprerment that a 1909, and in September, 1950, a commission rejected that the company had fulfilled the province in the concession requiring the expenditure of at least \$2 (100 (100 within the last year of the prelimipinte were cleared, @ miles of telegraph were erreted and steam dredges were set at work at the terratown end. After two years the work was continued at a slower rate. For a description of the proposed canal, with colored map, ere " Innual Cyclopardia" for 1800, page 614.

In 1891 the company, having spent \$4 (** o't) and issued certificates of stock for \$20 (**)

and bonds for \$5,953,000, asked the United States Congress to guarantee \$100,000,000 of bonds, and appoint an officer of the army to supervise the construction; but the bill failed to pass. In 1812 another was prepared by a committee of the Senate, which proposed to limit the capital stock to \$100,000,000, to cancel all stock and contracts excepting the stock assigned to the governments of Nicaragua and Costa Rica, and \$3,000,000 to be retained by the company in exchange for the concessions and privileges it had obtained; the United States was to reimburse the canal company for all its legitimate expenditures, and then the canal was to be constructed from the proceeds of bonds guaranteed by the United States Government. This bill was flually passed. It provided that the United States Government should issue \$70,000,000 of 3-per-cent, bonds to supply funds and should receive in return \$70,000,000 of the stock. The House of Representatives considered another bill, but took no final action. On April 2, 1895, President Cleveland appointed a board of experts to investigate and report upon the feasibility, permanence, and expense of a Nicaragua canal constructed along the route projected, so as to determine the advisability of the Government taking part in the enterprise. The board consisted of Major William Ludlow, of the Engineer Corps; Commander M. T. Edicott, of the navy; and Alfred Noble. When the company proposed to have the canal made with the credit of the Government the estimate of cost was put down to \$69,893,660, not far from Mr. Menocal's estimate for the actual work, which was \$65,000,000.

The board made an investigation on the spot. and concluded its studies in November, 1895. It reported that there were insufficient data upon which to found a final judgment as to the feasibility, permanence, and cost of a canal, and recommended that a survey and examination be made for the Government that would take eighteen months and cost \$350,000. The estimate the commission reached was \$133,472,893.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 363,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,-419 in 1840; 869,039 in 1850; 992,622 in 1860; 1.071,361 in 1870; 1,399,750 in 1880; and 1,617,-

Education.—The centennial commencement of the State University was celebrated at Chapel Hill, June 4, 5, and 6. An oration was delivered by Alfred M. Waddell representing the older alumni, and one by Adolphus H. Eller for the younger, a poem by Henry J. Stockard, and a centennial ode by James D. Lynch of the graduating class. Addresses were made by Henry A. London and Stephen B. Weeks. Subscriptions amounting to \$18,000 were made for an alumni building. The university received \$21,500 during the year from the Mason and Speight bequests. The "fraternity question" was settled by the trustees who adopted a rule that students be not allowed to join fraternities until the sec-

ond half of the sophomore year.

The Agricultural Department was consolidated by the Legislature with the Agricultural and Mechanical College, and appropriations were made for support for two years. The college graduated a class of 23. Wake Forest College graduated a class of 22 in June. Elon College graduated 5. It has had an addition of nearly \$20,000 to its endowment. Trinity College sent out a class of 15. At the commencement \$3,100 was subscribed toward a memorial building to the late President Baxton Craven, and \$5,000 was given for improving the grounds. Salem Female College graduated, at its ninety-third commencement, from its nearly 400 pupils, 53 in the regular course and 9 in special studies. At Greensboro Female College, founded in 1837, the senior class numbered 25. Peace Institute. at Raleigh, graduated 9 young ladies.

The State Normal and Industrial School, at Greensboro, closed its third year in May. The number of applicants to the school has been twice as many as could be accommodated, but more room has been added. The graduates numbered 28. In July the board bought 112 acres north of the institution for \$12,000.

The summer school of the university at Chapel Hill was attended by 104 teachers and

those preparing to teach.

State Institutions .- The Legislature made appropriations for these for the biennial period as follows: Raleigh Asylum, regular \$130,490.-20, special \$11,390,48; Morganton Asylum, regular \$180,000, special \$20,000; Eastern Hospital (colored), regular \$75,000, special \$20,000; Deaf and Dumb Institute at Morgan ton, regular \$70,000, special \$21,500; Blind Institute, \$80,000; Soldiers' Home, \$17,000; Penitentiary, \$49,000; State University, \$20,000; Normal and Industrial School, regular \$27,500, special \$10,000; Agricultural and Mechanical College, regular \$20,000, special \$30,000; Agricultural and Mechanical College (colored), \$10,000; Colored Normal Schools, \$13,250; Orphan Asylum, \$20,000; Colored Orphan Asylum, \$6.000.

The Penitentiary report gives the following statistics: There was an average number of 1,237 convicts in 1895, 3 more than in 1894. these, 180 were at the Cenrtal Penitentiary at Raleigh; 529 were at work on the Caledonia farm. 235 on the Northampton farm, 146 on the Halifax farm, and 73 at the Castle Hayne farm and mine; 67 were employed building for the Roanoke Rapids Company on the Great Falls Canal; and 45 for two months building a dam for the Rocky Mount Cotton Mills. The number of deaths was 40; in 1894 it was 52. The 150 employees were paid \$47,278.49. The total expense of the Penitentiary for the year was \$186,494.49. Of this amount, the Penitentiary raises products, etc., to the value of \$54,869.23, and \$131,625.26 was paid out in cash.

131,625,26 was paid out in cash.

The Oxford Orphan Asylum contained 101 boys and 103 girls in July. Cottages for the

boys are building.

The census shows a total of 573 blind children in the State of school age; of this number only 143 are in the Institution for the blind.

There are accommodations for 250,

Industries and Products.—The Labor Commissioner's report gives the following statistics of cotton mills: Number, 156; in course of construction, 11; looms, 24,858; spindles, 953,458; persons employed, 15,752 (of these, 4,888 are men, 4,157 women, and 4,689 children); capital employed, about \$15,000,000, or \$952,33 to each operative; cotton consumed, 123,658,775 pounds, or 309,147 bales weighing 400 pounds each. The average daily wages are; engineers, \$1.61½; firemen, 89½ cents; skilled men, \$1.10; unskilled, 70 cents; children, 30 cents. The average number of days worked in a year, 286½. At only 2 mills are there libraries. The per cent. of adults who can read and write is 95; children, 75.

The employees in railroad management and operation for 1895 are given at 9,439; 1894.

9.086: 1893, 9.000.

Insurance.—In July a conspiracy was discovered at Beaufort involving several prominent citizens, by which life insurance companies had been defrauded for eight years. Policies were taken out on the lives of persons in the last stages of fatal disease, and on the old and infirm. The medical examiners, who were working with local agents and others, made out false reports of examinations, ages, etc. Trials were held and convictions obtained. Six of the ac-

cused were sentenced in December.

Railroads.—There are in the State 3,616:58 miles of railroad, with a valuation of \$24,501,-800.63, an increase of over \$12,000,000 since 1890. The taxable property increased in 1895 \$337.837. The gross earnings were \$9,008,-054.35; the net income, \$2,974,475.93. About 10,000 persons are employed. Three roads have been abandoned: the Milton and Sutherlin, the Laurel River and Hot Springs, and the Hamilton. Only 3 are in the hands of receivers: the Cape Fear and Yadkin Valley, the Marietta and North Georgia, and the Norfolk and Western.

The most important matter concerning the railroads of the State is the lease of the North Carolina Railroad to the Southern Railway Company for ninety-nine years, at a rental in excess of the limit as fixed by its charter before the readbed would become liable for taxation. This lease is denounced as most flagrantly unjust

and unfair.

Monuments.—The monument at Raleigh to the Confederate dead, which was built by means of the efforts of the Ladies' Monumental Association of the State, was unveiled, May 20, by the little granddaughter of Gen. Thomas J. ("Stonewall") Jackson, in presence of a large assemblage. The speakers were tall a Ashe, Hon. A. M. Washleil, ea to a first a Hon. W. H. Cowles. The wora first he ment began in 1892, the corner sleepe was a law ment began in 1892, the corner sleepe was a law 1890 made appropriations. The measurement is 72 feet 6 inches high, at the top classife the figure of a Confederate infantry scotler at ground rest, the shaft near its base about 25 feet from the ground, is flanked on one rude by a cavalryman and on the other by an artillers man. These figures are of bronze and were made in Munich. The stone of which the mean ment was built is white North Carolina granite. It bears the inscription: "First at Bethel, last at Appointation."

A monument was unveiled at Bentonsville, March 20, the thirtieth anniversary of the battle between Sherman's and Johnston's armies.

The corner stone of a missimment to Leomidas Polk, bishop and general, killed at Pine Meantain, Georgia, June 14, 1864, was haid, Fish. 7, at Raleigh by Masons and members of the Farmers' Alliance, of which he was president. Gen.

l'olk was a native of Haleigh.

Legislative Session.—The regular borninal session of the General Assembly began Jan 9 and ended March 13. The Assembly was discussed politically as follows: Senate—Bennecrata, 8; Republicana, 18; Populista, 24. Homos—Dennecrata, 46; Republicana, 28, Pepulista, 36, Z. V. Walser was chosen Spanker of the House, At the election of a United States Senator to fill out the term of the late Senator Vance Jeter C. Pritchard, Republican, was elected by a vote of 116 to 45. His term will expers an 1897. For the full term, Marion Butler, Populist, was chosen by a vote of 117 to 45.

A bill to revise, amend, and convolidate the election laws filled 34 closely printed pages.

The method of county government was changed. Heretofore the county commissioners were elected by the magistrates of the county, who were appointed by the Legislature. I adder the new law the people will elect 2 commissioners, who shall serve as a board of comperation, with 2 others, to be appointed by the Superior Court judge, these 2 extra commissioners to be of a different political party from the commissioners elected by the people.

The county beards of education were abelished, and their powers and detice devides upon

the county commissancers.

It was enacted that the choice of schoolses he be left to each county instead of, as heretofore,

to a board consisting of Male Cheers

A revenue act was passed which increased the State levy 4 cents on the \$100 of property. Among the license taxes imposed were those upon hitch and tearling and belging houses at the rate of 50 cents for each bestream maintained, and on every practicing lawser, practicing physician, and dentist the sum of \$10.

It was discovered in July that this act had not level ratified, and the question of its validity without ratification was taken to the courts.

A new oveter law was made. It requires that persons taking outters must take a liverise and make oath that they are critizens and resolvents of twelve months' standing. A chief imports of oveters is provided. Purchasers of evident for packing or otherwise dealing in them are to make sworn statements as to quantity, price paid, and the like, and pay a tax of 2 cents a bushel.

The public school fund was increased from 16 to 18 cents on \$100 worth of property.

o 18 cents on \$100 worth of property.

Two new criminal courts were created.

The legal rate of interest was made 6 per cent. A law against prize fighting was enacted.

A resolution in the House to adjourn, out of respect to Frederick Douglass at the announcement of his death, was passed by a vote of 34 to 20. This, taken in connection with the report that resolutions to adjourn on the birthdays of Washington and Robert E. Lee had been voted down by the Senate, caused a great deal of feeling, and indignation meetings were held in several counties. Senator Butler gives the following version of the incident: "As a matter of fact, there is on the record of the House journal a resolution providing that when they adjourn en a certain day it be as a mark of respect to Fred Donglass. The Senate took no notice of the matter at all. The resolution was offered by a colored representative in a rush of business and was voted for by all parties, Democrats included, none of whom ever expected to hear of it again; and while the regular hour of adjournment by the House was 2 o'clock P. M., the House was in session that particular day till thirty-seven minutes past 2 o'clock. Both Senate and House adjourned promptly in honor of both Washington and Lee

A resolution instructing Representatives in Congress to vote for free coinage of silver was

indefinitely postponed.

The following appropriations were increased beyond those of the preceding Legislature: Insane asylums, increase of \$29,529,41; deaf, dumb, blind, and orphans, \$34,850; educational institutions, \$10,500; Penitentiary, \$49,158.71. The following were diminished: State Guard, \$20,000; Soldiers' Home, \$2,000; Normal and Industrial School, \$4,000.

A measure entitled "An Act to regulate assignments and other conveyances of like nature," provided that "all conditional sales, assignments, mertgages, or deeds in trust which are executed to secure any debt, obligation note or bond which gives preferences to any creditor of the maker shall be absolutely void as to existing

creditors."

This act, which was said to be equivalent to a stoppage of business, and the manner of its passage made a disturbance that continued to the passage made a disturbance that continued to the passage made a disturbance that continued to the passage made a disturbance only in case of as a distal for benefit of creditors; but in its effects that two benefit of creditors; but in its effects that was held to extend much further, and others were afraid to the right to execute assignment of the right to execute assignment and deeds of trust or make the pre-existing debts. It was not passed properly, and the was not passed properly. The vanity was brought before the state of the properly of State from publishing the land of the passed properly and the ded, by 3 against 2, that it has to the power to go back of the

record of the Legislature, which showed ratification of the act, and that the remedy must lie with the legislative branch of the Government. Justices Avery and Clark wrote dissenting opinions. An indictment was afterward found against the clerks of the two houses, and early in 1896 they were convicted. One was sentenced to pay \$250 fine and costs, and the other the same with the addition of twelve months at hard labor.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,-795 square miles. The population in 1890 was

182,719. Capital, Bismarck.

Government.—The following were the State officers during the year: Governor, Roger Allin; Lieutenant Governor, John H. Worst; Secretary of State, C. M. Dahl; Auditor, Frank A. Briggs; Treasurer, George E. Nichols; Commissioner of Insurance, Fred B. Fancher; Commissioner of Agriculture, A. H. Laughlin; Attorney-General, John F. Cowan; Superintendent of Public Instruction, Emma F. Bates; Railroad Commissioners, J. W. Currie, George II. Keyes, John J. Wamberg; Superintendent of Irrigation, W. W. Barrett; Chief Justice of the Supreme Court, Alfred Wallin; Associate Justices, Guy C. H. Corliss, J. M. Bartholomew—all Republicans.

Finances,—The Treasurer's report for 1895 shows receipts and expenditures as follow: Balance Dec. 31, 1894, \$61,568.16; receipts during the year from taxes for counties, \$334,165.23; receipts from other sources, including balance, \$826,060.22; total receipts, \$1,160,225.45; total disbursements, \$1,103,676.20; balance Dec. 31, 1895, \$56,549.25. Among the receipts were \$80,000 from sale of funding warrants for Legislature and incidental expenses, and \$130,000 from sale of funding warrants to pay outstanding indebtedness. The taxes from railroads amounted to \$97,223.90, and the insurance taxes to \$18,760.95. The warrants for legislative expenses were redeemed, as well as a small part of the debt incurred to pay warrants outstanding at the beginning of the year. Real estate was not assessed this year. The total personal valuation of the State is \$19,809,492. The tax levy was fixed at 4 mills for general taxes, and five tenths of a mill for interest.

Education.—The enumeration of pupils for the last apportionment was 63,567; the fund was \$115,691, or \$1.82 per capita. The enumeration had increased 7·2 per cent. over 1894. The average cost of tuition per pupil had been \$2.09, and the average daily attendance 79 per cent. of enrollment. The value of school property is \$1,643,181.77; paid for teachers' salaries,

\$547,462.04.

The Valley City Normal School had 228 students at the spring term, of whom about 89 were in the normal proper, and the Mayville Normal 117, about 102 in the normal proper. A class of 11 was graduated at Valley City, and one of 15 at Mayville. As those schools had no appropriation for payment of salaries, it was supposed that they would be closed for the next two years, but subscriptions were taken for amounts sufficient to keep them open for the present year.

The Agricultural College had 82 students, of

whom 57 were in the preparatory department. The college has a creamery, the largest in the State, with capacity for handling 1,500 pounds of milk an hour.

The State University, at Grand Forks, had 156 students, 35 of them in the university classes

and 121 in the preparatory school.

State Institutions,-The total number at the insane asylum during the biennial period ending Nov. 1, 1894, was 501, of whom 192 were women. The number remaining at the end of the period was 306. The percentage of recovery of these admitted during the two years was 59; of the number treated, 29; the average number present was 294. The expenses from March 1, 1893, to Oct. 31, 1894, were \$117,480.61.

The Soldiers' Home reported 27 inmates. The cost for rations per capita was 19} cents a day, including tobacco. The cost, covering all expenses, except fuel and lights, which were estimated

at \$1 cents a day, was 351 cents a day.

The Deaf and Dumb School closed a month earlier than usual, in part because of dissensions in the faculty. It had 30 pupils in March.

The question of the location of the Blind Asylum, which by the Constitution is required to be in Pembina County, was fixed at the corporation of Bathgate.

There were 113 inmates at the Penitentiary

at the end of 1895.

Farming.-The wheat harvest of this year was the most abundant in the history of the State. Prices were correspondingly low, but the great trouble was in getting the grain to market. The railroads were unable to move it as rapidly as it was ready to be shipped. Elevators, warehouses, barns, and grain houses built in the fields were stored full, and at one place bins were made on the fair grounds for temporary use. The crop of oats and other small grains was correspondingly large. The yield of potatoes was immense, the average being placed as high as 200 bushels to the acre. Renewed interest is taken in the production of flax, since it has been found that the oil product is of great use for fattening stock.

Irrigation.-The report of the Commissioner of Forestry and Irrigation shows that in 1894 an experimental irrigation plant was established at Bottineau, and the result proved so favorable that 2 districts have been organized in Bot-tineau County. North Dakota has 672 flowing artesian wells. One of these, the "Minnehaha," at Turtle Mountains, flows 283 gallons per minute. The native tree lands are estimated at 460,000 acres, and the cultivated trees

at 40,000 acres.

Immigration.—An immigration convention was held in Fargo Dec. 17. A State committee was appointed, and county and town organizations are to be formed. Resolutions were adopted requesting Senators and Representatives in Congress to arge an appropriation to complete the examination of the artesian basin of James river valley, and a survey of the rivers.

The Turtle Mountain Indians, - An out-break of these Indians was imminent in April and May, in consequence of trouble growing out of the attempted arrest of half-breeds for cutting timber on Government land. Chief Luttle Shell said he had given permission to the men to cut

the timber, as he claimed he had the call since the Government had meet pantle. dians for the land. This is a prof call standing. About eleven years ag 2 t with a of land were set ande for them but were believe made the subject of treaty. They claim that all the Turtle mountain land, about 10 terms of acres, belongs to them. They have had acres ance from the Government, and it is said that not only the Indians and half breeds of the result vation have shared it with them, but that the came dian half-breeds across the boundary line have also profited thereby. When these 2 townships were set aside for the Indiano there were celly 160 altogether, but the last census gave their numbers at 2,000. On this occasion the halfbreeds, to the number of 275, encamped 3 miles from St. John's, and threatened to kill every white man in the vicinity if they were not let alone. Marshal Cronan took a pease of deputies and went to St. John's, surrounded the feet, and demanded the unconditional surrender of the men for whom warrants were held, as well as of all the arms and ammunition. The surrender was made without a shot having been fired. In a subsequent trial Chief Little School turned State's evidence.

Legislative Session,-The pressure of the Legislative Assembly began Jan. 5 and ended March 8. The members were divided politically as follow: Senate-Democrate 2, Republicano 25, Populista 4; House-Democrate 5, Repullicans 49, Populiste & James C Gill was chosen Speaker of the House. During the new sion 178 bills were introduced in the Secate of which 78 passed both houses, 180 were introduced in the House, of which 62 passed both

branches.

The commission provided for to the Legisla-ture of 1891 to codify and revise the laws made its report, and a joint committee on complained was appointed to whom the codes were referred. They were adopted substantially as they came from this committee. Uncertainty as see after the adjournment as to whether the new codes could take effect before they were proclaimed by the Governor, and whether the laws passed by the session would be binding before that time. The question was referred to the Pospreme Court by a test case, and the decision was that the revised codes could not take effect until thirty days after the pre-amate a by the ties ernor of their printing and acceptance. Meantime the old laws were in force and such laws of the session of 1800 as were accompanied by emergency clauses.

The triulle about the treaters of the Acricultural College and the Penstentiars one " Anmual Cyclopardia" for 1860, page 303 came up again in the Legislature, and was settled by a report of a committee to the effect that the

charges had no foundation.

A committee was appointed to investigate the matter of supplies and expenditures during the providing term. The report eriticised the work of the ex-Treasurer and ex-Auditor, and charged mismanagement, especially in regard to julio printing-oresmonument of type, excess to numbers of copies of reports, and unneventer matter included. A minority report by a zero ters of the committee) dissented from the majority report in every particular. The majority report was adopted.

A proposition to resubmit to the people the

question of prohibition was defeated.

The State Superintendent of Forestry and Irrigation was made State Fish Commissioner. No fish can be legally taken from any of the waters of North Dakota, including the Missouri and the Red rivers, except by means of a hook and line. No fish can be legally shipped out of the State. And there are other restrictions.

A new came law was made, but as it was adopted as a part of the political code, it did not take effect during the season of 1895. A new office was created, that of State game warden, appointive by the Governor. For a license or permit to hunt with or without a dog during the open season a nonresident must pay \$25, and a resident of the State 50 cents. Prairie chickens, grouse, woodcock, plover, wild duck, wild geese, or brant may be killed only between Sept. I and Dev. 1. Buffalo, elk, deer, antelope, caribou, or mountain sheep may be killed only between Nov. 15 and Dec. 15.

None of the birds or animals named can be

legally shipped out of the State.

Two laws were passed relating to cigarettes, one making it a misdemeanor to sell impure cigarettes or to sell any to persons under seven-teen years old; the other forbidding the sale of any cigarettes, and imposing a fine of \$10 to \$50. It is claimed that the latter law is unconstitutional

Bounties were provided for five years on potato starch, flax or hemp spinning fibers, and twine suitable for binding grain made in the For the cradication of the Russian this-

tle and French weed \$30,000 was appropriated.

An act providing for drainage in the Red river valley will result in the reclaiming of 125,-

000 acres of the best land in the valley. An act was passed defining intoxicating liquors, covering the leading so-called "temperance drinks.

The Capitol commissioners reported the conclusion of their work in building the south wing of the Capitol, for which \$50,000 had been appropriated. Of this there was an unexpended

balance of \$700.

The House repealed the gross-earnings law for taxation of railroads. The Senate also passed the repealing bill, and immediately enand one adopting another system of grossorthings taxation supposed to be satisfactory to all the rowls. This bill did not become a law. Con iswed 1890, providing for direct taxation An a contact laws made were the following:

at int of personal property exempt τ (can ship the power to vote

ta commission.

The commission.

The control of the United States of the

Penitentiary in making brick for public improvements, and in improving roads leading to public institutions.

Making it a misdemeanor to abuse, overload, or underfeed domestic animals, and making it the duty of municipalities to provide watering troughs,

Appropriating \$500 annually for expenses of the weather crop service.

Declaring that in all cases in which the probable duration of the natural life of any person from and after a particular age is material, the statistical tables known as the Carlisle Tables of Mortality are com-

petent evidence. Prohibiting the printing or sale of vulgar or indecent prints or papers, sheets devoted to tales of crime and bloodshed alone, and journals that make a spe-

cialty of this class of matter. Making intoxication a misdemeanor.

Permitting farm laborers to file liens upon crops to secure payment for work done.

Compelling railroad companies to provide a certain number of brakemen to man trains not provided with air brakes

Providing for teaching civil government and temperance in the schools.

Establishing courts of conciliation.

Providing for a geological and natural-history survey of the State.

Creating the office of chief State veterinarian. Creating a high-school board and providing a system of higher education.

Establishing a garnishment law.

The Governor reduced the appropriations made by the Legislature to State institutions, on the ground that the amount of revenue available would not be sufficient. Following is a summary of the appropriations after reduction: Insane Asylum, \$128,500; Penitentiary, \$43,440; University, \$15,980; Soldiers' Home, \$11,900; Agricultural College, \$11,250; Mayville Normal School, \$7,700; Valley City Normal School, \$4,600: Deaf and Dumb School, \$16,500; total, \$239,870.

NORTHWEST TERRITORIES OF CAN-ADA. Since 1888 these Territories have had an elective Assembly, and in 1890 the Federal Parliament provided for full self-government.

Legislation.—The fifth session of the second Legislature of the Territories was opened at Regina on Aug. 2, 1894, by Lieut.-Gov. Charles Herbert Mackintosh, and was prorogued on Sept. 7. Among the measures passed the following were the most important:

Respecting elections to the Legislative Assembly. Respecting the formation of irrigation districts.

To amend the liquor-license ordinance.

To prevent trespass in pursuit of game. For aiding in the construction of the Wolseley and Fort Qu'Appelle Railway.

Respecting exemptions from seizure and sale under executions.

Respecting the establishment of farmers' institutes. Respecting the profession of medicine and surgery. Relating to mortgages and sale of personal property.

The powers given to the Northwest Territories are the same as those held by the provinces of the Dominion, with the single exception of the right to borrow money upon their own credit.

Immediately after the prorogation of the Assembly the elections took place under the new ballot regulations and with increased representation. The Premier, F. W. G. Haultain, was sustained by a good majority.

The first session of the third Assembly was opened on Aug. 29, 1895, with a speech from the Lieutenant Governor, of which the following extracts are the most important :

The Dominion Parliament having amended the othwest Territories act, a reorganization of the

ristracy will be necessary. With this in view, a rully prepared digest of magisterial procedure is ag prepared.

careful inquiry justifies an estimate of between the cooperand \$0,000,000 bushels of wheat, or nearly the cooperand \$0.000,000 bushels of wheat, or nearly \$0.000 bushels of wheat, \$0.000 bush while the erop of last year. From no pertion of the pritories come reports of failure. Barley, oats, and a smaller products of the farm are equally plented. The eattle and sheep ranches are also in a thrivandition.

e announcement of noticeable transport reduca, to the amount of about 30 per cent. on butter, on, and eggs, recently made by the Canadian se, and eggs, recently made by the Canadian le Rallway authorities, will no doubt prove ex-ely advantageous. Reports of several new in-tics have recently been received.

In the recent Territorial Exhibition the entries in various classes were double the number antici-id, every provisional district manifesting patriotic rest in the enterprise. The stock parade was ad-tedly the finest ever made in any part of the Do-tion, and most of the herds were disposed of at

ol prices to prominent buyers.

The general census of the Territories, taken by der of the Dominion Government, early in the year,

ows a gratifying increase of population throughout various provisional districts since 1891. The number of schools has noticeably increased. Aug. 2, 1894, there were 330 public schools, 2 estant separate schools, 36 Roman Catholic pub-At the present time there are 384 public schools, 2 rotestant separate schools, 44 Roman Catholic public schools, and 11 Roman Catholic separate schools. number of pupils in August, 1894, was 8,926, and August, 1895, is estimated at 9,750. Since August, 14, further school debentures have been issued and his, permission has been granted to several districts stered to the amount of \$34,000. In addition to e debentures to the amount of \$21,000. The ctal school debenture responsibility does not exceed 1170,000, representing virtually the debt of the Ter-

The Dominion Government have decided to name, or in Council, all the Territories between Alaska Labrador. The far western district will be called Takon; Athabasca will be enlarged by the addition a portion of the eastern territory; the remaining ortions will comprise Franklin, Churchill, and, to

certions will comprise Figure 1.

the far east, Ungava.

A few days since I had the honor of formally opening the Lady Aberdeen Woman's Hospital at Medicine Hat, under the auspices of the Woman's Hospital Aid Society. The Maternity Cottage is a handsome houselflow and will be a valuable addition to the

eral hospital.

Irrigation, authorized by the Dominion act of 1894. proved extremely useful in portions of Alberta, here a large number of ditches have been cut, splendid results following. One hundred and sixteen are a operation, with irrigating capacity for 28,000 acres.

The Assembly was prorogned Sept. 30, after using the following ordinances, among others:

Respecting alimony.

To provide for investigation of accidents by fire.

corpecting stock injured by railway trains.

pecting masters and servants. pecting assessment of railways.

To incorporate the Catholic parishes and missions the discose of Prince Albert.

Territorial Exhibition.—This exhibition was opened on July 29, 1895, by the Governor General of Canada, who was accompanied by the Premier, Sir Mackenzie Bowell, and other Do-

minion ministers. The World's Fair at 1 had had given Gov. Mackinteab the idea of the vir tising Territorial resources in this was at 1. had obtained from the Dominica Parlia cal a grant of \$25,000 for the purpose. The cap the Regina, gave \$10,000, and a site for the board ings was provided. The result was an emmently successful exhibit of cattle and horses, lumber and cereals, poultry and dairy work, and the minor products of mixed prairie farming and ranching. There were over \$1000 entries, compared with the average of 3,000 at the annual exhibitions of Winnipeg.

Agricultural.—The following were the crops

and live stock of the main populated portion of the Territories-West and East Assentanta, Alberta, and Saskatchewan-for 1864, with the exception of one division for 1860 Caltivated land, 437,254 acres; wheat, 2,734,300 bushels; oats, 2,404,442 bushels; barley, 379,300 bushels; potatoes, 471,411 bushels; horses, 78,717, cattle,

283,077; sheep, 243,929; pigs, 29,295.

The production in 1895 was a great increase upon these figures, and the 100,000 people who inhabit these wide Territories are unusually prosperous. During 1894 a large number of fairs were held, and a considerable number of immigrants reported, mainly English and Germans. They settled chiefly at Edmonton, Prince Albert, and Duck Lake.

Education .- No religious instruction is allowed in any public school before three o'clock in the afternoon, at which time such instruction as is permitted by the trustees may be given, parents having the privilege of withdrawing their children at that hour. In 1894 there were

297 schools with 8,341 papils.

Miscellaneous. - The 4 Territories have 1,772 miles of railway track. Under a Dominion act passed in 1873 a mounted-police force was ceganized, of 190 men, to protect the scattered population. On Nov. 30, 1894, the force numbered 947 men and officers, with 85 stations and SOO horses

By the census of 1891 there were in the Territories 14,344 Roman Catholics, 15,366 members of the Church of England, 12,547 Prodytername, 8,110 Methodists, and 4,735 persons who termed

themselves "Protestanta.

NOVA SCOTIA, an eastern province of the Dominion of Canada.

Legislation. - The first sesson of the thertyfirst Legislature of the province was opened on Jan. 31, 1865, by Lieut drev. M. R. Isale, with the usual speech from the throne, of which the following are extracte

A good harrent, an average fickery, marked progfree in mining operations, and consuderable art and other departments have ever beaut to emable jengle of Not a Newton to a would be some a stand the depress of trade which pressed so waters on this confident. It affords me much estimaters to time the storemed activity in eval mining operations, the out; ut of the mines has my been committeedly in ea cons (that dans previous year. The enlarged outurther extension contribute materially to the prosperite of the province.

Very material progress has been made in the construction of the railway evenerting the tape flower or cross with the post of Louisburg. We may be a think to be ing the enough summer, and we are justified if a

ticipating that through its operation our coal trade

will be further developed.

A contract has been entered into for the construction of a railway from Yarmouth to Lockport. A measure will be submitted to amend, in an important particular, the law respecting the payment of subsidies to railway companies. than the question of railway extension is that of the maintenance of our common roads. You will be asked to consider several proposed amendments to the laws respecting roads and to make some further privision for the large bridge service.

In accordance with an act of last session, arrangements were made for the taking, in connection with the general election, of a plebiseite on the question of prohibiting the liquor trailic throughout the Dominion. The returns indicate a very strong public senti-ment in favor of prohibition. Since the taking of ment in tayor or promotion, since the taking of the pichiseite the disputed point of the relative Issuers of the Dominion and provincial legislatures, as respects the enactment of prohibitory measures, has been decided by the Supreme Court of Canada in terms which place the subject beyond provincial

F. A. Lawrence was elected Speaker of the Assembly. During the session, which closed on March 20, the principal measures passed were as follow:

To amend the Revised Statutes "Of the Solemnization of Marriage.

To amend and consolidate the acts relating to

towns' incorporation.

To amend chapter liii of the Revised Statutes, fifth series, " Of Railways."

To amend and consolidate the factor's acts.

For amending and consolidating the acts relating To amend and consolidate the acts relating to pub-

lic Instruction. To amend the law respecting compulsory educa-

tion of children in the city of Halifax. To amend the act respecting succession duties.
To amend the trustees' acts.
Bespecting the sale of intoxicating liquors.

To regulate the closing of shops and the hours of labor therein for children and young persons. To amend the Nova Scotia judicature act (1884).

To amend the law respecting exhibitions. To provide for the formation of the Nova Scotian

Farmer's Association.

To amend the acts for the encouragement of agriculture.

Government,-Hon, W. S. Fielding, who has been Premier and Provincial Secretary since 1881, appealed to the people again in March. 1894, and was sustained by a good majority. He is a Liberal, as is his chief lieutenants Hon. J. W. Langley, Attorney-General, but they manage to hold their own despite the province being Stringly Conservative in Dominion politics. He der members of the executive are: Hon.

L. Caorch, Commissioner of Works and
M. H. n. T. Johnson, Hon. A. H. Corneau,
H. a. G. H. Murray.

Fisheries - . In a male ref fishermen in Nova

Scotia during 1894 was 5,907 in vessels and 19-571 in boats. The value of their vessels, boats, nets, wharves, fish houses, etc., was \$3,361,972, and the total yield of the fisheries was \$6,547,-387, an increase in the year of \$140,000. The exports of the province in fish were \$5,100,873, and the distribution of the catch was as follows: Salmon, \$100,483; mackerel, \$485,299; herring, \$811,284; cod, \$2,450,341; haddock, \$400,135; lobsters, \$1,294,557; hake, \$152,220; pollock, \$175,106; halibut, \$121,895; smelts, \$21,517; oysters, \$10,048; miscellaneous, \$524,502.

Halifax Exhibition .- During September 1894, an exhibition was held at the provincial capital under the patronage of Gen. Montgomery Moore and Admiral Sir John Hopkins, and a commission composed of men in the province. The buildings cost \$6,000, the prizes given amounted to \$5,778. The exhibits of horses, cattle, sheep, swine, poultry, fruits, and minerals were good. A series of naval and military manœuvres was arranged, which lasted during the week. The total expenditure on the exhibition was \$19,130.

Shipping.-The tonnage carrying into and out of the province in 1894 was 2,503,670 tons. The coasting trade in 1894 was 4,403,014 tons,

a slight increase over the preceding year.

Finances.—Premier Fielding delivered his budget speech on Feb. 11, 1895. The revenue during the year ending Sept. 30 had been fully up to the estimate. The chief items were: The Dominion subsidy of \$432.813; the receipts from mines of \$242.657; from the Hospital for Insane, \$40,403; and from the Western Counties Railway less refund of \$50,000 loan, \$131,-021. The total ordinary revenue was \$888,-213.70. The expenditure was \$862,842.89, leaving a surplus of \$25,370.81. The total liabilities were given as \$3,167,493, and the assets as \$1,358,182. The estimated revenue for 1895 was \$833,063, and the expenditure \$832,968.

Minerals.—The production for the year ending Sept. 30, 1894, included 19,980 ounces of gold, 83,512 tons of iron ore, 2,200,235 tons of coal, and an export of gypsum valued at \$106,-171. Much Nova Scotian coal used to go to the United States. During the years of free admission—from 1854 to 1866—this export ran up from 139,125 tons to 404,252. Since then it has varied from 102,000 tons in 1883 to 79,837 in 1894. But the production has steadily increased. The number of persons employed during the year in the coal mines was 5,936.

Railways.—The year 1894 will be remem-

bered for the acquisition of the Western Counties Railway by the Windsor and Annapolis Railway Company, which lines were merged under one management and called the Dominion Atlantic Railway. An effort was also made to give railway aid and traffic to the western shore districts of the province. The union of the two roads mentioned will enable the company to compete more effectively with the water traffic between Halifax and Boston, and Annapolis and St. John.

During the nine months from Jan. 1 to Sept. 30, 1894, the Nova Scotia railways carried passengers who paid \$205,475, freight paying \$185,-605, and mails and sundries paying \$22.914. There were 825 miles of track in the province

on June 30, 1894.

OBITUARIES, AMERICAN, FOR 1895. Myren, clergyman, born in East Bloomfield. Y., March 12, 1841; died in Rochester, N. Y., Dec. He entered Hamilton College with the class of 1863, but at the close of his junior year en-listed as a private in the 126th New York Volun-teers. He participated in the defense of Harper's Verry, where he was among the 11,000 men surren He was successively corporal, hospital steward, at lieutenant, and acting assistant inspector general On March 3, 1863, he was assigned to the signal corps. and the same year he was made acting adjutant of the 2d United States Colored Regiment. In 1864 he was in the battle of Mobile Bay as signal officer on the "Lackawanna." His part in the engagement is described in "Battles and Leaders of the Civil War." Vol. IV, page 397. Lieut. Adams rode to Washingson with the news of the surrender of the last Confederate troops east of the Mississippi at the close of the war. He was offered the rank of major, but re-He was graduated with his class at Hamilcollege and took a course at Auburn Theological Seminary, and, after a pastorate of one year at Union Springs and seven years at Dunkirk, was called to Rochester, N. Y., in 1876, where he remained till his death as paster of Plymouth Congregational Church. About 1881 his theological views underwent a change, and be announced to his congregation his disbelief in me of the tenets of the Church, especially in that of the eternity of future punishment. This brought upon him the censure of orthodox clergymen of the city, the withdrawal of the fellowship of the Ontario Association of Congregational Churches, and the of a part of the membership of his own church. But as the majority either sympathized with his views or were willing to accord full tree-lom to thought and to the expression of sincere conviction, he remained in the pastorate, and the church became known as a liberal organization, and ultimately set aside the confession of faith of the orthodox churches and adopted as its bond of union a simple declaration of faith in the fatherhood of God and the brother in the fatherhood of God and the brother hood of man, and a pledge to work toward universal recognition of the one and practical realization of the r. Mr. Adams became a Christian evolutionist, and gave expression to his beliefs in his sermons and a systematic exposition of them in his first published back, "The Continuous Creation" (Boston, 1889), ad of his theory of continued inspiration and progreative revelation in "The Creation of the Bible"

Almy, John Jay, naval officer, born in Newport, R. I., April 25, 1814; died in Washington, D. C., May 16, 1896. He entered the United States navy as a midshipman, Feb. 2, 1829; became lieutenant, March 1841; commander, April 24, 1861; captain, March 1863; commodore, Dec. 31, 1869; and rear admi Aug. 24, 1873; and was retired April 24, 1877. He was on sea service for twenty-seven years and ten months, on shore or other duty fourteen years and eight months, and was unemployed twenty-three years and nine months. He was attached to the line 6-battle ship "Ohio" in the Gulf of Mexico and the Pacific Ocean in 1846-50; took part in the siege of Vera Cruz and the capture of Tuspan, and command ed a fort at Mazatlan during the naval occupation of that place; was on coast-survey duty in Chesapeah Ray and on the coast of Virginia and North Care in 1851-'56; and commanded the "Fulton" of the coast of Central America in 1857, when the Walker alibustering party surrendered to Admiral l'acding on board that vessel. In 1858-59 he commanded the same vessel in the expedition to l'aragua) ing the civil war he was attached to the North

A favorite act of his was to discover a landlord pushing a poor terant to the wall, then to appear on the agency at the last moment, and end the proceeding with a check for the top amount due. He had conspicuously riskes his his to aid the suffering poor on many or agency, and by his charatable works had endeaded lines for a large community. His death was suchion and if it the formeral it was estimated by the poince if at fally largest people viewed the remains.

Atweed Charles B, architect, born in Millbury, Mass, May 1s, 1s4r, died in Chicago, Ill., Dec. 18, 1s4r, the logan studying architecture when seventeen years old, took the full course in the Harvard Scientiff. School, and worked with his architectural presspors till 1s72, when he opened an office of his can. Within three years he received a prize for a

design for the city hall in San Francisco, two prizes for the State Capitol in Hartford, Conn., one the courthouse in Springfield, Mass., and the first prize and commission to build the city hall in Holyoke, Mass. In 1875 he removed to New York, and during the next six years designed the residences of David Dows, William H. Vanderbilt, Elliott F. Shepard, William and Sloane, and interior decorations for the residence of

Mrs. Mark Hop-kins in San Francisco. In 1884 he gained the first prize, against 125 contestants, for a design for the Boston Pubbe Library, but for some unexplained reason the design was not used. After spending two years in designing the interior decorations for Mrs. Mark Hopkins's resi dence in Great Barrington, Mass., he gained the first prize of \$5,000 for plans for a new city hall in New York, which were highly recommended by the board of caperts From April 1, 1891, till July 1, 1893, he Works of the World's Columbian Exposition, and histoguished hunself by his designs for the Art bladding, the Peristyle, the terminal station, the to reason the bridges, the restral columns, the Service Horning the forestry, and many minor decorative at the Mr Burnham says of him: " Atwood was tall and bearing, with and a cartable for its beauty of outline. His voice that per unar quality which opens to its presensor. Altogether, the grateful to one's love of grace and We at we of these intangible elements made hand of gentleman. From to be the heart career he was much

secondary works than in the total practice. He had assire design, and also design, and are to books, and to the massive suggestion of massive suggestion and also design and and and and and and and also design.

a sketch had been made by him there was very little improvement to be suggested. He was of an honorable, charitable disposition, but, as most great artists have been, was a mere child in the practical things of life."

Badeau, Adam, author, born in New York city, Dec. 29, 1831; died in Ridgewood, N. J., March 19, 1895 He was educated at private schools, and became a contributor to the newspaper press, under the pen name of "The Vagabond." He entered the national army as an aid on the staff of Gen. Thomas W. Sherman in 1862, and was wounded in an assault at Port Hudson, May 27, 1863. In March, 1864, he became military secretary to Gen. Grant, with the rank of lieutenant colonel. He occupied the place till May 18. 1869, when he was retired with the rank of cap tain in the regular army and of brevet brigadier general of volunteers. In May, 1869, he was appointed secretary of legation in London, where he served till December, when he was assigned to duty as bearer of disputches to Madrid. He returned to London as consul general in May, 1870, and retained that office till September, 1881. During this period he was granted leave of absence, on the request of Gen. Grant, to accompany him on his tour around the world, 1877-78. In May, 1882, he was appointed consul general at Ilavana. During his incumbency he made charges of corruption against the State De partment, and in April, 1884, on being denied an op-portunity for substantiating them, he resigned the office. While consul general at London he received the appointments of minister to Belgium (1875) and to Denmark (1881), but declined both missions. his retirement from office he sought to re-enter the army, claiming that his military office had not been vacated by public service elsewhere. This led to a controversy that was not settled till Aug. 8, 1890, when the President and the Secretary of War decided that his acceptance of the office of secretary of legation at London, on May 19, 1869, had vacated his mili-tary office. In March, 1888, he brought suit against the estate of Gen. Grant for payment of services alleged to have been rendered the general in the preparation of his memoirs, but was defeated. His principal publications are: "The Vagabond" (New York, 1859); "Military History of Ulysses S, Grant" (3 vols., 1867–'81); "Conspiracy: A Cuban Romance"

(1885); "Aristocracy in England" (1886); and "Grant in Peace" (1886).

Bailey, Joseph Mead, jurist, born in Middlebury, VI., June 22, 1833; died in Freeport, Ill., Dec. 15, 1895. He was graduated at the University of Rochester, N. Y., in 1854, and removed to Freeport to practice law two years afterward. In 1866-70 he was a member of the Illinois Legislature, in 1877-88 was a judge of the Superior Court of Illinois, and from 1888 till his death was a justice of the Supreme Court. He became a trustee of the University of Chicago in 1878, and for several years was dean of the Chicago College of Law. Judge Bailey was widely known among educators because of his efforts to promote legal education.

Baldwin. Charles Candee. jurist, born in Middletown, Conn., Dec. 2, 1834; died in Cleveland, Ohio, Feb. 2, 1835. He was graduated at Weslevan University, received his diploma at the Harvard Law School in 1857, and was admitted to the bar in Cleveland the same year. At the time of his death he was the presiding judge of the circuit court of Ohio for the 8th Judicial District. He was one of the founders of the Western Reserve Historical Society, and its president since 1886.

Ballou, Maturin Murray, journalist, born in Boston, Mass., April 14, 1820; died in Cairo, Egypt, March 27, 1835. He was a son of the Rev, Hosea Ballou; was clueated in the Boston High School, held Federal clerkships for several years, and entered journalism on the weekly "Olive Branch" in 1838. Subsequently he became editor and proprietor of "Glesson's Pietorial" and "Ballou's Monthly," and undertook large building operations in the business part of Bos-

ton, erecting the St. James Hotel and other structures. In 1872 he was one of the founders of the "Boston Delly Globe," and for many years he was its chief editor. He was also sole or part proprietor of "Ballen's Pictorial," "The Flag of our Union," and the Boston Sunday Budget." For many years he had traveled extensively. His publications include "Due West," "Due North," "Due South," "Under the Southern Cross," "The New El Dorado," "Aztec Lad," "The Pearl of India," "The Story of Malta," "Rustorial America," "A Treasury of Thought," "Notable Thoughts about West," "Genius in Sunshine and Speech," "Edge Task of Speech," "Biography of the Rev. Hosea Ballen," and "Life Story of Hosea Ballon," He becauthed to 10 institutions, payable on the death of the videw, each \$2,000.

Inser, lawyer, born in Henderson, N. Y.,
In 20, 1811; died in Kingsbridge, N. Y., May 1s,
Ile was graduated at Union College in 1854,
son president law in New York eity in 1840, and
associated with Benjamin F. Butler, formerly
larney-General of the United States, in 1849. In
the became active in the temperance and antilarge movements, in 1840 was an unsuccessful antilarge movements, in 1840 was an unsuccessful antilarge movements, in 1840 was an unsuccessful antilarge movements, in 1840 was an delegate to
the latest (Hale and Julian). He was a delegate to
the convention of the Republican party in 1856, and
the Chicago convention in 1860. President Linappointed him collector of the port of New
fort, and when he resigned this office three years
are and he was tendered a foreign mission.

Lana, Government official, born in Washers, D. C., in 1819; died there Dec. 18, 1895. His ther was one of the doorkeepers of the Senate chamend was in the habit of taking his son with him important occasions. In 1831 the lad attracted the major of Daniel Webster, who appointed him a go to the Senate, the second one it had had. From year till his death he was in the continuous vice of the Senate, in recent years holding the last of the Senate, in recent years holding the sense of assistant doorkeeper and assistant to the sant at arms. His seat was at the left of the dailing officer, and it was his claim that he had session till he broke down during the transitions while the repeal of the Sherman law being considered in 1893, and that he had never being present at the opening of Congress in the was too feeble to attend.

Clara Dety, author, born in Ann Harbor, Dec. 23, 1838; died in Chicago, III., Oct. 14, She published her first book in 1868; married an Bates, a publisher in Chicago, in 1869, and the collector of the model library for children to Workl's Columbian Exposition. For many she had written for juvenile periodicals, and stories and poems brought out in Christmas she had published "Blind Jakey" (1868); "pr Fables," in verse (1878); "Heart's Content," of child life in Michigan; and "From Heart's

a volume of verses.

Action, philanthropist, born in Norfolk, April 9, 1819; died there Jan. 26, 1895. He predanted at Yale College in 1839, and since the of his father, in 1841, had been principally occur with the management of the Battell estate. He received with the management of the Battell estate. He received terms in the Legislature, was a deleted to the Pasce Convention of 1861, and was Composite of Connecticut in 1866. He was deeply interior in the promotion of agricultural, temperance, in the promotion of agricultural, temperance in the promotion of agricultural, temperance in the promotion of agricultural temperance. It is the promotion of agricultural temperance with the promotion of agricultural temperance with the promotion of himself and family to the College aggregated \$300,000. Other gifts were promotion, library, and memorial chapel to the of Norfolk, \$10,000 to the Long Island Historial Society, and chimes of bells to Yale and other allows. He made a large collection of paintings by this of the United States.

Battey, Robert, physician, berr in Augusta, Ga. Nov. 26, 1828, died in Henre tra. Nov. e. 1806. He was graduated at the 1 neversity of Pennsylvania 1805 and at the Jefferson Medical sodiege in 1807, and spent his professional life in Home, tra. During the civil war he served as surgeon in the tendederint army, both on the field and in the hospital. He was Professor of Obstetrico in Atlanta Medical codings in 1875-75, colited the "Atlanta Medical and Sungued Journal" in 1875-75, and was Previousless of the tracering and Medical Association in 1876. In Battey was most widely known as the originalor of an operation now bearing his harte for removal of the in setting his harte for removal of the in setting in the saring his harte for removal of the in setting.

now bearing his name for removal of the orarios.

Barier, Mary Rhimbeth Roberts, philanthrogost, bears in Manchester, Vt. in June, 1979, dead in Rustland, Vt., Nov. 9, 1896. She married live. Horsee R. Banter in 1851, and after 1854 passed her winters in New York city and her summers in Rustland, where her husband had large interest. For many years she was active in church and benevolent work. She presented to the city of Rotland a history at a cond of more than \$100,000, inade large aritmal getts to Bashoops Graves, of Colorado, Talbett, of Wyoming and Idaho, Brewer, of Montana, and Johnson, of Texas, and presented in other ways church work.

Boocher, Edward, clergy man, teem in Fact Ham Long Island, Aug. 27, 1803., died in Brassliyn, N. Y., July 28, 1895. He was a sen of the Rev. Lyman Brescher and an elder bysther of the Rev. Henry, Ward Brescher, and was graduated at Yale tedlege in 1932. After graduation he taught in the Hartford, Comm. High School for over a year, then studged theology at An-dover and New Haven; was appointed a tutor in Yale in 1825, and was ordained paster of the Park Street Congregational Church, Beston, in the following year. He remained in this charge till 1850, when he was elected President of Illinous College, where he served for fourteen years. Returning to Boston, he was pastor of the Salem Street Church from 1844 till 1856, and also senior editor of the "Congregational 1809, and and semior colors to accepted a pustorate at fat "in 1849 [53]. In 1836 he accepted a pustorate at Galesburg, Ill., which he held till 1871, and since then had resided in Brooklyn, N. Y., without pustoral charge, but active in various religious works, except-ing the period 1885 'e9, when he was passes of the Parkville Congregational Church. During his residence in Illinois he was for several years Professor Extraordinary of the Christian Organization of Society in the Congregational Theological Seminary, Chica-go, His effective work in the antislavery cause began while he was I'resident of Illinous tickings, and was incited by his indignation at the assault on the freedom of the press in the case of Elijah P. Losejoy at Alton in 1837. He aided in founding the Illinois State Antislavery Society, and prepared its declaration of principles and constitution. He then drew up a vigorous address to the public on the situation of affairs. In November he assisted in secreting a second printing press in the store of the strey & Galman, where E. P. Levejon was killed in defending it on the 6th. When eighty era years old he underwent an amputation of a log, rendered necessary by a railread accident, and surpresed his acquaintances by his specify recovery. He ascribed his remarkable vitality to his regular practice of physical culture from early youth. From 1924 till within a short time of early youth. From 1924 till within a short time of his death he was a prolific writer, and bendes eshiinstitutials, reviews, and contributions on a great variety of subjects, he published in book form "Address on the Kingdom of that "a Boston, 1825; "Nex Sermons on the Nature, Importance, and Means of Emissest Holiness throughout the Church" (New York, 1825; "Statement of Antislavery Principles and Address to the People of Illinois" [1830], "History of the Alton Bote "Clineinnati, 1838], "History of the Alton Bote "Clineinnati, 1838], "Haptaem, Its Import and Modes" (New York, 1850), "The Conflict of Ages " Botton, 1853); "The Unput Consprincy "Clineinnation 1855, and "History of Unput Consprince 1855, and "History of Un ton, 1955; and "History of Openions on the Scrip-tural Destrine of Future Retribution" (New York, 1978). His widow died Nov. 14, aged eighty-nine.

Bentley Heary H, electrician, born in Dutchess o many, N Y, in 1834, died near Rhinebeck, N, Y, 8ept 7, 1896. He removed to New York city in 1854, became a writer on the "Tribune," subsequently organized the New York City and Suburban Printing Telegraph Company, and on its failure beased the plant and operated it successfully. He haid the first working cable under the East river to Brooklyn, and established a message-delivery service and a mail service between Madison Square and the general post offices in the city. His health failing, he sold out his New York interests and removed to Philadelphia. He became editorially connected with the "Philadelphia Inquirer," and was one of its field correspondents during the civil war. After the war he applied himself to telegraphy; built local private lines, organized and became President of the Philadelphia Local Telegraph Company; and was made President of the Gold and Stock Reporting Telegraph Company; and was made President of the Gold and Stock Reporting Telegraph Company and of the Bell Telephone Company, of Padiadelphia

Bingham, George Arro, jurist, born in Concord, Vt., April 25, 1826; died in Littleton, N. H., Jan. 22, 1825. He was educated in his native State; was admitted to the bar in 1848; practiced in Lyndon, Vt., till 1852, and then removed to Littleton; and was a justice of the Supreme Court of New Hampshire in 1876 '80 and 1884 '91. Judge Bingham was a Democrat in politics; served two terms each in the State Senate and the Lower House; was a delegate to the National Democratic Convention in 1860; and was an unsuccessful candidate for Congress in 1880.

Blake Amos Shepard, manufacturer, born in Brookfield, Vt., Jan. 18, 1812; died in Waterbury, Conn., Feb. 18, 1895. He learned and practiced dentistry; was a mining superintendent in the Lake Superior region in 1852–55; and at the beginning of the civil war engaged in manufacturing. In the winter of 1852–53 he constructed the first locomotive ever seen in New England, designed to illustrate the practical-belity of travel by railroad, and large enough to carry two persons at a time around a hall on a circular track. This engine was exhibited throughout the Northern States by Asa Harrington. Dr. Blake procured 12 patents, and in 1865 organized the firm of Biake, Lamb & Co. to manufacture under them. Formig the civil war he superintended the manufacture of percussion caps for the National Government. He was for three terms a member of the Legislature of Connecticuit.

Boss, James Robinson, educator, born in Blandford, Mass, Jan. 27, 1815; died in Chicago, Ill., Feb. 9, 1827. In youth he removed to Hartford, Conn., to learn the tailor's trade; was there converted and licensed to preach by the First Baptist Church; was graduated at Brown University in 1850; and was importantly appointed a tutor of ancient languages to a little leavent abroad to study; in 1862 bear in 1850; he went abroad to study; in 1862 bear in the Linversity of Michigan; in 1868 took the little language of the Greek Language and Literative Inversity of Michigan; in 1868 took the language of the Tradessor of New Testament Interative in the Baptist I mon Theological Seminary. On the state of the new University of Chicago, and the Professor of New Testament Interative in the Baptist I mon Theological Seminary. On the state of the new University of Chicago, and the state of the new University of Chicago, and the state of the second published. Bawers L. mieth Creeker a trees, born in Stamford, in Washington, D. C., where of a Protestant in her youth, and a contract Frederick P. in the appearance Plack Theater, New T. W. W. Stamford in the Walnut Stamford in the Walnut

marriage. At the close of this engagement she made one for the Arch Street Theater, which was continued till her husband's death, in 1857. After a brief retirement she managed the Walnut Street Theater for two years and the Philadelphia Academy of Music for a shorter period; married Dr. Brown, of Bultimore; and in 1861 made a professional trip to England. Her performance as Julia in "The Hunchback" at Sadler's Wells Theater, London, won high praise. She also played an engagement there at the Lyceum Theater, largely increasing her popularity as Geraldine d'Arcy in "Woman." In 1863 she returned to the United States; played an engagement at the Winter Garden, New York; married, on the death of her second husband, J. C. McCollom, her leading man; repeated with him many of her old and favorite characters; and retired for several years. She organized a new dramatic company in 1888.

Boyesen, Hjalmar Hjorth, author, born in Fredericksvaern, Norway, Sept. 23, 1848; died in New York city, Oct. 4, 1895. He was graduated at the University of Christiania in 1868; came to the United States in April, 1869; and, after making a tour of New England, went to Chicago and became associate editor of the "Fremad." While in this place he strongly opposed the hostility of the Norwegian clergy to the system of public-school education in the United States. Chiefly for the purpose of perfecting himself in the English language, he accepted the chair of Latin and Greek in Urbana University, and while so engaged began his first novel, "Gunnar." Before completing it he spent a year in philological study at Leipzig; in 1874 was appointed Professor of German at Cornell University, where he remained till 1880, when he was called to the chair of Germanic Languages and Literature in Columbia College. He co-cupied this chair at the time of his sudden death. In view of his eminent services as an educator, the faculty have made his three sons wards of the college. His publications include: "Gunnar "(New York, 1874); "A Norseman's Pilgrimage" (1875); "Tales from Two Hemispheres" (Boston, 1876); "Tales from Two Hemispheres" (Boston, 1876); "A Daughter of the Philistines" (Boston, 1883); "The Story of Norway" (1886); "The Modern Vikings" (1889); "Vagabond Tales" (1890); "The Modern Vikings" (1889); "Vagabond Tales" (1890); "The Modern Vikings" (1892); "A Commentary on the Writings of Henrik Hssen" (1894); "Eiterary and Social Sihouettes" (1894); "The Norseland Series" (1894); and "Essays on Scandinavian Literature" (1895).

and "Essays on Scandinavian Literature" (1895).
Brayman, Mason, lawyer, born in Buffalo, N. Y., May
23, 1813; died in Kansas City, Mo., Feb. 27, 1896.
He was brought up on a farm; was apprenticed to
the printing business; became editor of the Buffalo "Bulletin" in 1834; and was admitted to the bar two years afterward. Removing to Monroe, Mich., he served a term there as city attorney. June, 1845; died at sea July 10, 1895. He was of five sons of William G. Brooks, four of whom Protestant Episcopal clergymen, and one, allips, a bishop. He studied at the Boston Latin was graduated at Harvard in 1867; studied ogy at Andover and Philadelphia; and was orod in 1870. In 1870-72 he held a charge in Wilsport, Pa.; in 1872-75 was rector of St. James's reh, Chicago; and since 1875 had been rector of Church of the Incarnation, New York city. soka had traveled extensively, published a volume sermons entitled "The Life of Christ in the add," and was the author of the article on Phillips lets in the "Annual Cyclopedia" for 1893. He a active in many charitable movements, and was

tee of Columbia and Barnard Colleges. ra, Charlotte Emerson, educator, born in Andover. in April, 1838; died in East Orange, N. J., 1895. She was a daughter of Prof. Ralph rson, of Andover Theological Seminary, and wife be Rev. William B. Brown, D. D., a Congregational She was graduated at Abbott Female Sem y, Andover; studied modern languages and music acope; and on returning settled in Rockford, Ill., we she taught languages in the seminary, and or a conservatory of music and two clubs, one study of French, the other for music. In 1880 rried Dr. Brown, and soon afterward she spent him three years in foreign travel and study. On return they made their home in East Orange Mrs. Brown was elected President of the Woman's Tab of Orange, in 1888, and on the organization of the General Federation of Woman's Clubs in 1829, and on the organization of General Federation of Woman's Clubs in 1829, some president of that body. After several re-cleans she declined another, and was appointed chair of the Compittee on Foreign Correspondence of the Compiter of She also organized the Fortnightly Club of hast Orange, and was a tire in the wide I the William

institute the set of the tongregations the Bryon, James H. hasteriologist, letter in Lucia July 24, 1861, dual to New York cuty, May ? He received a collegiate education in his maine ele was graduated in medicine in Saples, Italy, in the spetit three years in studying teachers dogs in Patie and, removing to New York city, because an association in the Lemmis Laboratory During the choices excite ment of 1991-72, he was physician and tracterioragist on Swinburne Island, New York Bay, and an amountant to Dr. Jenkins, the health officer of the part His continued to hold his office at the quarantime station after all danger of the operad of cholers had pu Lesses was an accomplished microscopust, and was reagileyed by many physicians to make casminations for them. While examining the sputum of a person befored to have incipient consumption, he inhaled some bacteria of tuberculosis without being aware of the fact at the time. Hasty tubercular consumption spendaly densit

oped, and he died after several severe harmourthagen.

Bull, Ephraim, W., viticulturist, born in fisions,
Mass., March 4, 1896; died in Concord, Mass., hept 29, 1995. He learned the goldlesster's trude, and car-ried it on successfully till 1837, and then, because of failing health, removed to toncord and engaged in the cultivation of the grape. At that time th bella and Catawha grapes were well established and popular, but they were not sufficiently hardy for the climate of New England, hence Mr Bull attempted to produce a grape equal to them in flavor and hardner He began by sowing the seeds of a wild grape to labraces, from which he raised seedlings. He then The there sowed the seeds from these, and obtained others, among them the famous Concord. About 1/40 soul. lings were raised before he obtained a grape that our passed the Concord. In the fourth generation he secured seedlings believed to be aspector to the time cord, and nearly equal to the European grape of conferm. The wild parent of the Concerd was ac-cidentally discovered by him growing along a hedge row, and he transferred it to his vinevard, where it is still thrifty. The Concord grape was first exhibited by the Massachusetta Horticultural Society in 1850. and professional grape growers made all the money out of the discovery. Mr. Bull was elected by the out of the discovery. Mr. Bull was elected by the American party to the State House of Representatives in 1835, and to the State Senate in 1856, and served on the State Board of Agriculture for twelve years. He lived alone on his sineyard till 1894.

Burnett, Peter Hardeman juriet, been in Nasheufle, Tenn., Nov. 15, 180; died in San Francisco, Cal., May 16, 1895. For some years, prior to 1865 he was engaged in trading and the practice of law in Ten nessee and Missouri In that a riar be made the over land journey to the throgon Territory, meeting Limit. John C. Fremont, then on an experience expedition, at Fort Vancouver. He took an active part in the organization of the Territorial too remained, was a member of the Legislature in 1944 and 1949, and for a short time was a judge of the Supermar Court, se-signing to go to California at the outbreak of the gold excitement. For a while he engaged in mining; then became agent for the Sutter family and estate at New In 144 he became comparation by his ad-Helvetia. In 1849 he became comparisons by his advectory of a State government, urging such an organ itation without awaiting congressional authority, and opposing the United States military government of the Territory United the new Constitution be was elected to server, but in the year following the adclerted toverned, but in the year necounny the de-mission he resigned, and engaged in law practice. In 1847 De he was a judge of the Supreme Court, and in 1842 Set was President of the Parishellank of Sam Francisco. He published "The Path which led a Protestant Lawver to the Catholia Church". New York, 1869); "The American Theory of Government. red with Reference to the Present "Recollections of an Old Piomer" mandered Present Crass and "Beasons why we should believe in total or tital, and Obey God " (1884).

Calkins, Norman A., educator, born in Gainesville, N. Y., Sept. 9, 1822; died in New York city, Dec. 22, 1826. He began teaching when eighteen years old, and became principal of the central school in his native town. Harrison (Cincinnat, 1873); "Manual of Object Teaching" (New York, 1881); and "From Rackboard to Books" (1883).

Campbell, James H., lawyer, born in Williamsport, Pa., Feb. 8, 1820; died in Wayne, Pa., April 12, 1895. He was graduated at the Carlisle Law School and admitted to the bar in 1841; was a delegate to the Whig convention in Baltimore in 1844; and was a Republican Representative in Congress in 1855-57, 1859 '65, serving on the Committees on Elections and on the Pacific Railrond, being chairman of the last. In May, 1864, President Lincoln appointed him United States minister resident to Sweden, where he served

till November, 1866.

Cantor, Rachel, actress, born in England, Sept. 10, 1810; died in Philadelphia, Pa., Nov. 4, 1895. She came to the United States in 1838, and made her first appearance here the same year at the Chatham Street Theater, New York, in support of the elder Wallack, Subsequently, she played for many years in support of Edwin Forrest, Edwin Booth, and other actors of distinction, and made her last appearance at the Howard Athenaeum, Boston, in June, 1882.

Carr, Joseph Bradford, military officer, born in Albany Y., Aug. 16, 1828; died in Troy, N. Y., Feb. 24, He received a common-school education, became a eigar manufacturer, entered the militia as a private in 1849, and was commissioned colonel of the 4th Regiment, July 10, 1859. At the beginning of the civil war he volunteered, and on May 10, 1861, he was commissioned colonel of the 2d New York Infantry; eight days afterward he left for the front; and on the 24th he established camp at Fort Monroe, his regiment being the first to encamp on Virginia soil. He took part in the battle of Big Bethel; was assured to duty under Gen. Hooker in Gen. McClellan's je ninsula campaign; commanded the Jersey brigade n the engagements at the Orchards, Glendale, and Malvern Hill; and was promoted brigadier general of volunteers, Sept. 7, 1862, for gallantry at Malvern At Bristow Station, Manassas, Chantilly, Fredketterg, and Chancellorsville he rendered services sed high commendation in official reports, . Cotty-burg a horse was killed under him, and May 1 will, he seted as a division commander. ired ha its fall, but refused to leave the by was given command of the 3d division 7m. at the head of which he fought at Les set Grove, and Mine Run. After " " c was transferred to the command " Hancock's (2d) Corps. Subseor ton. Butler on the outer 1 as commander of the He was brevetted major T=A' Very to war he engaged in max is the same appointed trayer gives a live to a strong Guards State of Very is a surface of the same and rendered engaged. He may in the same and rendered in the same appointed in the same and rendered in the sam York in 1879, 1881, and 1883, in the latter year being the only Republican on the State ticket who was elected. His last appearance in politics was in 1885, when he was defeated for Lieutenant Governor, with

the rest of the Republican ticket.

Cheney, Benjamin Pieroe, expressman, born in Hills-boro, N. H., Aug. 12, 1815; died in Wellesley, Mass. June 23, 1895. He received a common-school education; worked for some time in his father's blacksmith shop; became a stage driver on the route between Keene and Nashua; and subsequently was made Boston agent of the stage company. In 1842, in con-nection with Nathaniel White and William Walker. he established the Cheney & Co. express, to operate between Boston and Montreal. This was about contemporary with Harnden's and Adams's beginnings in the same line. The original Cheney express ran over the Boston and Lowell Railroad as far as it was then built (Concord, N. H.), thence by four-horse team to Montpelier, Vt., then by stage to Buriington, and finally by boat to Montreal. The immediate success of this line soon led to the establishment of a competing one, which ran over the Fitchburg Railroad to Burlington. In 1852 Mr. Chency bought out his competitor, and afterward, by securing control of other lines, he formed the United States and Canada Express Company, which covered the northern New England States with many branches. Of this consolidated corporation, he was proprietor and president till 1881, when it became a part of the Adams Ex-press Company, of which Mr. Cheney was treasurer and the largest stockholder. He invested much of the fortune made in the express business in railroad enterprises, and left an estate estimated at \$9,000,000. He bequeathed \$10,000 each to the Massachusetts General Hospital and the Massachusetts Institute of Technology; \$5,000 each to the Boston Museum of Fine Arts, the Kindergarten for the Blind, and the Bunker Hill Monument Association; \$2,500 to the Children's Hospital, Boston; \$1,000 to the Society for the Relief of Destitute Clergyman; and \$2,000 each to 18 Boston local charities—in all, \$74,500. In life he had presented the State with the bronze statue of Daniel Webster, at Concord, N. H.

Chittenden, Henry Abel, merchant, born in Guilford, Conn., April 29, 1816; died in Montelair, N. J., May 23, 1895. He began his business career in New Haven, subsequently removed to Hartford, and afterward became associated with his brother, the late Simeon B. Chittenden, in the wholesale dry-goods business in New York city. In early life he adopted the religious views of William Miller, and was an active apostle of the second advent. He was expelled from Dr. Bushnell's Congregational church in Hartford in 1845 because of his religious expressions, on which he published "A Reply to the Charge of Heresy." The antislavery movement enlisted his hearty co-operation, and he was conspicuous among its leaders. One of his acts in the cause was the individual maintenance in Washington, D. C., for six years of a Congregational church dedicated to the "cause of free speech on the

slavery question."

Clendenin. David Ramsey, military officer, born in Lancaster County, Pa., June 24, 1830; died in Oneida, Ill., March 5, 1895. He was graduated at Knox College; was commissioned major of the 8th Illinois Cavalry; served through the civil war with this regiment, most of the time as lieutenant colonel commanding; was commissioned major, 8th United States Cavalry, in January, 1867; lieutenant colonel, 3d Cavalry, in November, 1882; and colonel, 2d Cavalry, Oct. 29, 1888; and was retired on account of disabilities April 20, 1891. Col. Clendenin took part in the principal engagements of the Army of the Potonac, and was breyetted brigadier general.

Cogswell. Parsons Brainard, journalist, born in Henniker, N. H., Jan. 22, 1828; died in Concord, N. H., Oct. 28, 1895. He became a resident of Concord in 1847, and learned the printing business in the offices of "The Independent Democrat" and "The New Hampshire Patriot" (1847-52). On May 23, 1864, in

company with an associate, he established the "Daily Monitor," the first permanent daily paper published in Concord, with which he was connected as editor or proprietor until his death. He became a member of the Board of Education in 1859, and continued on the board for thirty-six unbroken years, serving as its president several years and for eighteen years as its manetal agent. He was a member of the State Legislature in 1872 and 1873, public printer from 1881 to 1883, and several years auditor of public printer's account. He was a member of the Board of Trusters of the State Library, and was Mayor of Concord two years. He was a member of the New Hampshire Historical Society, and four years its president, also aber and officer of the New Hampshire Press Association, a member of the Appalachian Club, and four years President of the Concord Commercial Club. He was United States Immigrant Inspector under President Harrison's administration Mr. Cagewell spent a year in Europe (1875-79), and wrote for the "Monitor" a series of letters, which were subsequently published in book form under the etile of "Glints from over the Water." He received the degree of M. A. from Dartmouth College in 1885.

Cowell, William, lawyer, born in Bradford, Massa, Aug. 23, 1883; died in Washington, D. C. May 22, 1884. He took a partial course at Dartmouth College, made a voyage around the world as a sailor, and was graduated at the Harvard Law School in 1860. In 1861 he raised one of the first companies of volunteers that went to the front from Massachusetts, was appointed its captain, subsequently was commissioned ealened of the 2d Massachusetts Infantry, and in 1864 was brevetted brigadier general and assigned to the command of the 3d brigade, 3d division, 20th Corps, with which he accompanied Gen. Sherman on his march to the sea. After the war he resumed law practice in Salem, where he was elected mayor five times, a member of the State House of Representatives 2ve times, and a State Senator twice. From 1887 to 1885 he was Republican Congressman from the 6th Massachusetts District.

Oct. Henry Augustus, educator, born in Wilmington, Det. Jan. 29, 1830; died in Concord, N. H., Feb. 5, 1898. He was educated at St. Paul's School, College Point, Long Island; took a partial course at the Uni-

versity of Pennvlvania; entered the ministry Protestant Episcopal Church, and engaged in missionary in Clinton County, New York, On the establishment of Saint Paul's Schoolin Concord. N. H., he was chosen its rector, assuming charge in April, 1856, with a class of half a dozen bere-Despite tempting offers of service class where, he remained at the death, making it

one of the rosted institutions of the country and bringing its student membership up to 300. In 1867 he was elected Possident of Trinity College, Hartford, and in 1871 Possident of Hobart College, Geneva, but he dedicate both places. He visited England in 1868, and taken a study of its public-school system. Dr 1868 and taken the degree of D. D. from Trinity (**) graduation of LLs. D. from Yale College

The second secon

sometidesigning and draughting of steam vessels and n achinery, as well as in all the manufacturing tran hes of the business as then known. After this training and a course of study in the higher mathematics he became superintendent of his father's estab-holment in Hartford, and designed and built river steamers. In 1836 he was appointed designing and constructing engineer of the West Point, X. Y., foundry, then the foremost plant of its kind in the country, where he built many marine engines and the first from hull put together in the United States. Three years afterward he became constructing en-gineer to the United States navy. During the Mexican War he fitted out for the Government the steamers comprising what was known as the " mosquito fleet. He designed the engines and boilers of the "Missours," the "Mussissippi," and the "Michigan" for Lake Eric, the latter being the first iron steamer ever used for naval service; and also the machinery for the "Saranae" and "Susquehanna," in which he introduced many novel features. He resigned this office and accepted that of superintending engineer of the Allaire Works in New York city, where he designed and built the steamers "Pacific," "Baltic," and "Panand out the steamers "Facine, "Battle, and "Fab-ama" for the Pacific lines, the "Bay State," "Em-pere State," and "Traveler" for Long Island Sound, and the famous "Harriet Lane" for the United States Revenue Service. In 1852 he was an expert before the congressional committee having in charge the United States Steamboat bill, and after the passage of the bill he was for nine years the first supervising inspector for the New York district. During the civil war he altered and fitted steamers for service on the shallow waters of the South. After the war he was consulting and superintending engineer to the United States Lighthouse Board and to the Norwich and New York Transportation Company, for which he designed the steamers "City of New York," "City of Boston," and "City of Worcester."

Copper. Henry, educator, born in Savannah, Ga., Oct. 13, 1*21; died in Bethlehem, Pa., March 22, 1895. He was of French West Indian parentage; was a student for one year at Yale College; studied engineering, and was employed on the construction of the Georgia Central Railroad from Savannah to Macon. In 1845 he was graduated at West Point and assigned to the artillery. He served through the Mexican War, reseiving the brevet of captain for gallantry at Con-treras and Churubuseo and a vote of thanks from the Legislature of Georgia. From the close of the war till 1855 he was Assistant Professor of Geography, History, and Ethics at West Point; from 1855 till 1866 Professor of English Literature and History at the University of Pennsylvania; from 1866 till 1874 was President of Lehigh University, which he had organized; and from 1874 till his death was Professor English Literature and History and of International and Constitutional Law in that institution. Since the death of Dr. Lamberton he had also been acting presiout of the university. Dr. Coppee was appointed a god of the Smithsonian Institution in 1874; was and he Congress in 1980 and 1886; and was United 1 2011 (-77) He was editor of the "United Magazine" (1864-66), of a translation Sport of Military Institutions " (1862), the set of Paris's "Civil War" (1877); Free note of Logic" (Philadelphia, of Farmore Poets? of a company enlisted in Alexandria; lived in California in 1849-'57; and was engaged in banking in Alexandria till the beginning of the civil war. In May, 1861, he was commissioned colonel of the 17th Virginia Regiment, with which he entered the Confederate service. He was engaged in the actions at Bull Run, where he was wounded, Boonesboro, and Antietam; was promoted brigadier general in November, 1862; commanded a brigade in Gen, Pickett's division in the expedition against Knoxville; and was taken prisoner at Sailor's Creek, Va., April 6, 1862, After the war he resumed banking in Alexandria.

Coxe, Samuel Hanson, clergyman, born in Mendhan,

Coxe, Samuel Hanson, clergyman, born in Mendhan, N. Y., Jan. 16, 1895. He was the second son of the Rev. Samuel Hanson Cox, D. D., the noted Presbyterian clergyman, and a brother of Bishop Arthur Cleveland Coxe (the brothers adopted an older spelling of the name), was brought up in New York city, and entered the ministry of the Protestant Episcopal Church in 1844. After heing rector of St. Peter's Church, Auburn, N. Y., for two years, he held various charges till 1857, when he became rector of Trinity Church, Utica, N. Y., where he remained for more than twenty years. He married a sister of Roscoe Conkling.

Crozier, Robert, jurist, born in Ohio in 1827; died in

Croster, Robert, Jurist, born in Onio in 1827; died in Leavenworth, Kan., Oct. 2, 1895. He went to Kansas to practice law early in life; was a member of the Territorial Council in 1857-'58; served several years as United States Attorney for the District of Kansas; was elected Chief Justice of the Supreme Court of the State in 1864; and in 1873 served part of a term in

the United States Senate.

Cullman, John Gottfried, benefactor, born in Bavaria, Germany, in 1825; died in Cullman, Ala., Dec. 3, 1895. He came to the United States in 1865, lived in Cincinnati four years, and then began colonizing German immigrants, settling over 10,000 families in Alabama alone, and making the place of settlement one of the garden spots of the State. A county was created and named after him, and in 1875 the town of Cullman was founded and made the county seat. The colonists are engaged in fruit culture, general agriculture, and manufacturing, and support two weekly newspapers. Mr. Cullman had recently organized the German Immigration Society of Alabama, and had completed arrangements for settling another large body of his countrymen in that State.

Daboll, David Austin, publisher, born in Groton. Conn., in 1813, died there July 8, 1895. He was grandson of Nathan Daboll, who conceived the idea and published the first number of the "New England Almanae" in 1772, and a son of Nathan Daboll, who was joint author with his father of "Daboll's Arithmetic" and his successor as publisher of the almanae. The first number of the almanae was prepared under the old oaken roof of the Daboll house, and each succeeding number has been prepared there since. David took up the work on his father's death, and in late years was assisted by his son, David Austin Daboll, Jr. David, Sr., was a member of the Connecticnt House of Representatives from 1846 till 1871, and then served a term in the State Senate.

Darr, Francis. military officer, born in Cincinnati. Ohio, in 1833; died in Wayne, Pa., Jan. 26, 1835. He made the overland trip to California when seventeen years old, and spent several years on the Pacific slope. At the beginning of the civil war he was commissioned 1st lieutenant and quartermaster in the 10th Ohio Volunteers; on Aug. 3, 1861, was appointed captain and commissary of subsistence; and Jan. 1, 1863, was promoted lieutenant colonel. During the war he served on the staffs of Gens. Rosecrans, Buell, and Foster; took part in all the battles of the West Virginia campaign, Shiloh, Murfreesboro, and the occupation of North Carolina, and reached the rank of brigadier general of volunteers. After the war he was a commission merchant in New York city till within three years of his death.

city till within three years of his death.

Davis, Edward F. C., engineer, born in Richmond,
Va., in 1847; died in New York city, Aug. 6, 1895.

He was graduated at Washington College in 1867, immediately entered the New Castle (Del.)
Works, subsequently going to the Atlantic
k Works, in Brooklyn, N. Y. In 1878 he was sinted one of the mechanical engineers at any, at Pottsville, Pa., and he had charge of all was an engineer in charge of the locomotive is at Richmond, Va. He became a member of American Society of Mechanical Engineers in and was elected its president in November At the time of his death (which was occad by his being thrown from his horse in Central was manager of an elevator and machinery

sequently it was attached to the 18th Corps. In the action of Fort Harrison, Sept. 29, 1864, Col. Donohoe received a severe wound in his hip. For bravery in this action he was again mentioned in general orders. In the last year of the war he served in Gen. Devens's invision of the 24th Corps, and was brevetted brigadier general for distinguished services on the field. After the war he was a post-office inspector, clerk of the essimissioners of public institutions of Boston, and, at the time of his death, superintendent of the

Boston Reformatory.

Dursey, James Owen, ethnologist, born in Baltimore, M.1. Oct. 31, 1848; died in Washington, D. C., Feb. 4. 1895 He took the classical course in what is now the City College of Baltimore in 1862-'63; spent two years in a countingroom, and a year in teaching, studied at the Theological Seminary of Virginia in ser 71, and was ordained a deacon in the Protestant Episcopal Church and began missionary work among the Pouka Indians in Dakota in the last year. Just as he became able to converse with the Indians without the aid of an interpreter, ill health compelled him to relinquish work in that field, and he engaged in parish work in Maryland from 1873 till 1878. He was then appointed ethnologist to the United States Geological and Geographical Survey of the Rocky Mountain region under Major J. W. Powell, and went to the Omaha Indian reservation in Nebraska. organization of the United States Bureau of Ethnology, in 1879, he was transferred thereto, and was employed in linguistic and sociologic work till his death. Prior to 1884 he confined his investigations to the tribes of the Siouan family. In that year he visited the Siletz reservation, in Oregon, where he obtained vocabu-laries and grammatical notes of Athabascan, Kusan, Takilman, and Yakonan languages. The results of much of his field and office work were published in the annual reports of the Bureau of Ethnology. Among his most notable works are: "Pouka A B C Wa-ba-ru," a Pouka primer (1-73); "On the Comparative Phonology of Four Sionan Languages" (1884); "Onaba Sociology" (1884); "Osage War Customs" (1884): "Sionan Edition of the Customs" (1884): "Sionan Edition of the Customs of the Customs" (1884); "Siouan Folklore and Mythologic Notes" 18841; "Kansas Mourning and War logic Notes (1884); "Kansas Mourning and war Customs" (1885); "Sionan Migrations" (1886); "Indian Personal Names "(1886); "The Dhegiha Language, Myth Stories, and Letters"; and "Omaha and Pouka Letters." He had also compiled a "Dhegiha-English and English-Dhegiha Dictionary" of over gernas words

Douglass Frederick, journalist and orator, born in Tuckahoe, near Easton, Talbet County, Md., in February, 1817; died near Washington, D. C., Feb. 20, 1895. The life of Frederick Douglass is one of the

most wonderful stories ever written. and seldom has pen or tongue told the incidents or drawn the lessons of humanity with more pathos, or greater purity of diction and melody of voice than his. Of his birth he says in his autobiography: " My only recollections of my mother are a few hasty visits made in the night on foot. She was tall and St.oly proportioned, " regular features

Short proportioned, with regular features, with regular features, of the state of t

famed for his superior intelligence. A desire for free dom began with his earliest memory, and when twenty doin began with his earnest memory, and when twenty-one years old he escaped from bondage. Arrived in New York city, he was directed by a colored man to David Ruggles, who sent him to New Bedford, Mass. Here he lived with his wife, who was a free woman, Here he lived with his wife, who was a free woman, and had come from Baltimore to join him; but the servile condition of his race in the South and the disabilities under which people of color labored even in many parts of the North weighed upon him. Through the "Liberator" newspaper he had come in contact with William Lloyd Garrison, and in 1841. at an antislavery convention held in Nautucket, he was first heard in public, and his eloquent simplicity as he rehearsed his wrongs moved every heart, as he rehearsed his wrongs moved every heart. It was soon proposed to him to become an agent of the Massachusetts Antislavery Society, and to lecture for it. With great enthusiasm he set out, the first duty assigned him being to travel in company with George Foster and solicit subscriptions to the "Antislavery Standard" and the "Liberator." The meetings proved wonderfully successful. Douglass told and retold his story, and Foster and Collins made the applications. But soon this method proved not applications. But soon this method proved no enough for Douglass. He says: "I was reading and thinking. New views were being presented to my mind. It did not satisfy me to narrate my wrongs: I felt like denouncing them. My friends wished to pin me down to simple narrative. 'Better have a little plantation speech.' 'It is not best that you seem too learned.'" The danger feared by them followed Douglass's efforts to yield to his impulse and put the soul and mind that were growing into the finished rhetoric and strong logic that seemed learn in him Percela heaven to delice the seemed. born in him. People began to doubt whether he had ever been a slave, and for answer he wrote his first book. Mr. Garrison and Wendell Phillips had no faith in the power of Massachusetts to protect Douglass, should the exposure result in any attempt at his recapture, and they advised him to throw the manuscript into the fire. This advice was not followed, and the story, told as only he could tell it, made unnumbered friends for the slave throughout the North. It produced also another result. the North. It produced also unother street English admirers, hearing of the danger of recapture, English admirers, hearing of the danger of recapture, raised and forwarded the sum necessary for his manumission. In 1843 the New England Antislavery Society engaged Mr. Douglass to accompany Messrs. George Bradburn, John A. Collins, James Monroe, William A. White, Charles L. Redmond, and Sydney Howard Gay on a tour of 100 lectures through New Hampshire, Vermont, New York, Ohio, Indiana, and Pennsylvania. With varying fortunes of sympathy and abuse these lectures were conducted, and everwhere. Douglass made pressonal friends. John A. Collins, who was general agent of the society, was a communist, and organized a corps of speak ers to present the dogma of abolishing all private ownership of property. He proposed that he with these men should attend the antislavery meetings and make common cause. Douglass was to speak in Syracuse, where a hearing had been obtained for him with great difficulty. While the meeting was in progress Collins came in and proposed that the cause of antislavery be set aside and communism be presented. To this Douglass objected, on the ground that the already unpopular cause could not bear the new burden; and that Mr. Collins, as well as he, was engaged to plead the antislavery cause during these hundred conventions. Douglass wrote to the board of managers about the matter, and received from Mrs. Maria Weston Chapman, an influential member, a sharp reprimand for insubordination to his superiors. In 1845 Mr. Douglass visited Eng-land, and made many life-long friends, among whom were John Bright and Richard Cobden. Friends in England proposed a testimonial of some kind, and Douglass suggested that it be in the form of a print-ing press, and aid in establishing in the United States a newspaper in the interests of his race. He

by one means and another he obtained until he was

id that the greatest hindrance to the rapid spread abolition principles was the low estimate placed the negro as a man-the assumption that he enslaved because he was naturally inferior. If could prove by a well-conducted paper what a row brain and hands could do, he would give an et lesson of immense value. The sum of \$2,500 raised, and after two years Douglass returned. To his amazement, his New England antivery friends were opposed to his undertaking such reniurs. They said no such paper was needed, I it would interfere with his usefulness as lecturer. only conviction that this reasoning left upon the of Douglass was that New England was not d of Douglass was that New England was not genial soil for his paper, and he betook himself to eity where his lectures had been best received— haster, N. Y. Here, in 1847, he issued the first y of "The North Star," afterward called "Fred-k Douglass's Paper." He says: "I was then a had disciple of William Lloyd Garrison; but thful disciple of a time a careful consideration of the subject ed me that to seek the dissolution between orthern and Southern States was no part of my y as an abolitionist; that to abstain from voting to refuse to exercise a legitimate and powerful as for abolishing slavery; and that the Constitu-, in its letter and spirit, an antislavery inin its letter and spirit, an applications proment. This radical change in my opinions pro-cid a corresponding change in my actions. The smittee of the Western New York Antislavery lay, who had helped me in every way when I a nonvoting abolitionist, withdrew from me I became a voting abolitionist." Other friends to his aid in Rochester; but the principal s of paying off the indebtedness following this tion, that almost put an end to his paper, came England. Thus thrown upon himself, Douglass England. Thus thrown upon himself, louglass his work prosper as he wrote by day and leed by night. He became an active manager on underground railroad," and at times had as you as 11 fugitives under his roof, his English had again helping with money. At this time glass became acquainted with John Brown, after acquire (in October, 1859) Gov. Wise issued a runt for the arrest of Douglass, and he was comed to flee to Canada. The experiences of this led Douglass to the opinion that slavery could destroyed only through bloudshed, and his extroyed only through bloodshed, and his exn of that apprehension still further alienated old supporters, the nonresistants. In 1848 he is heart and soul into the Free-soil movement, and re later into the Republican party. He worked for the election of Abraham Lincoln. When war broke out he saw from the first that it was to end of slavery, and in this belief he urged the was done, in 1863, he sent his 3 sons into the ee and worked to raise regiments until he saw colored soldiers were not treated like white sol-He visited the President and Secretary Stano plead their cause, and the result of the inwas that he resumed recruiting. of the murder of President Lincoln reached ster the people by common consent flocked to ty hall, and Douglass, being called on, made a ceth that so overwhelmed the people with its clo-ceth that so overwhelmed the people with its clo-mat sorrow that their sympathetic expression hard-allowed him to end it. In 1870 he removed to adhangton to edit, with his sons, "The New Na-land Era." In 1871 he was appointed assistant sec-tor of the commission to Santo Domingo; and on property of the District of Columbia. In to be was a presidential elector at large for the see of New York. In 1876 he was appointed states marshal for the District of Columbia. office he filled until 1881, when he became to r of deeds in the District. From this office he removed by President Cleveland in 1886. His blished books are: "Narrative of my Experiences Blavery Boston, 1844); "My Bondage and my

Two years afterward, while on the observable, "Fredonia," he was one of five perwone saved from the wreck of the vessel by an earthquake and tidal ways at Arica.

wave at Arica.

Dubuia, Claude Maria, elergyman, hown in France, about 1917; died in Vernaisen, Rhône, France, May 21, 1995. He was one of the early Roman Cathesia missionaries invited to Texas by Bishop Odin, and in 1947 was stationed at Castroville, where he built a residence and achosibosase. In 1ndv he was transferred to San Antonic, where for many years he was paster of San Ferdinanel's Church, and where he did much for the cause of citeration and suded the Leasilines in establishing a convent. On the premotion of Bishop Odin to the see of New testeams, Facher Theories in establishing a convent. On the progression Bishop of Galvesten Nov. 28, 1842. The progression Bishop of Galvesten Nov. 28, 1842. The progression through the bishop's exertions it contained in 1845 55 churches and chapels, 85 priesta, and about 1865, 650 Reman Catholics. In 1861 the bishop-retarnaid to France for his health, and there resigned his asse.

Esten, Daniel Cady, betannet, and there resignes has seen. Esten, Daniel Cady, betannet, been in Fort therefore, Mich., Sept. 12, 1844; died in New Haven, trents, June 29, 1856. He was a son of Brevet Major than Amow B. Eston, C. S. A.; was graduated at Yale toolege in 1857; studied betany at Harvard in 1960; and was Professor of Botany, a chair created for him, at Yale from 1864 till his desirab. He musia nonressum investigating tours in the interest of his dequatment of science; was a member of the floriermount expedition to the Walhastch Mountains in I tah, and contributed frequently to publications on betanneal subjects. His miest permanent works are the parts on ferms in Chapman's "Flora of the Southern States" (1960) and in "Gray's Manual" (18th est., 1945), and an exhaustive individual treaties on "The Forus of North America", Heston, 1979, 200.

Erskine, John, juried, twern in Strabusus, Ireland, Sept. 13, 1913, died in Atlanta, tea., Jan. 27, 1945. He came to the United States when eight years old, returned to Ireland to complete his education in 1925, made a tour of the world after leaving colleges, and actiled permanently in the United States in 1946. After teaching for four years in Florida, he was admitted to the har of that State in 1946, and prestand there till 1955, when he removed to Atlanta. In 1946, he was appointed a judge of the United States counts for the two districts of discappia, and he presided even the courts in Savannah and Atlanta till 1986, when Congress provided for a judge for each district. Judge Erskine selected the southern one and served it till 1984, when he resigned.

Pairbanks Franklin, manufacturer, born in St. Johnsburs, Vt., June 18, 1879; died there April 24, 1895. He was the youngest of the four some of Erastus Fairbanks, founder of the widely known scale works, received a common-school education; entered the scale works in 1845; and was admitted to the firm in 1845, 11 1888 he became president of the company. He served on the staff of Gov. Hall in 1859, and you to 18 of his father in 1860, and during the last term Frankhis equipped the first 5 regiments sent by Vermont to the national armies. Two terms in the Legislature (one term as Speaker) and atwenty-years' membership of the Republican State Committee comprised his political service. He was active in the work of the Congregational Church, was associated with his brothers in acts of public beneficence, and individually presented to the town of St. Johnsbury the Fairbanks Muscum of Natural Sciences, with an adequate

Ferry, Elisha Peyre, lawyer, born in Monroe, Mich Aug 9, 1825; died in Seattle, Wash., Oct. 14, 1895 He was educated in his native town; was admitted to the bar in Fort Wayne, Ind., in 1845, and removed to Wankegan, Ill., to practice in the following year, In 1855 he was appointed postmaster of the town; in 1856 was a Fremont presidential elector; in 1859 was elected may or of the newly chartered city of Wanke-gan, in 1861 was a member of the State Constitu-tional Convention; and in 1861-63 was State Bank Commissioner, During the civil war, as assistant adjutant general on the staff of Gov. Yates, he rendered valuable service in organizing, equipping, and sending Illinois regiments to the front. After the war he was appointed one of the direct-tax commissioners for the State of Tennessee. In 1869 he was appointed Surveyor General of Washington Territory, and in 1872 and 1876 Governor of the Territory. At the ex-piration of his second term he resumed the practice In 1889, on the admission of the of law in Scattle. Territory into the Union, he was elected Governor of the State

Field, Eugene, journalist, born in St. Louis, Mo., ept. 2, 1830; died in Chicago, Nov. 4, 1895. His father, Roswell Martin Field, a native of Vermont, was Pred Scott's first counsel, and for many years was judge of the circuit court of Missouri. As his wife died when his sons, Eugene and Roswell Martin, were small, they were placed under the care of Mary French, a relative, at Amherst, Mass. Owing to the early death of his father, Eugene's education was conducted without any fixed plan, for he attended Williams College, Knox College, at Galesburg, Ill., and the Unilege, Knox versity of Missouri. When Eugene reached his majority he spent several months in Europe, buying rare On his return looks and ancient relies without stint. to the United States he was on the editorial staff of several newspapers in Kansas City and St. Louis; several newspapers in Kansas City and St. Loins; but it was not until he wrote witty paragraphs for the Denver "Tribine" that attention was attracted to his work. Ultimately he went to Chicago, where his column, entitled "Sharps and Flats," in the Chicago "News," and "Record," soon made him well known. Therein he attacked Western provincialism or de-scribed in mock-heroic verse and humorous story the temptations and trials of a bibliomaniae and art colrester, as in "Dear Old London" and "Fluil, Trask, and Bisland". Field, Matthew Dickinson, alienist, born in Nashville,
Tenn., July 19, 1853; died in New York city, March 8, 1895. He was graduated at Williams College in 1875, and at the Bellevue Hospital Medical College in 1879; won an appointment on the hospital staff in a competitive examination, and was appointed an ex aminer in lunacy by the Department of Charities and Corrections in 1882. For over ten years he was sur-geon to the Manhattan Elevated Railroad Company, and for several years the city examiner in lunacy to

and for several years the city examiner in lunacy to Bellevue Hospital. He was an expert of high repute. Porbes, Edwin, artist, born in New York city in 1839; died in Brooklyn, N. Y., March 6, 1895. He became a pupil of A. F. Tait in 1859, and at the be-ginning of the civil war was sent by Frank Leslie to the Army of the Potomac as a special field artist. He witnessed many important battles and movements. After the war a large number of his unpublished sketches were etched on copper, and the collection sketches were etched on copper, and the collection was awarded a medal at the Centennial Exhibition. First proofs of these plates were bought by the Gov-ernment and are preserved in the War Department. After 1878 he was principally engaged on landscape and animal pictures. His most notable war etchings are: "The Keliable Contraband"; "Coming through the Lines"; the "Sanctuary"; "A Night March"; "Returning from Picket Duty"; "The Reveille"; and "Lull in the Fight"; and his principal later works. "Each Washier in an Orange Court Present Present Court Present Court Present P and "Lull in the Fight"; and his principal later works; "Early Morning in an Orange County Pasture" (1879); "On the Skirmish Line"; "Stormy March"; "Roughing"; "On the Meadows" (1880); and "Evening in the Sheep Pasture" (1881).

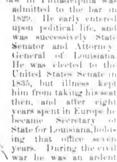

Foster, Charles Hubbs, playwright, born in Jericho, N. Y., March 3, 1833; died in New York city, Aug. 5, 1895. He removed to New York city in early youth, and made his first appearance on the stage at the Brooklyn Athenaum in 1855. After a season at the Brooklyn Museum he entered the lowest rank of the profession at Burton's Theater, New York city. with Mrs. McMahon as the star and Lawrence Bar-rett as leading man, in 1857. Subsequently he played at the Old Bowery, Purdy's National Museum. and Barnum's; was stage manager at the Old Bowery for several years; and in the last three years had traveled with road companies. He was the author of more than 75 mclodramas. These included: "Actors by Daylight," "Twins of London," "Neek and Neck," "Bertha, the Sewing-machine Girl," "Old Straw Man," "New York Burglars," "The Swamp Augels," "Twenty Years Dead," "The Gunnaker's Bride," "The Chain Gang," "The Turf Digger's Doon," and "Saved at Seven."

Frothingham, Octavius Brooks, elergyman, born in Boston, Mass., Nov. 26, 1822; died there Nov. 27, 1895. He was the son of the Rev. Nathaniel Langdon Frothingham, a well-known Unitarian writer, and was graduated at Harvard in 1843, and later at the contraction of the contraction Cambridge Divinity School. He was ordained pastor of the North Unitarian Church in Salem in 1847, and from 1855 to 1859 was in charge of a Unitarian church in Jersey City. Removing to New York city in 1860, he became pastor of the Third Unitarian Church there, at that time the most radical in its belief of any church within the denomination. It was dis solved in 1879, and in 1881 Mr. Frothingham devoted himself wholly to literary pursuits in Boston. At one period he was art critic of the "New York Triband in 1867 he was chosen first president of une, and in 1867 he was chosen first president of the Free Religions Association. During his ministerial career he was a leader in rationalistic thought, but in later years, without departing essentially from his former standpoint, he became more conservative in expression and certainly broader in his estimates of the standpoint of others. He was an acute, discerning critic, and his literary gifts were of a high order. His published works, exclusive of single sermons, include: "Stories from the Life of the Teacher" (Boston, 1863); "Stories of the Patri archs" (Boston, 1863); "Stories of the Patri archs" (Boston, 1863); "Stories of the Patri archs" (Boston, 1866); "The Religion of the Religion of Religion" (New York, 1865); "A thild's Book of Religion" (Boston, 1874); "Behets of I in hellevers" (New York, 1876); "Transcendentalism in New England" (1876); "Knowledge and Faith" (1876); "The Cradle of the Christ" (1877); "cressl and Conduct" (1877); "The Spirit of the New Faith" (1877); "Gerrit Smith: A Biography" (1878); "The Raing and the Setting Faith" (1878); "Visions of the Future" (1879); "Life of George Ripley" (Bession, 1882); "Memoir of William Henry Channing" (1886); "Recollections and Impressions 1823–1890"

Faller, Samuel, educator, born in Kensselaerville, N. Y., in 1802; died in Middletown, Conn., March 8, 1895. He was graduated at Union College in 1822; and at the General Theological Seminary in 1827; was appointed by Bishop Potter, of Pennsylvania, lecturer on Christian life in Philadelphia in 1853; and was Professor of Latin and Interpretation of the Holy Scriptures at Berkeley Divinity School, Middletown, from 1859 till 1883, where he was retired. In 1831, he became editor of "The Churchman," in 1844 he was acting president of Kenyon College, and in

1849 rector at Andover, Mass.

Osyarre Charles, Étienne Arthur, historian, born in New Orleans, La., Jan. 9, 1805; died there Feb 11, 1845. He was graduated at the College of New Orleans, and after studying law in Philadelphia was

advocate of the Confederacy, and urged the arming and freeing of the slaves conditioned upon the recognition of the Confederate States by France and England. His earliest published work was the "Historical Essay on Louis ana," in French (New Orleans, 1830). His subsequent works include: "Historical Essay on Louis quent works include: "Historical Essay on Louis ana," (New York, 1841); "Romance of the History of New Orleans, 1847); "Romance of the History of New York, 1851; "Louisiana" (New York, 1851); "Louisiana: Its Colonial History and Romance" (New York, 1851, "Louisiana: Its history as a French Colony" (1854); "History of Louisiana, 1769-1803" (1854); "History of Louisiana, 1769-1803" (1854); "History of Louisiana, "School for Politics: A Dramatic Novel" 1854; "Fernand do Lemas: A Novel" (1872); "Dr. Riuff: A Comesty", Louisiana Supreme Court Reports (1873-76), and "Aubert Dubayet: A Novel" (Boston, 1882)

Gemender, August, violin maker, born in Ingel 102 ca., Germany, March 22, 1814; died in New York city, Sept. 7, 1895. His father was a noted maker attainsparer of violins, who brought up his sone. Vagues and George, in the same trade. In 1839 he removed to Regensburg; in 1844, on an order tront a terminal violinist, he made an instrument on original discussions which differed wholly in tone and other use from the Italian violins in use. In 1840 he removed

Gordon. Archibald D., playwright, born in Ceylon, India. Oct. 11, 1848; died in Port Richmond, Staten Island, N. Y., Jan. 9, 1895. He was a son of the Rev. Alexander Gordon, an East India missionary; came to New York city and entered a publishing house in 1865, and subsequently was connected with daily newspapers in New York and Chicago, applying him Dewsysajers in Acw Tork and Cheago, applying miself chiefly to dramatic criticism. He was master of soveral modern languages. His best plays were: "Trixie," written for Maggie Mitchell; "The Ugly Duckling," produced by Mrs, Leslie Carter; "Is Marriage a Faiure?" written for Stuart Robson; and "That Guri from Mexico," produced by Sidney Drew.

Gowan, John E. engineer, born in Lynn, Mass., March 6, 1825; died in Paris, France, May 7, 1895. After the Crimean War he raised the Russian fleet that had been sunk in the harbor of Sebastopol by the Russians. He was an engineer of world-wide fame, and received the order of Commander of St. laus from the Emperor of Russia, the Star of the Medjedi from the Sultan of Turkey, the decoration of the valier of St. Maurice and St. Lazare from the King of Italy, that of Chevalier of the Legion of Honor from the Emperor of the French, and a diamond-studded gold snutfbox from the Queen of

England.

Graves, Samuel, educator, born in Ackworth, N. H. March 15, 1820; died in Grand Rapids, Mich., Jan. 20, 1595. He was graduated at Madison (now Colgate) University in 1846, taking both the collegiate theological courses; was pastor in Ann Arbor, Mich., in 1848 [51; Professor of Greek in Kalamazoo College, and of Systematic Theology in the Theological Seminary in 1851-39; and pastor in Norwich, Conn., in 1859-70. In the last year he was called to a Bap tist church in Grand Rapids, where he remained till 1885, and then became president of the Baptist Seminary in Atlanta, Ga., retiring in 1894. His principal publication was "Outlines of Theology" (1893).

Gray, Isaac Pusey, diplomat, born in Downington, Chester County, Pa., Oct. 18, 1828; died in Mexico city, Mexico, Feb. 14, 1895. Accompanying his parents to Ohio in childhood, he settled in New Madison in 1856, where he was educated and became proprietor of a dry-goods store. In 1855 he removed to Union City, Ind., where he carried on business for three years, studying law in the meantime, and then engaged in practice. During the civil war he was commissioned tain in the 4th Indiana Cavalry, and colonel of the captain in the sti indiana Cavarry, and cooler of the 14-th Indiana Infantry; but failing health prevent-ed field service. In 1866 he was a candidate for Con-gress, but was defeated by George W. Julian; in 1868 was elected to the State Senate, and became its presi-dent. In 1872 he was a delegate to the Liberal Republican Convention. He was elected Licutenant Concerns on the Democratic ticket headed by James 1) Williams in 1876; succeeded to the executive chair on the death of Gov. Williams shortly before the first term; was defeated for Lieutenant Concrete in 1894, and was elected Governor in 1884. to Go mur he originated the system of paroling and the adoption of election reforms, ad-1 . at the nervase of the bonds of State and county . Ashbel good New Jersey, was an and was almitted to the bar length for the limited and was appreciate the length for the limited for the limited for the length for the limited preciating polymers of the man in Pleas in 1868. In 1872 he was a length of the commissioners to emission and the state of the commissioners to emission and the state of the commissioners. to suggest armet, care the state Constitution, and

in the convention he was chairman of the committees on bill of rights, rights of suffrage, limitation of power of government, and general and special legislation. He was an unsuccessful Democratic candidate for Congress in 1868, and a successful one in 1884; was elected Governor of New Jersey in 1886; and was appointed Vice-Chancellor in 1890.

Gresham, Walter Quinton, statesman, born near Lanesville, Harrison County, Ind., March 17, 1832; died in Washington, D. C., May 28, 1895. He received a

common-school education, spent a year at the State University, studied law in Corydon, Ind., and was admitted to the bar in 1853. His political career began in the presidential canvass of 1856, when he advocated the election of John C, Frémont. In 1860 he was elected to the Legislature as a Republican, and as chairman of its Committee on Military Affairs he as charman or its committee on aintrary Analis he introduced and secured the passage of a militia bill, under which the recruiting of troops for the National armies was greatly facilitated. He declined a renomination in 1861, enlisted as a private in the 38th Indiana Volunteers, was elected its lieutenant colonel, and reached the field in time to take part in the battle of Shiloh. In December, 1861, he was commi sioned colonel of the 53d Indiana Regiment, and for bravery before Corinth and at Vicksburg he was promoted to brigadier general of volunteers, on the recommendation of Gens. Grant and Sherman, Aug. 11, 1863. While commanding a division in Gen. Sherman's army he was shot in the knee at Leggett's Hill, near Atlanta, and disabled. For his services in the Atlanta campaign he was brevetted major general of volunteers, March 13, 1865. After the war Gen. Gresham resumed the practice of law at New Albany, Ind. In 1866 he was an unsuccessful Republican candidate for Congress in a district heavily Democratic, but so reduced the majority of his oppo nents that soon afterward two Democratic counties were added to the congressional district. During 1867-'78 he was financial agent of Indiana in New York. In 1869 President Grant offered him the appointment of collector of the port of New Orleans which he declined; but later in the year he accepted the appointment of United States district judge for Indiana. He held this office till April, 1882, and during this period was an unsuccessful candidate for the United States Senate. In 1882, on the death of Postmaster-General Howe, President Arthur appointed him to fill the vacancy, and in 1884, on the death of Secretary Folger, he was transferred to the Treasury Department, but held the office only a few months, resigning it to accept the appointment of United States judge for the 7th Judicial District. His administration of the Post-Office Department was made memorable by his successful proceedings against the Louisiana lottery corporation; and one of his most important acts as United States judge was dur-ing the hearing of the celebrated Wabash Railroad case in 1886, when he ordered the removal of a receiver, appointed at the instance of the Gould interest, and put Judge Thomas M. Cooley in his place. In 1884 and 1888 he was a candidate for the Republican nomination for President. After the canvass of the latter year he urged reform in State elections, declaring that the conviction of a thousand obscure voters for bribery would in effect be as nothing com-pared with that of one prominent man. In July, 1892, an organization that met in Omaha, Neb., under the name of the People's party virtually offered Judge Gresham a nomination for the presidency, but the offer was declined, and in October following he publicly announced his intention of voting the Democratic ticket. After Mr. Cleveland's second inauguration Judge Gresham was appointed Secretary of State, and he held the office till his death. Among the notable diplomatic incidents of his term were the Hawaiian question, the Mosquito Reserve territorial dispute between Nicaragua and Great Britain, the Nicaraguan trouble with Great Britain arising from alleged insults to British subjects the Mora claim against Spain, the case of ex-United States Consul

Weller against France, the firing on a United States mercantile vessel by the Spanish war ship "Allian-" and the Chinese massacres. (For portrait, see "Annual Cyclopsedia" for 193, page 734.) East, Mauritz Frederick Headrick De. marine painter.

Bill. Affed James, archaeologist and geographer, born in London, England, in 1833; doed in 8t. Paul, Minn., June 15, 1895. He received a semimary education in England, and in 1854 settled at Kest Wing Minn. He immediately began a study of the prographs of the Northwest; removed to St. Paul in India, and served as a topographical engineer at the arms bouckquarters there. He enlisted at the outbroak of the civil was in 1861, and was almost immediately detailed for sque-cial service in Washington at army headquarters Joining his regiment at Heisens. Ark, he served till the close of his term of enlastment and was beautrably discharged, returning to bt. Paul, where he was cars quely connected with different departments of the State government, and by his researches remembering the treaty with England camed the change in the official maps, so so to include the detached territory north of the Lake of the Woods, not therefoliar recnorms of the part of the public demain. In 1988 he took up the study of archivology, and he was chair man of the Archivological Communities of the State man of the Archaeological Committee of the State Historical Sciency Mastering the Spanish, French, and Italian languages, he became editor of various translated historical articles, adding thereto volume nous notes. In this manner he took up the works of timesomy Constantino Heltrami, and secured for that Italian traveler the homes of having his manue given to a county at the source of the Mississippi, translations from the French were complete. Various rend prime pally on topics concerning the early establish of New France and Louisiana, the writings of Margry and the "Jesuit Relations" being his favorite study in that language. He continued his architectory researches, and supplemented them by studies it is tropomy, geography, cartography, and physics.

Having a quired a competency by judicious investment of wages, he made all needed preparations for an extensive and important archaeological survey of the Northwest, which had broadened out by necessity from an intended survey of ancient earthworks in Minnesota. He engaged the services of a surveyor in the field for mound explorations during a period of twelve years, and platted with his own hand nearly 12 and prohistoric mounds north of the Ohio river and west of the Great Lakes. In 1889 he was assist and to the commissioner in charge of a scientific suryes of the source of the Mississippi, in behalf of the State Hater, al Society, and took up a study of the Spatial, accounts of discovery, contributing volumi-Yumerous articles were published in scientific torna a usually over the name of his employee who warre yest the mounds and made the necessary explorations in the field. At the time Dr. Elliott Cones undersook the editorial preparation of the Lewis and Clark explorations up the Missouri and down the volumes, all the material portion of the work passed under the critical eye of Mr. Hill, and he contributed voluminous notes thereto. He was also associated with the expedition of 1895, which discovered numerand ancient village sites and mounds in the head-water trainage basin of the Mississippi and at Leech Lake. At the time of his death he was preparing a work on the route of De Soto and his followers, from Florida to the country west of the Mississippi; a work upon the archaedogy of the Northwest, for which he had accumulated the results of more than twelve years later at his individual cost, amounting to about \$19,inser, an elaborate paper on the international boundary line between Lake Superior and the Lake of the Worsts, an atlas; and various other uncompleted manus ripts. The results of these scientific labors, so far as they have come to light, have passed into the hands of the courts, as an estate for administraton and distribution to legal heirs who reside abroad As the cost of publishing the results of the labors enumerated will probably exceed \$45,000, the final result and disposition of this life work is left in jeoparty especially since no portion of the work is comwith his last illness only two days prior to the date set for his marriage.

Hoar Ebenser Rockwood, jurist, born in Concord, Mass, Feb 21, 1816; died there Jan. 31, 1835. He was a son of Samuel Hoar and a brother of United States Senator George F. Hoar; was graduated at Harvard in 1835, and was admitted to the bar in 1840. In 1846 he was elected to the State Senate as an Anti-clavery Whig, and in 1838 he became one of a notable company of men whose public careers began in assess than with the Free-soil movement. In consequence of his father's expulsion from Charleston, S. C., which is the best sent by the Legislature of Masses that to test the constitutionality of emetments. Legislature of South Carolina authorizing the state of the control people who should enter the son wrote the call for a meeting of all 1904. high commission that framed the Treaty of Washington in 1871. Judge Hoar served a term in Congress in 1873-75, and in the last year was a candidate for the United States Senate, when Henry L. Dawes

Holland, George W., clergyman and educator, born in Churchville, Va., July 16, 1838; died at Newberry, S. C., Sept. 30, 1895. He was graduated at Roanoke College, Salem, Va., in 1857; was tutor in the college for a year, and was graduated at the theological seminary of Gettysburg, Pa., in 1860, having spent onexession in Union Scannary, New York. In 1860 he was licensed and at once became pastor of the Rockingham parish, Virginia. In July, 1861, he enlisted in the Confederate army, and in October of the same year lost his left arm. In 1863 he became principal of the academic department of Roanoke College. In 1867 he again became pastor of the Rockingham parish, which he served until 1873, and then accepted a call as pastor of congregations near Pomaria, S. C. In the following year he accepted the chair of Ancient Languages in Newberry College, and in 1877 became president of the institution.

Houghton, Henry Oscar, publisher, born in Sutton, Vt., April 30, 1823; died in North Andover, Mass., Aug. 26, 1895. His early education was obtained in the common schools and at Bradford Academy in his mative State, and after some time spent in the office of the "Free Press" at

of the "Free Press" at Burlington, he entered the University of Vermont. After leaving college he was employed for a time as reporter on the Boston "Traveler," and in 1849 he established a printing office in Cambridge, the successor to which is the present Riverside Press. In 1864 he entered more distinctly upon his career as publisher by establishing in New York the house of Hurd & Houghton, and the publishing department of the business continued

under that imprint until 1878. In the latter year the Boston firm of Houghton, Osgood & Co., publishers, was established, the successor to that of Hurd & Houghton and James R. Osgood & Co., which was itself the successor to the more noted house of Ticknor & Fields. In 1880 the firm name became Houghton, Mifflin & Co., which it has ever since retained. The firm possessed not only the Riverside Press, but the library inheritances of the house of Ticknor & Fields and its predecessors to 1828, the year when the first publishing house of the line was established. Mr. Houghton's success was the direct result of long-continued effort and native talent. He was a man of wide sympathies and far-reaching plans, and did much toward establishing a high standard in book making.

Hovenden. Thomas, artist, born in Dunmanway, Counv Cork, Ireland, Dec. 28, 1840; died near Norristown, Pa., Aug. 14, 1895. He began studying art in the Cork School of Design; removed to New York city in 1863, became a student at the National Academy of Design, and had a studio in Philadelphia, Pa., from 1868 till 1874. In the last year he studied in Paris under Cabanel, returning to the United States in 1880. A year later he was elected an associate of the National Academy; in 1882 an academician and a member of the Society of American Artists and of the American Water-color Society; in 1883 of the Phila-delphia Society of Artists; and in 1885 of the New York Etching Club. He was instantly killed by a locomotive while making a vain attempt to rescue a little girl at a grade crossing. His most notable paintings are: "The Two Lilies" (1874); "A Brittany Woman spinning" and "Pleasant News" (1876); Woman spinning" and "Pleasant News" (1876):
"The Image Seller" (exhibited in the Paris Salon. 1876); "Thinking of Somebody" and "News from

the Conscript" (1877); "Pride of the Old Folks" and "Loyalist Peasant Soldier of La Vendee, 1798"

Howe, Mark Antony De Wolfe, an repeaceful elergyman, bern in Briantol, R. L. April 25, 1809; died there

July 31, 1895. He was graduated at Brown University in 1825, and was ordained deacon in 1832 and priest the next year. He was rector successively of St. James's Church, Roxbury, Mass., Christ Church, Cambridge, and St. Luke's, Philadelphia, having charge of the last-named parish from 1846 to 1871. In 1871 he was consecrated bishop of the newly formed diocess of Central Pennsylvania. He possessed marked executive ability, and while holding positive opinions was wholly nonpartisan in the conduct of his episcopal duties. His publications include "Domestic Slavery: A Reply to Bishop Hopkins" (Philadelphia, 1864);

A Reply to Bishop Hopkins" (Philadelphia, 1864);
"Memoirs of Bishop Alonzo Potter" (1871).

Byt, Jehiel Keeler, author, born in New York city,
in August, 1820; died in Plainfield, N. J., Feb. 9, 1895.
He was educated in Wilton, Conn.; engaged in business first in New York and afterward in New Orleans,
making a large fortune in the latter city and losing it
by the civil war; and from the close of the war till
within a few months of his death he was engaged in
journalism in New Brunswick and Newark, N. J.
He published the first American translation of Jules
Verne's "Journey from the Earth to the Moon," and
in co-operation with Miss Anna Ward compiled the
"Encyclopedia of Practical Quotations." At the
time of his death he had completed the compilation
of a "Quotable Shakespeare," on which he had worked

Harlbet, William Henry, journalist, born in Charleston, S. C., July 3, 1827; died in Cadenabbia, Italy, sept 4, 1895. He was graduated at Harward in 1847, and at its divinity school in 1849; continued his studies in Berlin, Rome, and Paris; entered the Unitarian ministry, and took a course in Harvard Law School. In 1855 he became a contributor to "Putmam's Magazine" and "The Albion." In 1857 he size of the New York "Times," and he was engaged in editorial writing till after the presidential election of 1860. In 1861 he was arrested by vigilance committee in Atlanta, Ga., and was refused a passport except on conditions to which he would not agree; but in August, 1862, he made his sease through the lines. He then joined the editorial staff of the New York "World," in which he acquired an interest in 1876, and from which he returned 1852. In 1866 he visited Mexico city on the instation of Maximilian: in 1867 represented his paper at the Paris Exposition, and at the contensor estival of St. Peter in Rome; in 1871 accompanied he United States expedition to Santo Domogon and he United States expedition to Santo Domogon and he United States expedition to Formula the New York "Rome," In 1891 a suit for breach of promise of mar-

riage was in ught against his otherwise for such as tradier his otherwise for such as tradier his of which the just returned a sec.

Kemper. James Lawson, military officer, born in Madison County, Virginia, June 11, 1823; died in Orange County, Virginia, April 7, 1895. He was graduated at Washington College, Lexington, Va., in 1842; studied law and was admitted to the bar; served as a captain in the Mexican War; and entered political life soon after his return. For ten years prior to the civil war he was a member of the Virginia House of Delegates, and for two years its Speaker. On May 2, 1861, he was commissioned colonel of the 7th Virginia Intantry, which he first led at Manassas. Soon afterward he was placed in command of the brigade that had served under Longstreet, Ewell, and A. P. Hill. and was promoted brigadier general. He took part in the first day's fight at Seven Pines, May 31, 1862; in the seven days' fighting around Riehmond the same year; the battles of South Mountain, Antietam. and Fredericksburg; in the Confederate operations in North Carolina; and in part of the battles of Gettys-burg, where he was severely wounded and captured. In June, 1864, he was promoted major general, and afterward commanded at Richmond till its evacuation. In 1872 he was a presidential elector at large on the Liberal Republican ticket, and in 1874-78 was Governor of Virginia. Kendrick, Asahel Clark, educator, born in Poultney,

Vt., Dec. 7, 1809; died in Rochester, N. Y., Oct. 21, 1895. His father, Clark Kendrick, and his uncle. Ariel Kendrick, were well-known Baptist elergymen in Vermont, the former of whom was active in pro-moting the education of young men for the ministry, Asahel was graduated at Hamilton College in 1831 and immediately became a tutor in the Literary and Theological Institution at Hamilton, Madison County, N. Y., which his father's consin, Nathaniel Kendrick had founded, and which is now Colgate University. Two years later he was made Professor of Latin and Greek, and afterward he taught Greek exclusively. Here he remained until 1850, with the exception of a year and a half, which he spent in a horseback journcy through the Southern States, for the benefit of his health. In Hamilton he owned and occupied the house that was afterward the home of Fanny For-rester, the third Mrs. Judson, whose life he wrote. When the University of Rochester was founded, in

1850, he was called to professorship of Greek, which chair he occupied until his retirement and appointment as professor emeritus in 1888. He had been ordained in early life as a Baptist clergyman, but never had a pastoral charge. fessorships in Hamilton. Waterville, Brown, and other institutions were offered to him, and at one time he was asked to become President of

Brown University; but he declined them all, pre-ferring to remain with the institution he had as-sisted in founding. In 1852 he visited Europe, and spent much time in Rome and Athens, studying their antiquities, and also traveled in northern Greece their antiquities, and also traveled in northern Greece and Germany, returning in 1854. He visited Europe again in 1868, and in 1881. He also traveled much in his own country, and had a very wide acquaintance among men of all classes. In 1865-'08, in addition to his duties in the university, he filled the chair of Hebrew and New Testament Interpretation in the Rochester Theological Seminary. When the American committees were formed to aid in the revision of the English version of the Bible, in October 1872 he was anywinted a member of the New October, 1872, he was appointed a member of the New Testament Committee, and he took a very active part in the work, rarely missing a meeting of the committee, until its task was completed, in 1880. Dr. Howard Crosby being asked as to the relative work and infuence of the individual members, answered: "I think, on the whole, Dr. Kendrick oftenest suggested he reading that was finally adopted." Dr. Kendrick not only the foremost Greek scholar in the counry, but was deeply read in many literatures and had m much study to Oriental fearning. Personally was the favorite of the students who came under charge of the faculty of which he formed a part, race of his genial nature, sympathetic method of raction, and frequent humor, as well as his great clarship. He did a vast deal of literary work, darship. He did a vast deal of literary work, h of which was of the most exacting and labakind, writing elaborate articles for the "Chris-Review" and other periodicals and prestucing ay books. These included: "A Child's Book in ht"; "Introduction to the Greek Language"; he Greek 'Ollendorf'"; Xenophon's "Anabasis," b notes; revision of Bullions's " Greek Grammar," other text-books; a revised edition of the Engtranslation of Olshausen's 'Commentary on the Testament," with many new notes and some retranslated (6 vols., 1853-'58); " Echoes," a ne of metrical translations from the French and on poets (1855); "Life and Letters of Emily ((1860); a translation of the Epistle to the dson" (1860); a translation of the Epistle to the sbrews, with notes, for Lange's "Commentary" 57); "Our Poetical Favorites" (3 vols., 1870-36); revision with notes of Meyer's "Commentary on an" (1885); "The Moral Conflict of Humanity" volume of articles in New Testament exegesia 164); and "A Life of Martin B. Anderson," Presiof the University of Rochester (1895). He left manuscript a translation of the Epistle to the Rowith voluminous notes.

Equa. Erasmas Darwin, military officer, born in Brimfold, Mass, May 29, 1810; died in Nice, France, Oct. 11, 1895. He was graduated at West Point in 1832; entered the army as brevet 2d lieutenant, 3d Arillery; was promoted 1st lieutenant in 1836; capain and assistant adjutant general in 1837; major, Oct. 12, 1858; colonel, May 14, 1861; brevet brigadier general, May 31, 1862; and major general of volunteers, May 5, 1862; and resigned May 6, 1864. His first service was in Charleston harbor during the nullification excitement of 1832. In 1837-'41 he was an aid to Gen. Scott; in 1841-'44 was on garrison duty; in 1844-'48 was instructor in artillery and cavalry tactics at West Point; and in 1848-'60 was an garrison and frontier duty, taking part in several campaigns against hostile Indians. From Jan. 1, 1860, till April 19, 1861, he was military secretary to Gen. Scott, and he then spent some time in New York eig and Boston, hastening the recruiting and ferwarding of troops. Afterward he served in the defenses of Washington, in the battle of Buil Run, and in the Peninsula campaign, commanding the 4th Cerps of the Army of the Potomae. In January, 1863, he organized a raid to White House, Va; in May commanded an expedition to West Point, Va; and in June and July was engaged in another toward Richmond. At the time of his resignation he was serving on the board for retiring disabled officers. After leaving the army he was for two years president of the Mexican Gold-mining Company in San Francisco, and for four years vice-president of the California Vine-culture Society. He was auther of "Fifty Years' Observation of Men and Events" (New Years)

Tork, 1884).

Rinhall, Hannibal L, financier, born in Oxford County, Maine, in 1832; died in Brookline, Mass., April 28, 1895. He was apprenticed to the carriage-maker's trade, followed it in New Haven and Hoston till 1866, entered the employ of George M. Pullman in Chicago, was placed in charge of the work of extablishing street railways in the Southern States, and became head of the Southern branch of the Pullman Car Company in Atlanta. From 1866 till his death he applied himself to the material development of Georgia. Through his efforts the State capital was transferred to Atlanta, and the new Capitol built by the city and presented to the State; the railway facil-

ities in the rear of the wholesa of the aspective and the transfer and agreed commercial contention the laters a. was at one time president of 2 railway ones passice Kimball. Moses, philanthropust, horn in Newfours port, Mans, Oct. 24, 1910; died in Bressblitte, Moses Feb. 21, 1805. He entered mercantile life, but tired of it and purchased "The New England trainer 1833, published it for several years, and also published engravings of Trumbulls "highing of the Declara-tion of Independence," hteasts "Washington," and many other notable postures. In 1816 he entered meteantile life again, only to abatelon it, on become ing interested in public amuscancets. He first opened a "lecture resen" in Lewell, in which dramates artists in Lawell, in which dramates i tainments were given and curvation calcitited. 1840 he lought the Columbian Museum in Boston, and transferred to it all his amissement properties. and in the following year, in partnership with his brother David, he opened what is now the Bonton Museum, of which he was proposether at his death From early life he was interested in politica, and for many years he was an influential worker in the auto-layery cause. He was elected a member of the tommon Council of Boston in 1945 and held some legisla tive office almost continuously for more than forty years. He was a member of the Ptate House of Exp. rescritatives for states to years, and derector of push institutions of Boston for twelve years; was the first chairman of the State Board of Health, Lansey, and Charity; was chairman of the House I second bee on Finance for many years; and was one of the communication sioners to arrange for the annexation of Eastery to Boston In 1879 he prescrited to the cuts the Louis cipation group in Park Square cipation group in Park Square. His public bequeets were: To the New England Hospital for Women and Children in Besten, \$15,000, to the same hospital the Home for Aged Men, the Home for Aged Women. the Boston Dispensary, the Massachusetts thatita-ble Eyo and Ear Infirmary, the transmiss Homes for Children, the New England Hotorsea demealogued Society, the Museum of Fine Arts, the Institute of Technology, and the Boston Young Mone thristians Union, each \$5,000; and to other necessarian charitable organizations an aggregate of \$10,000

itable organizations an aggregation of a Mindemobineg. Mil. Sept. 27, 1844; died in Mineroide, Cal. June 11, 1896. He was brought up on a farm hook a fine years' course at the academy at York Pa, was instructor in mathematics there for five years, and was appointed principal of the high a bond at Lancastine, Pa, in 1848. In 1841 he was chosen Preference of Mathematics at Delaware college of which he was elected president in 1856. Two years afterward he was called to the chair of Mathematics at Indiana. University, where he remained till 1898, when he was retired. He was anthor of "The Asherside of Miner Planets lettered Mare and Jaydate".

Received Joseph C, inventor, been in Ashleywillis (now West Springfield, Mass, about 1815) disel in Northampton, Mass, Ang 21, 18th. He hearmed the printer's trade in Northampton and followed it in Greenfield, Worvester, Troy and New York city, returning finalls to Northampton about 1876. Of his many inventions relating to the printing business, the invention protein are the "lay boy," a deather for receiving and juling up paper from a manufacturing or printing massime, an improved writing paper fielder, and an improved quois for locking up forms. The first invention yielded him large returns.

Langdon William Channey, elergy man, born in Burlington, Vt., Aug. 18, 1831; died in Providence, K. I. (Not. 22, 1805). He was graduated at Transalisanis. Instrusty, and after teaching for a short time shells; College, Kentneky, was for neurent scars is examined in the Patent Office. In 1850, 50, 100. priest a orders in the Episcopal Church, and in the same year founded the American Episcopal Church in Reine, and was its rector until 1862. He then beand rector of St. John's Church at Havre de Grace, In 1867 he went abroad again, remaining there until 1875, in the interest of the movement for Church union, and was very active in bringing about cordial relations between "Old Catholies" and the American lushops, Buring this time he founded Emmanuel osneps. During this time he founded Eminanuel Church at tietheva, and was its rector for two years. He was subsequently rector of Christ Church, Cambridge, Mass., From 1875 to 1877, and of St. James's Church in Bestford, Pa., from 1883 to 1890. He retired from active clerical duty in that year, but still labored in behalf of the cause of Christian unity. He published "Some Account of the Catholic Re-form Measurement in the Italian Church" (London, (New York, 1871); "Plain Papers for Parish Priests and People (1880 83); "Conflict of Practice and Principle in the American Church Polity" (Cambridge, 1992).

Langstroth, Lorain L., apiarist, born in Philadelphia, Pa. Dec. 25, 1810; died in Dayton, Ohio, Oct. 6, 1895. He was graduated at Yale College in 1830; was a tutor there in 1834 '35; entered the ministry of the Congregational Church; and became principal of a young ladies' seminary in Philadelphia in 1848. Since 1838 he had been engaged chiefly in the cultivation of bees at Oxford, Ohio, occasionally acting as a ministerial supply. He invented the movablecomb hive, and was the author of "The Hive and the

Honey Bee.

Lanman, Charles, author, born in Monroe, Mich., June 14, 1812; died in Washington, D. C., March 4, 1895. He spent ten years in a business house in New York city, and in 1845 became editor of the "Gazette" in his native town. In 1846 he became asso-

ciate editor of the Cincinnati "Chronicle," and in 1847 of the New York "Express"; in 1849 was appointed librarian of the War Department; and in 1850 became librarian of copyrights and private secretary of Daniel Webster, He was examiner of depositaries for the Southern States in 1853; librarian of the Interior Department in 1855-'57: librarian of the House of Representatives in 1866; and secretary

to the Japanese legation at Washington in 1871-82. The last fifteen years of his life were spent in literary work and in painting, as he had studied art with Noter B Durand and been elected an associate of National Academy in 1846. He was the first perto penetrate the Saguenay region in Canada, and and the first explorers of the mountain region He contributed frequently to the Brack-ide and Homestead " and "Frontier Home" (1884). Letters from a Landscape ir to the River Saguenay" "Private Life of hary of Congress" impiled for the James Carlotte Carlot

Places" (Edinburgh, 1881); "Leading Men of Japan" (Boston, 1883); "Farthest North" (New York, 1885); and "Haphazard Personalities" (1886).

Leach, Stephen W., composer, born in Rumsey, England, in 1821; died in Oakland, Cal., Aug. 21, 1895.

Prior to coming to the United States he played double bass in the orchestra that accompanied Paganini in Southampton. He made his first appearance in the United States in Philadelphia, April 25, 1849. At one time he was chorus master of Jenny Lind's company, and he also sang with Anna Bishop and with Patti. In 1861 he went to San Francisco with an Patti. In 1861 he went to San Francisco with an opera company, and after a season of song he joined the company of the California Theater. Afterward he established himself in Oakland, where he conducted a conservatory of music. While connected with the California Theater he wrote the incidental music for at least 50 plays, including the parts for John McCullough's "King John," "Coriolanus," and "Richelieu," and that for Adelaide Neilson's "Cymbeline." His last composition was a special Easter service for 1895.

Lecleroq, Charles, actor, born in England about 1823; died in New York city, Sept. 19, 1895. He was a son of Charles Leclerce, a well-known English actor and pantonimist, and a brother of the late Carlotta Leclerce and of Rose Leclerce. He came to the United States in 1870, and after supporting Charles Fechter as Caderousse in "The Count of Monte Cristo," he joined the company at Daly's Theater, with which he remained for fourteen years, playing chiefly com-

edy and dialect parts.

Lee, Samuel J., lawyer, born in Abbeville County, South Carolina; died in Charleston, S. C., April 1, 1885. He was born in slavery, on the plantation of Samuel McGowan, who became a Confederate general; was body servant of his master throughout the civil war, in which he was wounded; and after the war secured an education and was admitted to the bar. the beginning of the reconstruction period in South Carolina he moved into Edgefield County, and was elected to the General Assembly, of which he became Speaker when Franklin J. Moses was elected Governor. In 1876 he escaped the prosecutions that be-fell most of the officeholders of that period, and settled in Charleston, where he secured considerable practice and the good will of white lawyers. On the reorganization of the State militia he was commissioned brigadier general of the 1st brigade of colored troops, being the only colored officer of that rank in the United States.

the United States.

Lewis, John Francis, farmer, born near Port Republic, Va., March 1, 1818; died in Lynwood, Va., Sept. 2, 1895. He was brought up as a farmer, and spent all his life, when not in public office, as such. In 1861 he was a delegate to the State convention called to determine whether Virginia should secede, and was the only member within the present limits of the State who refused to sign the ordinance of secession. With others he appealed successfully to President Grant to recommend to Congress the passage of an act submitting to a separate vote of the people of Virginia the disfranchising clauses of the Underwood Constitution, and in 1869, when the reform Constitution was adopted, he was elected Lieutenant Governor on the True Republican ticket. The same year he was elected United States Senator, and during his term he was chairman of the Committee on the District of Columbia and a member of that on Engrossed Bills. In 1875 he was appointed United States marshal for the Southwestern District of Virginia, and in 1881 he was again elected Lieutenant Governor on the Readjuster ticket.

Loomis, Alfred Lebbeus, physician, born in Bennington, Vt., June 10, 1831; died in New York city, Jan. 23, 1895. He was graduated at Union College in 1851 and at the College of Physicians and Surgeons in 1853; spent two years as assistant physician to the hospitals on Ward's and Blackwell's islands; and, establishing himself in New York city, made a specialty of pulmonary diseases. In 1860 he was ap-

pointed physician to Bellevue Hospital: in 1800 75 was consulting physician to the Charity Hospital from 1874 till his death was physician to the Mount Sinal Hospital; and since 1204 had been connected with the University of the City of New York, first as Medicine, and after 1866 as full professor. He was also for several years lecturer on physical diagnosis at the College of Physicians and Surgeons. In the University of the City of New York he was the leader in three notable steps of the faculty of mediolas the liquidation of the debt in land, the secur of \$100,000 for a new laborators, the ing in 1857 denor of which itseleted that the laboratory abould bear the name of Dr. Loomis, and that his own name should not be made public; and the reorganization in 1892 of the course of study. Dr. Lesonia had been President of the New York Pathological Society and of the New York State Medical Society. He beand of the New York State Medical Society. He be-questhed \$25,000 to the Loomis Laboratory and \$10, 000 to the New York Academy of Medicine. He published "Lessons in Physical Diagnosis." New York, 1868; "Diseases of the Respiratory Organs, Heart, and Kidneys." (1876); "Lectures on Fevers." (1882); "Diseases of Old Age." (1882); and "A Text-book of Practical Medicine." (1884).

Loop, Heary Augustus, artist, born in Hillsdale, N. Y. 9, 1831; died at Lake George, N. Y., Oct. 20, He was educated at Great Barrington, Mass. ; 1495 1990. He was educated at Great Barrington, Mass.; studied painting in New York with Henry Peters Gray, N. A., and in Paris with Thomas Conture, continued his studies in Rome, Venice, and Florence, and opened a studio in New York. In 1859 he was elected an associate of the National Academy of Design, and in 1861 an academician. He confined himsign, and in 1861 an academician. He confined himself chiefly to portraiture. Among his paintings are "Undine" (1876); "Aphrodite" (1876); "Echo" (1877); "Hermione and Helena" (1877); "Enone" (1878); "At the Spring" (1879); "Idyl of the Lake" (1881); "Love's Crown" (1882); "Summer Moon" (1884); "The Dreamer" (1885); and many portraits.

**Robalbeh Hagh, financier, born in Kennebunk, Me., Dec. 7, 1868; died near Washington, D. C., May 24, 1893. He studied at Bowdoin College and in Bosen, and in 1833, sennoved to Fort Wayne, Ind. and

ten, and in 1833 removed to Fort Wayne, Ind., and

began law practice. But finding this vocation uncongenial, he acvisiation cepted the management of a branch of the State Bank of Indiana in 1835. In the following 1835. year he was elected a director. He remained with this branch till the expiration of its charter, in 1857, when he was chosen president of a newly organized State Bank of Indiana, with which he remained till May, 1965, when he became Comp.

troller of the Currency under the national banking Two years afterward, on the resignation of Wil liam P. Fessenden, Secretary of the Treasury, he was appointed by President Lincoln to fill the vacan y this time the Government was in great fluati cial straits, owing to its enormous expenses and the heavy demands upon the Treasury In less than six months from the time of his appointment the Government had paid the large amount due to 'as 100 soldiers and sallors whose services were no longer necessary, had discharged other large obligations, and had begun reducing the national debt. By verting more than \$1,000,000,000 of short 'me will tions into a funded debt, Secretary McCullechesecceled in placing the whole debt of the country it a satisfactory shape in a little more than two years He constantly advocated a steady reduction of the national debt, the retirement of the legal tender

When the diocese of Grass Valley was created, he was made its vicar general, and he acted as such for fitteen years. (ii) July 29, 1880, he was appointed condition to Bishop O'Connell, and in 1884 he became the second Rishop of Grass Valley. In May, 1886, the diocese was enlarged by the addition of adjoining counties. Sacramento was made the see, and Bishop Manogue was transferred to it.

Marshall. William Rainey, military officer, born in Boone county, Mo., Oct. 17, 1825; died in Pasadena, cal. April 4, 1895. In early life he accompanied his parents to Quincy, Ill., where he received a common-mehool education. In 1841 he went to work in the lead mines at Galena; in 1847 engaged in the survey of public lands in the part of Wisconsin Territory within the limits of Minnesota; in 1849 with has brother established the first general merchandise store on the site of Minneapolis; and in 1852 opened the first iron store within the limits of Minnesota at He was a banker in St. Paul in 1855-57: became a dairy farmer and stock breeder in the last year; and established "The Daily Press" (now "The Proper Press") in 1861. He was elected to the Legislature of Wisconsin in 1848, and to the First Terptomal Legislature of Minnesota in 1849. He was also active in organizing the Republican party in Minnesota, and in 1855 was defeated as its candidate for Congress. In 1862 he was commissioned colonel of the 7th Minnesota Regiment, with which he took part in two campaigns against the Indians; in 1863 was assigned to the 16th Army Corps, with which he was engaged in several battles; in December, 1864, com-manded a brigade at the battle of Nashville; and on March 13, 1865, was brevetted brigadier general of volunteers for meritorious services. He was elected Governor of Minnesota in 1865 and 1867, and was afterward a commissioner of railroads.

Martine. Randolph Brant, jurist, born in New York city in 1844; died there March 30, 1895. He was graduated at Columbia College Law School in 1866, and the same year was admitted to the bar and began practice in New York city. For several years he was an active member of Tammony Hall, but in 1882 he resigned, and two years afterward, when chairman of the executive committee of the County Democracy, he was its successful candidate for district attorney. During his tenure a number of celebrated cases were tried, among them the members of the board of aldermen who were indicted for accepting bribes from Jassed Sharp in return for the franchise of the Broadway surface railroad. He personally took charge of the prossecution of Mr. Sharp, and secured a conviction of an additional judge of the Court of General Security, and in the autumn of that year Mr. Martine

was cortes the first additional judge.

in the city guard after the occupation of Mexico city, After the war he was on duty at Jefferson barracks till September, 1849, when he resigned, studied law, was admitted to the bar in 1850, and began to practice in Albany, Ky. He removed to Paris, Texas, in 1857. and practiced there till the beginning of the civil war. He raised the 9th Texas Infantry for the Confederate army, and was commissioned its colonel. He was promoted brigadier general in 1862; took part in the assault on Gen. Buell's retreating army in the first siege of Port Hudson and in the defense of Jackson, Miss.; and in 1863-'65 commanded the Confederate military district of the Indian Territory, and was promoted major general. After the war he resumed law practice at his home. In 1874 and 1881 he was elected to the United States Senate as a Democrat. In the Senate he was chairman of the Committee on Post Offices and Post Roads and of the select committee to inquire into claims of citizens of the United States against Nicaragua.

Merriam, Augustus Chapman, educator, born in Locust Grove, N. Y., May 30, 1843; died in Athens, Greece, Jan. 19, 1895. He was graduated at Columbia College in 1866, and was tutor in Greek and Latin there in 1868-'80, Adjunct Professor of Greek in 1880-'89, and Professor of Greek Archeology and Epigraphy from 1889 till his death. He was also at the time of his death the senior active professor in the School of Philosophy and one of the senior instructors in the School of Arts of the college. In 1886-87 he was President of the American Philological Association; in 1887-'88 was director of the American School of Classical Studies at Athens; and in 1891-'94 was President of the New York Society of the Archae ological Institute of America. He superintended exeavations at Siegow and Icaria, and by his investigations in 1888 determined the birthplace of Mespis. "The American Journal of Philology" and "The American Journal of Archæology"; editions of American Journal of Archæology"; editions of Books VI, VII, and VIII of the "Odyssey," and Books VI and VII of "Herodotus"; and, among other writings, "The Greek and the Latin Inscriptions on the Obelisk Crab in Central Park" (188 and "The Law Code of Gortyna in Crete—Text, Translation, and Comment" (1886).

Miles, Henry Adolphus, clergyman, born in Grafton, Mass., May 30, 1809; died in Hingham, Mass., May 31, 1895. He was graduated at Brown University in 1829, and at Harvard divinity school in 1832; was ordained to the ministry of the Unitarian Church in Hallowell, Me., in 1832; and continued in pastoral relations till within a few years of his death. In 1836-'53 he held a pastorate at Lowell, Mass.; in 1852-'69 was secretary of the American Unitarian Association at Boston; and in 1876-'84 was pastor at Hingham. He edited the "Quarterly Journal" in Boston, in 1854-'59, and published "Lowell as it was and is" (Lowell, 1845); "Grains of Gold" (Boston, 1854); "The Altar at Home" (1855); "Gospel Narratives" (1858); "Channing's Thoughts" (1859); "Words of a Friend" and "Picture Writing" (1870); and "The Birth of Jesus" (1878).

Millard, Harrison, composer, born in Boston, Mass., Nov. 27, 1829; died in New York city, Sept. 10, 1896. He received a public-school education; studied music in Italy; appeared as a tenor singer in grand opera at Florence in 1852; returned to Boston and joined the Handel and Haydn Oratorio Society in 1858; and removed to New York city and composed his song "Vive l'America" in 1859. In 1861 he enlisted as a private in the 71st New York Regiment, and while the regiment was in Washington he created a sensation by singing "Vive l'America" at a social gathering composed chiefly of Southerners. President Lincoln, on being informed of the incident, sent for the composer, and, after congratulating him on his patriotism, commissioned him a 1st lieutenant in the 19th Infantry. He served at various times as aid-decamp, division commissary, and division inspector on the staffs of Gens. Rousseau, Rosecrans, and Inness

IL Palmer; was wounded at Chickamauga, Sept. 19, 665, and resigned from the army soon afterward.

Returning to New York, he was appointed to a place
the customhouse, where he remained till 1-85. During all this time he carried on his work as a composer, writing masses and vespers and many songs, including "Waiting." "When the Tide comes in." "Under the Daisies," and "Say not Farewell." His "Waiting" is the test song used in the Conservatory of Music in Paris. He also composed the grand opera "Leah." During the season of 1894 he trav-

of the Sphinx Opera Company.

10ller, John, elergyman, born in Princeton, N. J.,
April 6, 1819; died there April 14, 1895. He was
producted at Princeton in 1836, and began preparing or a professorship in natural philosophy, but in consequence of a religious revival determined to enter agon the ministry, and was graduated at the theolog-ical seminary in 1842. In the following year he was ordained paster of the Presbyterian church in Fred-rick City, Md.; in 1850 was settled over the Vine et Church in Philadelphia and in 1855 removed to Riccet Church in Philadesphia and in reservith the Lexington, Va. He served during a part of the civil war in the Confederate army, and from 1863 till 1871 was paster of the Washington Street Presbyterian Church in Petersburg, Va. Returning to Princeton in the last year, he devoted himself to original inves in the last year, he devoted nimself to original inves-tigations in theological matters. As results he pub-lished a "Commentary on Proverbe" (New York, 1863); "Fetich in Theology" (1874); "Metaphysics; or, The Science of Perception" (1875); and "Ques-tions awakened by the Bible." He was tried in May. 1977, by the New Brunswick Presbytery, on a charge of publicly denying and assailing important doctrines the Confession of Faith and the catechisms of the Pre-byterian Church, and was suspended from the ministry. He appealed to the Synod of New Jersey, and finally to the General Assembly, and the latter ods modified his sentence so as to permit him to withdraw from the Presbyterian Church instead of being deposed. He then went to Plainsbore, near Princeton, which was destitute of church accommodaons, built a church at his own expense, and soon athered a large congregation. In 1880 he built a ond church, at Princeton; subsequently erected a hird one, at Monmouth Junction; and in May, 1893, wrehased a building in New Brunswick which had n occupied by a Baptist congregation and began sching there in March following. All these arches were conducted according to the doctrines e Cumberland Presbyterian Church.

Ther, Alenso Ames, clergyman, born in Lempster, I. H., Aug. 17, 1814; died in Boston, Mass., June 14. 8. He was educated in public schools and acades in New Hampshire and Vermont, and began sching when sixteen years old. In June, 1839, he vas ordained as a Universalist elergymen at Methuen, : in 1842 removed to Lowell, where he distinished himself by combating the rationalistic in-ence of Theodore Parker; in 1848 succeeded E. II. Chapin as associate of the Rev. Hosea Ballou, whom ecceded, and held this charge nominally till his th, though retiring from the active pastorate in 1891. In early life he was elected an overseer of Harvard College by the Legislature; was appointed a member of the State Board of Education by three different governors, serving in all for twenty four years; for nearly twenty-one years was chairman of the Board of Visitors of the State Normal Art Scheek, and for twenty years was President of the Massachu setts Temperance Alliance. He was a frequent contributor to the more portant Lutheran periodicals, was an earnest of the

1. Lie Ian history, and did much to cultivate the mate to history in others. He was the founder of the Latteran Historical Scenety, whose library at cathyshung is one of the most valuable in the country, we should be instituted material. He was the founder of the Academy of Lutheran Church History, whose only president he was. He was an enthusiastic Luther student, collecting and collating everything pertaining to Luther on which he could lay his hands; and he collected the best Luther library in this country. Besides many translations and addresses, review and magazine articles, tracts and scientific articles, he published "Catechumen's and Communicant's Companion" (Baltimore, 1831); "Henry and Antonio" of Brettschneider, translated from the German (Philadelphia, 1831; altered ed., entitled "To Kome and Back Again," 1853); "Catecheical Exercises on Luther's Catechism," adapted from the German (Baltimore, 1832; Von Leonard's "Lectures on Geology" (Ir., 1839); "Popular Exposition of the Gospels" (2 vols., 1840); "Life of Dahn Arnelt" (1853; "The Blind Girl of Wittenberg" Philadelphia, 1856; "The Blind Girl of Wittenberg" Philadelphia, 1856; "The Blind Girl of Wittenberg" Philadelphia, 1856; "The Loris Baltimore "(Baltimore, 1874). "Bibliotheca Lutherana" (Philadelphia, 1852; "The Loris Baltimore" (Baltimore, 1859; "Augustor of the Lipidoptera of the United States" (Washington, 1862; "The Loris Baltimore "(Baltimore, 1874). "Bibliotheca Lutherana" (Philadelphia, 1876; "Fifty Years in the Lutheran Ministry" (1878); "A Day in Capernaum," translated from Franz Delitzsch (1879); "The Diet of Augsburg" (1879); "Augsburg Confession and the Thirty-nine Articles" (1879; "Augsburg Confession and the Thirty-nine of the Lord's Supper" (1884); "Memoirs of the Stork Family "(1884); "Supper" (1884); "Memoirs of the Stork Family "(1884); "Memoirs of the Stork Family "(1884); "Memoirs of the Stork Family "(1884).

Merris, Lusen Burritt, jurist, born in Newton, Conn., April 16, 1827; died in New Haven, Conn., Aug. 22, 1895. He was graduated at Yale in 1854, and was admitted to the bar of New Haven County in 4856. In 1855, 1856, 1870, 1876, 1880, and 1881 he was elected to the State House of Representatives; in 1871 was elected to the State Senate and was president of that basly; in 1857, '63 was probate judge of the New Haven district; and in 1885 was appointed chairman of commission to revise the probate laws of the State. He had early identified himself with the Democratic party, and in 1888 was its candidate for Governor. lle received 75,174 votes, a plurality of 1,415, but failed to receive a majority of all votes cast. In 1890 he was again candidate for Governor, and his party friends declared that he had a majority of 26 and a s wrahty of 3,663 over his Republican opponent. A des look followed. The contest for the office was taken from one court to another, and was held in at gat on till the expiration of the term. In 1892 Morra was a third time his party's candidate state of Daniel Hand, the philanthropist.

Nason, Henry Bradford, chemist, born in Foxboro, Massa, June 22, 1831; died in Troy, N. Y., Jan. 18, 1895. He was graduated at Amherst College in 1855; took a course in chemistry and the natural sciences at the University of Göttingen; and in 1858 was appointed Professor of Natural History at Rensselaer Polytechnic Institute in Troy, and also Professor of Chemistry and Natural Sciences in Beloit College, Wisconsin. In 1866 he was called to the chair of Chemistry and Natural Science in the Polytechnic Institute, which he held till his death. He was a juror at the World's Fair in Paris in 1878 by the United States Government for the department of mineralogy and metallurgy, and since 1880 had occupied the place of chemist to the Standard Oil Company. He received the degree of Ph. D. for original investigations on the formation of ethers from the University of Göttingen in 1857. Since 1880 he had devoted much attention to methods for improving the treatment of crude oil and for abating the nuisances arising from the products of oil reflueries. Among his numerous publications are "Table of Reactions for Qualitative Analysis" (Troy, 1865); a translation of Wohler's "Handbook of Mineral Analysis in Colors" (Troy, 1870); and an edition of Elderhorst's "Blowpipe Analysis" (1873; revised ed., 1880).

Neumoegen, Berthold, entomologist, born in Germany in 1844; died in New York city, Jan. 21, 1895. He was a broker in New York for many years. In early life he developed a desire to make the largest and most beautiful collection of butterflies in the world, and for more than twenty years all his leisure was devoted to this object. He received choice specimens from Africa through Dr. Livingstone, and others through Henry M. Stanley, Lieut. Schwatka, members of the Greely Relief Expedition, and from personal friends in various parts of the world. He kept 2 men employed in receiving and shipping specimens in exchange with other collectors, and in a single consignment he shipped 20,000 butterflies to Europe. His collection contained 100,000 rare specimens. He is known to have paid \$160 for a single specimen. His collection was exhibited in New York city in April, 1888. There are but two known collections in the world that exceed in number and variety this one; one is owned by the British Mu-

seum, and the other is in Paris.

Newton, Henry J., manufacturer, born in Connecticut in 1823; died in New York city. Dec. 23, 1895. For many years he was a member of the firm of Leight, Bradbury & Newton, piano manufacturers, and at the time of his death was President of the Newton-Merritt Bronze Company. He was president of the photographic department of the American Institute for twenty years, the inventor of the dry-plate process of photography, President of the Camera Club of New York, and a member of the Governing Board of the Brooklyn Institute. The top floor of his residence was fitted up as a laboratory, where he studied chemistry, physics, and astronomy, and during the last twenty years of his life he gave much time to investigations in spiritualism. In the summer of 1875 he became chairman of a committee to investigate the phenomena of an alleged materialization by a com-The committee bustion of aromatic gum and herbs. met at Mr. Newton's house, an organization was completed, and the name of "The Theosophical Society" was adopted. Subsequently the idea was taken up by Henry S. Oleutt and Mme. Blavatsky, and ex-panded into a system of occultism, for which an East Indian origin was claimed. Mr. Newton claimed that the Theosophical Society originated in his house and not in Asia, that all the Indian accessories were an afterthought, and that they constituted a fiction.

Newton, John. soldier, born in Norfolk, Va., Aug. 24, 1823; died in New York city, May 1, 1895. He was graduated at West Point in 1842, standing second in a class of 56, and was commissioned 2d lieutenant of engineers, and assigned to duty as Assistant Pro-

fessor of Engineering in the Academy. Subsequently he served in the construction of fortifications and other works along the Atlantic and full cossis until 1860, except during 1858, when he was chief engineer

of the I tah expedition On July 1, Inia, he was promoted captain, and at the beginning of the civil war he was chief engineer of the Depart ment of Pennsylvania, holding later a like office in the Depart-ment of the Shenan From August doah latil, till March, lad? he was engaged in constructing the defenses of Washington, D. C. where he also had a brigade, having been made brigadier general

of volunteers on Sept. 23, 1861. During the Peninsula campaign he served with the Army of the Potomac, and was engaged in the actions at West Point, Games's Mill, and Glendale. He continued with his command in the Maryland campaign, participating in the forcing of Crampton's Gap and the battle of Antictain. In the storming of Marye Heights at the battle of Fred ericksburg he led a division. He was made major general of volunteers on March 50, 1865, and took He was made major part in the Chancellorsville campaign. In the Pennsylvania campaign he succeeded to the command of the 1st Corps on July 2, 1865, after the death of Gen John F, Reynolds, and held it during the last days of the battle of Gettysburg. He was brevetted colonel for services in that action. He was given the 2d division of the 4th Corps of the Army of the Cumber-land under Gen. Oliver O. Howard in May, 1864, and participated in the invasion of Georgia taking part n the engagements that culminated in the capture of Atlanta in September. Later, he had various districts in Florida until January, 1866, when he was mustered out of the volunteer service after receiving the brevets of major general of volunteers, and that of brigadier general and major general in the regular army. He received his regular promotion as lieuten-ant colonel of engineers on Dec 28, 1865, and in April, 1866, was made superintending engineer of the construction of the defenses on the Long Island side of the Narrows entrance to New York harbor; also of the Improvements of Hudson river and of the fort at Sandy Hook. His most brilliant achievement was the removal of the dangerous rocks at Hell Gate This compelled the solution of novel engineering problems and the invention of new apparatus. He blew up Hallett's Reef on Sept. 24, 1876, and Floral Rock on Oct. 10, 1885 (see "Annual Cyclopesha" for 1885, page 470 et seq.). Meanwhile the proposed enlargement of Harlem river, the improvements of Hudson river from Troy to New York, and of the channel between New Jersey and Staten Island and of the harbors of Lake Champlain were placed under his direction. On June 50, 1879, he was promoted colonel, and on March 6, 1884, was made chief of engineers with the rank of brigadier general, holding that place until his retirement on Aug 27, 1886. He was appointed Commissioner of Public Works at New York elty Aug. 31, 1887, which office he held until Nov. 24, 1888. During his administration politics were entirely eliminated from the department. and many reforms instituted, notably one that it is

tal purishment. He became United States minister to Portugal in 1854, and held the office till 1863. He was noted for his mastery of ancient and modern languages, was an intimate friend of Nathaniel Hawguages, was an intimate friend of the thorne, and at the unveiling of Bartholdi's Statue of Liberty, in New York harbor, he delivered an address in French that was highly commended by the

French visitors.
Palme Timothy Otis, Egyptologist, born in Winslow,
Mc., Oct. 13, 1824; died in Boston, Mass., Dec. 6, 1895. He was graduated at Waterville College, Maine, in 1847; became paster of the Swedenborgian church at Flinwood, Mass, in 1856, and for many years after so head of the New Jerusalem Church in Boston. was an enthusiastic student of Hebrew and the ancient was an entitusiastic student of receive and the alterial languages, and he spent his leisure in unraveling the mysteries of hieroglyphics, becoming an acknowledged authority on Egyptology. Among his publi-cations was "Solomon's Temple; or, The First Taber-nacle," in the preparation of which he spent thirty-five years, and in which he completely reconstructed the

conception of this ancient edifice.

Parker, Ely Samuel, military officer, born in the Indian reservation, Tonawanda, N. Y., in 1828; died in Fairfield, Conn., Aug. 31, 1895. He was a fullleaded Seneca Indian, and chief of the Six Nations. He took a course at the Rensselaer Polytechnic Institute, and studied law; but as Indians had then no claims to citizenship he could not be admitted to the bar. Subsequently he received an appointment in the engineer corps of the United States army. living in Galena, Ill., he became intimate with Ulysses S Grant. At the beginning of the civil war he en-tered the National army; soon afterward was appointed by Gen. Grant one of his staff officers, and during the latter part of the war was military secretary to that commander. He was brevetted brigadier general of volunteers, Apr. 9, 1865, and captain, major, licutenant colonel, colonel, and brigadier general the regular army, Mar. 2, 1867. After the war Gen. Parker resumed civil engineering, and in 1869 was appented Commissioner of Indian Affairs. He resigned this office in 1871, and in 1876 received an appointment in the police department of New York city. shere he superintended the repairs to the buildings of the department and purchased its supplies. Gen. Parker owned and always kept the gold pen used by Gen Grant in signing the terms at Appointation.

Parsons, Lewis Eliphalet, lawyer, born in Broome county, New York, April 28, 1827; died in Talladega, Ma, June 8, 1825. He was educated in the public schools, studied law, and in 1840 settled in Talladega, He was elected to the Legislature as a reprea stative of the State-aid and internal-improvement movement in 1852, and was again sent to the Legislature in 1863, when he opposed the militia system of the State because the Confederate Government had 'ul power there. On June 21, 1855, he was appointed I'm comal Governor of Alabama, and he applied to the work of reconstruction till December, . In was elected United States Senator, but he The seat because of the opposition then The the reconstruction policy of the Presi-- . " - aker of the House in 1872.

Perkins, William Rufus, poet, born in Eric, Pa., Sept. 1, 1847; died there Jan. 28, 1895. His early studies were conducted by his mother and by an accomplished teacher for many years resident in the family. He was graduated at Western Reserve College as valedictorian in 1868, and in 1869 he returned to that college as tutor, remaining three years. Subsequently he studied law and was admitted (1878) to the bar of Eric County, Pennsylvania. In 1879 he was called to Cornell University as Assistant Professor of Latin and Greek, being transferred in 1882 to the department of history. In 1885 he studied in Europe the modes of teaching in the universities, and on his re turn, in 1887, he was called to the chair of History in Iowa State University. In the spring of 1888 he was a delegate to the eighth centenary of the University of Bologna, Italy. He attended that fete and spent a few months in traveling in England and France, returning to the university in the autumn. In 1880 he privately published, under a pen name, the poem of "Eleusis," and in 1892 his selected poems, under the "Eleusis," and in 1872 his selected poems, under the misleading title of "Eleusis and Lesser Poems," were published in Chicago. Two of his historical monographs—"History of the Trappist Abbey of New Melleray" and "History of the Amana Society". were published by the State University of lowa. manners were reserved and unassuming. His untime ly death, apparently at the beginning of a poetical career, was a great loss.

Perry. Rufus Lewis, clergyman, born in Smith County, Tennessee, about 1833; died in Brooklyn, N. Y., June 18, 1895. He was the son of a slave, who escaped to Canada. The boy was sold in 1852, but subsequently made his escape and undertook to find his father. Rufus was graduated at Kalamazoo University in 1861, and was ordained and installed pastor of the Second Baptist Church in Ann Arbor, Mich., in October of that year. In 1865 he engaged in general missionary work; afterward was superintendent of a freedmen's school; was for ten years corresponding secretary of the Consolidated American Baptist Mis Convention; and for many years editor of ational Monitor." He was considered one of sionary "The National Monitor." the best scholars the negro race has produced; was the author of numerous works requiring much research; and was an accomplished linguist, especially he delivered a scientific lecture on "Light" before the State University at Louisville, Ky. Among his publications is "The Cushite; or, The Children of Ham as seen by Ancient Historians and Poets."

Phillips. Philip, singing evangelist, born in Chauta qua County, New York, Aug. 13, 1834; died in Delaware, Ohio, June 25, 1895. In youth he studied music with Lowell Mason, and in 1853 became a conductor of singing schools. In 1860 he united with the Methodist Episcopal Church, the same year publishing his first musical composition, entitled "Early Blossoms," In 1861 he opened a music store in Cincinnati, and published "Musical Leaves," During the civil war he held services of song in the principal cities of the North to aid the Christian Commission. After the war he settled in New York. In 1868 he went to England, and held services in its principal cities, and prepared for the British Sunday-school Union "The American Sacred Songster," of which over 1,000,000 copies were sold. On leaving England he made a singing tour of the world, holding religious services in the Sandwich Islands, Australia, Zealand, Palestine, Egypt, and India, and in the large cities of Europe. He published many collections of cames of Europe. He published many confections songs, chiefly religious, including "Spring Blossoms" (1865); "Singing Pilgrim" (1866); "Day-school Singer" (1869); "Gospel Singer" (1874); "Singing Sermons" (1877); "Singing Pilgrimage around and throughout the World," with a biographical skerch (1880); and "Six Song Services with Connective Reading" (1892).

Filling, James Constantine, bibliographer, born in Washington, D. C., Nov. 16, 1846; died at Olitey, Md., July 26, 1895. He was educated at Golzage, and from 1875 to 1880 was a member of the Rocky Mountain surveying expedition under Major Powell. His ethnological researches began then, and until his death his time was mainly given to linguistic and ethnological work. He was considered a high authority on North American Indian bibliography, and his publications on this subject are very numerous. Among them are "Bibliography of the Esimo Language" (Washington, 1887); "Bibliography of the Sionan Languages" (1887); "Bibliography of the Sionan Languages" (1887); "Bibliography of the Sionan Languages" (1887);

numerous. Among them are "Bibliography of the Eskimo Language" (Washington, 1887); "Bibliography of the Siouan Languages" (1887); "Bibliography of the Iroquoian Languages" (1888). Pitcher, Thomas Gamble, military officer, born in Rockpert, Ind., Oct. 23, 1824; dies lat Fort Bayard, New Mexico, Oct. 21, 1895. He was graduated at West Point, and commissioned brevet 2d lieutenant, 5th Inantry, in 1845; was promoted 2d lieutenant, 8th In-antry, Sept. 21, 1846; 1st lieutenant, June 26, 1849. captain, Oct. 19, 1858; major, 16th Infantry, Sept. 19, 3; and colonel, 44th Infantry, July 28, 1866 assigned to the 1st Infantry, Dec. 15, 1870; and was retired June 28, 1878. In the volunteer service he was commissioned a brigadier general, Nov. 29, 1862, and was mustered out of the service April 30, 1866. During his military career he was brevetted 1st heu tenant in the regular army, Aug. 20, 1847, for gallantry at Contreras and Churubusco; major, Aug. 9, 1862 for gallantry at Cedar Mountain, Va.; and lieutenant nel, colonel, and brigadier general, all on March 13, 1866, for meritorious services during the war In 1862 he served in the defense of Harper's Ferry and in the Virginia campaign, receiving a wound at Cedar Mountain; and from Jan. 10, 1863, to the close the war, because of his wound, was on duty as commissary and provost marshal. In 1866-71 he was commessary and provest marsinal. In 1866—the was superintendent of the United States Military Academy; in 1871—77 was governor of the Soldiers' Home in Washington, D. C.; and in 1880—'87 was superintendent of the New York Soldiers' and Sailors' Home.
Piley, Prancis Morrisson, journalist, born in Westmoreland, N. Y., Jan. 31, 1825; died in San Francisco.

Piley, Prancis Morrisson, journalist, born in Westmoreland, N. Y., Jan. 31, 1825; died in San Francisco, Cal., Aug. 11, 1895. He was graduated at Hamilton College; studied law in Rochester, N. Y., and was admitted to the bar in Michigan. In the spring of 1849 he set out on mulchack for the California mines, arriving in El Dorado County in September following, and worked in the mines till 1851, when he went to San Francisco and entered into a law partnership with Judge Roderick N. Morrisson, an uncle. Soon afterward he was elected city attorney; in 1858 he was elected to the Assembly as a Republican; in 1861 became Attorney General of the State; and in 1869 was appointed United States district attorney for California, an offlee he soon resigned. In 1877 he retired from active politics, and with Frederick M. Sonners founded the "Argonaut," a literary weekly.

Pos, Orlando Metcalfe, military officer, born in Na varre, Ohio, March 7, 1832; died in Detroit, Mich., Oct. 2, 1895. He was graduated at West Point and commissioned brevet 2d lieutenant of top-graphical gineers in 1856, and was promoted 2d lieutenant L 7 following; 1st lieutenant, July 1, 1860; captain f engineers, March 3, 1863; major, March 7. cutenant colonel, June 30, 1882; and colonel, July 1888. In the volunteer army he was commissioned colonel of the 2d Michigan Infantry, Sept 16, 1861 was promoted brigadier general, Nov. 29, 1862; and as mustered out of the service, March 4, 1865. Dur ing his military career he was brevetted major in the regular army, July 6, 1864, for the siege of Knovelle. putenant colonel, Sept. 1 following, for the capture of Atlanta; colonel, Dec. 21, for the capture of Savan nah; and brigadier general, March 13, 1865, for mis to torious services in the campaign terminating with the surrender of the Confederate army under tien Joseph L. Johnston. He was chief topographical engineer of the Department of the Ohio in the carly part of 1816; was on the staff of Gen. McClellan at the leat the of Rich Mountain; commanded his Muchigan re

Remey, William R., naval officer, born in Iowa; died in Somerville, Mass., Jan. 21, 1895. He entered the marine corps of the United States navy as 2d lieutenant, Sept. 5, 1861; was promoted 1st lieutenant, Feb. 17, 1864; captain, June 21, 1872; and colonel, June 12, 1884; and was retired, June 4, 1892, on his own application. In 1862 and a part of 1863 he was attached to the frigate "Sabine"; in 1864 was on duty at the marine barracks at Gosport, Va.; in 1865 was attached to the receiving ship "North Carolina." He served on the "Vanderbilt" of the Pacific sequadron in 1865-27; on the receiving ship "New Hampshire" in 1868; at the marine barracks in Philadelphia in 1868-69; and was on special duty in Washington, D. C., in 1869-70. During 1871-72 he served at the headquarters of the Marine Corps in Washington, D. C.; 1873-74 was on the frigate "Colorado" of the North Atlantic squadron; and then returned to marine headquarters. As fleet marine officer he served on the South Pacific station in 1876-76 and on the South Pacific station in 1875-76 and on the South Atlantic station in 1875-77. In 1878-80 he was acting judge-advocate general of the navy, and from 1880 till his retirement held the office of judge-advocate general.

Renwick, Henry Brevoort, evil engineer, born in New

York city, Sept. 4, 1817; died there Jan. 27, 1895. He was a son of James Renwick, physicist, and a brother of James Renwick (see below). He was graduated at Columbia College in 1836; spent some time in commercial business; studied civil and mechanical engineering; entered the service of the United States Government as an assistant engineer; and was first assistant astronomer of the United States Boundary Commission in 1840-42. In 1848 he entered the Patent Office as an examiner, and in 1853 was appointed the first United States inspector of steam vessels at the port of New York. While on engineering service for the Government, he was engaged in important works, including the breakwaters at Sandy Hook and Egg Harbor, and the survey that settled the boundary line between Maine and New Brunswick. He was probably best known as an expert in patent cases. Among the most notable cases in which he testified were the suits growing out of the invention of sewing machines, the McCormick reap-

er, and the Bell telephone.

Renwick, James, architect, born in New York city, Nov. 3, 1818; died there June 23, 1895. He was graduated at Columbia College in 1836, inherited a fondness for architecture from his father, and first engaged in civil engineering. He superintended the construction of the distributing reservoir on Fifth avenue and was an assistant engineer on the Croton aqueduct. When the vestry of Grace Church purchased the property on Broadway near Tenth street. his plans for the new building were accepted; he w placed in charge of the work, and completed the building, with the exception of the permanent spire (the first one being of wood), in 1845. He was afterward selected as architect of Calvary Church and of the Church of the Puritans, and before these were finished, on the invitation of the regents of the Smith sonian Institution, Washington, D. C., he prepared plans for their new building, which were adopted. He was also architect of the Corcoran Art Gallery in the same city. In 1853 he was invited by Archbishop. Hughes to prepare plans for a cathedral to be built on Fifth avenue, and his plans were accepted. The corner stone of the cathedral was laid Aug. 15, 1858; the building was dedicated May 25, 1879; and the erection of the two towers was begun in 1887. Renwick also was the architect of the group of buildings of Vassar College, Poughkeepsle; of St. Ann's Church. Brooklyn, N. Y.; of Booth's Theater, at Sixth avenue and Twenty-third Street; the Young Men's Christian Association building; the new front of the New York Stock Exchange; several of the public buildings on Blackwell's and Randall's islands: and of the restoration of the old Spanish cathedral at St. Augustine, Fla. He had also planned business and residential structures. Mr. Kenwick, who was deeply interested in art in all its forms, had for several years devoted his leisure to making a collection of notable paintings by old masters, and he because the development of the Metropolitan Museum of Art a collection of 74 paintings, supposed to be worth \$550,000 in December following his death the trusteen of the museum declined the gift, giving no reasons, but a belief gained currency that Mr. Kenwick had been imposed upon in the purchase of the paintings.

Rice, Alexander Hamilton, merchant, born in Newton, Mass., Aug. 30, 1818; died in Melrose, Mass., July 32, 1803. His father carried on an extensive paper manufactory, in which the son passed a regular apprenticeship, subsequently receiving a collegiate education. He then entered a paper house in Boston, of which in time he became the senior member, the mame being changed to Rice, Kendall & Co. After serving as a member and president of the Council, he case elected Mayor of Boston in 1855 and 1857 on a citizens' ticket, and under his administration the Back Bay improvements were begun and the City Hospital founded. He was elected to Congress as a Republican in 1858, and served 4 consecutive terms. From 1869 till 1873 he was President of the Back and of Trade of Boston, and in 1876, 1877, and 1878 he was elected Governor of Massachusetts. In 1877 he aroused much unfavorable criticism by veto-ling a local-option license bill, but he was re-elected the same year.

Bidgway, Henry Bascom, estucator, born in Talbot County, Maryland, Sept. 7, 1830; died in Evanston, Ill., March 30, 1895. He was graduated at Dickinson College in 1849; joined the Baltimore Conference of the Methodist Episcopal Church immediately after leaving college, and became a circuit rider. Within a few years he was called to a small church in Baltimore, and subsequently he held pastorates in the Old High Street Church, Baltimore, in Portland, Me., in Chleage, in New York city, and in Cincinnati. In 1882 he was chosen Professor of Historical Theology in Garrett Biblical Institute, Evanston, Ill.; and from 1884 till his death he was President of the institution and Professor of Practical Theology. About two years ago he made a trip round the world and visited many mission stations in India, China, and Japan. He was the author of "The Life of Alfred Cookman" (New York, 1871); "The Lord's Land: A Narrative of Travels in Sinai and Palestine" (1876); "The Life of Rishop Edward S. Janes" (1882); "Bishop Beverly Waugh" (1883); and "Bishop Matthew Simpson" (1885).

Rier, Charles Valentine, entomologist, born in London. England, Sept. 18, 1843; died in Washington, D. C., Sept. 14, 1895. His childhood was passed in D. C., Sept. 14, 1895. His childhood was passed in the College of St. Paul, at Dieppe, France, and three more in Benn, Prussia. He early exhibited a passion for drawing and painting, and for studying insects. He came to New York when seventeen years old, spent three years on a stock farm in Kankakee County, three years on a stock farm in Kankakee County, the part of the years of the was next engaged in newspaper work, and in May, 1864, went to the front with the 134th Illinois Volunteers. In 1868 he was made State Entomologist of Missouri. Of the 3 volumes of his Missouri. Reports," Charles Darwin wrote that they brought to his knowledge many valuable facts and generalizations, and the "Entomologists" Monthly Magazine." of London, remarked—"The author, in giving full scope to his keen powers of observation, in minuteness of detail, and in the skill with which he uses his pencil, and in a regard for scientific accuracy, maintains his right to be termed the foremost economic entomologist of the day." The illustrations of these reports were made at his own expense, from drawings he has own hand. During two years (1862–770) [707 Kisley also served as associate editor of the "American

Entomologist." In 1815 at 1.144 frontistant in the tot of grassfrongers in the Northwestern States led to the cryater of a commission for the investigation and Prof. Biles, as which of this commission of the only of the commission of the only of the commission of the only of the commission of the other commission of

regrets. In 1878 he was appointed t mited States Entennelogist, and be filled this office till 1994. cacept in 1979 Inem. when, at the head of the Entomological commission, he conducted the cetters weem threetagation. the him reappointment so I mited States Enterpologist in [85] the countries with was transferred to the Department of Agricul ture, in which the divi sion of entomology was organized, and at its head he remained until June, I. 1994, when in

consequence of failing health he resigned after bringing to successful issue the treatment of the army worm and other insects migurous to cotton, he turned his attention to the orange interests of Florida, the insects affecting stock in the lower Massa-sippi, those affecting the hope, and these affecting cranberries. Two of his remedies have passed into almost universal use - the employment of kermens emulsified with milk or map against all suching insects and the invention of the "cycloms" or saidy chamler in merales for the spraying of immericulus or fungicules. He never received a cont beyond has begitimate salary, never took a fee for of Carried will never attempted to control any discensery to his own advantage, nor applied for a patent. In two he in troduced the Australian lady beg. I combe cordenates to free the orange groves of tal forms of the white scale, and he has been wately hearend for has studies on the grape phyllosers. In 1875 the French Repub-lic presented him with a gold medal for his services rench grape culture, and in lors a beautiful tecopie statue was presented to him to the grape growers of southern France. In 1889 fired Riley represented the Department of Agriculture at the Paris Lapsestion. On July 14, 1999, he received the 4 rems of Legion of Honor from the French to versional to services rendered to the agreement of all communities, and particularly to that of France and in 1864 he was awarded a gold medal by the secret authorities for a collection of forestry monte which he exhibited in Edinburgh His studies of the However by and the hop fly in England tore directly to long of agreems tural prespective and he was elected an horseners member of the Royal Agracultural Society. He was one of the 6 horners menture of the Landon In tempological Society, was for many sours removeding secretary, and for two years President of the Condense of Sciences of St Louis and was the founder and first president of the Frience lagious Societt of Wanh ington A tallingraphs of Fred Riley's works above more than your titles of tooks, paraginate, and magatitle and bewegaper articles on scientific endounts. His more important wieks are "Reports on the Most rous lienefrual, and other lessevts of the State of Pitato Proto" New York, 1939; Lacoust 11 const Plactic in the United States" (harage, 1977), and Attnual Reports as Fast one degreet of the Department Ismulture" pro-ulture." He lectured on anaemology at Cor-University, Kansas State Agricultural College columbian I niversity, and Missouri State University ts which institution conferred on him in 1872 the him-rary degree of Ph D. During his life Prof. E-les was an indefatagable collector and preserver insects, and he presented his immense presented.

tion to the National Museum at Washington. It contains insert than 20,000 species, represented by 115,000 parties at some and much additional material. It is the largest general collection in the United States, and is right in biological examples. Prof. Riley's reall, was excusioned by a fall from his bicycle a short distance from his suburban home. He was above the average in height, spare, athletic, with a hervous temperament, a dark complexion, and a striking Italian air. He was an accomplished inusician. In 1878 he married Miss Emilie J. Gonzelman, of St. Louis, by whom he had 6 children.

Ritchie Alexander Hay, engraver, born in Glasgow, Sestland, Jan. 14, 1822; died in New Haven, Conn., Sept. 12, 1825. He was educated in art at the Royal Institution under Sir William Allan, and took 4 prenounces for drawing during his first year as a student. This course of instruction was taken while he was serving an apprenticeship to a firm of press builders. In 1843, on completing his apprenticeship, he removed to Camada, where he engaged in portrait painting and learned steel engraving. From Canada he removed to New York city. He was elected an assected of the National Academy of Design in 1863, and an academican in 1871. He became the foremost engraver in stipple and mezzotint in the United States, and produced notable original compositions. His basi-known engravings are: "Lady Washington's Reception Day," after Daniel Huntington; "On the March to the Sea," after Felix O. C. Darley; "Henry Clay"; "Washington and his Generals"; "Death of Lincoln," the last three after his own paintings; "The First Reading of the Emancipation Proclamation." after Carpenter; "Washington entering New York"; "The First Blow for Liberty"; and "Sherman's March to the Sea," His paintings included: "Washington and his Generals"; "Mercy knocking at the Gate" (1866); "Fitting out Moses for the Fair" (1871); and portraits of Charles Hodge (1862) and James McCosh (1870).

Root. George Frederick, musical composer, born in Sheffield, Mass., Aug. 30, 1820; died on Bailey's island, Maine, Aug. 6, 1895. He was brought up on a farm till his eighteenth year, when he went to Bos-ton. There he devoted himself to the study of music, and in 1839 '44 was instructor in the public schools, and also director of music in 2 churches. He then removed to New York city and taught till 1850, when he spent a year in Paris. In 1859 he became a member of the music-publishing firm of Root & memoer of the music-pholishing firm of Root & Undy, of Chicago, and took up his residence in that e.ty. He was the originator of normal musical institutes, and was one of the faculty when the first one was held in New York city in 1852. Besides many popular songs, he composed much sacred music, and mental music, pamphlets on harmony and the printhe of teaching, and articles in musical periodicals. Maily of his war songs were very popular. The Battle try of Freedom" was inspired by the Tresident Lincoln's second call for troops, it is and more started together in his mind, and a nas a arrely dry when the song was sung at charg, to be used afterward in camp, on at I even on the field of battle, I mand for Mr. Root's music in Engis thing several months in muat at heard his own songs fre-- friend J. Curwen Spencer, of the shawing in the musical of Marcalla nearly 24 pages deworks reprinted in the second of the works reprinted in the second of th 76 - 1 -Fra La In a recent catah m, and -July 200 - 1 1 1 6 15 of George F Lee

14 printing presses at work on "The Battle-Cry of Freedom." "Tramp! Tramp! Tramp!" was written near the close of the war, and had only a year of its influence, but during that time it gave a profit of \$10.000. Work was his pleasure, and he never took an

absolute vacation from it. His personal appearance was very pleasing. He was tall, creet, and courly, with a fine strong face, and an atmosphere of friend-liness. He received the degree of Mus. Doc. from the Chicago University in 1872. His best-known compositions are "Hazel Dell" (1853); "Rosalie, the Prairie Flower" (1855); "The Battle Cry of Freedom" (1861); "Just before the Battle, Mother" (1863); "Tramp! Tramp! the Boys are Marching" (1864); "The Old Folks are Gone"; "A Hundred Years Ago"; "Old Potomac Shore"; the quarte "There's Music in the Air"; and the cantatas "The Flower Queen" (1852) and "The Haymakers" (1857).

Rothermel, Peter Frederick, artist, born in Nescopack, Pm., July 18, 1817; died in Grassmere, Pa., Aug. 15, 1895. He received a common-school education, studied land surveying, became a sign painter when twenty years old, and soon afterward was led to study drawing by attending an art exhibition in the Philadelphia Academy. He began his art career as a portrait painter, but as there was then only a slight demand for portraits, he turned his attention to historical subjects. In 1856 he spent a short time in London and Paris, and then spent two years in Rome, returning to Philadelphia in July, 1859. He was an honorary member of the National Academy of Design and an active member of the Pennsylvania Academy of Fine Arts. His paintings include: "De Soto discovering the Mississippi" (1844); "Embarkation of Columbus"; "Christian Martyrs in the Coliseum"; a scries illustrating Prescott's "History of the Conquest of Mexico"; "The Virtuoso" (1855); "Vandyke and Rubens"; "King Lear," from a study of a pose of Forrest in London (1856): "Patrick Henry before the Virginia House of Burgesses"; "St. Agnes" (1858); "Paul Preaching on Mars Hill"; "Trial of Sir Henry Vane"; "Battle of Gettysburg" (finished in 1871, now in Memorial Hall, Philadelphia); "The Landsknecht" (1876); "Baechantes" (1874); "Columbus before Isabella"; "Macbeth mediating the Murder of Duncan"; "Lady Macbeth"; and "Amy Robsart interceding for Leicester." Many of his paintings have been engraved.

Royall, William Bedford, military officer, born in Virginia, April 15, 1825; died in Washington, D. C. Dec. 13, 1895. He was commissioned 1st licutement in the 2d Missouri Mountain Infantry July 31, 1846, and 1st lieutenant and adjutant of the Santa Fe batand ist fleutenant and adjutant of the Santa refeatation Aug. 14, 1847, and was indistered out of the service Oct. 20, 1848. On March 5, 1855, he was completed out the lieutenant, 2d United States 4 avairy fle was promoted captain March 21, 1861; major, 5th Cavairy, Dec. 7, 1863; lieutenant colonel, 3d Cavairy, Dec. 2, 1875; and colonel, 4th Cavalry, Nov. 1, 1882; and was retired Oct. 19, 1887. During the civil war was brevetted major, May 37, 1862, for Hanover ourthouse; lieutenant colonel, June 13 following, for Old Church, Va.; colonel, March 13, 1865, for recrulting services; and brigadier general, Feb. 27, 1800, for gallantsy in the action against the Indians on Resolud Creek, Mont., June 17, 1876. His appointment to the regular army was in recognition of his gallantry in the Mexican War, especially at the cap-ture of Puebla de Tacs. In 1856 he took part in an erredition to the head waters of Conchos river, and in his camp against hostile Comanches. In the civil war he took part in the engagement at Falling Waters, the siege of Yorktown, and the actions at Hanover Court so, Williamsburg, and Old Orchard. In the last he received saber wounds while cutting through the enemy to escape capture, and was disabled for several are, serving the remainder of the war on recruitng duty. After the war he served against Indians n Kanas, 1868, in the Republican river expedition, 569, and in the Yellowstone expedition, 1876.

z, James Adams, embryologist, born near Lou-Pa, in 1859; died in Philadelphia, I'a, March His education was limited in the main to a public-school course, though he studied for some time on a Jessup scholarship at the Acad-smy of Sciences in Philadelphia. He published, when twenty-five years old, an account of his seletitific researches that attracted the favorable attention of European bacteriologists, and in consequence he received the appointment of embryologist to the United States Fish Commission. In 1886 he was called to the chair of Comparative Embryology in the University of Pennsylvania, which he held till his death. He invented various instruments, including microtome, designed to unravel the structure of simal tissues in serial form, and achieved his highest sentific reputation by his investigations into the arti-

cial propagation of ovsters. He was a prolific writer biological science. Savyer, Sylvanus, inventor, born in Templeton. April 15, 1822; died there Oct. 25, 1895. From childhood he showed great mechanical ingenuity, and from his twelfth to his twenty-first year he spent most of his time in endeavors to improve articles of familiar mechanism. In 1839 he went to Augusta, , and worked with his brother-in-law, a gunemith. Prior to attaining his majority he had made invenne, including a reed organ that embedied many of the features of those in use to-day, a steam engine, a About 1843 he went to work in a machine shop in and there invented a machine for splitting rattan for use in chair bottoms. Such a device had long been sought, and on receiving his patent, in 1851, he and a brother established themselves in East Templeton as manufacturers of chair cane. This in on revolutionized the chair-cane industry, and transferred it from European and Asiatic countries to the United States. In 1853 he invented improve ments in rifled cannon projectiles, which were put ented in 1855. He spent considerable time and me he experimenting with these devices for the benefit of the United States Ordnance Bureau, and chettes the declaration by the Secretary of War that the practicability of rided cannon projectiles had been denoted in the secretary of the declaration by the Secretary of the state of t strated. In the early part of the civil war panish were prepared for service under his patent, and their efficiency was highly commended; but the towern

ment did not adopt his sister. ordname officers in expension La in the manufacture of carried there , his patent. Beelye. Julius Hawley, educator, born in Bethel, Conn., Sept. 14, 1824; died in Amherst, Mass., May 12, 1895. He was graduated at Amherst College in 1849; studied theology at Auburn, N. Y., in 1849-52, and at Halle, Germany, in 1852-53; was ordained by the t lassis of Schenectady in 1853; and was pastor of the First Reformed Dutch Church in Schenectady, N. Y., on 1853 78. In the last year he was elected Professor of Mental and Moral Philosophy in Amherst College, holding the chair till 1875. In 1874 he was elected holding the chair till 1870. In 1874 he was elected to Congress as a popular candidate, not having been nominated by any party. While in Congress he acted in general with the Republican party, though he opposed the Electoral Commission and the declaration of the election of Rutherford B. Hayes to the president of the check of th dency. In 1877 he was elected President of Amherst College, which office he resigned in June, 1890. He received the degree of D. D., from Union College in 1842, and L.L. D. from Columbia in 1876. He accepted an invitation to deliver a course of lectures in India in 1872; was a member of a commission to revise the tax laws of Massachusetts; was one of 3 visitors appointed to oversee Andover Theological Seminary; and was a trustee of the Clarke Institute for Deaf Mutes, of Smith College for Women, and of Mount Holyoke Female Seminary. During his administration at Amherst the college received endowments amounting to over \$500,000, and he was instrumental in raising over \$270,000 after the burning of Walker Hall. He made radical changes in the management of the college, abolishing the marking system and the valedictory exercises, and selected the commencement speakers from special departments in which they excelled. He also brought about the abolition of rules for the conduct of the students, and formed what was known as the "college senate," under which the students governed themselves in all matters conearning deportment. Dr. Seelye was a frequent conto for to periodicals, and published a translation of Schwegler's "History of Philosophy" (New York, 1875, "Lectures to Educated Hindus" (Bounbuy, 1871, republished as "The Way, the Truth, the Late," Beston, 1873, and translated into Hindustani, Japanese, and Germana; and "Christian Missions S. Shea, George, jurist, born in Cork, Ireland, June 10, 826; died in New York city, Jan. 15, 1895. He was the son of John Augustus Shea, author and journalist, and came to the United States with his parents in New York city; was corporation attorney in 1865-67; and was chief justice of the Marine Court of New York in 1870. Judge Shea was associated with Charles O'Conor in the defense of Jefferson Davis, and was counsel for the Kings County Elevated Railand was counsel for the Kings County Flevacea Ran-road in Brooklyn. He published "Hamilton," an his-torical study (New York, 1877; enlarged edition, Bos-

Shufeldt, Robert Wilson, naval officer, born in Red Hook, N. Y., Feb. 21, 1822; died in Washington, D. C., Nov. 7, 1895. He was appointed a midshipman in the navy, May 11, 1839; was promoted passed mid-shipman, July 2, 1845; master, Feb. 21, 1853; lieutenant, Oct. 26, 1853;

commander, Nov. 19. 1862; enptain, Dec. 31 following; com-modore, Sept. 21, 1876; and rear-ad-miral, May 7, 1883; and was retired, Feb. 21, 1884. He was on sen service for eighteen years and one month; on shore or other duty, eleven years and three three months; and was unemployed twenty six years and four months, being out of the service for seven

years and seven months from July 20, 1854, when he was connected with the merchant marine and had charge of a surveying party on the isthmus of Tehnantepec. At the beginning of the civil war he was in command of a steamship plying between New York and Havana, and soon afterward he was appointed United States consul general at the latter city. Early in 1863 he re-entered the navy under a commission of commander, dated Nov. 19, 1862. He was first given command of the steamer "Conemaugh," then on blockading duty at Charleston, and took part in the engagements on Morris Island. In 1864-766 he com-manded the "Proteus" of the Eastern Gulf blockading squadron. After the war he was successively in command of the "Hartford" of the East India squadron, the "Wachusett" of the Asiatic squadron, and the monitor "Miantonomoh." In 1870-771 he was again on surveying duty, both on the Tehuartepee and Nicaraguan routes. During 1875-78 he was chief of the Bureau of Equipment and Recruiting. and in 1879-'80 was on a special mission to Africa and the East Indies, in connection with the expansion of American commercial relations. During this cruise he was selected for arbitrator by the United States and British governments to settle the Liberian boundary question, and subsequently he negotiated an agreement with the Kingdom of Korea for protection while at of American life and property. In 1881, while at Pekin, China, as special agent of the United States Government, he secured the treaty that opened Kores to the world and recognized that kingdom as an independent nation. After his return to the United States he was president of the naval advisory board that designed the first steel cruiser and planned the new navy, and was also superintendent of the naval observatory. After his retirement he spent some time in Korea as the guest of the nation.

Sleeper. Solomon S., philanthropist, born in Bristol, N. H., March 18, 1815; died in North Cambridge, Mass., Jan. 6, 1895. He was the son of a Methodist elergyman, and in 1843 engaged in the wholesale

At the centermal of the imageura-tion of President Washington in New York city on April 29, 1889, he was consensite of a crew of 10 veserati sea captains, all members of the Marine Lo change, that rowed President Harrison in a small boat from the United States steamer " Businich" the East river to the landing stage at Wall beyond.

Spoir, Samuel Plast, physician, been in Breaklyn N. I., April 9, 1858; died there Dec. 19, 1895. 14 was graduated at the meetical department of the Uniwas graduated at the messions department or the aboversity of New York in 1860, having won the Most gold medal and the Van Buren jerise for achadarship. He also was awarded the Weed prize at Bellevue Hospital, which he autosequently entered. He continued his studies in Europe for nearly three years. l'laster of l'aris as a substitute for splints was there first introduced in surgical operations. He made a apecial study of the innovation, returned to the United States in the latter part of 1862, and was sent by the United States Sanitary (commission to the Army of the Potesnac, where he dostinguished hims self in applying these surgical axis. In 1865 he returned to Brooklyn, where he remained tell his death. holding the offices of demonstrator of anatomy in the Long Island College Hospital, physician, curador, microscopist, and surgeon of the Brooklyn Hospital, surgeon to the tumor and cancer department of Brooklyn Dispensary, and consulting surgeon of the Brooklyn Dispensary, and consulting surgeon of the hospital. Dr. Spier originated the Scanide Home for Children and foundoithe Helping Hand Dispensary. He published the "Pathology of Januadice" 1966, for which he received a gold medal, "The Murse-scope in the Differential Diagnosis of Morbid Growth." (1871); and "The New Method of arresting Homestringe by the Use of the Artery Constructor," which won a prize from the New York Medical Scientiff. He was widely known as an expert on camer, which were the camer of his death. was the cause of his death

Both, Edward A, musical componer, been in thermany in 1820; died in Ecodout, N. Y. April 21, 1896. He developed musical abilities at an east age, and became especially known as a composer of religious, classical, and concert music. Among his twee known compositions are the "Austrian Bugle March" and the "Apollo Overture," a funeral march.

Sprague, Eben Carleton, lawyer, been in Bath, N. H., Nov. 25, 1977, died in Buffalo, N. 1. Feb. 14, 1986. 1 - Feb 14, 2003 He removed with his parents to Buffals in 1896. He studied at Phillips Exeter Academa, and was graduated at Harvard in 1943. He was admitted to the bar in thitoher, 1964, and from that times practiced in Buffalo. He was a member of the State Security in 1576 "T, was for several years Chameelles of the Cabversity of Buffalo, and was President of the Harmard Club of western New York, and President of the Liberal club of Buffalo. Harmard gave him the de-

gree of L.I. D. in 1892.

Stearns, John Newton, reformer, been in New Ign.

March 1992. A Land in Recording N. N. with N. H., May 24, 1879, died in Brooklyn, N. L., April 33, 1895. He engaged in journalism in New York in 1850, and became editor and proprietor of "Merry's Museum" in 1856. He joined a juvenile temperance mariety when seven years old; Barristone a member of the Some of Temperature at his berth place in 1448, was elected grand worthy patriarch of the grand division of eastern New York in 1939 and 1944

and most worthy grand patriarch of the national division of North America in 1866. In the latter year he also joined the Independent Order of Good Templars, and subsequently he was twice elected grand worthy templar of the Grand Temple of New York. On the organization of the National Temperance Society and Publishing House, in 1865, he was appointed its corresponding secretary and publishing agent, which offices he held till his death. In 1875-76 he was President of the New York State Temperance Society, and in 1893 had general charge of the World's Exposition. Mr. Stearns was editor, from 1885, of the "National Temperance Advocate"; was also exister of the "Youths' Temperance Banner," "The Water Lily," "The National Temperance Almanac," issued annually since 1869; and published "The Temperance Chorus" (New York, 1867); "The Temperance Chorus" (New York, 1867); "The Temperance Volume" (1876); "The Prohibition Songster" (1885); and "One Hundred Years of Temperance

Steams, Joseph Barker, electrician, born in Weld, Me., Feb. 28, 1831; died in Camden, Me., July 2, 1895. He learned telegraphy in Newburyport, Mass.; became superintendent of the Boston Fire-slarm Telegraph Company in 1855, and held the office till 1867, when he was elected President of the Franklin Telegraph Company, operating lines between Boston and Washington. While in charge of the fire-alarm tele-Washington. graph in Boston he made numerous inventions, by which the system reached its present high state of development. In 1868 he invented a duplex system of telegraphy, for which he received a United States patent and revalties from the British, French, Italian, Russian, and Spanish governments, from several in Central and South America, and also from submarine telegraph companies. He was employed as an electrical engineer in making, laying, and putting into operation telegraph cables between Galveston, Texas, and Vera Cruz, Mexico, and between the Isthmus of Tehuantepse in Mexico and Callao, Peru. On the completion of his last work he made his home in Canaden, Me., where he gathered a collection of carved ivories, said to be the largest ever made.

Stevens, John Leavitt, journalist, born in Mount Vernon, Me., Aug. 1, 1820; died in Augusta, Me., leyan Seminary and the Waterville Liberal Institute; studied theology, and was ordained a minister of the Universalist Church in 1844. After ten years failing Universalist Church in 1944. Article Co., she health compelled him to abandon the ministry, and health compelled him to abandon the ministry, and Kunnelse Journal," called him to the associate editor-ship of that paper. Three years afterward Mr. Blaine removed to Portland, and Mr. Stevens succeeded him as editor in chief, holding the place till 1870. He was then appended United States minister to Uruguay and Paraguay, which countries were in a disturbed ~ 5 litten. He was influential in protecting American threes and in aiding to re-establish peace between the second research went to Sweden as United States of the r. to making there till 1883. While residing the pathered materials for a history of the days Violphus and the Thirty Years' War. In a same appeared minister to the Hawaiian Is-At a granted ministry to the royal Government of the ministry of Jan. 20, 1863; the Queen's the Archive of the Town, and a provisional govern-ing I use article Hawaiian Islands in Cycle Ila" for 1893). Minister I a proposition over the islands on use proposed disavowed by the State on Feb. 15 President Cate a message accompanied Rate a message accompanied by thing for annexation.

Rate the first thing for annexation of the first thing for annexation of the first thing for annexation of the first thing of the f connected with the overthrow of its Government, vesting him with paramount authority. On April 1 Commissioner Blount withdrew the protectorate, and in May Minister Stevens was recalled and Mr. Blount was appointed minister in his place. Mr. Stevens returned to the United States and took no further part in public affairs.

Stiles, Isaao Newton, lawyer, born in Suffield, Conn., July 16, 1833; died in Chicago, Ill., Jan. 18, 1895. He received a common-school education, studied law, and was admitted to the bar in Lafayette, Ind., in 1855. Soon afterward he became prosecuting attorney; was elected to the Legislature; and was an active speaker in the Frémont presidential campaign. At the beginning of the civil war he enlisted as a private, but went to the field as adjutant of the 20th Indiana Infantry. He was taken prisoner at Malvern Hill, and was confined for six weeks in Libby prison. On being exchanged, he returned to the army; was promoted major, lieutenant colonel, and colonel of the 63d Indiana Volunteers, and was brevetted brigadier general for meritorious services in the field, Jan. 31, 1865. After the war he settled in Chicago to practice. For several years he was totally blind.

Stockbridge, Henry, lawyer, born in North Hadley Mass., Aug. 31, 1822; died in Baltimore, Md., March 11, 1895. He was graduated at Amherst College in 1845, and was admitted to the bar in Baltimore, May 1, 1848. During the civil war he was active in the Union cause, and was appointed a special district attorney in the War Department. In 1864, while a member of the Legislature, he drew up the act providing for a Constitutional convention to abolish slavery in that State. He was elected to this convention, and subsequently defended the Constitution framed by it before the court of last resort. Subsequently he instituted and prosecuted with success in the United States courts proceedings for annulling the indentures of apprenticeship, through which attempts had been made to evade the emancipation clause. By these efforts he secured the enfranchisement of more than 10,000 colored children in Maryland. In 1865 he was judge of the circuit court Baltimore County. He was Vice-President of the Maryland Historical Society, for more than twenty years editor of the fund publications, and contributed Part XXII to "The Archives of Maryland" (Baltimore, 1866).

Stone. David Marvin, journalist, born in Oxford, Conn., Dec. 23, 1817; died in Brooklyn, N. Y., April 2, 1895. He received a common-school education, and was engaged in teaching and in mechanical pursuits till 1842, when he became a merchant in Philadelphia, and in 1849 removed to New York city and became editor of the "The Dry-goods Reporter." In December following he became commercial editor of "The Journal of Commerce." In 1861, in conjunction with William C. Prime, he purchased the paper, and five years afterward succeeded Mr. Prime as editor in chief. He held this place till June 10, 1893, when the paper was consolidated with "The Commercial Bulletin." A notable incident in his long editorial career was the suppression of his paper by the United States Government in May, 1864, for publishing a spurious draft proclamation purporting to have been issued by President Lincoln. Copies of the alleged proclamation were sent to the principal newspapers in the city, but the "Journal of Commerce" and the "World" were the only ones that published it in full. The only person imprisoned was Joseph Howard, Jr., author of the canard. Mr Stone was a lover of flowers, and spent all his leisure in his garden and conservatory, giving freely of his floral treasures to the poor and sick. He bequeathed to the Brooklyn Society for the Relief of Reputable Aged Indigent Women \$5.000.

Story, William Wetmore, sculptor, essayist, and poet, born in Salem, Mass., Feb. 12, 1819; died in Vallombrosa, Italy, Oct. 7, 1895. He was a son of Joseph Story, the famous jurist, and after graduation at Harvard University studied law with his father and was

admitted to the bar. Five years of active work in his profession, during which time he produced several law books and contributed both verse and prose to the magazines, were followed in 1845 by a severe ill ness, from which he had hardly recovered when his

father died. It was descrided by the bar to erect a statue to Judge Story, and the commission was given to his son, who had hitherto accomplished only amateur work in sculpture. In order to qualify himself for serious effort in this direction he went to Rome to study, and for the rest of his career made Italy his home, He made, however, several visits to the United States, delivering a series of art lectures here in

the winter of 1877-79. In 1843 Mr. Story married Miss Eldridge in Boston, Mr. Story's studio was one of the most popular places of resort for visitors in Reme, and about the sculptor himself centered much of the best literary and artistic life of the city. He went to Italy at a period when very little had been accomplished in sculpture in his native country, and if he never rose to greatness as a sculptor, he still accomplished much that was both creditable and pleasing lis "Cleopatra" statue is mentioned by Hawthorno in "The Marble Faun," and among his best works of this character are the statues of Josiah Quincy, at Sanders Theater, Cambridge, and George Peabody, in London. Much less admirable are such well-known works of his as the "Edward Everett," in the Beston public garden, and the "Prescett," at Bunker Hill. In poetry Story takes a higher rank than in sculpture; the level reached in his first volume of poems in 1847 is maintained in all his allegant works. subsequent work down to the latest collection of bis verse in 1885. His poetry exhibits a delicacy of suggestion, a strength of phrase, a felicity of diction, and a glow of color that win our admira-tion, but it falls short of a very high degree of excellence. The "Roman Lawyer in Jerusalem," one of his most characteristic poems, was better known a constation ago than it is at present; but perhaps his lines on the historian Motley show him, in certain work was "Roba di Roma," a series of "Walka and Talks about Rome," which remains as delightful reading to-day as when it was written. "Fiammetta a novel deeply penetrated with Italian passion, and displays one side of his varied nature, as his "Conversations in a Studio," a critical volume, reveals an other. Yet it must be admitted that in prose as in verse, and in sculpture also, Story achieved nothing distinctive, although his work in all three departments of effort gives much pleasure. But it is the work of a highly accomplished dilettante, not that of evalus. His talents were exercised in teo many fields to admit of supreme excellence being achieved fields to admit of supreme excellence being achieved in any one. He was strongest as a poet. Mr. Story's first published work was a "Treatise on the Law of Sales" (Boston, 1844), followed by a "Treatise on the Law of Contracts" (Boston, 1847). His other basks include "Poems" (Boston, 1847). His other basks include "Poems" (Boston, 1847); "Life and Latters of Joseph Story" (1852); "Poems" (Roston, 1856); "Robs di Roma" (London, 1862); "The American "Question" (London, 1862); "Proportions of the Haman Figure" (1866); "Graffiti d'Italia" (Edinburgh, 1853); "The Roman Lawyer in Jerusalem" (Roston, 1870); "Norto; An Historical Play" (Edinburgh and London, 1873); "Castle St. Angelo" (Philadel; his. 1877); "Vallombrosa" (Edinburgh, 1881; "He said She; or, A Poet's Portfolio" (Boston, 1884); "Flant She; or, A Poet's Portfolio" (Boston, 1884); "Fammetta: A Summer Idyl" (Boston, 1885); "Fams" (Edinburgh, 1885); "Conversations in a Studio"

1834 entered a printing office as an apprentice, where he had Horace tireely for an associate. A friendship aprang up between them, and on leaving the printing office the two set up in business for themselves under the name of Horace Greely & Co., and edited and published the "Log Cabin." In 1843 Mr. Swain pur-chased the "Hudson Kiver Chronicle" in Sing Sing, Y , and edited and published it till 1849, when he returned to New York and became city editor of the "Tribute" He went to the "Times" in a similar capacity in 1851, and became editor of the "American Agriculturist in 1852, and political contributor to the "Times" in 1853, and its Washington corre-*pendent in 1800. He also edited the "Free State see, and the Albany "Daily Statesman" in 1857-'61. In 1set he taised a body of cavalry known as "Scott's Nine Hundred," and went to the front as its colonel, He served till the close of the war, and on his return was appointed engineer in chief of the National Guard of New York. In 1867-70 he was a United States we gher, in 1876-85 edited the "Hudson River chronole," and in 1881-85 was an inspector of post offices He published " Life and Speeches of Henry (2 vols, New York, 1842); "Historical Notes to a t ollection of the Speeches of Henry Clay" (2 vols., 1843); and "Military History of the State of New York" 3 vols., 1861-65).

Swinburn, Balph, engineer, born in Newcastle, England, in January, 1895; died in Charleston, W. Va. June 14, 1895. He was the son of a miner, and when fifteen years old was apprenticed to Stephenson, who was then perfecting his railway locomotive. In 1850 he settled in New Orleans, afterward removing to Eichmond Va., where he secured employment in the building of the old Virginia Central Railroad. He remained in the railway service as operating and constructing engineer till about 1870, when he settled on a farm in West Virginia, and also entered the ministry of the Baptist Church, and was engaged in work as an evangelist till within two years of his death. Mr. Swinburn aided Stephenson in making the trial trip of the first railway locomotive, and sat in the cab

with his hand on the throttle as engineer.

Taylor, William Mackergo, elergyman, born in Kil-marhoek, Scotland, Oct. 23, 1829; died in New York city Feb. 8, 1895. He was graduated at the Univer-. to of Glasgow in 1849; studied theology at the Diinty Hall of the United Presbyterian Church at Edenburgh; was licensed to preach by the presbytery of Kilmarnock, Dec. 14, 1852; and was ordained pastor of the United Presbyterian Church at Kilmaurs, June In 1855 he was called to the United Presbyter an Church on the Derby Road, Liverpool, where I cla's red for sixteen years, building up a congregaton of from 16 to nearly 1,000 members, and leaving tille second largest of its denomination in England. contributor to the religious press; and published "Life Truths," a volume of sermons (Liverpool, 1862); "The Miracles: Helps to Faith, not Hindrances" (Edinburgh, 1865); "The Lost found and Wanderer welcomed" (1870); "Memoir of the Rev. Matthew Dickie" (Bristol, 1872); "Prayer and Business" (New York, 1873); "David, King of Israel" (1875); "Elijah, the Prophet" (1876); "The Ministry of the Word" (1876); "Songs in the Night" (1877); "Peter, the Apostle" (1877); "Dariel, the Beloved" (1878); "Moses, the Lawgiver" (1879); "The Gospel Miracles in their Relation to Christ and Christianity" (1880); "The Limitations of Life, and Other Sermons" (1880); "Jesus at the Well" (1884); "John Knox: A Biography" (1885); "Joseph, the Prime Minister" (1886); "The Parables of Our Saviour expounded and illustrated" (1886); "The Scottish Pulpit" (1887); "Ruth, the Gleaner" and "Esther, the Queen" (1891); "Good Character: What it is, and how to form it" (1892); and "The Boy Jesus, and Other Sermons" (1893).

Thatcher, Solon O., jurist, born in Hornellsville, N. Y., Aug. 31, 1830; died in Lawrence, Kan., Aug. 11, 1895. He studied at Union College, and was graduated at Albany Law School in 1856. He was a delegate to the first State convention in New York for the organization of the Republican party, and after the Frémont campaign removed to Lawrence, Kan., where he at once became one of the counselors of the Free-state movement. In 1859 he was temporary presiding chairman of the Wyandotte Convention, and was chosen chairman of the legislative committee of that body. He was elected the first district judge of the 4th Judicial District of Kansas in 1859, and served till 1864, when he resigned, and was the unsuccessful Republican candidate for Governor. He was appointed in July, 1884, one of 3 commissioners to negotiate treaties with the South and Central American governments; and at the subsequent assembling of the Pan-American Congress at Washington he made a detailed report of his work.

Thomas, Elisha Smith, clergynnan, born in Wiekford, R. I., March 2, 1834; died in Salina, Kan., March 9, 1895. He was graduated at Yale in 1858 and at Berkeley Divinity School, Middletown, Conn., in 1861. In June of the latter year he took deacon's orders, and after taking priest's orders was for three years rector of St. Paul's Church at New Haven. In 1864 he became rector of Scabury Hall, Faribault, Minn., and Professor of Old and New Testament Exegesis in the divinity school there. In 1811 he accepted a call to the rectorship of St. Mark's Church, Minneapolis, which he held till his consecration as Assistant Bishop of Kansas in 1887. On the death of Bishop Vall in 1889, Bishop Thomas became the head of the diocese, and he labored with energy and ability in behalf of

Church extension.

Thomes, William Henry, author, born in Portland, Me., May 5, 1824; died in Boston, Mass., March 7, 1895. He received a public-school education and learned the printer's trade. In 1843 he went to California, and again in 1849, extending his last trip to Honolulu, the East Indies, Australia, and China. During his travels he visited almost every point of interest on the South American and African coasts. He was engaged for three years in the mines in Australia; spent some time on an opium smuggler between China and California; and at the beginning of the Mexican War was forced into the service of the Mexican Government, from which he escaped with difficulty. On his return to Boston he became editor of "Ballou's Monthly," to which he contributed a large number of stories. Among his publications are "The Gold Hunters of Australia" (Boston, 1869); "Life in the East Indies" (1870); "A Whalensan's Adventures" (1871); "The Gold Hunters in Europe" (1872); "A Slaver's Adventures" (1873); "Running the Blockade" (1874); "The Belle of 'Australia" (1885); "On Land and Sea" (1886); and "Lewey and I" (1887). He was the first President of the New. England Society of California Pioneers.

Thompson, Alexander Ramsey, clergyman, born in New York city, Oct. 16, 1822; died in Summit, N. J., Yeb. 7, 1895. He was graduated at the University of the City of New York in 1842, and at Princeton Theological Seminary in 1845; was pastor of the Preshyterian Church, Staten Island, in 1851-59; of the Reformed Dutch Church in Twenty-first Street, New York city, in 1862-73; and of the North Reformed Dutch Church, in Brooklyn, N. Y., in 1873-58, While holding a pastorate in Bridgeport, Conn., at the beginning of the civil war he was instrumental in organizing the 17th Connecticut Regiment, and for a year he was its chaplain. He was also an organizer of the Christian Commission, and for two years was in charge of the New England Soldiers' Relief Bursau. In 1863-65 he was chaplain of the New England Hospital, and from 1873 till his death, of the Rossevelt Hospital, New York city. He reserved the degree of D.-D. from the University of the City of New York in 1865, and had been a member of its council since 1872. Among his publications are "Casting down Imaginations" (1874) and "Christian Patriotism: The Points of Similarity between the Struggle for Independence in America and that of our Holland Ancestors" (1875). Dr. Thompson was the author of many hymns, and his translations of Latin and Greek hymns rank high. He assisted in cempiling "Hymns of the Church" (New York, 1869) and "Hymns of Prayer and Praise" (1874).

Themsen, Alfred, artist, born in London, England, in 1831; died in Barnegat Park, N. J., Aug. 31, 1895. He was educated at Rugby and Cambridge; entered the Enniskillen Dragoons, with which he served for several years, attaining the rank of captain; sold his commission, and studied art in Munich and Paras; and did considerable work on the illustrated papers in the last city. Three of his paintings were exhibited at the Royal Academy. After returning to London he was for a time editor of "Pan and the Mask," was one of the founders of the Empire Music Hall, and composed and superintended the preduction of pantomimes at Dray Lane Theater and Covent Garden. He settled in New York city in 1884, where for a time he published a comic paper called "Snap." He saipted "The King's Pleasure" for Lawrence Barrett, wrote the librettos for "The Arabian Nights" and "The Crystal Slipper"; designed the floats for the Columbian Celebration parade, and the seenery and costumes for Robson and Crane's production of "The Comedy of Errors," and for several years devoted himself almost exclusively to designing the atrical seenery and costumes.

Thempson, Mary Harris, surgeon, born in Washington County, New York, in 1829; died in Chicago, Ill., May 21, 1895. She was educated at Fort Edward In estitute and West Poultney Academy, and studied at the New York Infirmary for Women and Children. In 1843 she removed to Chicago, where she gained the reputation of being one of the most eminent female surgeons in the world. She was one of the promoters of the Women's Medical College, and founder of the Chicago, Henrital for Women and Children.

Chicago Hospital for Women and Children.

Thurnan, Allen Granbery, jurist, born in Lynchburg, Ya., Nov. 18, 1813; died in Columbus, Ohio, Dec., 12, 1893. He accompanied his parents to Chillicothe in 1819, where he received his education, and afterward settled in Columbus. His first employment was as an assistant to a party of land surveyors in Ohio. Afterward he studied law and became private secretary to Gov. Lucas. He was admitted to the bar in 1836. Returning to Chillicothe, he entered into partnership with his uncle, William Allen, and when the latter laid aside his law practice for his political affaces. Mr. Thurman took charge of all of the fermer. His received the Democratic nomination for Congress in 1844 and was elected. He declined a remountable and resumed the practice of law till 1800, when he was elected a judge of the Supreme Court of the States serving the last year of his term as chief justice. He declined a renomination for this office also, and azend

returned to practice. In 180' he was the cambillate for two errors and in the Kuthertord B Hayen, he greatly reduced.

of the successful party. The new Legiolature was I temolected in the legiocratic and elected him United States Senator for the term leginning March 4, 1869. He was appointed a member of the Committee on the Judiciary, of which subsequently which subsequently he was chairman for several years. In 1874, he was reelected to the Senate, and in this term was chesen its president profess. While

in Congress he drafted the bill to compare the bond aided Parific railreads to fulfill their the gathers to the tiovernment, since known as the "Therean act" presented arguments against the constitute made of the Civil Rights bill which have some tune our tained by the I nited States & present ours about to secure for the States that severled the most far ga ble reconstruction legislation opposed the Kovamp tion act, advocated a concurrent readed as declaring that the public debt of the I m ted mater was payable in allver coin of standard weight and \$money supported the Bland Alimon act took part is from ag the bill providing for the Levises & common and was a member of that tody and a warm didnotes of its constitutional authority and of its december James G. tion by the American Bible Society in New York in 1864-'67. From 1857 till 1880 he was manager of the mission press in Beyrout, and afterward he was physician to St. John's and St. George's Hospitals and Professor of Pathology in the Syrian Protestant College. In Syria he was esteemed as the "Great Hakim," or "Great Healer." On April 2, 1890, on the completion of his fifty years of service among them, the Syrians held a jubilee in his honor. He received the degree of D. D. from Rutgers College in 1865. His publications in Arabic include a series of mathematical, chemical, astronomical, and hygienic works, and translations of the "Shorter Catechism

works, and translations of the "Snorter Cateenism and the "Schönberg Cotta Family."

Van Wyck, Charles Henry, lawyer, born in Pough-keepsie, N. Y., May 10, 1824; died in Washington, D. C., Oct. 24, 1895. He was graduated at Rutgers College in 1843, studied law, was district attorney of Sullivan County, New York, in 1859-'56, and was a Representative in Congress in 1859-'63. While in his second term he was commissioned colonel of the 56th New York Volunteers, with which he served to the close of the war, being promoted brigadier general in close of the war, being promoted brigadier general in 1865. In 1866 and 1868 he was re-elected to Congress. He removed to Nebraska in 1874, was a delegate to the Constitutional Convention in 1876 and a State Senator in 1876-'80, and was elected United States Senator, as a Republican, and took his seat March 4, 1881. In the Senate he distinguished himself he respictives in the state of the seat has a second of the seat of t self by persistency in the attempt to secure the removal of secrecy from its executive sessions. In 1892 he was defeated as the Populist candidate for Governor of the State. Senator Van Wyck was conspicuous in organizing the Farmers' Alliance movement in Nebraska. He was a man of much eccentricity, at one time spending an entire summer with his family in a vacant church which he owned in the fashionable residence part of the national capital.

Vaux, Calvert, architect and landscape gardener, born in London, England, Dec. 20, 1824; died in Bensonhurst, Long Island, Nov. 19, 1895. He was educated at the Merchant Tailors' and the F. A. Reynell's schools in London. At the age of nineteen he became an articled pupil of Lewis N. Cottingham, a prominent architect, and at the close of his three years' indenture took an educational trip on the Continent. In 1850, being then a member of the London Architectural Association, he met the eminent Ameri can landscape designer, Andrew J. Downing, who induced him to come to this country as his assistant and at the close of 1851 made him architectural partner their office being at Newburg, on the Hud-son. After the death of Mr. Downing, in 1852, Mr. Vaux remained for five years in Newburg, his professional engagements rapidly growing in number and importance, and taking him over a wide extent and importance, and taking him over a wide extent of the seaboard States. An idea of his work at that time may be got from his book "Vilna and Cottages" (New York, 1857; 2d edition, 1864). At the suggestion of John A. C. Gray, whose house in Fifth Avenue he had designed, and who remained his stanch friend through life, Mr. Vaux removed to New York to take charge, as architect, of the Bank of New York, and from that time he was identified with the best art life of the metropolis. Landscape painting, then at its best, centered in New York, but the leading city of America was at a low stage both in architectural adornment and in civic stage from in architectural adornment and in civil dignity. Most of the territory now known as Central Park had been secured, but it was a strip of unkempt suburb, with the ruins of a grand seenery. While the ground was being cleared and roughly inclosed Mr. Vaux, among others, urged that the designs for its landscape treatment be selected in a public competition, and this idea being adopted he sought out Mr. inition, and this idea being adopted he sought out Mr. F. L. Olmsted, then engaged as superintendent of labor in closing in the park, and invited his co-operation in preparing a landscape design. The two met after the day's work was over, at Mr. Vaux's house in East Eighteenth Street, and as the result of their labor the design signed "Greensward" was accepted (April 1856). The two men became associated under the me of Olmsted & Vaux, and under their hiefly, but through various viciositudes of po-dministration, the Cantest Prostration, the Central Park grew up. On b. Mr. Vaux was employed to make a 13, 1845, Mr. Vaux was employed to make a for Prospect Park, in Brooklyn, and urged the ge in the boundaries by which a great addition de to the grounds already acquired and a picturesque and happy arrangement was ren-possible. Ofmsted & Vaux were appointed appe architects and superintendents (May 29, and in their reports of 1866 and 1871 presented and in their reports of 1866 and 1871 presented agreative way and with a light touch what to be the leading features of a general treatment of eity grounds applied by them then and afterbut with endless variations, to many great Through them chiefly the landscape archip brought our American elms and maples into alone relations with the foliage of all lands, at of elements as heterogeneous as our population, in the heart of our cities, framed a picture of a quiet and satisfying beauty. Of Mr. Vaux's lead work in New York city may be noted as the Marble Arch, Bowbridge, and Belvidere, bridges over drives and sunken roads, with landscape treatment of transverse roads; the landscape treatment of transverse roads; landscape treatment of transverse roads; the relandscape treatment of transverse reads; the fal site of the Grant monument and all details or side Park, whose full development is yet to In the Niagara reservation huna Island may be noted. In association with Mr. Olmit, Vanx's plans and supervision—sometimes ut generally both—extended over parks in port, Conn. (1866); in Newark, N. J. (1867); buth Park, in Chicago (1869), including the lasterward used for the World's Fair build-Fairmount Park, in Philadelphia (1871); parks vidence, R. I., and Fall River, Mass. (1872); in o. N. Y. (1874), and others. In connection with Il Parsons, Jr., the present superintendent of the grounds of Bryn Mawr College, l'ennsyl-(1882); Trinity Cemetery, New York (1884); liver Park, New York (1893); and that at Corlleck (1894). Of public buildings, he designed, a many others, the Museum of Natural History and the Metropolitan Museum of Art (1874), and the Metropolitan Museum of Art (1874), hy partly completed. His last finished work edge for Mulberry Bend Park, "When he it," says his daughter, " being then ill in bed, id down the pen with a happy sigh and said, hat I feel I have put the best work I have to and it is my best." He was much engaged in hars in defending in the interests of the city the sylvan meads and other rural features city grounds against encroachments for speed-ad for military purposes or for merely tempo-lities. In this most important work he found it summaries in Paul Dana and Andrew H. Mr. Vaux at the time of his death was ork city, commissioner of the Consolidated sion of the Greater New York, and landscape to the Commission of the State reservation ligara. He was an early member of the Union as Club and of the Century Association; also of Sational Sculpture Society. He married in 1853 7 Swan McEntee, of Rondout, N. Y., a sister of minest artist, and left two sons and two daugh-

Don. 18, 1816; died there March 22, 1898. He was a set Judge Roberts Vaux, was educated by private two, and was admitted to the bar in Philadelphia 1808. Soon afterward he was appointed bearer of the bar in London, when he remained for a year as Secretary Lagation. During this period he had the honor ducing with Queen Victoria at a court ball in London, After alding in reorganizing the United Landon, after alding he returned to London,

and became private secretary to the feel brates Mil. leter Andrew Stevenson In 1969 to returned a of Philadelphia. On Jan 7, 1842, he was appround an inspector of the Eastern Penitentiary and war elected secretary of the learns at its first mention I or more than fifty years he write every amount eigent, prepared nearly to relumns on the subject of peticings. and delivered numerous addresses on the subject of prison management. About the time of his appoint ment as positeritary mercure he was churted comp-troller of public achoods to successed his father. After being several times the tensorsesoful Demonstratic can diclate for mayor, he was elected to that other in Inid. and completely reorganized the government of the city. In 1856 he was chosen a director of timest College, and in the following year tonuous president of the board. Mr. Vaus was largely instrumented in framing and passing the set of lead, which now comstitutes the charter of the city of Philadelphia last public service was as a member of Congress, elected May 12, 1850

Vestch, James Cliffard, military officer, been near Elizabethtown, Ind., Dec. 19, 1819, died in Elevahaust, Ind., Dec. 22, 1835. He was admitted to the har, practiced for many years, and was elected to the ladiana Legislature in 1841. On Aug. 3, 1861, he was commissioned colonel of the 25th Indiana Voluntaure; on April 28, 1862, was promoted beignedier general; and in August, 1865, was brevetted major general for distinguished services during the war. He took part in the actions at Fort Denselson and shilled, the enigree of Corinth, Vickeburg, and Mobile, and the Atlanta campaign. He was appointed adjutant general of Indiana in 1869, and was collected of indermal general.

in 1870. '82

Velk Leonard Wella, sculptor, horn in Wella, Hamilton County, N. Y., Nov. 7, 1878; died in thesesha, Wis., Aug. 19, 1895. His father was a marche cutter in Pittsfield, Mass., with whom he learned the trade and worked for several years. In 1848 he would to St. Louis, Mo., where he began medicing in clay without instruction. In 1856 he went to Italy to study sculpture, aided by Stephen A. Douglan, whose cousin he had married. Two years affectives his first sitter for a portrait bast his distinguished putron, of whom a year afferward he made a life-size status in marble, which was destroyed in the great fire distinguished, particularly, which was destroyed in the same fire. He spent 1868-69 and 1871. 72 in study in Italy life was elected an academician of the Charage Academic of Design in 1867, and was its previouslent fire sight years. Among his many works are the Benglus monument in Chicago, the life-size status of Ibenglus monument in Chicago, the life-size status of Ibenglus and Lincoln in the Illinois State Capace, gentralia busts of Henry Clay, Zachariah Chaedler, Eliku B, Washburne, and Gen. James Shiriba, and the status are for the Henry Keep manusoleum at Wassersows,

Waddell John Bowton, educator, been in Willington, S. C., April 2, 1812; died in Birmsingham, Ala., Jan. S. C., April 2, 1812; died in Birmsingham, Ala., Jan. 9, 1895. He was a sem of the Birn Mosson Waddell, D. D. President of the University of Georgia, and was graduated at thad institution in 1895. In 1841 he entered the ministry of the Presidynterian Church; in 1845 by an Professor of Latim and Greek in the University of Missioneges; and in 1832-bit hold a similar chair in La Grange College, Tennesson. He was then elected president of the last institution, which in 1863 was church, and he housene general apprintendent of Presidynterian missions in the Western Confederate army. During 1865-73 he was charactellor of the University of Missionege, and in 1872-38 he held the same post in the Seathwestern President of University. Clarkwille, Tenn. By Wadfell was largely instrumental in feaniding the asylum for explane of Confederate seddiers in Turke applied for the Southern Presbyterian Church from Education of the Southern Presbyterian Church from

1874; and received the degrees of D.D. from the University of Nashville in 1851 and of LL. D. from the Liversity of Viceorgia in 1873. Wainwright. William Pratt, military officer, born in

New York city in 1818; died there Oct. 17, 1895. He was graduated at the University of the City of Now York; and spent much time in the study of military matters, chiefly in Germany. rie, and wife of William Vassar Webb. She began her literary career in early childhood, and became a contributor to juvenile papers and magazines when fifteen years old. In 1878, having become familiar fifteen years old. In 1878, having become familiar with the Spanish language, she was engaged on the with the Spanish language, she was engaged on the editorial staff of "El Atenio," a Spanish art journal published in New York city, and soon afterward she became known as a writer of short stories and poems and of essays on reform topics. Her best-known publications are "A Tiff with the Tiffins," "Gala-Day Books," and "A Breath of Suspicion."

Weld, Theodore Dwight, reformer, born in Hampton, Conn., Nov. 23, 1803; died in Hyde Park, Mass., Feb. 8, 1895. He was educated at Phillips Andover Academy, became general agent of the Society for the Promotion of Manual Labor in Literary Institutions in 1830; studied in Lane Theological Seminary, Cineinnati, Ohio, but withdrew on the suppression of the antislavery society of that institution by the trustees in 1833, and then engaged in delivering antislavery lec-tures till 1836, when he lost his voice. Soon afterward he was appointed editor of its publications by the American Antislavery Society. In 1841-43 he was engaged in the antislavery cause in Washington, D. C.; in 1854 established a school in Eagleswood, N. J., where he received pupils irrespective of sex and color; and from 1864 resided in Hyde Park, near Boston, where he taught as long as his strength would permit He published numerous pamphlets, including "The Power of Congress over the District of Columbia" Power of Congress over the District of Columbia (1837); "The Bible against Slavery" (1887); "American Slavery as it is; or, The Testimony of a Thousand Witnesses," which is said to have led Mrs. Stowe to write "Uncle Tom's Cabin" (1839); and "Slavery and the Internal Slave Trade in the United States"

(London, 1841). Wellington, Arthur Mellen, civil engineer, born in Waltham, Mass., Dec. 20, 1847; died in New York city May 16, 1895. He was educated at the Boston Latin School, and at the age of sixteen began, in the office of John B. Henck, the study of civil and mechanical engineering. He passed an examination for assistant engineer in the navy, but the close of the war and some difficulty with his eyes prevented his calleying that they beauty of the proposition. following that branch of his profession. His first engagement was in the engineering corps of the Brookgagement was in the engineering corps of the Brook-lyn Park Department, under Frederick Law Olm-sted. In 1868 he began railway work on the Blue Ridge Railroad in South Carolina, serving later as an assistant engineer on the Dutchess and Columbia Railroad in New York. In 1870 he was placed in charge of a division on the Butfalo, New York and Philadelphia Railroad, and was soon made principal assistant. Two years and a half later he became lo-cating engineer of the Michigan Midland Railroad, and later engineer in charge of the Toledo, Canada Southern and Detroit Railroad. From 1874 to 1878. the active practice of his profession being interrupted by the long financial depression, he devoted himself assidnously to study and to literary work connected with his professional interests. In 1874 he published "The Computation of Earthwork from Diagrams," which met with such success that in the following year he began his principal work, "The Economic Theory of the Location of Railways," This was afterward expanded into a series of articles on "The Justifiable Expenditure for improving the Alignment of Railways," and published in the "Railroad Gazette." Still later these were published in book form, and at once attracted the attention of engineers and railway men. In 1878 he became principal assistant to Charles Latimer, chief engineer of the New sistant to Charles Latimer, emer engineer of the New York, Pennsylvania and Ohio Railway, and through the courtesy of Mr. Paine, of the Lake Shore and Michigan Southern Railway, he was enabled to make experiments on the resistance of rolling stock, which suggested a paper read before the American Society of Civil Engineers, Jan. 15, 1879. These experiments of Civil Engineers, Jan. 15, 1879. These experiments were influential in establishing formulas for trainresistance at low velocities; and in 1884, in another paper before the same society, he gave the results of

ries of tests on journal friction at low velocities.

861, after spending three years on the "Nypano,"
seems engineer in charge of location and surveys
the Mexican National Railway, and he described

tral Railway. On his return to the United States
arread his attention to technical journalism, and
mes one of the editors of the "Railroad Gazette,"
the upon their staff he edited the revised edition

a "Car-builders' Dictionary," in addition to his the "Car-builders' Dictionary," in addition to his ular work, and prepared another edition of his alway Location" (1887). This second edition was w book, embodying a vast amount of la-January, 1887, he became one of the editors and part owner of "The Engineering News," within two years its subscription list was more doubled. His originality and the swiftness with his brain worked were most wonderfully supd by infinite care as to statistics and paon in investigating and proving his theories and patients. In addition to his editorial work, he served as a consulting engineer, being called his advice in such important matters as the action of grade crossings at Buffalo, the improve-of railway terminals at Toronto, and the foun-m of the Board of Trade Building in that city. a member of the Board of Engineers that ex-land approved the estimates of the Nicaragua in 1890. In 1893 he was called before the husetts Legislature, and at his suggestion the nt Street subway, now being built in Boston, septed as the best plan for a desired improvecocepted as the best plan for a desired improved. His last work as consulting engineer was in red to railway lines in the island of Jamaica. Plans for increasing the facilities of the Brooklyn ge were unanimously approved by the experts as easy the best offered, but in every way admia. The trustees feared, however, a greater extens they wished to incur, though the results listed by Mr. Wellington from other plans have followed. He was greatly interested in the yef thermodynamics, and invented an entirely type of thermodynamic engine, designed to conype of thermodynamic engine, designed to conthe into mechanical power with a much smaller stage of loss than the best existing steam enact his intense devotion to this problem undersed his health, but he finished his experiments left the matter for practical and commercial decreased although he did not like to some it households. ent, although he did not live to see it brought tice of the world. The daring brilliancy of ination was fully equaled by a respect for nee that made him heedful of every ground jection, and his great service to the world came

a rare combination of literary ability with scientific knowledge.

Televick, Berjamin Frank, physician, born in St. Luis, Mo., Feb. 4, 1851; died in Brooklyn, N. Y., and 12, 1895. He was graduated at Long Island Calege Hospital in 1874, the youngest and first in a set of 57, and became Professor of Surgical Pathology at that hospital and Adjunct Professor of Anatomy and visiting physician to the Methodist Episcopal St. Mary's Hospitals. Dr. Westbrook was known to his success in the operation of drawing blood from the right lung in cases of pneumonia when it was believed that this was the last chance to save life. He

caributed largely to medical literature, his last work ing the elaboration of a system of therapeutics.

Loan, Jame A., engineer, born in Manchester, M. H., Aug. 37, 1827; died there May 8, 1895. When the man years old he was appointed assistant engineer on the Concord Railroad, and in 1849 he was promoted to chief engineer. For a series of years he id the office of roadmaster and master of transpersion of the Concord and the Manchester and Laws was read. As chief engineer of the Concord and the appearance roads. As chief engineer of the Concord and the superintended the construction of the greater part of that line, and subsequently

built the Suncesok Valley read at 1 w 12 publisher of Concertle system of water w 12 posterior of water w 12 posterior of Manchester in a 1 lin 1971 he was a candidate for two-cetted of the lagainst the Key James Pike. The closter receives no choice by the people, but Mr. Weet a 10 lin pell and a Democrate Legislature elected disc. In 1972 and 1973 he was an unsuscensful candidate to receive time, and in 1974, when the choice of his just; the fourth time, he reversed more votes than he like publican opponent, Luther M. Cutching, but the scattering vote prevented a choice, and the Legislature again choice bim for Gercertser.

Wheatleigh, Charles, actor, born in London, England, about 1923, died in New York city Feh. 14, 18th; Ite was the son of an actor and appeared in a juvenile part with his father. In 1842 he came to the United States and played his first important engagement in support of Charlotte Cushrian. Nulseequently he played leading parts with Hooth, Laura Keena, Joseph Jefferson, John McCullough, Charles Feehat, and others. He was a member of Laura Keena, Joseph Jefferson, John McCullough, Charles Feehat, and others. He was a member of Laura Keenai company in the late fifties. Mr Wheatleigh made several professional trips to California and Australia and also visited India and New Zenland, and at one time was leasee of the Lyceum Theater in New York city. For about eight years prior to his death he was connected with Augustin Paly's company, and the day of his death he attended a reheursal of "The Two Gentlemen of Verona" at Daly's Thouster. He was the original Danny Man in "The Collean Haws."

Wichlife. Robert Charles. Lawyer, born in Bardesown, Ky., Jan. 6, 1820. deed in Shelby ville, Ky., April 26, 1826. He was the sen of Goo Charles A. Wichliffe. He was educated in St. Joseph's, Augusta, and Conter Colleges in Kentucky, studied law, and remeried in West Feliciana Parish, Louislana, in 1864. He was elected State Senator for three terms, became Precident of that body on the death of Lieut-Goor Farmer, and was elected Goorerror of Louislana in 1865, serving for four years. At the close of his term he recursion law practice to a limited extent and sought recursion from ill health in extent planting. In 1866 he was elected to Congress as a Democrat, but was refused his seat because he would not take the eath required under the reconstruction laws.

Wilcox, James M., inventor, teem in by Mille, Pa., Nov. 20, 1824; died in Haverfeed, Pa., text. 21, 1810. In early life he was apprenticed to the paper making trade, which he followed till 1880, when he required in the manufacture of Portland ecement. For many years he manufactured the paper used by the United States Treasury Department for its bank notes. He gave optical attention to making this paper by man honory and to rendering it difficult to counterful, content ving and producing the localized fiber paper. The chronical paper used by the Treasury Department for mastamps and cheeks, known as "chameleon" paper because of internal resonnes stamps. I aske as a strong and reuse of internal resonnes utamps. Williams Charles Frederic, editor, born in Charlestown, Miss, Oct. 51, 1842; died in Boston, Mass., Oct. 51, 1842; died in Boston, Mass., Dec. 52, 1835. He studied at Harvard Law School, and was editor of the last 8 volumes of the "American Mass." " He pubcan and English Encyclopedia of Law," He published, among other works: "The Tariff Laws of the I mited States, with Explanatory Notes and Citations from the Decisions of the Courts and the Treasury Repartment [1883]; "Index of Cases overruled, distanguished, etc." (1887); and "Digest of Decisions of the Massachusetts Supreme Court" (Vols. CXLII-1.1.1 of the Massachusetts "Reports," 1881). He also was engaged in the preparation of the "Federal Digest" [1886]; was a collaborator of the "Annual Digest" and of Jacobs's "Complete Digest."

Williams Henry Willard, physician, born in Boston, Mass. Pec. 11, 1821; died there June 13, 1895. He was istocated at the Boston Latin School and at Harvard Medical School, being graduated at the last in 1849. He then spent three years in European hospi-He was ophthalmic surgeon to the Boston City Hospital from 1864 till 1891; was lecturer in Harvard Medical School in 1869-71; and was Professor of Ophthalmology there in 1871-'91, when, on retiring, he endowed the chair. He was the founder and first President of the American Ophthalmological Society. He gained the Boylston prize for his essay on "Recent Advances in Ophthalmic Science," and published a "Practical Guide to the Study of Diseases of lished a "Practical Guide to the Study of Diseases of the Eye" (1982); "Recent Advances in Ophthalmic Science" (1986); "Optical Defects in School Chil-dren" (1868); "Our Eyes, and how to take care of them "(1871); and "A Diagnosis and Treatment of Ibscasses of the Eye" (1886). Wilson, James E., liswyer, born in Newark, Ohio, Oct. 19, 1828; died in Fairfield, Iowa, April 22, 1895.

He was apprenticed to a harness maker, and worked at his trade till 1851, but studied law, and was admitted to the bar in 1852. In 1853 he removed to Fairfield, lowa. In 1856 he was elected to the State Constitutional Convention: in 1857 to the Legislature, in which he was made chairman of the Committee on Ways and Means; and in 1859 to the State Schate, where he served on the Judiciary Committee, and was chosen presiding officer in 1861. In the last year he was elected to Congress to fill a vacancy, and he was three times re-elected. During the civil and reconstruction periods he was chairman of the Judiciary Committee; in 1868 was one of the managers of the impeachment trial of President Johnson : and in 1869 was appointed a commissioner for the Pacific Railroad. He was elected to the United States Senate as a Republican taking his seat Dec. 4, 1883; was re elected in 1888; and retired on March 3, 1895. In 1891 he introduced a resolution in Congress instructog the Committee on Military Affairs to report train states forces to return fugitive slaves and to the dismissal from the army or navy of who used troops for such a purpose. abroad, setting up heavy engines that had been built in New York and superintending the fleet of steam-bonts belonging to the Danube Navigation Company, returning to the United States shortly before the civil war. He resumed his studies of marine architecture and made the designs for one of the first ironelad vessels built by the Italian Government. During the war the greater part of the Morgan fleet of steamships was taken by the United States Government for use as transports and cruisers, and Mr. Winter superintended the equipment of several large plants required for the construction of war vessels. The first twinscrew steamship launched in the United States was designed by him. From the close of the war till his retirement he was chief engineer of the Morgan line of steamships, and he held the same place with the Metropolitan line. Mr. Winter invented a rotary cutoff for beam engines, a patent wharf drop, and other devices which were never patented, but are in use in the steamships that he designed.
Wright, Edward, military officer, born in Salem, Ohio,

June 27, 1824; died in Des Moines, Iowa, Dec. 6, 1895. He removed to Iowa in 1852, and was elected to the Legislature in 1855, 1857, and 1859. Early in 1862 he was commissioned major of the 24th lows Infantry, and at the close of the war, during which he was twice wounded, was brevetted brigadier general of volunteers. He was returned to the Legislature, and was elected Speaker in 1865 and Secretary of State in the following year, serving for three terms. On retiring, in January, 1870, he was appointed secre-

tary of the Capitol Commission.

Wright, Henry, father of professional baseball, born in Sheffield, England, Jan. 10, 1835; died in Atlantic City, N. J., Oct. 3, 1895. He came to the United States when an infant and learned the jeweler's trade in New York city. In 1859 he became a professional player in the St. George Cricket Club; and on the organization of the Knickerbocker Baseball Club, a played in the principal games of both clubs. He joined the Union Cricket Club of Cincinnati in 1865, and in the following year became captain of the famous Red Stocking Baseball Club of that city, for which he played center field till 1870. From 1871 till 1882 he was manager, captain, and secretary of the Boston Baseball Club, and during this engagement he took the Boston and Athletic Clubs' nines to England for a series of games. In 1882 he was engaged by the Providence (R. I.) club, and in 1884 by the Philadelphia club, remaining with the last till 1893, when failing eyesight obliged him to resign. His sight partially returned in 1895, and he was appointed chief of umpires of the National League.

Wylle, Theophilus Adam, educator, born in Philadelphia, Pa., Oct. 8, 1810; died in Bloomington, Ill., June 11, 1895. He was a son of Samuel Brown Wylle, D. D.; was graduated at the University of Pennsylvania in 1830, and was appointed an instructor there. In 1837-'52 he was Professor of Natural Philosophy and Chemistry in the University of Indiana; in 1855 55 was Professor of Mathematics in Miami University, and in 1855-'64 held his former chair in the University of Indiana, also acting as president in 1859. From 1864 till his retirement, in 1886, he served the university as Professor of Ancient Languages, and on retiring was made professor emeritus. He was pastor of the Reformed Presbyterian Church in Bloomington, Ill., in 1838-'52 and 1855-'69. He published

Yost, George W. N., inventor, born in New York in 1831; died in New York city Sept. 26, 1895. He was brought up on a farm, developed a fondness for mechanics, and was apprenticed in an agriculturalimplement manufactory. After serving his time he was employed for many years in the manufacture of Acme mowers and reapers, for which he suggested many valuable improvements. Subsequently he became interested in writing machines, and invented the typewriter bearing his name. For a description of it, see "Annual Cyclopædia" for 1890, page 817. About two years before his death he organized the Union Typewriter Company for the manufacture and control of writing machines. He was deeply interested in spiritualism for several years before his death, and claimed to be able to make spirits of the dead com-

in spiritualism for several years before his death, and claimed to be able to make spirits of the dead communicate with the living by means of a typewriter, OBITUARIES, FOREIGN, FOR 1895, Aberdare, Henry Austin Bruce, Baron, an English politician, born in Duffrin, Wales, April 16, 1815; died in London, Feb. 25, 1895. His father's name was origi-London, Feb. 25, 1895. His father's name was originally Kulght, but he changed it to Bruce, and after and to Bruce-Pryce. The family resided in France till the son was twelve years old. He studied at Lin coln's lnn-in the chambers of his uncle, who became Lord-Justice Knight Bruco-and was called to the bar In 1887; practiced a few years; became a police magin-trate in Wales in 1847; and in 1852 was elected to Parliament for Merthyr Tydvil in the Liberal inter-est, retaining the seat until he was displaced, in 1868, by an earnest advocate of disestablishment. He was Under Secretary of State for the Home Department in 1862, and Vice-President of the Council in 1864 Having made himself familiar with the working of the education acts, he aided Mr. Forster in claborating a new system of elementary education. He was harity commissioner and one of the commissioners of Church estates. After Mr. Gladstone's return to effec in 1868, Mr. Bruce, although he had lost his seat, was appointed Homo Secretary, and was elected member for Renfrewshire. He introduced in 1871 a beening bill for the control of the drink traffic that proposed the sale at auction of all licenses that were to be renewed. This raised such an outery that the novious clause was withdrawn, and the measure failed to pass. In 1872 he was more successful with the mines regulation act. When the Cabinet was re-constructed in 1873 Mr. Bruce gave up his place as Home Secretary to Robert Lowe, and on being raised to the peerage as Lord Aberdare succeeded Lord Ripon as President of the Council. His Radical lisering bill was the principal cause of the defeat of the Liberals at the polls in the following year and of his own permanent retirement from office. He occuhimself thenceforth with social reforms and edusthuis questions and became interested in geographal exploration. He presided over the Social Science Congress in 1875, and in 1883 he was elected President of the Royal Geographical Society. He publabed a life of his father-in-law, Sir William Napier

Albrecht, Friedrich Rudolf, Austrian archduke and moral, born in Vienna, August 13, 1817; died there real, horn in Vienna, August 13, 1811; died there yeb, 18, 1895. He was the son of the Archduke Karl, agreat uncle of the Emperor Franz Josef. Entering army when twenty years old, he served two years with a cavalry regiment in Hungary, and in 1840 was placed in command of a brigade. He stud-l faithfully the art of war with the Italian army of Marshal Radetzky, and when he was made lieutenant bild marshal in 1843 and placed in command of the brees in Moravia and Silesia he put into practice the bree manœuvres originated by that officer. Subsection cently, under his supervision, this method of train-NAM THE extended to the whole Austro-Hungarian army. In March, 1848, when he was commander in shief at the capital, he ordered the troops to fire upon the mob and thus provoked the revolution. Resigning his command, he shortly afterward joined Marshal Radetaky's army in Italy and fought against the King of Sardinia, distinguishing himself as a volunteer in the battle of Santa Lucia. When Carlo Alberte renewed the war, in 1849, he returned to Italy, and, as commander of a division in the advanced guard, he look a prominent part in the battles of Mortara and Novara. From 1851 to 1860 the Archduke All relia as commander in chief of the 3d Army torps at 1 evel and military Governor of Hungary He as sumed command of the 8th Army Curps at Verlas in October, 1860. In April, 1863, he was 1700 design to be a field marshal, and, having been no is present mander-in-chief of the broken and dishearter of the

Benavides y Navarrete, Francisco de Paola, a Spanish prelate, bern in Bacza, Jach, May 14, 1810; died in Saragessa, March 50, 1895. He was a learned and alsquent priest and an ardent defender of the Catho-he faith, and in 1857 was created Bishop of Siguenza. Atter the accession of Alfonzo XII he was selected to the office of l'atriarch of the Indies, and at the same time was created a cardinal, March 12, 1877. was appointed Archbishop of Saragossa.

Bennett, William Cox, an English poet, born in Greenwich, Oct. 14, 1820; died in Blackheath, March 4, He was active in educational and other reforms, and as a song writer enjoyed considerable pop-After the death of Longfellow he suggested that the bust of the American poet should be placed in Westminster Abbey, and he formed a committee of two to effect it, headed by the Prince of Wales. He published the following works: "Poems" (London, 1850); "The Trial for Salamis" (Greenwich, 1850); "Endowed Parish Schools and High Church [1856]; "Endowed Parian Schools and High Charles Vicars", Greenwich, 1853); "Queen Eleanor's Venge-ance, and Other Poems" (1856); "War Songs" (1857); "Songs by a Song Writer" (1858); "Baby May, and Other Poems" (1859); "The Worn Wed-ding Ring, and Other Poems" (1860); "Our Glory Koll, and Other National Poems" (London, 1867); "Contributions to a Ballad History of England, etc." Lendon, 1869); "School Book of Poetry" (London, 1879); "Songs for Sailors" (London, 1872); "Narrative Poems and Ballads" (London, 1879); "Songs of a Song Writer" (London, 1876); "Sea Songs" (London, 1878). His work shows facility of execution and

considerable range of feeling.

Blackie John Stuart, a Scottish author, born in Glasgow in July, 1809; died in Edinburgh, March 2, 1895. He studied at Marischal College, Aberdeen, and after ward at the University of Edinburgh, but he would not give enough attention to mathematics to win his degree, and in 1829 was sent to complete his studies in Göttingen, Berlin, and Rome. When he returned be wrote articles on German literature and education. and in 1834 published a translation of "Faust." He was admitted to the bar in that year, but gave his attention rather to literature. In 1841 he was appointed professor in Marischal College, and became known as an enthusiastic and inspiring teacher. In 1852 he was called to the chair of Greek in Edinburgh University. He had begun an agitation for the elevation and broadening of university education in Scotland, which, with the help of others, he carried on henceforth with great vigor until he succeeded in having the universities act passed in 1858. He retired from lecture tall the end of his life. As a teacher of Greek, I a most to mepire his students with a love for Greek the and thought rather than the aims of exact scholar-. he which he was no adept, and he was one of then ab regard Greek as a living language and the There is a heirs and exemplars of the intel-polation of the ancients. Bogran, Luis, ex-President of Honduras, born in Santa Barbara, June 3, 1849; died in Guatemala city, July 10, 1895. He was educated in his native town and at a college in Comayagua, and studied law. 1873 he joined the Guatemalans in the war against Salvador and served as chief of staff in his native province, of which he was made governor at the ter-mination of the war. He retired in 1876, but in 1877 was again appointed governor, served as commissioner for Honduras to the Paris Exposition in 1878, and in 1879 was elected President of Honduras by an almost unanimous vote. He was again elected in 1883. He organized and directed a movement for the union of the Central American States into a single republic, in which Nicaragua should not have too great a preponderance.

Bonaparte, Lucien Napoléon, an Italian prelate, born in Rome, Nov. 15, 1828; died there Nov. 19, 1825. He was a son of Lucien Bonaparte, Prince of Canino Entering the Church at an early age, he filled with zeal and intelligence various posts in the Roman Curia, and was created a cardinal on March 13, 1868,

Bonghi. Ruggiero, an Italian scholar and politician, born in Naples, March 20, 1828; died in Torre del Greco in October, 1895. He began the study of philosophy, and at eighteen published a partial translation of Plotinus on the Beautiful." A year later he put forth a translation of Plato's "Philobus," with critical notes. During the revolutionary excitements of 1848 Signor Bonghi founded the journal "Il Nazionale," and subsequently he was banished from the Kingdom of Naples. In 1859 he became Professor of Philosophy at the new Academy of Milan, and in 1864 of Greek Literature at Turin. He was subsequently called to the University of Rome as Professor of Ancient History, and at various times held other similar posts. He was also connected with the man agement of newspapers at Naples and elsewhere. was a strong advocate of secular education, and from 1874 to 1876 was Minister of Public Education. He supported the second ministry of Signor Crispi, although he had formerly been opposed to him, and although he had formerly been opposed to most his last public utterances were in behalf of the present Italian Government. The more important of present Italian Government. The more important of his many works are: "Storia della Finanza Italiana": "La Vila e i Tempi di Valentino Basini" (1869): "Frati, Papi e Re, discussioni tre" (Naples, 1878): "Pie IX ed il Papa Futuro" (Milan, 1877): "Cavour, "Bie IX Bismarck, Thiers"; "Bibliografia Storica di I Antica" (Rome, 1879); "Roma Pagana" (1886). Thiers"; "Bibliografia Storica di Roma

Antica" (Rome, 1879); "Roma Pagana" (1886).

Brock, Edgar Philip Loftus, an English architect, died in London, Nov. 2, 1896. He studied at the Royal Academy schools and entered the offices of the Messrs. Habershon, architects, in 1851. Some years later he became a member of the firm of E. Habershon in 1879 Mr. Brock and and the retirement of Mr. Habershon in 1879 Mr. Brock and and the distributions of the firm of E. Habershon in 1879 Mr. Brock and and the distributions of the firm shon, in 1879, Mr. Brock conducted the entire practice of the firm. He designed a great number of rural and other churches as well as secular buildings, while his restorations of ancient edifices were accomplished in a spirit of intelligent conservatism. He developed a mode of timber construction in thirteenth-cent Gothic for mission churches that was notably effective In those buildings the exterior walls were of brick or masonry, and the pillars, areade, and clearstory

were of timber. Brot. Charles Alphonse, a French novelist, born in 1809; died in Paris, Jan. 4, 1895. He began to publish verses when he was twenty-one years old, but soon he turned to the historical romance. From 1848 till 1872, he had the direction of the printing and publishing department of the Ministry of the Interior. He was one of the founders of the Société des

Gens de Lettres, and of the Société des Auteurs Dramutiques. He was the author of 4 plays and many novels. Some of the earlier ones are: "Ainsi soit il," "Histoire du Cour," "Le Tour de Londres," and "Jane Grey." "Les Espions" was published in 1874

and "Déesse Raison" in 1881.

Keanington, Surrey, Nov. 12, 1809; died in Wells, morset, Dec. 12, 1895. He was educated at 8t. hats College, Oxford, and became Prebendary of Faul's, London, in 1845. In 1860 he was made redeacen of Bath and rector of Weston-superare, resigning the rectory in 1876, on becoming nearny fellow of King's College, London. He was author of a "History of Greek and Roman Classel Literature" (1851–253); the "History of Greece" d "History of Rome" in "Gleig's School Series"; d "History of Rome to the Death of Demittian." and "History of Rome to the Death of Domitian," and slated the "Ethics" of Aristotle.

in 1831; died there May 5, 1895. He was d at University College, where he won honors rises, was graduated in medicine at the London ersity in 1856, assisted his father, a metropolitan on, in his practice, and made himself noticeable is interest in sanitary affairs, having been nomi-medical officer to St. Giles in 1856, when public filters began to be appointed. He originated the thous of sanitary investigation, studied the of overcrowding and other insanitary condi-to the spread of disease, worked at the preven-fsmallpox and cholera epidemics, and invented on for collection of statistical information re-ter the health of his district, in which the reof his labors soon became apparent in the in-decondition of the public health. His inquiries the working of the vaccination acts, begun at equest of the Privy Council, led to the amendof those acts in 1867. He began in 1862 an in-into the prevalence of typhus fever in the north cland during the cotton famine, and devised s of prevention. In 1865 he reported upon proved health in the manufacturing towns re-In 1865 he reported upon from the adoption of better methods of drain-eremoval of filth, and water supply. His report ed the conclusion that even the mortality from mption depends largely on drainage. He was ted a medical inspector under the Privy Coun-1869, and in 1871 he was transferred to the Government Board as assistant medical officer, ing head of the department ten years later, cholers, and perfected various other sanitary tions that have reduced mortality in the United ofton. He retired in 1892, and was knighted, a member of the council of University College of the senate of the university, he took a great at in educational matters, especially university alon for women.

stion for women.

Inall, Berlanda, an English architect; died in
the at an advanced age, Nov. 16, 1895. He went
tests about 1873, and practiced his profession
with much success. He very skillfully adapted
the art to median. with much success. He very skillfully adapted that art to modern requirements, and built or requirements and point or requirements and built or respected many fine villas near Algiers for French English residents as well as for native owners, was the friend of Viollet-le-Due, and was the of that famous architect when the latter was sling the chateau of Pierrefonds for Napoleon III, translated into English "Painted Tapestry," by Jodon (1879), and the following works by his by Viollet-le-Due; "How to build a House" (1879); "Annals of a Fortress" (1875); "Habitations Itan in All Ages" (1876); "Lectures on Architec (1877); "Mont Blanc (1877).

10. Elbelas Christianovich, a Russian statesman, in Kieff in 1823; died in St. Petersburg, June 1865. He gained distinction as a Professor of

He gained distinction as a l'refessor of ence, Economy, and Statistics, and pubvaluable treatises on the bases of political dony, on the system of public accounts in Eng d, on the theory of credit, on the restoration of a allie currency, etc. In 1881 he was appented sister of Finance. His financial policy was severe refiteled by Katkoff and others, as being too these stical and unsuited for the needs of the country, and a 1886 he was replaced by Vishnegradsky

Carrebert. Prancies a Freezest on Last tany in 1809, died in Paris, Jan. 32 ... tered the military school of by any graduated with distitutions, and section as a period dier till he won a commission in the infanter or re-lieutement. Heroming a headement in 1841, he was ordered in 1835 to Africa, where he their past in the expedition to Mascara, gained a captainty by and. capealities to Mascara, gaines a capsument terious service in Grans, was wounded in the storm ing of Constantines, and was made a firestenant int cond in 1846 and colonel in 1847. He led an expedition against Ahmed Seghir in 1842, and, being transferred to the communed of a secure sugment won a victory over the Kabyles. In 1969 he enoumanded the gouge co and led one of the columns in the attack upon Zastchia, withing the grand seems of the Legion of Hener and presented to the rank of brigadier general. In Indo he surrounded the Araba in Narah and destroyed their stronghold He returned to France in that year and alconified bemacif with the cause of the Prince Prescient, who made him one of his aides de camp. He held a commenced at Paris, and by his energetic suppression of the popular uprising insured the encounsed the rising distance in January, 1852, he was communicated in January, 1852, he was recentementaried to sout this In January, 1802, ne was consistent processes sub-principa and select among the political processes sub-tents for internal elements. When the Russian was jects for imperial clemency. When the Russian was broke out, in the spring of ladd, he was plaused in command of the let Division of the Army of the East, command of the let Division of the Army of the East, and took a prominent part in the lastife of the Ahma, where he was wounded by the bursting of a shell When, after a few days, St. Armand resigning, ties. Canrobert successed to the chief command file marched upon Schusteyol and, after finding it impossible to reduce the place by boundardment in front, carried out the operations for a complete investment in the face of great obstacles He was wounded at the battle of Intermant while healing a charge of the zouaven. He and Lord Englan fool on the question of the best method of attack, and in May, 1855, he resigned the chief eventuated to Marshall Pelissier on the plea of failing health and returned to France. Napoleon III sent him to becomes a na diplomatic mission. The Italian was of 1800 gave him another opportunity to display her talents as a commander in the field. At the bond of the bit torys of the Army of the Algo he showed his usual fear lessties of personal danger in the buttle of Magonta. and at Solferino he came to the aid of Marsha. Neil and saved the day by an able merennend. At the end of the war he was made a marsdral of France. At the the commanded the carry of Paris. When the war with subsequently the army of Paris. When the war with Prussia broke out in 1-70 Marshall t american sook command of the camp at I have and aftergrand to organize the reserves, but was an hateful to the dotachmente from l'arie that he was anothe to establish order and discipling communicately he gave up the task and was placed in communicated of the 6th 6 organist Lyons. After the defeat at I vehuch he served ander Baraine in and around Mets, exhibiting in all the anpragetients the utriest introgulity under fire. At Vionaille and at termedicte he displayed shalling at 44 well as gallantry. On the capitalation of Mete his was taken as a principle to torroway, wheneve he returned after the agreeture of the prelimination of peace. There received him countesmely, but would not give him a command. He was appended a number of the Supreme to ancel of Was in 1872, and seem afterward resigned in dadgeon, but was induced by Marshal Ma Mahoo to withdraw his resignations. Marsial Ma-Mahon to withdraw his resignation, when his name was proposed in 1822 for the comminant of the Army of Versalles the Connect of Ministers rejected the proposition. In 1824 he was cleated as a lionapartied to the Semite, and he sat till 1872, speaking only twice. He failed to be re-elected from the Let Department, but was returned later from the Let Department of the Chambra and was from the Department of the Charente, and was reelected in 1883. Canrobert was the last sure is no marshal of France. The German Kasser telegraph is condulances to the family of the "heroic defender

5: I'r vat." but the extreme Republicans in the From a Chamber refused to vote to give the honor of a material Juneral to "the accomplice of the coup

def it at 11ch, 2, 1861.

Cantri Cesare, an Italian historian, born in Brivio, mar Moan, Dec. 2, 1805; died March 11, 1895. At executes in he became Professor of Literature in the United of Sondrio. He afterward went to Milan, became an ardent Liberal, and on account of the senti-ments expressed in his "Reflections on the History of Leoniardy in the Seventeenth Century" was im-Leoniardy in the Seventeenth Century" was impressed for three years by the Austrian Government, Daring his captivity he published a popular historical remance, "Margherta Pusterla" (1835). His "Steria Universale" (1837) has been translated into English, French, Danish, and German. Among his other works are: "Storia degli Italiani" (1854); "History of Italian Literature" (1851); "History of the Last Hundred Years" (1852); "Milano, Storia de Popolo e pel Pepolo (1871); "Conniento Storico ai Prenessi Spesi, o la Lombardio nel Secolo XVII" (1874); "Bonato ed Ercole Silva Conti di Biandrate." (1874; "Donato ed Ereole Silva Conti di Biandrate," with C. Rorida (1876); "Caratteri Storici" (1881); " Beccaria et le droit penal" (1885).

Carrière. Morits, a German philosopher, born in Grantel, Hesse, March 5, 1817; died in Munich, Jan. 19, 1895. He studied in Giessen, Göttingen, and Berlin, and spent some years in Italy, where he devoted humself to aesthetics amid the master works of art. Returning to Germany, he became a privat docent at the University of Glessen, and in 1849 was made professor. In 1853 he went to Munich, and lectured on asthetics in the university, and later also in the Academy of Arts on the history of art. He acquired fame as a philosopher, starting as a Hegelian, of fame as a philosopher, starting as a Hegelian, or original views, and diverging more and more from his master. His first essays in this field were "Vom Geisthehen" and "Die Religion in Ihrem Begriff," beth published in 1841. In 1843 appeared "Der Kölner Dom als freie deutsche Kirche." His translation of the letters of Abélard and Héloise passed the start of the letters of Abélard and Héloise passed the start were also litting. Carrière's averton of this letters of Abélard and Héloise passed the start were also litting. through several editions. Carrière's system of philosophy sought to reconcile pantheistic conceptions of the world with deism. His chief works are "Die philosophische Weltanschauengen der Reformationsreit", "Religiöse Reden und Betrachtungen für das deutsche Volk"; "Das Wesen und die Formen der Possie"; "Aesthetik"; "Die Kunst im Zusammen-Menselle Testerer The Kunst in Zusammen-hang der Kulturentwickelung und die Ideale der Mensehheit": "Erbauungsbuch für Denkende"; an I = Die sittliche Weltordnung." He also wrote an hesterical poem, "Die letzte Nacht der Girondisten," an essay on Cromwell, and "Deutsche Geisteshelden III Elazas "

Cates William Leist Readwin an English writer, born in 1821; diel in Hayes, Middlesex, Dec. 9, 1895. Mr. Cates was a well-known scholar whose "Dictionary tabe was a well-known scholar whose "Dictionary formeral Biography" (1867) passed through four editions, the latest revised and enlarged, appearing in the was also the author of "The Pocket Date 1994, "A History of England from the Death as at the Confessor to the Death of King John" and with B. R. Woodward, of an "Encyclotic translegy" (1872). His translation of the History of the Reformation" was is-
